The Nation

VOL. XCIV.—NO. 2427 THURSDAY, JANUARY 4, 1912 Reg. U. S. Pat. Office. PRICE TEN CENTS

Columbia University Library

Novels

PETER AND WENDY
By J. M. Barrie

"For the latest generation what 'Alice in Wonderland' was for a former. Children will enjoy this book as much as they did the play, and it will survive even the play."
—*London Athenæum.*

Illustrated by F. D. BEDFORD.
$1.50 *net; postage extra.*

ETHAN FROME
By Edith Wharton

"'Ethan Frome' is beautiful with pure and lovely bits of description, delicate with fine shades, and (to mention one thing along of many) charged from cover to cover with the magic of snow. . . . In intensity and grip, in reality and beauty, in simple art of handling, the story can bear comparison with the finest short stories we have."
—*London Times.*

$1.00 *net; postpaid* $1.10.

KENNEDY SQUARE
By F. Hopkinson Smith

"Mr. Hopkinson Smith has written a novel that can be read with unalloyed pleasure, that is as tender a portrait of the old chivalrous life of the South as has ever been given to the world."—*The Argonaut.* $1.50.

THE MOON LADY
By Helen Huntington

"Decidedly unconventional and wholly interesting, with an unusual love interest."
—*Brooklyn Daily Eagle.*

"Told with delicacy and even distinction of style."—*The Nation.*

$1.25 *net; postpaid* $1.35.

SHIP'S COMPANY
By W. W. Jacobs

"His fun is inexhaustible, and never in the making of it does it occur to him to raise his voice. A blissful spinner of yarns is Mr. Jacobs, and, as befits a writer so good for mankind, he is fortunate in his illustrator."—*Tribune*

Illus. $1.25 *net; postpaid* $1.35.

THE OUTCRY
By Henry James

"The characters and the situations are touched-in with all Mr. James's elusive but unerring skill." *London Athenæum.*

$1.25 *net; postpaid* $1.35.

New Scribner Publications

All of Henry van Dyke's poems, with many hitherto unpublished, now first collected, revised, and issued in one volume entitled

The Poems of Henry van Dyke

"This volume justifies and explains a reputation which is both popular and professional, for Dr. van Dyke has won the suffrages of the few as well as the applause of the many. Read as a whole, his collected work cannot fail to advance his reputation as a poet who understands his art and knows the secrets of skill as well as of inspiration."—*The Outlook.*

"We do not hesitate to advance the opinion that not only is the volume before us the most important and noteworthy of the season, but the most splendid contribution to the poetical literature of this country that it has witnessed for many and many a year."—*New York Observer.*

With Portrait. $2.00 *net; postpaid* $2.20.

Recollections, Grave and Gay
By Mrs. BURTON HARRISON

"A romantic and eventful life is that which Mrs. Burton Harrison portrays."—*New York Evening Sun.*

"Mrs. Harrison has much the charm and verve of a gifted Frenchwoman, and there are few writers who could have lent quite such quality to a reminiscent narrative."—*Springfield Republican.*

$2.50 *net; postpaid* $2.67.

The Arctic Prairies
By ERNEST THOMPSON SETON

"A year ago the most important book of exploration was Peary's account of the discovery of the North Pole. In the present season the honor of being the most important and interesting book of adventure in northern latitudes goes easily to 'The Arctic Prairies.'"—*Springfield Daily Republican.*

Illustrated $2.50 *net; postpaid* $2.70.

Robert E. Lee: Man and Soldier
By THOMAS NELSON PAGE

Using his "Robert E. Lee: The Southerner" as a basis, Mr. Page has written this comprehensive biography of Lee which covers every phase of both his civil and military life. Whatever part of the material of the earlier work it contains has been so largely revised and rearranged as to be virtually new; and this new biography gives graphic and untechnical accounts of all Lee's battles, which were entirely overlooked in "Robert E. Lee: The Southerner."

With portrait and map $2.50 *net; postpaid* $2.70.

Franz Liszt
By JAMES HUNEKER

"The strongest, finest, and most sympathetic study of Liszt that has yet appeared."—*New York Sun.*

"Mr. Huneker's book will give the vividest impression of the most brilliant and many-sided of all musical geniuses."—*New York Nation.*

With numerous illustrations.
$2.00 *net; postpaid* $2.20.

THE CLASSIC POINT OF VIEW
By Kenyon Cox

"By all odds one of the most notable treatises on art published for many a long day. . . . . Cannot be too highly commended for its thoughtful and generally significant qualities."—*Art and Progress.*

$1.50 *net; postPaid* $1.65.

The COMMON PEOPLE OF ANCIENT ROME
By Frank Frost Abbott

"As a vivid picture of daily life among the common people of Rome, with their language, their occupations, their sentiments, and their amusements, this volume can hardly be excelled. . . . An amazingly real insight into men and politics in the greatest city in the world nearly 2,000 years ago."—*Chicago Record-Herald.*

$1.50 *net; postpaid* $1.65.

MEMORIES OF TWO WARS
By
Brig.-Gen. Frederick Funston

Describing his service in the Cuban insurgent army and in the United States army in the Philippines.

Illus. $3.00 *net; postpaid,* $3.30.

A PRINCESS OF ADVENTURE:
Marie Caroline, Duchesse de Berry
By H. Noel Williams

author of "Henri II: His Court and His Times," etc.

Illustrated. $3.75 *net.*

The REFERENDUM, INITIATIVE and RECALL IN AMERICA
By Ellis P. Oberholtzer

"An indispensable book for the student of public affairs and a volume to be read by every citizen who cares to take forethought with respect to the governmental problems of the day."—*Evening Sun.* $2.25 *net.*

The EARLY LITERARY CAREER OF ROBERT BROWNING
By T. R. Lounsbury

Prof. of English in Yale University.

"As a view of literary history and as an account of the attitude of the public to a great poet during an important portion of his career, Professor Lounsbury's volume is of permanent importance. It is lightly written, without any sacrifice of accuracy or style and it lacks nothing of scholarship because of its informality."—*Transcript.*

$1.00 *net; postage extra.*

CHARLES SCRIBNER'S SONS 153-157 FIFTH AVE., NEW YORK

The Nation

A WEEKLY JOURNAL.

FOUNDED IN 1865.

[Entered at the New York City Post Office as second-class mail matter.]

Just Published
DRYER'S HIGH SCHOOL GEOGRAPHY
PARTS I AND II, PHYSICAL AND ECONOMIC.
By **Charles R. Dryer,** Professor of Geography and Geology, Indiana State Normal School.
Price, $1.20
This textbook gives in proper relation a practical and up-to-date treatment of physical geography, together with a logical and well organized presentation of economic or commercial geography. It treats the leading facts and principles of geography as factors in the human struggle for better living, that is, for the highest possible civilization. The style of the book is clear, precise, and logical; while three hundred maps, diagrams, and illustrations from photographs make plain graphically the points touched upon in the text.
AMERICAN BOOK COMPANY
New York Cincinnati Chicago

The Athenaeum Press Series
PRESENTS THE CHOICEST SELECTIONS AMONG THE GREAT ENGLISH CLASSICS
Under the general editorship of Professors GEORGE L. KITTREDGE and C. T. WINCHESTER the books of this series are prepared by the most famous scholars and teachers of English of the present day. They contain biographical sketches, critical introductions, notes, glossaries, and every other aid that a serious student of literature can desire for a full appreciation of the work he is taking up.

IN
THE NATION

The *Nation,* in its special field of political and literary criticism, is unlike any other periodical, American or foreign. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

10 cents a line for 13 times.

NEW YORK, THURSDAY, JANUARY 4, 1912.

The Week

The tariff programme outlined by Mr. Underwood, the Democratic leader in the House of Representatives, is in line with the policy that he has stood for from the beginning. He proposes to put through the House a series of measures of substantial tariff reduction, in pursuance of the clear conviction that the exactions of the protective system as it now stands are manifestly beyond reason and that the country is entitled to relief without further prolonged delay. It will then be for the Senate to decide whether these measures shall go to the President for approval or not; and, if they do, Mr. Taft will be placed in the position of determining, upon the eve of a Presidential election, whether he will plant himself in opposition to Congress on that issue or let the bills become law. From the standpoint of party policy, this is a clear-cut and effective programme; for if the President opposes, the Democrats will have precisely the issue they want in the campaign, and if he approves, they will enjoy the credit of having actually enacted remedial legislation. Nor is the case less strong from the standpoint of national policy; for the measures contemplated are not of a revolutionary character, but are to be framed in such a way as to reduce the tariff burden without violent shock to interests of national importance.

To the objection against framing bills of this kind without waiting for the reports of the Tariff Board on the various schedules involved, the Board's report on wool, admirable though it is as a piece of investigation, furnishes a most effective answer. Those who may have entertained the naïve expectation that such an investigation would supply a simple and straightforward answer to the question of what the tariff rates on wool and woollens ought to be, must see by this time that nothing of the kind has happened, or can happen. The information that the report supplies is both more abundant and more trustworthy than what was available before, but it leaves the question as wide open as ever. Even if we were to accept as a finality the difference-of-cost principle—which, when it comes to extreme cases, nobody really does accept—it would still be impossible to say what tariff rates ought to be imposed as a consequence of the Board's report. As regards some of the most vital particulars, the Board expressly states that it is impossible authoritatively to determine that difference; and furthermore the difference may be any one of a dozen different things according as comparison is made with this country or that, and according to what section, or what enterprise, in our own country is taken as a basis.

Protests to President Taft against his proposed appointment of Judge Hook to the Supreme Court are based on a single case. In it Judge Hook decided that a certain railway rate of fare was confiscatory, and that therefore the State had no constitutional power to impose it. But this was purely a question of fact. Granting the facts to be as alleged by the court, there was nothing else for the judge to do but declare what the law is as applied to them. The objectors should address themselves to the task of showing that the facts were not correctly presented in the court, rather than to efforts to prove that Judge Hook laid down the law wrongly. Most of his decisions in railway and Trust cases are admitted to have upheld the power of the Government duly to regulate and restrain. Indeed, more doubts about his selection for the Supreme Court have been expressed by corporation lawyers than by radically-minded persons. It would be a fair inference, accordingly, from the objections to Judge Hook telegraphed from Oklahoma and Minnesota, that he is one who holds the scales of justice even. In general, the reception of the news of his probable appointment to our highest court, and the testimonials to his ability and character, are such as to show that he is fitted for the honorable promotion.

"How happy could I be with either," is the sentiment that evidently pervaded the proceedings of the Ohio Progressive League at Columbus on Monday, but, in the case of at least one of the eminent speakers, the discomfort produced by the tantalizing peculiarities of "t'other dear charmer" found plaintive expression. "Col. Roosevelt should declare himself," said Senator Works of California, "both as to his candidacy and as to his stand on the principles that are accepted as progressive. If this movement attempts to centre itself around its principles and not around a candidate it will lessen its chances of success." Coming from a man who, at the same time, declared that, if Roosevelt should declare himself, he would not hesitate to support him, and that Mr. La Follette would do likewise, this criticism of the Colonel has special interest. It must, indeed, be peculiarly trying to have the man who was so long thought of as a volcano in a state of constant eruption adopt the rôle of the Sphinx at the very time that his ardent admirers are most anxious to know where he stands—and where they stand.

"Gov. Harmon is either a standpatter or a progressive. He cannot be both," says Mr. Bryan. Yet that is just what the overwhelming majority of American citizens actually are. Whole-hog standpatters are about as scarce as whole-hog progressives. Most of us are standpatters on some things, and progressives on others. This is true even of distinguished progressive leaders. Gov. Wilson, for example, is a standpatter on the tenure of judges, a progressive on workmen's compensation and kindred subjects, and a mitigated progressive on the initiative and referendum. Mr. Bryan himself, who was once a mighty progressive on government ownership of railways, looks now wonderfully like a standpatter on that subject, seeing that even "ultimate" ownership has apparently ceased to interest him. Gov. Harmon has enunciated, from time to time, "progressive" views on certain questions, but he doubtless had no notion that by doing so he was cutting himself off from the privilege of holding association of any kind with anybody who was not a progressive of the deepest dye.

Nothing gives Senator Lorimer and his friends greater pain than to see some one else appear to violate the spirit of the Illinois primary law. His feel-

BURLINGAME PUBLIC LIBRARY

ings can be imagined, therefore, at the action of the Cook County Republican Committee in adopting, by a vote of 31 to 9, a resolution for a convention to recommend candidates for the spring primary. But apart from this feature, the vote, we should think, must be most satisfying to him. It clearly demonstrates the necessity for the Lorimer-Lincoln League, with its firm adherence to the "only true and historic Republican principles," and its determination to put into office men whom it can trust. Before the meeting of the County Committee, the League had issued a call for a convention of all that mighty army of Illinois Republicans who believe in the fundamental principles of Republicanism as advocated by Abraham Lincoln and as practiced by William Lorimer. Why, then, should the Senator want his candidates' names to appear on the regular ticket when they can as easily be put on the ticket of the League?

The present manœuvring and plotting over the Sherwood Pension bill gives point to the series of articles on pension abuses which Mr. Charles Francis Adams is contributing to the *World's Work*. Himself a Union veteran, Mr. Adams is able to speak with a freedom greater than that accorded to the ordinary writer. That even he will be abused for using such plainness of speech is certain. The pension machine has its vigilant press agents as well as lobbyists, and lets no guilty man escape —the guilty man being, of course, any one who writes or votes against granting the most extreme demands made in the name of the old soldiers. But some one must make a stand, and sooner or later these pension raids upon the Treasury must be beaten off.

One point Mr. Adams drives home with great force is the hugger-mugger condition of our pension legislation as a whole. There is no fixity or certainty in the law. It is in a constant state of flux, and even if something like a general standard could be set up, it would be instantly undermined by the flood of private pension bills which are continually enacted. These special bills have now come to be regarded as an established perquisite of Congressmen; each member is entitled to a given number, irrespective of the merits of the case. The process has grown from small beginnings to portentous results. In the first Congress after the Civil War, only 138 private-pension bills were passed, but now they number thousands annually. In all, Mr. Adams states, more than 32,000 original pensions or increases of pensions have been voted by Congress to persons who could not qualify for them under the general laws. This system is obviously the destruction of all system. So gross have been the evils of "correcting the military record"—often equivalent to condoning desertion—of would-be pensioners, and of the other methods of the private pension bills, that one Senator is prepared to urge an amendment to the Sherwood bill absolutely forbidding the granting hereafter of any special pensions. The howls that this would provoke may easily be imagined.

Tammany gets a peculiarly damaging blow in the defeat of the eleventh-hour attempt to railroad through its pet building code. It was a manœuvre that was suspicious and unblushing from the start, the effort to rush the patched-up code to enactment being made in defiance of propriety and also of the legal requirements, but it was not the nature of the grab that hurts Tammany but the failure to execute it. The Wigwam has no scruples about decency in such matters, but its boast and its strength have been that when it set out to "put it over" it always succeeded. It was this belief in Tammany's invincibility which nerved the long fight for Sheehan as United States Senator last winter, and his final defeat did great injury to Tammany prestige. It may well be argued, however, that its failure with the building code, right here in its own bailiwick and in its own Board of Aldermen, is even more crushing. Incidentally, the break-down of the discreditable attempt to force a code through must be a relief to Mayor Gaynor, as otherwise he would have been compelled to veto it.

Philadelphia has received from its reform City Solicitor a substantial Christmas present in the shape of an involuntary surrender of valuable contracts by the McNichol and Vare concerns that have so long been doing work for the city. The event is hailed as the most decisive victory for honest administration in the city's history. The legality of these contracts was questioned before the Blankenburg Administration came in, but that did not prevent Councils from voting the money to pay for them. The first official act of the new Solicitor, however, was to serve notice on the Controller not to countersign warrants for these payments. This led to a request for an interview from Senator McNichol, which was denied, but he was generously told how he might save something by giving up a good deal, and he assented to the terms. Not only are the contracts to be readvertised, but McNichol is to furnish a bond of $1,000,000 to cover any imperfection that may be found in the work already done. Vare hesitated at first, but soon followed the example of his fellow-boss. The total sum involved in the abandoned contracts is about $750,000.

It is not for us to express an opinion when the Editor and the Contributing Editor of the *Outlook* differ. We can only note with becoming awe the fact that their views do diverge. Each writes in last week's number of the Russian treaty. The Editor knows that Mr. Taft served notice of its abrogation. The Contributing Editor has evidently never heard of the President's having had any part in the business, and thought Congress did it all. He does not mention Mr. Taft by name. The Editor writes that "the country should be grateful to the President for saving it from putting a perfectly needless affront upon a friendly Power." The Contributing Editor avoids personalities, but comes down heavily upon abstractions like "contemptible hypocrisy"; and yet the following passage will doubtless be supposed in some quarters—possibly in the White House—to have a personal application:

> It is neither sincere nor patriotic to make believe to support the principle of arbitration in general, and to try to get the country to commit itself to this principle, and at the same time to take part in, or to connive at, the repudiation by this country of the principle so loudly advocated, the very first moment that it is possible to reduce that principle to practice. In other words, it will put this country into a position both ridiculous and discreditable to pass the proposed general arbitration treaties at the same time that we denounce our general treaty with Russia.

What the probative force may be, for the immediate trial of the beef-packers, of all the evidence given in Chicago about proposed giant mergers which were not effected, we do not undertake

to say. Its financial and moral effect, however, is patent. By it we get a vivid glimpse into the state of mind that was prevalent in those lavish days of 1901 and 1902 when every industry was eagerly combining, and when huge overcapitalization and enormous profits for promoters were making the methods and hopes of Col. Sellers appear reasonable. That period is past, and it is safe to say that in exactly the same form it will never recur in the country. At least some positive achievements can be pointed to as the result of all the agitation and law-making and prosecutions of the last ten years, and one of them is the present impossibility of such plans for making hundreds of millions out of hand as were entertained by the packers in 1902.

Boston and Chicago may ban the skyscraper, but Milwaukee remains a firm friend. Its City Planning Commission does admit that, carried to an extreme point, the high building brings about conditions detrimental to the public welfare, but that point, it holds, has not yet been reached in Milwaukee. The few skyscrapers with which that city is favored make for good rather than evil, and citizens would do much better to be solving some of the other urgent problems confronting them. One is beginning to admire Milwaukee's good sense as evidenced by this report, when the eye lights upon this sentence: "The present law, which in one instance an attempt has been made to enforce, would limit the height of buildings to one and one-half times the width of the street upon which they are to be built." It thus appears that when a skyscraper and the law come into collision in Milwaukee, it is not the skyscraper that goes down. Some innocent or meddling official may make an attempt to enforce the law, but all the recognition it gets from the City Planning Commission is that it "would limit the height of buildings"—if it could. Laws, no more than kings, can stand in the way of a free people.

Pessimism as a philosophy of life must always shatter itself against the elemental fact that the vast majority of men do find it easier to say "yes" than "no," and easier to say "you are right" than "you are wrong." That this is the fact we have the great American institution of the post-card poll to prove. No magazine or newspaper finds the least difficulty in procuring from its readers an overwhelming vote for the man or the principle that the publication in question has closest at heart. The strictest impartiality is observed, of course; the voters are carefully distributed by States and parties and religious denomination and nativity and what not. The questions are framed by highly judicial questioners; the replies are classified by highly-trained classifiers; the spirit of impartial anonymity broods over the whole process. And yet, by some invincible telepathy between editor and subscribers, the subscribers never fail to endorse the man or the principle that the editor, with fine foresight, had long ago hit upon as the one Moses to lead us out of Egypt and the one secret to save this country.

The results of an elaborate experiment in anti-typhoid inoculation, as described by Dr. Vincent, an eminent French epidemologist, are truly remarkable. His work was carried on among the regiments stationed on the Algero-Moroccan frontier. Two hundred and eighty-three men were inoculated either with the Wright serum or one invented by M. Vincent. The first result obtained was to disprove the accepted belief that inoculation for typhoid is followed by a negative phase in which the subjects are more than ordinarily susceptible to infection. Not one case of the kind occurred, and, on the other hand, three cases in an early state of infection at the moment of inoculation developed into only a very mild form of typhoid. The experiment was carried out under the most trying conditions—in a notoriously unhealthful region, among a population ignorant of the rules of cleanliness, with whom the pollution of the water is a usual practice. There developed among 2,632 soldiers of European origin, who were not inoculated, during a period of three months, 171 cases of typhoid fever and 134 cases of febrile intestinal disturbances, a rate of 115 per thousand, with eight deaths. Among 129 men treated with the Wright serum there was a single light case, giving a ratio of 8 per thousand; among 154 men treated with the Vincent serum there were no cases.

At least one peace movement is progressing without a hitch. We refer to the project for celebrating in 1914 the completion of one hundred years of peace between the United States and Great Britain. Plans are forming to make this commemoration notable on both sides of the Atlantic and in the British colonies, not only as marking past good will and peaceful relations on the part of English-speaking peoples, but as a pledge of the future. A preliminary meeting for the appointment of a British Executive Committee in furtherance of the project was held in London not long ago, and the heartiest expressions of approval and adhesion came from all sides. The list of eminent men who are actively interesting themselves in the proposed celebration includes the names of the Prime Minister and the Foreign Secretary, Mr. Balfour and Bonar Law, Lloyd George, Lord Curzon, Field-Marshal Roberts, and a host of distinguished representatives of law, letters, and the Church.

The Czar's Empire seems to be racked with vehement demonstrations of resentment at the abrogation of the treaty of 1832. This is rather odd after the reports sent over from Russia at the time of the debates in Congress, to the effect that the country as a whole was either ignorant of what was going on at Washington or else did not care. The dreadful things we are now threatened with by the ultra-patriotic element in the Duma may be heavily discounted. Such a proposal as the bill absolutely prohibiting the entry of American Jews into Russia, which the Nationalists are said to have introduced, is on the face of it absurd. It would be worse than insulting treatment which the Russian Government protested against in the Sulzer resolution, and our Government, too, has its sensibilities which a foreign Power is bound to take into account. And under the present régime in Russia, the Duma's action is really the Government's action. The majority in the Duma takes its cue from the Imperial Palace, and Nationalist demonstrations have their value only to the extent that the Czar and his Ministers can be conceived as backing them up. Now, many reasons exist why the Czar's Government is not prepared to enter into open antagonism with this country. Patience and diplomatic courtesy on our part, blended with firmness, will yet find a way out of the difficulty.

PLACATORY RADICALS.

Senator La Follette's speeches in Ohio are illustrating a tendency often displayed by radical public men when they seek support for high office. They then minimize their radicalism. Or they will describe it as the only true conservatism. Sometimes they will represent themselves as possibly a little extreme, but will assert that going as far as they do is the only way to head off Socialism or anarchy. In general, however, they take a deprecating or placatory attitude. This kind of gentle roaring has often been heard from Senator La Follette and his friends in recent weeks. In Ohio he points to the tranquil state of affairs in Wisconsin, with capital secure, railways contented, banks safe, and the people enjoying prosperity—all as a result of legislation which has been denounced as radical!

A somewhat similar tone was adopted by Gov. West of Oregon during his recent tour in the Eastern States. His errand was partly to arouse interest in his own commonwealth, and to attract to it investors, so that it was natural to find him, in his public addresses, using conciliatory language. He did not want Easterners to get the idea that Oregon is loaded down with freakish legislation and afflicted with endlessly experimenting radicals. Gov. West admitted that they had in his State made a number of political innovations, but contended that they did not in the least affect public stability or financial soundness. Nowhere was property more secure or a fairer field offered for enterprise. Oregon is growing rapidly, her natural resources are being successfully developed, and there is no reason, her Governor asserted, why an unfounded dread of "the Oregon plan" in the matter of elections and in the use of the initiative and referendum should any longer do harm to the State.

There is no occasion, in the case of either Wisconsin or Oregon, to dispute the facts as alleged. We think it is generally conceded that the political movement which La Follette headed in Wisconsin did a great deal of good, even if it did not wholly and directly bring about all the blessings which are now held up to our admiration. If the whole question were to be debated, we should have to ask whether other and larger causes had not been operative. But our present intention is not so ambitious. We are merely noting a trait in political human nature—the almost invariable disposition of a political radical, when hard put to it for votes or followers, to picture himself as really one of the most steady-going persons alive, and one who, if you will only look at him in the true light, will appear to you as a very bulwark of the social order.

This may seem only amusing, by contrast with the truculent air which the radically-minded statesman assumes on other occasions, but it is in reality a sort of spontaneous tribute to the good sense of the American people. That they are at heart conservative, your radical who is at the same time a skilled politician easily discovers. He may think it wise vehemently to harangue and rouse them at times, but he knows that they do not really favor root-and-branch methods, that they do not long pin their faith to a man who is forever unsettling things, and hence he now and then adopts the rôle, as we see Senator La Follette doing, of one who loves to go slow and go safe and is as far as possible from being an incendiary. Even Mr. Bryan has occasionally sung low in this way, though in his campaigns his oratorical impulse always ran away with him in the end, and, no matter how mildly he might begin, he wound up in a fierce vein.

These diverse and apparently contradictory manifestations of the radical temperament must enter into the final judgment of any man in public life who is thought of as "advanced" or "dangerous." It is a nice question which view of him the people will take. In his placatory and reassuring moods, can he make them forget his firebrand moments? On the other hand, will those who really desire a constant and driving radicalism in our public life, be led to fear that the man they had for a time accepted is insincere and cannot be depended upon, because he stops occasionally to agree with the conservatives and to invite their coöperation? Our recent political history has given us many an example of this twofold peril for the political radical. He will make a first deep impression which, with a multitude of people, nothing which he may afterwards do or say can remove. One did not need the demonstration in the repeated attempts made by Mr. Bryan to gain the confidence of the country, to be sure that he could not overcome the idea of his character early formed. People were on all sides heard to say: "It's of no use for him to talk. You cannot persuade me that the man is not flighty and would not upset everything if he had a chance." This may be unjust, but it shows how difficult it is for a statesman to placate after he has long inflamed and alarmed. And at present, we are bound to add, there seems no likelihood that Senator La Follette will succeed in making the country believe that the garb of a conservative fits him comfortably. No speeches which he can make in Ohio will cause people to forget his speeches in the Senate. His praise of business methods in Wisconsin cannot divert attention from the wild and whirling words he has uttered about the men of his imagination who wickedly bring on needless financial panics.

A YEAR'S RAILWAY LEGISLATION.

From the Railway Business Association comes a bulletin setting forth the history of the legislative year, 1911, from the railway point of view. It is intended to be a "fair and uncolored narrative," and is laid before the public in order that people need not depend upon "chance impressions of the daily news" for their knowledge of the trend of legislation in the several States. If the tone of much of the comment is frankly that of men having a heavy stake in the business, and therefore not unbiassed, the actual record seems nevertheless accurate. Primarily, the Association notes gladly that whereas there were 664 laws affecting railways passed in 1909 by 41 Legislatures, in 1911, with 40 Legislatures sitting, there were but 276, a decrease of no less than 58 per cent. Moreover, there is rejoicing that in these Legislatures a marked tendency towards a "constructive policy affecting railways" was to be noted. But what pleases most is that the States which have been pioneers in regulating the roads "seem to have nearly or quite given up the quest for further restrictions, and are now evincing anxiety to attract capital for the development of transportation and business." Finally, the Association feels that politicians who advocate a "far-sighted policy" towards railways are receiving the support of the several electorates.

Before accepting these statements as indicating that there has been a cessa-

tion of what some railway men are only able to describe as a "war upon capital," it is well to analyze them. What, for instance, is the definition of "far-sighted policy"? Senator La Follette's definition would hardly coincide with that of the Railway Business Association, yet he, too, is certain that a far-sighted policy is going to prevail. Again, the decrease in the volume of legislation may be explained in a variety of ways. Two years ago we were very nearly at the high-water mark of railway regulation, and in many States far-reaching statutes were passed. After such a flood of laws a recession was inevitable. More than that, the decrease in the number of bills in itself might signify little or nothing, even from the railway point of view. For there might be more radical and revolutionary statutes in the 276 of 1911 than in all the 664 of 1909; the character of the legislation might offset its decrease in volume. Thus in New Jersey, in 1911, there were passed but seven laws affecting railways, whereas in 1909 there were eleven. But there is no comparison between the two sets of statutes, for those of 1911 not only constituted an efficient and powerful Public Utilities Commission, but, as the pamphlet before us admits, conferred upon it in addition to the usual powers of a Commission a "number of orlginal provisions," among them the power to compel a railway corporation to build any extension to its lines which the Commission thinks wise.

The idea of a public service commission was bitterly opposed by the railways, notably in New York State. But the record shows no marked diminution—in view of what has already been achieved—of the movement to create or to strengthen commissions. Thus, in addition to what was accomplished under the advice of Gov. Wilson, Indiana has given its Commission a mandatory power over rates instead of a "recommendatory" one, and the new rates, instead of standing for two years, remain in force until the Commission itself alters them. Wisconsin, California, and Minnesota similarly gave to their Commissions absolute power over rates, while Connecticut established a Commission, and in Oregon there was passed an important Public Utilities act. Even the Pennsylvania Legislature, boss-ridden as it is, considered a Public Utilities bill, while the Ohio and Kansas Legislatures extended the jurisdiction of their Commissions over other utilities than railways, as did the New York Legislature in 1910. In Illinois, too, the powers of the Railroad and Warehouse Commission have been enlarged. Plainly, there is nothing in this record to make any one believe that the American public is dissatisfied with the commission idea.

Only in Texas, Georgia, and Delaware were there no railway laws passed in 1911. In twenty-one States, runs the report before us, there were no statutes put on the books "showing hostile manifestations" to railways. Here again a definition would be desirable, for a "hostile manifestation," in the eyes of a railway, might seem to shipper or traveller the best of actions in his behalf. Eight of our commonwealths passed "a great many railway bills" increasing restrictions, yet this list does not include New Jersey or Connecticut. Wisconsin is on this "black-list"; none the less, Senator La Follette and Gov. McGovern testify that public service corporations are wholly out of politics, and that the relations between the public and the railways are much better than ever before. In Alabama, the Association naturally finds a ground for satisfaction in the appeal of the reactionary Gov. O'Neal for the "restoration of conservatism."

Now, unwise legislation there may have been in Alabama and other States, and unwise administration elsewhere. But railway men everywhere must realize by this time that the process of readjusting the relations of railways and governments will go on until the possibility of rate and capitalization abuses is at an end and the railways are out of politics. The most favorable signs of the times are the disappearance of much of the heat and bitterness of the past years. Upon this change in feeling, upon the evidences of coöperation before the Legislatures, among all interested, which was particularly marked in Illinois, the pamphlet before us does well to touch—not, however, because it is to be interpreted as a public desire to follow a new policy, but as proof that the very changes against which the railways protested so vigorously are in daily practice lessening friction and putting an end to strife, besides ending intolerable abuses. In our judgment, this steady progress towards readjustment on a pacific and permanent basis can only be interrupted by blundering on the part of our great railway managers.

PHILANTHROPY AND MURDER.

That the McNamara dynamitings are to be looked upon as acts of war is, very naturally, the view presented by those who regard the existing and historic organization of society as a thing that ought to be overthrown, and look upon a reign of terror as a hopeful means of bringing about that overthrow. That is the view of William D. Haywood, as frankly expressed in his speech at Cooper Union a few days ago. It would be idle to enter upon a discussion of this question unless one were prepared to dig to the bottom of the whole system of economics and ethics upon which civilization has been built up. One remark, however, is worth making in a brief reference to the matter. When it comes to a question of war there is no half-way place. Those who make war upon society must be prepared to suffer the consequences; and on the other hand those who stand for the defence of society, and not for its surrender, must be prepared to inflict, or to sanction the infliction of, the penalties which war decrees. In a civil war there is no room for neutrals.

As to this clear issue between organized society on the one hand and an organized war upon society on the other, there is not much danger of widespread confusion of counsel. But beside this plain and unmistakable view of the McNamara type of violence as a justifiable act of war, there has been put forward a different kind of plea in mitigation, a plea which, in the present condition of popular thinking, is calculated to do a great deal of insidious mischief. There are many good people, especially among the ministers of religion, who, though not only opposed to violence as a means, but also to socialism as an end, seem to think that the McNamara affair offers a favorable opportunity for bringing home to the employing class, and the wealthy classes generally, a needed conviction of sin. In itself, there is perhaps nothing to object to in this view. Any occasion that makes for serious and sober reflection lends itself to the purposes of self-examination and self-reformation. But at a time when a great deal of loose thinking is in the air, touching matters fraught with vital peril, to dull the edge of people's perception in re-

gard to the central issues of society and law is to incur a grave responsibility; and this is precisely what a great deal of the humanitarian and religious talk stirred up by the McNamara case is calculated to do.

Take the address made by Felix Adler two weeks ago last Sunday, as extensively reported in the next morning's newspapers. We select it not as an example of wild or reckless statement, but quite the contrary. Dr. Adler is an eminently careful thinker and speaker; and in this very instance, unlike some moral teachers of less sobriety, he took care to brand the dynamitings as "not war, but murder." Nor do we believe that in his own mind there was any confusion of thought behind the utterance to which we take exception. We are thinking of the effect likely to be produced on the minds of thousands of well-disposed, but not strong-minded, persons when they read such a passage as this:

> The number of lives blotted out in mines by the criminal carelessness of capital is far greater than the number of deaths from the placing of dynamite bombs. The railroads every year are killing people whose lives would be spared by expenditures for safety devices. There are thousands killed and wounded by the wealthy classes as compared with the twenty-one corpses in Los Angeles.
>
> We should not, of course, too fully associate the two sorts of conditions. There is the difference that there is in the latter case the sheer intent to do that which may mean murder, while the other cases are of indifference.

Now the mild warning that we should not "too fully associate the two sorts of conditions" will quite fail to counterbalance the effect of the parallel, with precisely the class of minds that most need to be protected against dangerous sentimental errors. It is true that more lives are blotted out by the criminal carelessness of capital than by the murderous doings of dynamiters, and it is true that we should work with might and main to prevent such sacrifice of human life; but we should not only refrain from "too fully" associating the two classes of things—we should not associate them at all. For that way lies madness, or its social equivalent, anarchy.

Such a distinction can surely require no elaborate demonstration, for intelligent persons. But perhaps the point may be more effectively driven home if we consider the consequences which the logic of the erroneous parallel carries with it. "Capital" is not alone in its criminal carelessness. All mankind is guilty of it, and has been since history began. If for every life the McNamaras have destroyed "capital" has destroyed its thousands, surely for every life "capital" has destroyed the ordinary every-day man has destroyed his tens of thousands. We destroy them by typhoid when we fail to boil our drinking-water; we destroy them by fire when we use common matches instead of safety matches; the mother destroys her child when she permits it to play near the fire, or near a window; we all destroy lives uncounted—not only our own, but those falling under our guardianship—by taking lightly the warnings of science about drinking cups, about dogs, about kissing, about almost every act of human life. We do not assert that these things fall under the same head as "the criminal carelessness of capital"; we do not say that the two things should be "too fully" associated. But if it is a mere question of the number of human lives that might be saved by taking sufficient care, or by incurring expense entirely within the easy reach of the persons responsible, the victims of "capital" are very few in comparison with the victims of every-day human nature. Not upon any such calculation have the standards of mankind, the primary sentiments that lie at the very foundation of civilization, been based. We shall keep on trying to reduce the death rate by sanitary measures and otherwise; we shall keep on trying to force upon "capital" more and more responsibility for the lives and the health of employees; but, if we are not to cut loose from our moorings altogether, we shall keep the thought of these things in quite a different compartment of our minds from that in which we place our detestation of murder, or any of the basic sentiments of civilized society.

THE HAY ARMY BILL.

To the bill making appropriations for the support of the army for the fiscal year ending June 30, 1913, Congressman Hay, Chairman of the House Committee on Military Affairs, has appended a number of proposals for changes in the service which in his opinion will lead to economy and betterment. Some of them have stirred the army to an unusual degree and called out the opposition of the Chief of Staff and the Secretary of War. A truce declared for the holidays, expires early this month; after that the War Department, with the possiblo exception of the Adjutant-General, will endeavor to bring about a modification of some proposals and the abandonment of others.

Primarily, Mr. Hay's programme differs from the Republican legislation of the last thirteen years in that it proposes retrenchments and a decrease in the number of officers. Thus, it would cut the number of major-generals from seven to five and of brigadier-generals from sixteen to twelve, and do away with the brigadier-general who is Chief of Coast Artillery. Naturally, this is enough to make the service unhappy, because it feels that there are, as it is, not enough line generals to offer much opportunity for high rank and pay to ambitious officers. A still more important provision is the consolidation of the Quartermaster's, Subsistence, and Paymaster's Departments into one corps, to be known as the Supply Corps. This highly desirable reform was advocated by Mr. Root when Secretary of War, but without success. It has been urged by every intelligent writer on army affairs for years past in order to end the absurd situation under which three separate bodies of officers perform the duties carried on in the navy by the paymasters alone—with much resultant waste of funds and loss of efficiency. The new Secretary of War urged this change in his annual report. It is most surprising, therefore, to find that the only dissentient is Major-General Wood, the Chief of Staff, who, after advocating the consolidation on May 4, 1911, as a "good bill," one to "promote both efficiency and economy," has now, for reasons best known to himself, decided to oppose the change, ostensibly becauso it means an eventual saving of ninety-nine staff officers and the transferring of some of them to the line, where they may retard promotions.

If there is otherwise a chorus of approval of this proposed reform, the similar plan to consolidate the Adjutants-General and Inspectors-General with the General Staff is calling forth protests on every side. In our opinion, the principlo involved is correct. We have never been able to see why an inspector-general should be a permanent officer or a detailed officer set apart in a special corps. No one maintains that an inspector must have particular military

qualifications; at least none have ever been exacted of appointees to the Inspector-General's Department; and the same is true of the adjutants-general, whose sole duties are clerical. Originally intended to be merely military secretaries to generals, they actually received those new titles a few years ago, only to have the old ones restored. As a result, we have the present anomalous situation at the War Department, which contains two major-generals, the Chief of Staff and the Adjutant-General, who divide between them the real power and are at swords' points. This natural antagonism is now accentuated by the fact that both of them are excessively ambitious men, able enough, and both of them without training in the line of the army, being graduates of the Medical Corps. We do not know what schools of medicine they belong to, but they could not be more opposed if one were an allopath and the other a homœopath. Dr. Ainsworth gives the Congress military opinions one day which Dr. Wood is apt to contradict the next.

In so far, however, as the Hay bill interferes with the present General Staff Corps by adding permanent officers to it, we believe that it should be amended or its language clarified. The *Nation* was among the first to urge, twenty or more years ago, the formation of such a body. It understood then as now the dangers which would result if that body obtained great powers. Hence it insisted on the two-year detail system as the best safeguard against aggrandizement of power. Were the present permanent officers of the Inspector and Adjutant-General's Department all to be retired now, we presume there would be little or no objection to the proposed consolidation. It should seem, therefore, as if the prompt application of the detail system and the return of the permanent staff officers back to the line of the army would be the way out. Indeed, this may be now intended by Mr. Hay; but it is, unfortunately, true that the army now regards this section of the bill as a blow at the detail system in the General Staff and a plan to place the control of the army in the hands of a small group of officers.

As a matter of fact, that is where it rests to-day and has rested for years past, if not always. The War Department officials have never bagged so many favors for themselves or so many line generalcies as within the last four years. If necessary to prevent future undue growth of power in the General Staff, the right to make details to it could be strictly limited so that men should not constantly be re-detailed—a danger now in evidence. Perhaps it would have been better if Mr. Hay had introduced separate bills for each important measure: he also provides for the long-desired army service corps and abolishes the division of militia affairs, against which there are also vigorous protests. But the temptation to attach these measures to the appropriation bill, in view of the Republican Senate and President, was doubtless too hard to resist. In conference and debate the weaknesses of the bill will, we trust, be done away with. But we cannot fail to record our belief that, in tho main, if the General Staff is duly safeguarded, the passage of the bill would mean a wonderful step forward in the modernization of the army and its administration as an efficient branch of the Government, instead of being inefficient, extravagant, and wasteful.

THE CHANGING ORIENT.

Even the sturdiest believer in the gospel that this is a white man's world must feel that the great event of the year which has just closed is not to be looked for in the twelve months' record of Western civilization. Asia has taken the centre of the stage. What is now going on in China is bound to transcend in importance all our tariff revision and Presidential speculations, all of Lloyd George's insurance schemes, all Franco-German bickerings and adjustments. And this will hold not only for the year 1911, but for the half-dozen years that preceded it. Many years from now, when historians appraise the permanent contribution to human progress made by the first decade of the twentieth century, they will very likely find that, in spite of radium, wireless, and the aeroplane, the West has experienced no such profound change as has come during these years over the mind and spirit of the supposedly unchanging East. We are fond of speaking of the heightened consciousness that must animate men living in a great generation. Are we aware to-day that we are the witnesses of, and to a certain degree the participants in, a phase of historical evolution that is worthy to be compared with any era in history? For what we are witnessing to-day is nothing less than the moral transformation of Asia, which means the moral transformation of more than half the human race.

China is to-day the dramatic example. But the forces that have broken out with such violence have manifested themselves elsewhere in the East; with equal power in Turkey and Persia, with greater restraint in India. Just where the rush of events is carrying us one dare not say. But the one great thing that has been accomplished is the shattering of what may be called the Caucaso-centric theory of the universe, the belief in a dual law of civilization which decrees that one portion of the human race is born to move forward and another portion to stand still, one portion to rule and another portion to serve, one portion to whom ideas are living things and another portion to whom they are inaccessible. These have been a bitter half-dozen years for the political philosophers of the West and their generalizations about the peoples of the East. The philosophers had no trouble in proving that Mohammedanism and representative government were impossible; so Turkey worked out a constitutional revolution unhampered by the priests, and Persia established a constitutional government under the leadership of its priests. The philosophers had no difficulty in showing that the caste system in India makes the idea of self-government a delusion. But caste in India is giving way before the newspaper and the college, and the British Government is conceding self-government to India. The philosophers had no trouble in showing that the Oriental mind rejects the idea of liberty and demands to be governed by despots. So China to-day is on the verge of establishing a republic. We must do the philosophers justice: now that things are what they are, they have discovered that the Chinese are at bottom a democratic people, and have always enjoyed a generous measure of self-government.

A great many books have been written by Europeans in the last fifteen years or so about the awakening of China. The long-predicted awakening is now taking place, but after a manner quite disconcerting to the European experts. Almost everywhere it was taken for

granted that China would awaken to the more doubtful blessings of Western civilization—to a great standing army with which she could menace the peace of the world, and to a great navy with which she might set out in search of coaling-stations, spheres of interest, and indemnities. China, in other words, was to become a Power strong enough to send the other Powers about their business, thereby gaining their respect and forbearance. So all the talk was of modern armies, arsenals, navy yards, reformed economics, regular taxes, mines, railways, factories—in short, a huge awakening in which the nobler aspirations of the nation were quite overlooked. That the Chinese people should desire freedom from Manchu misgovernment as well as from foreign aggression; should desire a free press, and free speech, honest administrators, honest judges, schools, libraries; in other words, Progress—this our Western students of the Chinese awakening did not foresee. The regeneration of the Empire was to come through its armies; the regeneration of China through the force of ideas takes them by surprise. They expected that things would begin to happen as soon as China could put a million men into the field. They did not foresee that the great awakening would come when China could count five thousand students educated abroad in the ideas of constitutional government and liberty.

For the time being, no doubt, the ferment of new ideas in China carries its perils. Mere inertia kept the decrepit Empire together, whereas a Chinese Republic threatens civil war, foreign intervention, and possible dismemberment. Our Western blessings come to the Eastern peoples sadly disguised. For while the guileless Oriental is busy putting our Western ideas into practice, the Western Powers are equally busy in taking advantage of the resulting inevitable confusion to prey upon the guileless Oriental. The future of constitutional China feeling its painful way amidst a circle of ravening Powers is by no means a reassuring one. But the future of the Chinese people can never be worse than the present when the Chinese people has demonstrated its ability to recognize and overthrow an unjust system. The future of the East can never be hopeless, once a quietus has been given to the dying traditions concerning Oriental incapacity, Chinese immovability, and Persian what not. Looking beyond the immediate peril besetting the independence and integrity of the Chinese Empire, we find a permanent gain in the slow disappearance of the fetich of race supremacies.

THE MODERN LANGUAGE ASSOCIATION.

URBANA, Ill., December 30.

The twenty-fifth annual meeting of the Association was held at Chicago during the holidays. This was the second union meeting of the Central Division of the Association with the parent organization. It was the guest this year of Northwestern University and the University of Chicago; and the sessions were held alternately in the buildings of the two institutions. The attendance, since this was a union meeting, was considerably larger than it usually is at the annual gathering, nearly three hundred being present. The question of attendance seems to be determined, however, in the mind of the modern-language savant, not so much by the distance as by the direction in which he must travel to reach the place of meeting. In other words, his going is decided, not on a basis of mileage, but of longitude. It appears to be far more difficult for the learned to travel westward than eastward. "What I like about these meetings," said one of those present, "is the fact that I learn such a lot. Why, I've just made a most interesting geographical discovery. I've found that it is one thousand miles from Chicago to New York, and two thousand from New York to Chicago." As a result of this paradox, the attendance of the more eminent scholars, heads of departments in Eastern universities, was noticeably small. If these men realized how much the young Western teachers, many of whom are their former students, would value their presence, and the opportunity to greet them, and to report progress, they would make the necessary sacrifice to attend. As it was, an inquiry for the more prominent Eastern educators at this meeting might have elicited some such response as that which Maria Edgeworth recounts, as having been given by an Irishman to an inquiry whether there were many absentee landlords. The reply was "The country's full of them." Conspicuous as an exception to the number of absentees was, however, Professor Kittredge of Harvard, who gave a delightful "smoke-talk" on Thursday evening at the University Club. His general topic was "Pedants," whom he defined as those who habitually employ a set of technical terms different from our own. Professor Kittredge's paper, with its quasi-scholarly divisions into chapters, sections, and sub-divisions, was itself a burlesque upon pedantry. In the general method of its satire, it recalled De Quincey's famous essay "On Murder Considered as One of the Fine Arts," or perhaps still more Sterne's whimsical burlesque of scientific method with which he now and again diversified the later chapters of "Tristram Shandy."

The serious programme was, as a whole, fairly representative of the modern language scholarship of the country. In the twenty-six papers read at the five sessions, fourteen of the Eastern and Central States were represented, Massachusetts and Texas being the most distant from Chicago. Naturally, the Mississippi Valley was the most fully represented. Illinois led with seven papers; Wisconsin came next with three; Michigan, Ohio, and Maryland followed with two each; and New York, Pennsylvania, Massachusetts, Connecticut, Virginia, West Virginia, Louisiana, Texas, Missouri, and Iowa were each represented by one paper. None of these papers was of distinctly popular interest. The nearest approach was, probably, Prof. F. N. Scott's on "A Simple Phonetic Alphabet." This was a discussion of a set of simple visual symbols, chosen on a phonetic basis, that might theoretically be substituted for the present English alphabet.

At the session Friday morning the following officers were chosen: For president, Prof. C. H. Grandgent of Harvard; for first, second, and third vice-presidents, Prof. Felix Schelling of the University of Pennsylvania, Prof. E. P. Baillot of Northwestern University, and Prof. Philip Allen of the University of Chicago; for secretary, Prof. W. G. Howard of Harvard University; for treasurer, Prof. Karl Young of the University of Wisconsin. Next year's place of meeting for the Central Division was announced as Indianapolis; that for the Eastern Division has not yet been selected, but seems likely to be Philadelphia.

E. C. B.

SOCIETY OF BIBLICAL LITERATURE.

NEW YORK, December 30.

The annual sessions of this society were held in New York on December 28 and 29, at the General Theological Seminary. Three sessions were held on Thursday and one on Friday. The business reports showed a membership of 222 names and increased activity in publications. The president's address, which is the feature of the opening session, was given by Prof. E. D. Burton of the University of Chicago, who discussed in a strikingly illuminating manner "Some Phases of the Synoptic Problem." The main aim of the paper was to counteract the present tendency in New Testament research of assuming a single source as the basis of the Gospels of Matthew and Luke and regarding this source as identical with the sub-

stance of the Gospel according to Mark —admittedly the oldest of the three. Professor Burton's contention was that all three Gospels represent the third generation of traditions and views regarding the Gospel story; that behind, or in addition to, any possible common substratum, we must assume two or three, or possibly even more sources that were at the disposal of Matthew and Luke, at all events. The Synoptic Problem thus hinges on the endeavor to reach back to the sources of the sources and so far as possible to restore these sources. Naturally, a thesis of this character affects the historical value of the material embodied in the Gospels, and in the course of an interesting discussion on this aspect of the problem, Professor Burton maintained that the investigation from the historical point of view must be postponed until the differentiation of the sources and the character of each of these sources had been satisfactorily determined.

There were more New Testament papers than last year, but, as usual, those concerned with Old Testament themes predominated. Easily the most important feature of the sessions was the announcement by Prof. Henri Hyvernat of the Catholic University of Washington, D. C., that J. Pierpont Morgan had acquired above fifty Coptic manuscripts discovered by Arabs about a year and a half ago, amid the ruins of a small monastery in the southwestern part of the Fayum. Mr. Morgan has virtually the entire library of the Coptic monastery in question, which, bearing the name of the Archangel Michael, dates back beyond the ninth century. We thus obtain for the first time an accurate view of the character and extent of such convent libraries in Christian Egypt. The manuscripts are fortunately dated, the oldest, from the year 825 A. D., being actually older than any Coptic manuscript hitherto known. Apart from the intrinsic value of the manuscripts, the full extent of which can only be estimated after their publication, the collection is noteworthy because of the beautiful leather bindings and of the interesting and educative illuminations. Professor Hyvernat closed his account of the manuscripts by the statement that all the other Coptic manuscripts known to exist do not equal one-half the value of this collection, which will make New York the centre of Coptic studies. We are fortunate in having in this country, in Professor Hyvernat, one of the leading Coptic scholars, under whose direction the publication of the manuscripts will be undertaken.

The recent publication, through Professor Sachau, of the Aramaic papyri found at Elephantine lent a special interest to Professor W. R. Arnold's interpretation of one of these documents, shedding further light on the religious conditions in the Jewish colony at Neb (the ancient name of Elephantine) in the fifth century B. C. This document is a letter of Chananyah to the head and to the chief men of the Jewish colony giving directions for the observance of the Passover festival. The directions agree with the laws prescribed in the priestly code, except that, in addition to the prohibition of everything leavened, a beverage is also forbidden which Professor Arnold (on the basis of a suggestion by Professor George F. Moore) identified with the famous Egyptian beer, made of barley and, therefore, subject to fermentation. There is no reference to the Passover sacrifice, and Professor Arnold was disposed to draw therefrom the conclusion that the writer who represents the Palestinian objection against sacrifices outside of the central sanctuary at Jerusalem, was aiming to make the Jews of Elephantine conform to the practice and authority of the priests of Jerusalem. The Elephantine documents thus show us the Jewish Church, with a central absolute authority in Jerusalem in the making.

The contributions of Prof. Paul Haupt of the Johns Hopkins University this year were two papers, one on a denunciation of Edom and a song of triumph over Edom's downfall, embodied in the forty-ninth chapter of Jeremiah. According to Professor Haupt, this composition is a patriotic poem written several hundred years after Jeremiah on the occasion of the campaign of John Hyrcanus against the Edomites in 128 B. C. The poem would thus belong to the Maccabean period, which was a time of great literary activity among the Jews. The other paper furnished another illustration of this activity, for Professor Haupt also claims the famous Ninetieth Psalm, entitled "A Prayer of Moses," for the Maccabean age.

Among the papers on the New Testament, mention should be made of an important communication by Prof. James A. Montgomery of the University of Pennsylvania, on "New Testament Quotations in the Odes of Solomon," in which he pointed out that in parts of the composition regarded by Harnack and Spitta as belonging to the original Jewish sections there were undoubted quotations from the New Testament and also distinct allusions to it, while the quotations from the Old Testament were almost wholly from those books—the Psalms and the theological parts of the Wisdom Literature—that were the favorite sections of the early Christian Church. All this indicates that the Odes are an expression of Christian thought. The name "Odes of Solomon" Professor Montgomery thinks due to their likeness to the mystically interpreted Canticles or "Song of Songs," attributed to Solomon.

At the session on Thursday evening the report of Prof. C. R. Brown, as director of the American School of Archæology at Jerusalem for the past year, was read. It appears that, until the school can obtain the funds required to erect a permanent home on the site acquired in Jerusalem, no systematic excavations can be undertaken, and, indeed, very little work of a really original character carried on. In view of the activity of the English, German, and French in this particular, it is deplorable that the comparatively small sum needed should not be forthcoming. Is this perhaps due to the lack of concentrated and systematic efforts?

Before adjourning the Society elected officers for the ensuing year. Professor Paton was chosen president, and Prof. George A. Barton of Bryn Mawr College vice-president. The Society decided to meet next year in conjunction with the Archæological Institute of America.

Correspondence

COMPETITION AND MONOPOLY.

TO THE EDITOR OF THE NATION:

SIR: In the *North American Review* for December ex-Senator Edmunds has an important article upon the Anti-Trust law, in which it appears that the Judiciary Committee of the Senate which framed the so-called Sherman law had no "fear that some literal construction of the words 'restraint of trade' in the act might lead to the sacrifice of some just, fair, and wholesome business arrangements . . . for if the principle and purpose of the Constitution and act have any foundation at all, there can be no such restraint, because such conduct is not restraining, but is promotive of and beneficial to the public interest."

Accepting the above as a correct statement of the intention of the lawmakers, why are the business men of this country still so uncertain of the meaning of the law that they are afraid to enter into what have been customary methods for restraining destructive competition? In the majority of instances, these arrangements have not been a real restraint upon trade; rather, they have been for the public interest, as well as the salvation of industries. To understand this it is necessary that we should have clear ideas as to what these methods are, and the motives that prompted them.

A certain article of merchandise in general use is made by half a dozen manufacturers, and is being sold at a price which gives a fair profit to the makers. Into this field come a couple of new manufacturers of the same commodity, who believe that in order to introduce their goods quickly they must sell them at a lower price. The old makers meet the price to protect their trade, the new makers go lower still, and this goes on until all the manufacturers are selling at or near to cost, and sometimes even below it. It is not to the public interest to have this continue until several failures have occurred, factories closed, and employees are deprived of work. The

methods that have been generally adopted to put a stop to this cut-throat competition are to call a meeting of the competing manufacturers, and to agree upon an advance in prices. This agreement, under the usual interpretation of the Sherman law, is considered by many to be "in restraint of trade," and if the lawfulness of each separate case has to be settled by the courts it will impose so much hardship and expense as to make the remedy impossible. It has taken twenty years for the Supreme Court of the United States to decide that the construction which Senator Edmunds says was intended by the Judiciary Committee is the proper one, but a doubt still exists as to what business restrictions are reasonable or unreasonable.

From these trade agreements, or combinations, all of the later forms of so-called "Trusts" have come. When I entered business above fifty years ago, they were beginning to be noticeable, and were then regarded as extra-legal, if not illegal under the common law. They were also transitory, and had to be renewed every year or two, whenever the number of competitors were many. To escape from possible illegality and to insure greater permanency, the best legal minds were employed, and various forms of organization were devised, ending in the "holding companies" or complete consolidation. In the meantime, the Government took hold of the problem in the wrong way. Instead of legalizing these combinations and thereby obtaining the power to regulate them, it attempted by means of the Sherman law to restore competition to its old place, as a regulator of policies and prices. Under modern business conditions this is impossible, for reasons which ought to be obvious. If laws had been framed, as suggested by Prof. Henry C. Adams twenty-four years ago, to "raise the ethical level of competition," and also laws to regulate all attempts at monopoly, and to prevent over-capitalization of stock companies, we should not be in our present plight.

The immediate question is "how shall we get out of this plight?" On the 23d of April, 1887, the *Post-Express* of Rochester, N. Y., published an article of mine on "Competition and Monopoly," in which the industrial necessities that led to the formation of trade combinations were set forth, and the obvious advantages of bringing them under the law by recognizing them and regulating them. After a discussion of the advantages of competition and monopoly, both economically and socially, the following conclusion was reached:

> There are two alternatives for the regulation of monopoly; carefully guarded franchises or official commissions, and it is obvious that the first requires something in the nature of the second to see that the privileges granted are not overstepped. These commissions are growing in favor, and seem to be the most efficient means yet devised for preventing the dangers of monopoly. They may be said to be extensions of the judicial system, as their function is to prevent unjust discriminations, but being administrative, rather than judicial, can decide more promptly and establish rules of conduct, which will be quickly understood and easily followed. They leave the ownership of property in private hands, and therefore secure its most efficient and economical administration.

Nearly all the affirmative legislation now proposed is taking the form suggested above. When so many thoughtful men, as indicated by the poll which Mr. Seth Low took among the business men, agree upon a solution, that plan is worthy of trial. The present status is not satisfactory, and the proposal of a few members of the Congress, to enforce rigidly the Sherman law, by amending it so that the "rule of reason" shall not apply, would be destructive. Fortunately, the decision of the Supreme Court, and the explanation which ex-Senator Edmunds has just made as to the intent of the law, will prevent any such legislation.

ROBERT MATHEWS.

Rochester, N. Y., December 26.

PROFESSIONAL ENGLISH.

To the Editor of The Nation:

Sir: Of the printed things that come to a college office, the freest from traces of professional training are the circulars from teachers concerned with English.

The New England colleges have just received "an open letter to teachers of English by (*sic*) the Executive Committee of the New York State Association of Teachers of English." The first sentence contains an *it* with antecedent in the third noun back. A little below appears an *is* that should be *are*. As you turn the first page, in slips the mixed metaphor: "The schools are swamped . . . to the exclusion of a wide range of . . . books covering the whole field . . ."

This particular Committee, in its way of saying things, seems to be loyal to the State Association; at all events, a piece of the Society's own English, introducing the open letter, shows no less plainly how writing has gained freedom since King James's day; for in nine consecutive lines eighteen per cent. of the words are *of's*.

Unless there are unseen reasons why thorough teachers of English, in discussing requirements for college, should enjoy privileges denied to grammar-school boys, could not the instructions of delegates to the approaching National Conference well include a reminder that in the teaching of English, also, precept implies example?

WILLIAM M. WARREN.

Boston University, December 19.

"YEOMAN'S SERVICE."

To the Editor of The Nation:

Sir: One frequently sees in the papers—indeed I am afraid I have seen it in the classical diction of *Nation* editorials—the phrase, "yeoman's service" used to signify eminent or distinguished service. That is not the meaning. It comes from the feudal tenures, under which the yeoman held his land by services regarded as humbler than the knight's service; and hence "yeoman's service" means humble but useful service.

It has attained general currency from its use by Hamlet, where, speaking of his ability to write a clerkly hand (an accomplishment which he had despised as "a baseness," and unworthy of a prince), he says that on this occasion it did him useful, if humble service—"yeoman's service"—in enabling him to forge a commission apparently from the Danish chancery.

Rider, Md., December 28.

THE GUILT OF THE McNAMARAS.

To the Editor of The Nation:

Sir: As one of the least of those who, by written and spoken word, defended the McNamaras before their confession, may I be permitted a comment upon your editorial of December 14?

Apart from all questions of the advisability of the use of force, it seems to me that union labor's quarrel with the McNamaras lies most properly in their betrayal of their fellow-unionists. Whether the accused believed in their methods or regretted them, they should either have admitted their guilt upon being arrested, as the Russian revolutionists do, and before the unionists contributed towards their defence, or else they should not have confessed at all.

You complain, however, of the fact that "on the main question of the violent championing of the McNamaras" the explanations of their erstwhile defenders are "labored and weak," and you say that, had those defenders been "really cautious," they "would not have filled the air with cries about a 'frame-up' and perjured testimony."

Had the McNamara case been the first in which union leaders were accused of murder, yours would be a fair attitude; but this was not the first case. Those defenders of the McNamaras who believed in the innocence of the accused and in the justice of courts, "filled the air with cries of a 'frame-up' and perjured testimony" because they remembered the Butte trial of Moyer and Haywood, who were accused of committing murder by just such means as those attributed to the McNamaras. Yet a jury found that Moyer and Haywood were innocent, and that, therefore, the testimony produced against them—the dynamite "discovered" by Pinkertons and the "confession" of Orchard, the Butte McManigal—must have been frame-up and perjury. With a court's proceedings proving that such things were possible in Montana, why should there have been cause to doubt that they were possible in Indiana and California?

REGINALD WRIGHT KAUFFMAN.

Columbia, Pa., December 22.

Literature

AN ENGLISH VIEW OF ARGENTINA AND CHILI.

Argentine Plains and Andine Glaciers: Life on an Estancia and an Expedition into the Andes. By Walter Larden, M. A., late Lecturer at the Royal Naval Engineering College, Devonport (England), Author of "Recollections of an Old Mountaineer." With a map and ninety-one illustrations. New York: Charles Scribner's Sons. $3.75 net.

This book is agreeably distinguished from most of the numerous works that have recently appeared relating to South America by a sort of simplicity and directness which put us in a closer and more definite touch with the country described than do the more elaborate

treatises which attempt to be encyclopædic. The author writes only about the things he has actually seen or done. He describes one particular estancia (farm or ranch) in Argentina, which is the property of his brother; tells us what the typical farmhouse is like, what are the crops, and the live stock, and the workpeople, and the sort of life that is led by them and by the owner of the property. He makes us feel in what kind of way it is that the country has grown and is growing; and without laying himself out for artistic treatment, he succeeds in presenting a picture of the vast sunburnt, bare, dusty, or muddy plain, stretching out to infinity in every direction, which is producing larger and larger crops and enriching the cultivators so rapidly in good years that they can stand being almost ruined in the years when the locusts descend upon them. He gives a description which is graphic because it enters into the small, everyday details of the work done on an estancia and the people who do it. These are mostly Italian immigrants, divided into two classes. Those from the north are for the most part steady and industrious workers, able to live on little and do without comforts. They are called *par excellence* "Italianos." The South Italians, such as Calabrians and Sicilians, incline to stay in the towns and live by odd jobs or common trades there, and they bear, as in this country, not so good a character for honesty or order. The labor of these Italians of the former class has done more than any other, says our author, to bring the land into good condition; once it has been improved, the landowner can get on well enough with the native peon, and let his Italians move further to new lands to be reclaimed or take up, as they sometimes do, a small farm on lease.

Of the native peon Mr. Larden takes a hopeful view. Forty years ago he was a Gaucho, something like a Texas cowboy, only rougher and more ignorant, and with a touch of native Indian blood. How much of this blood has entered into the race, Mr. Larden does not seem to know. Probably not very much, for there were few aborigines in the Pampas; they occasionally attacked the early settlers, but were pretty easily driven off, and gave on the whole very little trouble—hardly as much as the North American Indians did in Virginia and the Carolinas in the seventeenth century. It is only in the far north of modern Argentina, and particularly in the plains of the Gran Chaco that an aboriginal population now remains. To-day the "old-style" Gaucho, be he pure Spaniard or of mixed blood, has almost disappeared, except in the wilder outlying parts of the country. His children have subsided into the peon, who is still rather rough, very ignorant, a good rider, and expert (in the pastoral districts) in the use of the lasso, but otherwise what would be called an ordinary agricultural laborer. The illustrations, taken from the author's own photographs, are quite good, and give a lively impression of Argentine rural life.

The same directness and careful observation of details which make our author's account of farm matters valuable are seen also in his description of the animal life of the country. Most of the quadrupeds and birds of the central Pampa are noticed, with a particularly full study of the locusts, which are the chief plague of the farmer here, as in South Africa and parts of Western Asia. The only chance of diminishing their ravages is by killing as many as possible in pits dug in the line of their march when they are still moving forward on foot. Once they begin to fly, the case is hopeless. Mr. Larden's history of a locust invasion, as seen at an estancia in the State of Santa Fé, is calculated to appall any one thinking of buying a farm in the country. Nevertheless, the farmers thrive.

About a third of the book is devoted to a narrative of an excursion into the Argentine Andes above Mendoza, and into the valleys which lead up to the great summits of Aconcagua, 23,000 feet high, loftiest of all South American mountains, and Tupungato, which is only a thousand feet lower. Both are extinct volcanoes, and both have been ascended by an English climber, Mr. Vines, accompanied by a Swiss guide. The scenery seems to be grand, for these peaks rise fifteen thousand feet above the level of the main valley which lies between them, but bare and dreary, the country being dry and sterile, without trees or shrubs, or even grass. These valleys, and indeed all the eastern spurs and valleys of the Andes in this region, are uninhabited, there being no possibility of cultivating the arid soil, although when the rivers get out into the plains they are used for irrigation and the soil is made to yield excellent crops. From this wild region he crossed the Uspallata Pass, the tunnel which now pierces the Andes at this point not having been completed till 1910, and spent a few days in Chili, visiting the cities of Santiago and Valparaiso. He was struck, as most travellers are, by the difference between the social and political character of two countries lying side by side and inhabited by people mainly of the same Spanish race, and as his reflections are short and to the point, they may be quoted:

> After the vast formless plains of Argentina, Chili seemed to me attractive through possessing form and character. You might be dropped almost anywhere in the Central Pampas of Argentina, and it would look all the same; it would be like being dropped anywhere at sea. But in Chili each part had its individuality, and I felt that while you might very easily acquire quite a passionate love for life in the Pampas, in Chili you would rather get a love for the country itself as your home and adopted fatherland. I think patriotism would thrive more in Chili than in Argentina, just as love for a person is more easily entertained than love for a formless spirit. Then the population in Chili seemed more homogeneous, more of a nation, while in Argentina, which seemed to me to be rather a vast region for "getting on in" than a country in the sense that France is a country, the population appeared to be as yet not a nation but a mixture of unblended nationalities (p. 276).

In Argentina that which strikes the author most, as it strikes pretty nearly all reflective travellers whose minds are not fixed upon "industrial development," is the preoccupation of everybody with material things and material progress. There is, except in a few small cultivated circles in Buenos Ayres and Cordoba, very little interest in intellectual pursuits, or in any form of literature and science. These may come, but they have not yet arrived. Even politics, which furnish occupation to plenty of Spanish Argentinos—for the foreigners of some social position, such as the English and German merchants and owners of estancias, as well as the humbler Italian and Basque immigrants have nothing to do with them—even politics are of much less interest to the average Argentine than is the weather, for it is upon rain that the prosperity of the country for the next six months depends.

CURRENT FICTION.

The Blood of the Arena. By Vicente Blasco Ibáñez. Translated by Frances Douglas. Chicago: A. C. McClurg & Co.

The bull-fight has frequently been described by romanticists in quest of local color, and by humanitarians disgusted with its brutalities; but the picture has always been one-sided and incomplete. It has remained for the Valencian novelist to depict Spain's national spectacle as it actually is, with all its glamour of romance and all its savagery as well. Blasco Ibáñez is, perhaps, the most vigorous present exponent of Zola's moribund naturalistic school. In "The Blood of the Arena" (an unhappy rendering of the original title, "Sangre y Arena"), he has carefully followed Zola's formula. He has not merely described a few corridas, but has made a minute study of the bull-fight from every conceivable point of view. The rearing of bulls for the arena, the training of matadors, the daily life of the thousand and one hangers-on of the ring, all this and much more claims his attention. He has Zola's skill in describing a crowd, and the French novelist's ability to make literary use of a mass of carefully gathered data.

The early life of the hero, Gallardo, is said to be a faithful biography of An-

tonio Fuentes, the greatest of living matadors. An untutored son of the people, he soon develops a passion for the sport, distinguishes himself at amateur bull-fights, and finally, at the expense of numerous wounds, acquires that marvellous skill which makes him first in his profession. He is now the idol of the populace. His income is that of a grandee; but he spends it as freely as it comes. Finally, the inevitable happens. He is gored by a bull, and henceforth loses much of his former audacity and skill. The fickle populace turns upon him. To retrieve his reputation, he takes greater and greater risks, until at last he meets death on the bull's horns. In describing Gallardo's end, the author has accurately portrayed the death of Pepete, which occurred under precisely similar circumstances many years ago in the plaza of Madrid. The book is a terrible arraignment of the national sport, but, unlike the ordinary novel with a purpose, the author's private opinions are not obtruded upon the reader. Facts speak for themselves. It is not until the last sentence of all that Blasco Ibáñez gives the reader a clue to his own attitude: he has advanced in art since writing "The Cathedral." By reserving the worst horrors for the last chapter, he clearly intends that the reader shall close the book with a feeling of loathing and disgust; but the author's method is so subtle that, in spite of his well-known advanced views, few foreign reviewers have recognized that the work is an attack upon the bull-fight. The translator of the present edition has done her difficult task well. It is to be regretted that there has been such an evident appeal to lovers of sensation. The gaudy binding and the crude, colored illustrations will cause many readers who are influenced by external appearances to shun a work which merits serious attention.

The Nine-tenths. By James Oppenheim. New York: Harper & Bros.

Many a short story of Mr. Oppenheim's is a pithier contribution to the social question than is this novel. Apparently, he has yielded to a journalistic impulse to "write up" two signal episodes in New York's industrial history while they are yet fresh in the memory. Joe Blaine is a good "average" American citizen, prosperous owner of a large printing establishment. Through negligence—partly venal and partly indulgent—a fire originates in Joe's printery and spreads to the upper stories of the loft building. There is but one elevator, and that rickety. The fire escape is broken; sixty girls employed in a hat factory above the printery are burned or jump to their death. In horror and remorse Joe realizes the crime of being an "average American. . . . In his rush for success he had made property his treasure instead of human beings." While the impulse to make reparation is working in him, he attends the mass-meeting at which the public sentiment roused by the fire found voice, and here it is that his eyes are opened to the existence of a "monstrous social cleavage," and a "strong working-class movement." Wishing to ally himself with the latter, he reads extensively to inform himself in social science, until he is fed full of hopeful ideas and fired with desire "to go and live among the toilers, get to know them, and be the means of arousing and training them." West Tenth Street is chosen for the scene of his essay, and a workingman's paper is to be his instrument of influence. The success of the sheet immediately brings him into touch with the forces of organized labor. Before he knows it, he is in the thick of hostilities, engineering a shirtwaist-makers' strike. The protracted struggle exhausts his enthusiasm. His faith in this weapon wanes as he counts the cost of victory to the workers themselves and the undeserved cruelties it has inflicted upon both sides. He is even perplexed to know where justice lies. "Facts in a fierce stampede [had] engulfed and swept him along and put all his dreams to a galloping test, a test wherein he had even forgotten his dreams. *He had gone the way of all reformers*, first the explosive arousal, then the theory, then the test."

Yet after Joe has recuperated and married the Myra who has attended with interest the working out of his experiment, he views the "human muddle," if with less assurance, still with no less hope. "Life! Life itself—not our interpretation—is the great working force!"

Mr. Oppenheim can hardly help being interesting when he writes about New York. Among the host of writers whom she has inspired, the "great world city" has no lover like him, with an eye for her pageants and a mind for their meanings. But in this work he has neglected his fine talent for dramatic construction. Pursuing his proof, he has lost his story among a host of illustrative incident. To introduce some of these he has even abandoned the vantage ground of thorough information and condescended to employ a crude impressionalism most unlike his usual method of attack.

The Haunted Photograph. By Ruth McEnery Stuart. New York: The Century Co.

In telling her stories about the down South darky, Mrs. Stuart has a "way" of her own—a pleasant, unaffected way, that shows quite old-fashioned beside the smart conciseness displayed by most of the fabricators of current fiction. Those of us who are fortunate enough not to have discarded our taste for—let us say Washington Irving—find her altogether delightful. Of this *genre* she can never give us enough. In her judgment of negro character and her interpretation of the negro's emotional problems, there survives a habit of feeling that used to be called Southern, but which is nowadays hard to find, North or South—the merciful tenderheartedness of a dominant towards a dependent race; it widely mitigated in practice the essential evil of slavery, and to many easily satisfied minds constituted a sufficient justification of the institution. In "A Case in Diplomacy," one of the stories of the present volume, this combination of delicacy and leniency is personified, as it were, in the "Marse Horace," who in the capacity of amanuensis exerts himself to accelerate the course of true love amid real difficulties, and to steer it through the more dangerous shallows of a too serene engagement. Joshua, the plantation-hand, is truly a primitive lover, but in his reliance on borrowed eloquence and his impatient misery in a too placid conquest—"*For Gord's sake, git me disingaged, marster*, . . . I done los' my taste for 'er, dat's all"—is he not human under his dark skin? "Whence and Whither" deals gently with some of the disastrous propensities of diluted African blood. It is not often that Mrs. Stuart dwells upon such latent barbarity as that involved in the tangled relationships of "Sassie" Salisbury the mulatto Delilah, Six-Toe Steve, and Choctaw Charley.

The fields to which she invites us in the other two stories of this volume (which, notwithstanding its diminutive bulk, covers Mrs. Stuart's range very completely) are less congenial to her talent. She extends her sympathetic understanding to the gossips of an Arkansas country town and to circles of polite leisure in New York, but she does not infallibly make her readers at home in either.

SHELLEY.

Shelley and his Friends in Italy. By Helen Rossetti Angeli. New York: Brentano's. $3 net.

The Romantic Life of Shelley and the Sequel. By Francis Gribble. New York: G. P. Putnam's Sons. $3.75 net.

The reader who has travelled through the various instalments of the Shelley letters and the lives by Hogg, Peacock, Trelawny, Medwin, Middleton, Dowden, Lady Shelley, Jeaffreson, Clutton-Brock, etc., may be pardoned if, before entering upon these two bulky volumes, he pauses to inquire whether he is not merely retracing his steps. In general, he may be confidently assured that such is the case. Hogg retains his place as the authority on Shelley's life at Oxford. Of all that cloud of witnesses who have offered discordant testimony regarding Harriet Westbrook, Peacock —though less frequently called to the

stand than the more prejudiced spectators—remains in many respects the best informed on both sides of the question, the most detached, cool, critical, and trustworthy. For the last months in Italy Trelawny's vivid and savory memoir is worth whole libraries by pious pilgrims. Finally, with all his passionate special pleading, Professor Dowden left few indeed of the vital biographical questions unsettled that are not still in dispute to-day.

Miss Angeli gives her entire volume of some 325 pages to a period in Shelley's life covered by Mr. Gribble in about 100 pages. Certainly to discreet lovers of Shelley she will seem to have chosen the better half of the story in turning away from his acrid and rasping boyhood to his tragically chastened twenties. For before his final departure from England he is, despite his appearance of spontaneous activity, only a notably tractable puppet of the Time-Spirit—a little *monstrum horrendum* begotten upon eighteenth-century rationalism by revolutionary enthusiasm. But when the stars of Hume and Paine have waned, and the great prophet Godwin has dwindled into a leech, when Keats, and Dante, and Æschylus have risen in his firmament, when, revolted by the hardness and immobility of objective reality, he has retreated into the pure world of ideas without tangible consequences—then first the unworldly, personal charm of the man finds scope for expansion, and his perilous will spends itself serenely in the creation of "beautiful moral idealisms."

Miss Angeli's principal qualification for dealing with this period is her profound respect for everything touched by the hem of Shelley's garment—a respect which leads to considerable inorganic extension of her narrative. Further, though her book is by no means a biography with a "message," it contains, when it verges on criticism, faded fragments of the old anarchy. Her peculiarly feminine reverence for the "higher" lawlessness and her abjectness in the presence of genius may be illustrated by two characteristic utterances. Speaking of the suffering occasioned to Mary by Shelley's "platonics," she declares that "there is, in general, little sympathy for the wives of geniuses, and we would not willingly lose a verse or a single line to save their feelings, did their lives depend on it. It is their part to endure." That is a substantial contribution to the Shelley question, which only a woman could have made. There we touch upon the true Eternal-Feminine—the ultimate rocky remorselessness towards other members of the sex, which seems to be latent in every woman's breast. This should assist the masculine intellect to understand Mary. The other passage is in a characterization of Trelawny—"one of those rare men whose innate excellence of heart and natural store of chivalry and honor find the compulsory restrictions of civilized and family life intolerably galling." To a devout disciple of Shelley that sentence doubtless conveys some high transcendent truth. *Excellence of heart . . . chivalry and honor. . . . find restrictions of civilized and family life intolerably galling.* To a plain man of sense—well, the reviewer hopes, in some ecstatic state such as Porphyry says his master Plotinus four times enjoyed, to be able to see these incompatibles meet in the kiss of peace.

Mr. Gribble, we are happy to say, shakes our dispositions with no such thoughts beyond the reaches of our souls; there is nothing mystical about Mr. Gribble. It was, of course, inevitable that he should write this book, for he is our first authority on the matters treated therein. For Mr. Gribble, needless to say, writing the life of Shelley means discussing fully his relations with women. His discussion, as we should expect, is free from that roseate cloud of sentiment which obscures the judgment of so many of his predecessors. Piercing through the veil of illusion, he looks upon Shelley and Harriet Grove, Harriet Westbrook, Mary Godwin, Jane Clairmont, Emilia Viviani, and Jane Williams with the clear, dispassionate eye of the clubman. Furthermore, he writes with a purpose; he feels himself called upon to thresh this matter out and let us see things as they really were. Shelley himself presents no difficulties. Shelley is only the eternally polygamous male. We are all like that. The theme is inviting. But that is not the unifying principle of Mr. Gribble's book. His main thesis is that Harriet Westbrook was a barmaid. Now, to be sure, Harriet Westbrook was not a barmaid. She was the daughter of a well-to-do, retired hotel-keeper, who sent her to a private school, where she became the intimate associate of Sir Timothy Shelley's daughter before she ever met Percy; according to all accounts, she was graceful, neat, and delicately beautiful; according to Peacock, who was a sensible friend to both Harriet and Shelley, she was well-educated, wrote letters well, was vivacious and cheerful, had good manners, reflected credit upon Shelley in society, was agreeable to his whims in solitude, and "her conduct as a wife was as pure, as true, as absolutely faultless as that of any who for such conduct was held most in honor." But all that is neither here nor there, so far as Mr. Gribble is concerned. He is bent on out-Hogging Hogg, who failed in his attempt to seduce Harriet, and, of course, always spoke of her with great reverence afterward. Mr. Gribble does not find Peacock's memoir very useful. Furthermore, it is essential to the artistic lights and shadows of his book, to its fine character contrasts, to its general rush and go, that Harriet should be a barmaid. This is the way the candid Mr. Gribble begins the theme:

> A man who is born in a stable is, notoriously not a horse; a girl who is born behind a bar is not necessarily a barmaid. But she is apt to look like a barmaid when inspected, from a distance, through the eye-glasses and lorgnettes of the heads of county families; and she is also apt, even though her father has made a competence and retired, to think, feel, and proceed after the fashion of a barmaid in the conduct of the affairs of the heart.—And one knows what that means. Barmaids are, etc., etc.

After this frank exordium on the nature of barmaids, Mr. Gribble lays aside all reservations, and, whenever Harriet appears, quite simply reminds us that she is a barmaid. When Shelley and Harriet were on their honeymoon in Edinburgh, it will be remembered that their landlord demanded that Shelley should treat him and his friends to supper (this was the landlord who proposed in the middle of the night that the guests should wash the bride with whiskey). "Necessity compelling," says Mr. Gribble, "Shelley agreed to this; and Harriet does not seem to have raised any objection. As the daughter of a licensed victualler, she may even have been glad to welcome another licensed victualler as a wedding guest, feeling that his presence would insure geniality." Referring in another connection to the pert Miss Hitchener, he points out that as a school-teacher she was, of course, "less temerarious in such matters than a barmaid." Commenting on Hogg's attempt to seduce Harriet after her marriage, Mr. Gribble explains that he probably meant no harm, but, being left alone with the daughter of a licensed victualler, was obliged to prevent the tedium of hearing her read Robertson's historical works aloud [literary barmaid, as it were] by paying her "such exaggerated compliments as men pay to pretty barmaids." In order to give the last touch of truth to this conception of Shelley's wife, Mr. Gribble, in the dearth of documents, invents outright the imaginary scene of Hogg's explanation to Shelley of how it all happened:

> Shelley! Shelley! My dear Shelley! What an amazing accusation! . . . Harriet complained to you that I chucked her under the chin? Well I never—Do I deny it? you ask. . . . I'd no idea she minded. She didn't seem to at the time, etc.

The honest Hogg's embarrassment here is due, of course, as Mr. Gribble conceives it, solely to the awkwardness of having to explain to Shelley that he has only treated Harriet as he thought all barmaids liked to be treated. But enough of Mr. Gribble and the barmaids! Enough of the Gribbelian school of posthumous slander. Obviously, there is no decency to be observed with the dead. When we return to the

BURLINGAME PUBLIC LIB

dust, we forfeit our last titles to truth, and must be prepared to surrender our memories to cold-blooded fabricators of infamy. Some little suffering Harriet underwent in her lifetime from the cloud-born cruelty of her ineffectual angel—a broken heart, the bitter waters of death; but now in the fulness of time let us hope she has expiated her sins in Mr. Gribble's wanton, open-eyed, long premeditated smirching.

The Revolutionary War and the Military Policy of the United States. By Francis Vinton Greene. New York: Charles Scribner's Sons. $2.50 net.

This volume, consisting of two disconnected parts, is the first of three intended to "present the essential facts in our military history, and to make such comments upon them as may be useful for the future and interesting for the present." The work is really addressed to the professional soldier, for if our army is to be efficient, "it must study its past history, and draw from it the lessons which are applicable to the future." If, with the clear declaration of purpose thus made by the author in his preface, we couple the inviting title, we have surely a right to expect not so much an account of the campaigns, battles, and skirmishes whose sum constitutes the Revolutionary War, as an attempt to show how the character of that war was conditioned by the nature of the rebel government, and by the circumstances and accidents of the rebel colonists. But these expectations are soon dispelled, for it becomes abundantly clear that what we are reading is after all nothing but the usual narrative. That it is clear and good, part of it, indeed, the description of Greene's Southern Campaign, really excellent, is from our immediate point of view wholly immaterial. Something more is needed in the fulfilment of the author's purpose. We should have liked some information in respect of Washington's dealings with the Congress, some idea of the control of the Congress over the army, and of the defects of the constituted government. Yet they are merely touched upon here and there according to the necessities of the moment.

Equally great is our disappointment that a strictly military subject, the organization of the Revolutionary Army, should, so far as formal treatment is concerned, be wholly ignored. The subject holds the author's attention through barely three pages in the part devoted to Military Policy (pp. 288-291). Of the great heads of supply, administration, equipment, armament, there is not a hint. Knox's services in these matters are not even mentioned. And yet Knox was to Washington, and more, what Lariboisière was to Napoleon. He was one of the three really great soldiers developed by the Revolution, and without his services it is conceivable that even Washington might have failed.

It is easy to say that the author has written a good and clear narrative of the "essential facts" of the Revolutionary War. Never departing from the axis of events, his account should prove more than acceptable to the general reader. Little or no detail is given, and, with the following exception, no original views are set forth. As every one knows, the War of Independence hung fire, so to say, on the British side. Howe more than once had an opportunity either to end the war by a decisive stroke, or, by pressing Washington, to make further effort on the American side impossible. He failed to do either, and whatever the reasons assigned, treachery according to some, metropolitan politics according to others, the matter remains to this day a mystery to all but Gen. Greene. His explanation is simple: at Bunker Hill, Howe completely lost his nerve, and never recovered from the mental paralysis there received. Clinton, too, apparently, on one occasion at least fell under some sort of spell; our author does not hesitate to make him "attribute to Washington almost supernatural powers," as the only explanation of his (Clinton's) concern for the safety of New York in 1777. In the absence of evidence, we are compelled to leave these explanations where they properly belong, in the domain of speculative opinion.

For two things especially, we are indebted to Gen. Greene; he has given a correct measure of the help afforded us by France, and he puts Washington in a true light, as one of the great commanders of all time. We also heartily commend part ii, treating of the Military Policy of the United States, to the attention of those who regard our regular army as not only a menace to our liberties, but as a useless thing in itself. Though it has no real connection with the preceding chapters on the Revolution, it contains much that our people ought to know. And similarly of the appendix by Lieut.-Col. J. R. Kean, of our medical staff; this paper, dealing with the success of our surgeons in stamping out yellow fever in Cuba, is a still greater stranger than part ii. Its presence is due to the generous desire of Gen. Greene to publish to the world the great deeds of our regular service in all branches of its endeavors.

We have to note a few errors. Between pp. 52 and 54, some 6,500 men would seem to have slipped out of Gen. Washington's army. On p. 267, d'Estaing's *fleet* is reported as "engaging in a disastrous repulse" at Savannah. On p. 322, footnote 2, our field artillery is mentioned as having been transferred to the *line* of the army by the Act of January 25, 1907. Of misprints, there are few: some proper names have suffered, Hackensac (p. 60), Verlpanck (p. 65), Abercrombey (p. 102), Popelopen (p. 121), Balcarras (p. 124), Mechlenberg County (p. 224), Yager's brigade on p. 238, as though Yager were a person; Dam for Dan, in margin, p. 232. Ramsour's Mill or Mills of the maps appears as Mill in the text, and Ramsay's Mill, as Mill or Mills, the Hillsboro of the one being uniformly the Hillsborough of the other. The Monmouth map shows no morasses, though this makes no great difference, as one of these morasses is called alternatively ravine in the text, and the map shows ravines. Hale's place of execution is marked in the map opposite p 46 as near Sixty-sixth Street, in that opposite p. 52, as near Forty-fifth Street. The index, made by the publishers, carries mainly proper names, personal and place; of these the number might have been increased with profit.

Notes

Announcement is made that an *English Journal* has been founded by the English teachers of America. It will be issued January 15, and each month thereafter, except July and August, from the University of Chicago Press. The editor is James Fleming Hosic of the Chicago Teachers College.

"Tante," Anne Douglas Sedgwick's new novel, will be published by the Century Company on January 20.

Books promised by the Scribners this month include L. Allen Harker's novel, "Mr. Wycherly's Wards," and a new volume in the Original Narrative of Early American History series, entitled "Narratives of Early Pennsylvania, Delaware, and West Jersey, 1630-1708," edited by Dr. Albert Cook Myers.

In a letter to the London *Times*, Edmund Gosse reports that the members of the Nobel Prize Committee of England, of whom he was one, have unanimously decided to lay down their functions of nominating candidates for the Nobel Foundation, which they took up ten years ago. The committee had been appointed, with the knowledge of the Swedish Academy, by the Society of Authors, and now dissolves because its members learn that the Swedish Academy has adopted another system to determine expert opinion in England.

The Baker & Taylor Co. are issuing this week "Corpus Christi Pageants," by Prof. Lyle M. Spencer; "Verse and Worse," by Jack Hazzard, and "Child's Guide to the Bible," by the Rev. George Hodges.

The Société des Gens de Lettres of France announces that it has appointed Frank Allen, 84 Mercer Avenue, Plainfield, N. J., its representative in the United States, and begs members and associates of the Society who have copyrighted French books in this country since 1909, to send Mr. Allen a list and copies of these works.

The third group of volumes in the Home University Library of Modern Knowledge will be issued early in January by Henry Holt & Co. This group of eleven volumes will contain Prof. F. L. Paxson's "The Civil

War," which is the first of a five-volume series on American history within the larger series. Other volumes for issue in January are "The Dawn of History," by Prof. J. O. Myres; "The Papacy and Modern Times," by Rev. William Barry; "A History of Our Time" (1885-1911), by C. P. Gooch; "The Civilization of China," by Prof. H. A. Giles; "Modern English Literature," by G. H. Mair; "The Evolution of Industry," by Prof. D. H. MacGregor, and "Elements of English Law," by Prof. W. M. Geldart.

As a matter of record we mention here Emily S. Hamblen's "Friedrich Nietzsche and His New Gospel" (Badger). The book is of little value except as another indication of the swelling tide of interest, often unintelligent, in Nietzsche's philosophy.

"Little Dorrit," in two volumes, and "Reprinted Pieces," in one volume, bring Scribners' excellent Centenary Edition of Dickens measurably nearer to completion.

The "Almanach de Gotha" for 1912 comes to us, as usual, from Lemcke & Buechner. This is the one hundred and forty-ninth year of its appearance, and it shows no signs of exhaustion. The portraits are the King and Queen of Spain, Luitpold of Bavaria, and Stolypine.

Henry Frowde has done the general reader as well as the scholar a service by issuing in a convenient little volume Bishop Hurd's "Letters on Chivalry and Romance, with the Third Elizabethan Dialogue," edited with Introduction by Edith J. Morley. The text of the "Letters" is a reprint of the first edition which came out in 1762, and has been collated with the last edition which appeared in Hurd's lifetime —that of 1788. The Dialogue has been reprinted from an edition likewise of 1788. In the introduction are expositions of Hurd's writings and the latter's own outline of his career, entitled, "Some Occurrences in My Life."

"Hauff's Specific Relation to Scott" is the title of a paper by Garrett W. Thompson in the Publications of the Modern Language Association. The discussion centres upon Hauff's novel, "Lichtenstein." It is asserted that the love interest of the story, to which its historical and fictitious aspects are subordinated, shows no influence of Scott; but that the types of character employed, the disposal of the incidents, and the progress of the action are unmistakably after Scott's manner. "The Abbott," it appears, "is the most obvious single model of 'Lichtenstein.'" The writer makes much of his contention that from the original purpose of writing an historical romance, "Hauff was swerved by the realism of his own love experience."

In the same journal Eunice R. Goddard argues certain "Psychological Reasons for Lessing's Attitude toward Descriptive Poetry." Lessing in "Laokoon" declares that detailed description of bodies in space is unpoetical, and by reference to the means which poetry should employ and to the practice of Homer he insists that progressive actions are the peculiar subject of poetry. The apparent exception found in Homer's elaborate picture of Alcinous's palace and gardens, he explains away by supposing that its author intended to convey not a detailed image, but an idea of immensity. Consulting the table of the psychologists, the writer of the present paper finds that there are three recognized types of imagination (1) visual, which is very common; (2) auditory, which is confined mainly to musicians and actors; (3) motor, sometimes called verbal-motor. "In this type there are usually two factors present: (1) the images of movements; (2) the images of words. The second factor is dependent on the first, for it consists in a suppressed speech, that is, in suppressed muscle movements in the head or in the throat." From several passages in Lessing's writings she concludes that his imagination was motor and that this fact explains his narrowly prescribed limits of poetry.

The "real" Stevenson, looking out from an unmistakably Scotch face, with shrewd, yet brooding, eye, uncropt locks straggling over a prominent ear, the narrow chest, the beloved dark flannel shirt—an unpublished portrait: this is the only novel feature in Isobel Strong's dainty, blue-bound, 87-page book, "Robert Louis Stevenson" (Scribner, 50 cents net). By way of contrast, the text presents us once again the somewhat idealized Stevenson of popular legend—the frail, imaginative child, the high-spirited youth, the knight errant of letters, the singer of requiems, and maker of prayers, the myth-like white chieftain of a South Pacific isle. It is all done prettily enough, but there is hardly a line that a dozen men who never took down Highland romances from the lips of Tusitala could not have written as well. Most of us have the tale by heart—

> Where is the man that never yet did hear
> Of fair Penelope, Ulysses' queen?

If any such there be, let him buy Mrs. Strong's quintessential narrative, and join the majority.

The Society of Colonial Wars of Michigan has made a new departure from the usual course of confining the activities of the organization to a banquet with eloquent speakers, in publishing the "Journal of J. L. of Quebec, Merchant." The enterprise is due to the initiative of Clarence M. Burton of Detroit, who obtained a transcript of the journal in the British Museum, and, with the assistance of his daughter, has edited it. The J. L. of the manuscript is John Lees, who became active in the affairs of the colony of Quebec shortly after the conquest of that territory by the British. The journal recounts the events of a journey made in 1768 from London to Boston, thence to New York, Albany, Niagara, Detroit, and of the return to Montreal by the St. Lawrence River. It is interesting, contains descriptions of places, and comments on affairs; and the editorial work has been well done.

The latest publication of the prolific State Historical Society of Iowa is the "Life of Henry Dodge," by Louis Pelzer. The history of Iowa does not stretch over a long era, nor is it teeming with the names of men sufficiently noted to deserve a biographical volume. The scantiness of good material has forced the editor of the series in this case to poach on the preserves of the neighboring State of Wisconsin, for the name of Henry Dodge is connected with the territory forming the present State of Iowa only through the fact that he was Governor of Wisconsin Territory during the two years, 1836 to 1838, that it included territory west of the Mississippi. This finesse on the part of an historical society might have been condoned had it resulted in producing a real life study of Henry Dodge, pioneer, Indian fighter, soldier, Governor, and Senator. The rough pioneer environment by which a boy, trained in the school of the hard-fisted, unscrupulous, and dishonest John and Israel Dodge, was educated into a respectable general and Senator, certainly offered an opportunity to the biographer that should have given us a miniature of early Western society. In the 204 pages of this biography we rarely catch a glimpse of the real man; and the moulding forces of the society around him, as it is described here, might have existed, save for the shadowy forms of Indians and boatmen, in almost any part of the globe. The aim of the volume is directed at the popular taste of the reading public of the State, and it will probably hit the mark. The biography bears the ever-accompanying character of historical writings, with this aim: the obscuring of unpleasant episodes, the promotion of all geese to swanship. The people of the West are particularly sensitive to criticism. The events described in this volume are very recent, and some contemporaries of Dodge, and many of their children are still living. With the exception of a few episodes, of which very little is made, the author finds that the hero and his contemporaries lived very orderly lives, such as would not shock the nerves of a hypersensitive Sunday-school teacher of Massachusetts. A life of Dodge was well worth doing. He was not a great man, nor was his career unique, but he was an excellent type of his era and environment.

In spite of the excellence of Wright's "Arabic Grammar," there have hitherto existed in English very scanty and imperfect helps for the elementary study of Arabic. When a student had got past the little reading book in Socin, he had either to use chrestomathies with vocabularies in Latin, German, or French, or to embark upon the *mare magnum* of the great Arabic lexicons. On another side, beyond the English-Arabic exercises in Socin's golden little book, there have been no aids at all in almost any language toward the writing of Arabic prose. These difficulties the Cambridge University Press (Putnam) has now fairly removed, with Thornton's "Arabic Series" in three volumes of reading books, and Weir's "Arabic Prose Composition." The series owes virtually only its inception to Thornton, and the burden of its preparation has been borne by Dr. Reynold A. Nicholson, better known as a Persian scholar. He has included a selection from the Koran, all the texts in Wright's "Arabic Reading Book"—an excellent selection, until now useless for lack of vocabulary—and more than a hundred pages of other extracts. All are well edited, with footnotes and a separate little lexicon in each volume. Of course, there is no attempt at the completeness of annotation which makes De Sacy's "Chrestomathie" still such a thesaurus; but the explanations are adequate. The Arabic prose volume is an experiment, and, it is to be feared, implies a teacher with a command of the language beyond that of most. In the hands of such a teacher it would undoubtedly do excel-

lent service, for it is very carefully arranged and annotated. A key would add much to its usefulness.

In "Five Years in the Sudan" (Appleton) Edward Fothergill tells of his varied experiences while engaged in transporting by steamboat supplies to the stations on the banks of the rivers of the Anglo-Egyptian Sudan. Its value lies mainly in the testimony which it bears to the remarkable success of the British rule in transforming oppressed, turbulent savages into industrious, law-abiding cultivators of the soil. He has rarely any but words of praise for the Sudanese, whom he regards as a much finer race than the Egyptian. They "are really making extraordinary strides in the direction of an effectual civilization." A notable characteristic is their fondness for their children, who, "boys and girls alike, are remarkably well behaved, as a rule, and one very seldom hears them crying." The wonderful fertility of the soil in the region bordering the Blue Nile is shown by the effects of the first rains. "One day the country will be brown and comparatively bare; the next day there will be a shimmer of green over the land; and in three or four days' time the grass will be shoulder high and almost impenetrable." On the Sobat he was impressed by the clouds of fireflies which lined its banks at night. Lovers of sport will find much of interest in his accounts of his numerous hunting expeditions. In an appendix are given the Government regulations in regard to the shooting of big game. Many of the customs of the natives are described, and some information, with severe criticism, about the work of the American missionaries will be found. The thirty-two illustrations are mostly of natives and game.

A series of ecstatic letters from Italy and France, signed "Zelphine," and describing the sightseeing adventures of a party of Philadelphians—such is Anne Hollingsworth Wharton's latest book ("In Château Land"; Lippincott). As "dear Margaret," to whom the letters are addressed, already knows the writer's travelling companions, Zelphine gives no description of them, and they remain colorless beings to the end of the book. First there is her husband, the faithful Walter, who likes fishing and Louis XII, and whose remarks are "so manlike." Then there is Miss Cassandra, a Quakeress of uncertain age, whose comments are so irresistibly funny that every one in the book "laughs heartily" at them. Finally there is the self-possessed Lydia, who chimes in with her improving historical information until it is time for her to serve as heroine. In the course of the book two other characters are introduced: M. La Tour is discovered to act as guide; and Archie is imported from America to take the party automobiling and to get engaged to Lydia. Angela and Ian, who appear at the end, have about as little to do with French châteaux as have the children who disappear into a Swiss school at the beginning. Although the book contains a great deal of useful information about the Italian Lakes and the châteaux along the Loire, it is lacking in charm, in originality. Zelphine does not get at the heart of things.

It is difficult to speak with patience of the curious medley of incoherent and inconsequent material which is found in "The Early Christians in Rome" (Lane), by the Very Rev. H. D. M. Spence-Jones, D.D., Dean of Gloucester, professor of ancient history in the Royal Academy. The title of the book awakens interest, for a careful and critical account of the life of the early Roman Christians might well claim attention; but instead there is offered us a series of superficial and repetitious disquisitions on a number of subjects, some relevant, others irrelevant, to the matter in hand. The work is divided into five books, as follows: (1) The Beginnings of Christianity in Rome, where a few banal remarks spread over a hundred pages are made about the foundation of the church by Peter and Paul, the persecutions of Nero and his successors, the character of Pliny as a letter writer, and the vogue of the epistolary form of literature; (2) The Life of a Christian in the Early Days of the Faith, not a bad account of certain features of Christian life within the empire, east as well as west; (3) The Inner Life of the Church, devoted exclusively to a second discussion of the persecutions; (4) The Roman Catacombs, and (5) The Jew and the Talmud, which has nothing to do with the early Christians in Rome or anywhere else. Studies upon such disconnected topics might be worth while if written by a scholar who had new light to shed or anything of importance to say. As it is, they are for the most part wholly without value. Saint Peter, it is stated, spent twenty-five years in Rome; Saint Paul is represented as a theologian "whose thoughts were largely taken up with the great doctrinal questions bearing on the person of the founder of Christianity," while the persecutions, in traditional fashion, are exaggerated beyond all warrant, and ascribed to a set resolution formed by the Roman Government as early as the reign of Nero to exterminate Christianity. The only excuse for the book's existence is the account of the Roman catacombs, which fills a hundred pages and is accompanied with about a dozen excellent illustrations.

Brig.-Gen. Frederick Funston's "Memories of Two Wars" (Scribner) is a racy account of the author's experiences as a volunteer in the last Cuban struggle for independence, and, later, in the war with Spain and its ensuing Filipino insurrection. Aside from its value, not inconsiderable, as a contribution to military history, the book is a really notable record of a career in which talent, "push," audacity, personal courage, and luck have mingled in unusual degree. Here one may read to his heart's content of perilous scouting, hard fighting, exhausting marches, hairbreadth escapes, fever, exposure, hunger, and all the other accompaniments and horrors of real war; for although the stage is small, the setting is vivid. If deceit is justifiable in war, then the capture of Aguinaldo, of which a full account is here given, must be set down as one of the most brilliant, as it certainly was one of the most daring achievements in our military annals. The political phases of the two wars, or their larger military aspects, are hardly referred to, but there are interesting descriptions of Gomez and Garcia, of Lacuna, the Filipino general, of Aguinaldo himself, and of some of the commanders on the American side. In spite of a somewhat assertive preface, Gen. Funston's narrative is singularly modest. He does not magnify the military importance of the operations in which he engaged, nor his own share in them, and he is generous in praise of others. His utmost claim for the book is that it is "a contribution to the literature of adventure." Not so much that is favorable can be said for the author's moral attitude, for rarely does one find such brutally frank justification of killing if the life to be taken happens to be that of an enemy. The literary style would have been lively enough without the slang which frequently decorates it. The volume is profusely illustrated with drawings by F. C. Yohn.

Dr. C. A. Mercier announces himself as the pioneer of a new science, which he calls "praxiology." His title spares us the name, but supplies the definition—"Conduct and Its Disorders Biologically Considered" (Macmillan). The scheme of the work is simple. Book i draws the preliminary psychological distinctions between reason and instinct, voluntary and involuntary, spontaneous and elicited conduct, while Book ii, covering the greater part of the work, is a detailed description of conduct, classified as self-conservative, social, and racial, and distinguished under each head as normal, excessive, or defective. The purpose is to show that normal, or moral, conduct is that which conserves proximately the individual, ulteriorly society, but ultimately the race. In a case of conflict, the survival of the species is the final test. After this account, a student of Spencer's "Data of Ethics" will wonder how Dr. Mercier can regard himself as a pioneer. Indeed, it is rather difficult to realize that one is not reading Spencer himself. There is the same idea of excess and defect, measured by the same criterion of race-survival—which is complicated by the same determined individualism; there is the same trick of illustrating a point through an ascending series of animal species—only not the same cold formalism of style; and finally, the conception of a science of conduct is precisely that which Spencer proposes and illustrates at length in his first eight chapters. Between ethics, at least the ethics of a generation past, and "praxiology" the difference is purely of name. We cannot suppose that Dr. Mercier is unaware of this; for, although, in the present work, we have been unable to find more than one reference to a living or recent writer in the field of psychology and ethics, his earlier works show a wide and abundant reading. The truth seems to be that Dr. Mercier prefers to do his thinking alone. The result is little that is absolutely new, much that is even antiquated. If, for example, he had taken issue with William James's chapter on Instinct, now twenty-four years old, he must have paused before repeating that the area of instinct is smaller in men than in the lower animals; and even a slight attention to the general literature of the subject should have disturbed his confidence in the all too easy formulation to the effect that instinct determines the ends of conduct, reason the means. Surely he cannot mean that the ends of conduct are never submitted to judgment.

For all this, Dr. Mercier's work is readable and stimulating. While not a "contribution to knowledge" in the narrower sense, it is nevertheless the expression of independent, if self-willed, thinking, and bears the mark of ripe experience united with strong

and keen good sense. The characterizations of types of conduct are often perfect; the conception of justice (reciprocal conduct) is itself beautifully just and clear; and in a period of brain-storms it is like a gleam of sunlight to hear from an expert alienist that the instinct of retaliation, cultivated to excess until nearly a generation ago, now shows signs of defect.

We noticed recently the lectures of the French scholar, Cumont, on the introduction of various Oriental religions into Roman territory. A broader scope was taken in the Lowell Institute lectures, delivered last January by Prof. Jesse Benedict Carter of Princeton University, on "The Religious Life of Ancient Rome," now presented in book form by Houghton Mifflin Company. Beginning with the Rome of an all but prehistoric era, when the Etruscan influence was dominant, Professor Carter follows in rapid outline the evolution of Roman religious life from a crude social instinct, largely the reflex of physical interests, until it reached the highly developed individualistic and spiritual phases found not only in Christianity, but in a number of the Oriental faiths which for some generations competed so strongly with Christianity. Detail is, of course, sacrificed in a plan which reaches Constantine in the fourth lecture and closes with Gregory and the Lombards in the eighth. Just such a brief and lucid outline of the subject, however, has been sorely needed, and will be of great assistance to readers of more detailed and more narrowly delimited studies. The author has not been led by the possible perils of the situation into the assumption that Roman religion in its later phases can be satisfactorily treated apart from the rise and growth of Christianity in the same territory, and we may add that he has shown that the subject can be treated as a whole in a thoroughly scholarly and independent spirit without giving any reasonable ground of offence.

J. Scott Clark, professor of English in Northwestern University, died a week ago, following an operation for appendicitis; he was born in 1854. A number of textbooks on the English language and on literature bear his name.

Judge Elbert Eli Farman died on Saturday of last week in his eighty-first year. It was he who, while Consul-General at Cairo, procured from the Khedive the gift of "Cleopatra's Needle" to New York. He accompanied Gen. Grant on his voyage up the Nile, and wrote a book on the subject, "Along the Nile with General Grant."

Science

The Origin of Life. By H. Charlton Bastian. New York: G. P. Putnam's Sons. $1.50 net.

The spontaneous origin of life on the earth was long a favorite topic of discussion for those biologists philosophically inclined. It will be recalled that Pasteur and Tyndall made this a matter of thorough investigation about 1870, and their work seemed so conclusive that biologists have not greatly concerned themselves with the topic since that date. In fact, the whole subject of bacteriology and the maintenance of pure cultures, which has reached such an important development in our time, rests on the assumption that spontaneous life does not develop in any of the media used to maintain the lower forms of life.

It is therefore something of a surprise to find Dr. H. Charlton Bastian, emeritus professor of the principles and practice of medicine, University College, London, returning once more to the charge with what he regards as new evidence to show that the lower organisms develop spontaneously in suitable media in sterilized and hermetically sealed tubes. And the surprise is the greater when we learn that these newly arisen beings are such familiar forms as bacteria, yeast, and the mould penicillium. His photographs show beyond much doubt that he found these types in his preparations; the only question that modern biologists are likely to be interested in will be to know how his solutions became contaminated. The subject of sterilization is one for the specialist to deal with; the evidence that Dr. Bastian furnishes to put his findings on a safe basis is lamentably deficient. If spontaneous life occurred in such ways as he describes, the entire results of sterilization would be beyond human control. The present volume and its predecessors will not receive serious attention from those experienced in such matters, but to those who lack this training the book, well-written and finely illustrated, may appear to open an old question; especially when modern biologists take the agnostic view that we know nothing concerning the first origin of living matter.

It may be recalled that this is the same Dr. Bastian who, as a young physician in 1870, "had excited in the English and American public a bitter prejudice against the results announced by Pasteur on the subject of spontaneous generation." The manuscript of the present book, the author candidly informs us, was submitted in 1910 to the Royal Society and was rejected as "not suitable for acceptance by the Society."

In a simple, elementary manner, Rankin Kennedy, the author of "The Principles of Aeroplane Construction" (Van Nostrand), attempts to explain the physics of flying. The first three chapters deal with the fundamental laws of mechanics, defining the units of force, mass, velocity, and other quantities, and contain a general discussion of the principle of the inclined plane and of the properties of the air. The author has made the elementary mechanics in the chapters apply directly to the aeroplane, and has illustrated the principles with numerous examples. Chapter four compares two methods of making calculations relating to the power that is required to operate an aeroplane of any given size. Further investigation, however, is necessary before such calculations can be accurate. Though the author, in his own calculations, uses the correct formula for air pressure, it should be noted that on page 48 he gives a table of velocity and pressure that is inaccurate—that of Smeaton. The pressure on a flat surface perpendicular to the wind current is actually about 60 per cent. of that given by Smeaton's table, which, therefore, should not be printed without correction. A long discussion of the shape of the main supporting plane of the machine, accompanied by some good diagrams, is a special feature in the volume. It is followed by chapters on "the curves of the aeroplane" and the "aeroplane centre of gravity"; the latter involves, of course, the all-important problem of stability. The book has a number of the usual illustrations of the leading types of machines. The helicoptere and the propeller are both discussed, and some space is devoted to the successful Gnome engine. In a final chapter there are some sensible views on the future of the aeroplane.

Dr. Arthur Vincent Meigs, formerly president of the College of Physicians, Philadelphia, died on Sunday, at the age of sixty-one. Among his writings are "Milk Analysis and Infant Feeding," "The Origin of Disease," and "A Study of the Human Blood-Vessels in Health and Disease."

Drama

Sherwood. By Alfred Noyes. New York: Frederick A. Stokes Co. $1.75 net.

There is much delightful reading in this five-act romance of Alfred Noyes, which embodies nearly all the familiar legends associated with the name of Robin Hood, together with others of which few persons, probably, have ever heard before. Written in fluent and musical blank verse, it is full of charming fancy, and is charged throughout with the free spirit of the woodland. Here and there—as in the song of the fairies with which it begins and ends—it breaks into flights of fine poetic inspiration. For Oberon and Titania and their elfin court, though unperceived by the grosser mortal characters, play their part in the loves and adventures of these Sherwood foresters, and bespeak for them the immortality which they long ago won in fairyland. They reveal themselves only to the faithful Fool, Shadow of a Leaf, who for love ventures all and loses all, except the dim hope of reward in some dreamland of the future.

Pure romance as the play is, it is not devoid of serious purpose, for it is founded upon a democratic creed of the broadest sort and waxes eloquent in its assaults upon the old feudalism and modern abuses. Robin Hood figures as a philanthropist of the most advanced type. As Earl of Huntington, he has impoverished himself to relieve the victims of the savage forest laws, and he robs the rich only to give the proceeds to the poor. His bride, Maid Marian, joins him in disguise, after the fashion of Rosalind, when her time-serving old father,

the Baron Fitzwalter, would betray her into the arms of the baleful Prince John, regent in the absence of Richard the Lion Heart. Queen Ellinor is against her, too, being in love herself with Robin, who was her page in the days of her early pursuit of the Fair Rosamund. Mr. Noyes, with a poet's license, makes light of certain chronological difficulties. Richard himself appears upon the scene, after Robin and his men—none of the nursery book favorites are forgotten—have outlawed themselves beyond recall by their defeats of John and his minions, and it is he who confers honors and fresh riches upon Earl Robin and his lady. But the cruel and guileful Ellinor triumphs at the last, and, when there is no longer any Richard to interfere, becomes the double murderess of the devoted pair. It is then that Oberon decrees their immortality in fairyland.

It is a pity that Mr. Noyes elected to kill his lovers, although this is made the occasion of so fine a burst of jubilant poetry as his ode "The Forest Has Conquered" and the pretty fairy epilogue with its closing optimistic note. Fairy tales ought not to end in tragedy. But this catastrophe could easily be avoided, if the piece ever reached the footlights. And with a little alteration—which probably would involve the excision of all the fairy episodes—the piece ought to prove most effective as spectacular romance. Its rare literary quality would commend it to discerning theatre-goers, while the abundance of incident and the familiarity of most of the characters ought to be attractive to the multitude. In any case, it will furnish a pleasant hour to all intelligent readers.

The first piece presented by W. A. Brady's Playhouse Company, in Maxine Elliott's Theatre, was the "Just to Get Married" of Cicely Hamilton, author of "Diana of Dobson's," well known as a writer of smart, but somewhat flippant and obvious, satire on social topics. Her present theme is the necessity of marriage as a means of livelihood to the ordinary helpless woman, and the shameless shifts to which she is often driven in the pursuit of a husband. Her heroine is an orphan niece, adopted into the family of a rich uncle, and reared luxuriously, but uselessly. At twenty-nine she is weary of dependence, and is praying that Adam Lankester, a rich but exceedingly shy young bachelor, may propose to her, that she may enjoy some sense of freedom. She does not care for him a snap, rather despises him, but spreads her toils for him, while the family speculate upon her chances, and finally ensnares him. Then she discovers that he is a paragon of manhood, that his shyness arose simply from dread of failure, that he is ardent, tender, generous, and supremely trustful. As she begins to fathem the depth and purity of his affection, she is agonized by conscience, dares not complete her deceitful bargain, and at last confesses the truth and bids him go. The whole value of the play as drama is centred in this scene, which is comparatively fresh, and is exceedingly well written—with simplicity, insight, and naturalness—and uncommonly well acted, by Lyn Harding, as the man, and Grace George, as the woman. Mr. Harding promises to be an acquisition to the American stage. He acts with notable ease and self-control, exhibits both vigor and delicacy in his execution, can be humorous without exaggeration, and can signify strong internal emotion in a manner rarely simple and life-like. Miss Grace George also acted at this juncture with spirit and sincerity. Of the remainder of the play, which is rounded off with the conventional happy ending, little need be said. The professed purpose is forgotten, probability is defied, and the moral vanishes in fog. It should be added that some of the members of the new stock company sorely need instruction in the arts of correct speech and agreeable manners.

It is announced that Winthrop Ames has made arrangements to bring Professor Reinhardt's production of "Sumurûn" to the Casino, on January 16, with the original company from the Deutsches Theater, Berlin. This piece, which was described long ago in this journal, ran for two seasons in London and was enthusiastically lauded by some of the most prominent critics as being in the highest degree artistic and virtually a new form of dramatic expression. Setting raptures aside, it seems to have been a highly superior example of pantomime. It is a wordless play, unfolding a story of exceedingly lurid Oriental melodrama, which is accompanied by special music, composed by Victor Hollaender, who is now at work in this city drilling a full orchestra.

These independent theatres have queer notions of art and entertainment. The London Stage Society has just been regaling itself with a stage version of George Moore's "Esther Waters." The London *Times* says: "It is all very real. You feel sure that it all happened somewhere, exactly like that. But you also feel—and that is the worst realism—that you don't greatly care whether it did or not."

In the performance of "Bella Donna," the play which J. B. Fagan has made out of Robert Hichens's book, Sir George Alexander plays the part of the cool, tactful, alert, firm opponent of browbeating and bluster; Mrs. Patrick Campbell is the woman at bay, required to show composure in trying moments.

A play which has attracted a great deal of attention in Paris is "Les Sauterelles," by Emile Fabre, which is a scathing attack upon French colonial maladministration. The scene is manifestly intended for Indo-China. A Paris correspondent of a London journal writes: "A great variety of types of French officials from the Governor-General downwards and their chattering wives pass under review, and they are mostly self-seeking, or at best purblind. The Orientals are numerous and picturesque." The main plot revolves around a projected loan, which is to be expended upon political "graft" of different kinds. When the native ruler refuses to acquiesce, he is promptly dethroned, whereupon there is a revolution, in which the dishonest officials and their wives exhibit dauntless bravery. Then the annexation of the colony is announced and the election of a native representative assembly ordered by "universal suffrage." There is one scene, in a native council, of which the correspondent before quoted says:

> Two of the old native councillors comment, very much in the manner of Usbek and Rica in Montesquieu's "Lettres persanes," upon the follies and vulgarities of European civilization, and, above all, upon that crowning folly which mistakes telegraphs, telephones, motor cars, and aeroplanes for evidences of the essential superiority of the West over the East. One councillor has been in France, and his story of what he heard and saw is infinitely droll, and is at the same time a piece of most biting and infinitely delicate satire. His conclusion is that the French are "barbarians."

News has reached London of the death of Otojiro Kawakami, father of the new school of Japanese dramatic art. Mr. Kawakami and his wife, Mme. Sada Yacco, visited England about twelve years ago, and with some pupils of the modern school who were travelling with them gave a series of Japanese performances at the Coronet Theatre. At that date, neither of them was very famous at home. Kawakami was known as an actor who wished to reform the native theatre, and Sada Yacco's fame was simply that of a popular singing-girl. London awakened to their abilities only a few days before their brief season closed, and Paris acclaimed them as theatrical stars of the first magnitude. On their return to Japan, they at once leaped into popular favor. Some of Mr. and Mrs. Kawakami's experiments, despite their great courage, bade fair to turn this newfound popularity into ridicule, but they persevered doggedly in their uphill task. Their enthusiasm had its reward in due course. Thinking people began to look upon the drama as one of the arts, and grudgingly to recognize actors not merely as artists, but as respectable members of society. The late Prince Ito did much to raise the drama from the despised position it had hitherto occupied, and the present Premier, Marquess Saionji, helped to raise the status of the actor by receiving him at his own home—an unheard-of condescension in an official and a person of the *shizoku* class.

Music

The new (fourth) edition of Henry L. Mason's "Opera Stories" includes productions of the present season in New York, Boston, and Chicago, among them, "Lobetanz," "Cendrillon," "Mona," "Siberia," "La Forêt bleue." Besides the 163 operas now included in the useful little book, there are five ballets and the mystery play, "The Martyrdom of St. Sebastian."

"A List of Books on the Operas Announced for Production at the Boston Opera House During the Season of MCMXI-MCMXII in the Public Library of the City of Boston" is the elaborate title of a forty-nine-page brochure published by the trustees of that library. The list covers thirty operas: "Aïda," "Il Barbiere di Siviglia," "La Bohême," "Carmen," "Cavalleria Rusticana," "L'Enfant prodigue," "Faust," "La Forêt bleue," "Germania," "La Habanera," "Hänsel und Gretel," "Lucia," "Madama Butterfly," "Manon" (Massenet), "Manon Lescaut" (Puccini), "Mefistofele," "Otello," "I Pagliacci," "Pelléas et Mélisande," "Rigoletto," "The Sacrifice,"

"Samson et Dalila," "Il Segreto di Susanna," "Thaïs," "Tosca," "La Traviata," "Il Trovatore," "Werther." In this list there are only two German operas, Boston having no German division like the New York Metropolitan, whose Wagner every season has more performances than any Italian or French composer. The list has been prepared with Bostonian thoroughness. After naming five dictionaries of operas, the compiler mentions twenty-six books of history and criticism, followed by twenty books of "Stories of the Operas." Then the operas themselves are presented in alphabetical order, the different scores and librettos being named, as well as publications specially concerned with this or that score. Concerning "Carmen," there are no fewer than nine of these, and "Tristan and Isolde" has eight, among them Weyl's humorous "Herr Richard Wogner, der musikal'sche Struwelpeter, saane naiste oper: Crischan Isoseildich." The list was prepared by Miss Barbara Duncan, who is in charge of the Allen A. Brown collection, to which reference has been made repeatedly in these columns. The monumental catalogue of this collection has now got as far as part iii of Vol. II, including all books, scores, and other musical publications, from "Musicians" to "Panormo." No fewer than ninety-one columns are needed to catalogue everything that comes under the head of operas, while barely ten are needed for oratorios. Offenbach, now obsolete except for one opera, is entombed in five columns.

At the concerts of the New York Philharmonic Society in Carnegie Hall this evening and Friday afternoon, Josef Lhevinne, the Russian pianist, will make his first New York appearance this season. He will play, under Josef Stransky, the Rubinstein Concerto No. 5, in E flat, op. 94, his performance of which a few years ago in Berlin won him the coveted Rubinstein prize, and brought him into wide prominence. He got his chief training under Safanoff at the Royal Conservatory of Moscow, his native city. While a student there, and fourteen, he was invited by Rubinstein to play the Beethoven Emperor Concerto at a concert of the Moscow Symphony, a work which he will perform at the Philharmonic concert of Sunday afternoon, January 7.

Art

The Life and Works of Winslow Homer. By William Howe Downes. With illustrations. Boston: Houghton Mifflin Co. $6 net.

This handsomely printed and fully illustrated quarto brings together whatever needs to be known of the life of Winslow Homer. Mr. Downes, who is well known as art critic of the Boston *Transcript*, knew Winslow Homer for many years, has diligently collected the scanty literature of the subject, and has listed all pictures which have been publicly exhibited. So this first biography of the greatest of modern painters of the sea is not merely official, but in an unusual degree definitive. Mr. Downes's attitude toward his hero is well expressed in the following words:

From my boyhood I have loved the pictures, the least of them—a drawing of a little boat, a slight affair, perhaps a sailboat with a group of boys and girls aboard, but so full of a good, sound, expressive naturalism that one said: "What a jolly thing it is to sail a boat!"—and from that day to the time of The Look-out—All's Well, with its inscrutable, mystic suggestion of all the wonders of the life of the seaman, and its still more mysterious hint of the wonders of life itself, the solitary figure of Winslow Homer has loomed up in my imagination with a strange persistency and a singular, commanding impressiveness. In him, more than in any other American painter, dwelt that racy, native, pungent, Yankee note which seemed to me beyond all price. The things that he painted interested me; the way that he painted them suited me; the way that things looked to him was the way that they looked to me; I felt that I understood him; and I rashly resolved that I would write a book about him.

Here we have avowed the frank hero-worship that inspires the book, and a sufficient hint of the sturdiness of the style. Mr. Downes effaces himself throughout. He gives facts rather than opinions, though he freely quotes the opinion of others, and the figure of his hero disengages itself with a massive and convincing objectivity. All this is excellent good art, and the present writer can quarrel with Mr. Downes only for using his scrap-books too conscientiously. A certain amount of repeated description of pictures might be pruned out to the advantage of the book. If the survey were to be contained within the horizon of Prout's Neck, Maine, a better biography, given the material, could hardly have been composed. Mr. Downes has been admirably consistent in abiding by his self-imposed limitation. We have not detected a single allusion to any work by any other artist than the hero. That whole field of comparison and analogy, which is the very basis of criticism, lay open to the author, and he resolutely declined to set foot therein. Winslow Homer painted as if his were the only painting in the world, and his biographer piously accepts that point of view.

But a painter is, though, like Winslow Homer, he flees the world, in the world after all; and the admiration for any artist's work fuses in men's hearts with kindred admirations. Sooner or later, pure biography must merge into criticism, into the consideration of the work in all its relations. Winslow Homer's art, though possibly he would have denied it strenuously, belongs to the art of the world, and some time or other he will have to be considered in cosmopolitan aspects most uncongenial to him.

Possibly, the instinctive dislike of the artist for the critic is due to a sense that the critic is going to transfer him ruthlessly from favorite club or chosen sketching-ground to the white light of the museum, is going to set up a lot of injurious comparisons. Even more, the feud between painter and that other sort of artist called critic is the painter's just apprehension that in the long run criticism is not so much of work as of personal temperament. The future will ask about Winslow Homer, beyond his leading passion for the keenness of forest guides and the courage of seafaring men, what were his other admirations? What was his attitude or interest in the work of older painters or of his contemporaries? What did he read? What manner of men and women did he draw to himself? The silence of this biography on such points is already a criticism. The concentration and narrowing of the man's aims can hardly be paralleled among artists of his rank. He elected the narrowest outlook, and more or less justified it by the intensity of vision he thus attained. In a far truer sense than the *luministes* he was an impressionist, prizing beyond all else the first keen edge of vision and declining to temper it by much infusion of reflection or comparison. Oddly enough, this racy, solitary figure came near to meeting the current ideal of the mere artist, and, paradoxically, men never failed to understand him. There is no story of inner disharmony to be told of him, nor tragedy of praise deferred. Until middle life he kept himself well by a kind of illustration that was popular, well-paid, and very congenial to him.

Academic honors were promptly and profusely bestowed upon him. Buyers always wanted his pictures. His own etched copies of some of his most moving compositions were widely distributed. He is the only great artist America has produced who has achieved real popularity. Judged on any American scale, his greatness and importance can hardly be exaggerated. Judged on a universal scale, it may be that he will be associated not with the great central figures, but with such uncompromising and wholesome individualists as Manet and Courbet. Turner at his rare best, Ruysdael as sea-painter, Millet, seem to have more of the stuff of immortality in them.

But we have no desire to anticipate a criticism that may reasonably wait a generation or so, and we are grateful to Mr. Downes for writing just the sort of book he has chosen to write. It is the production of a hero-worshipper who is also a fine critic. It is what the moment calls for, and what only this particular writer and time could offer. For the critics of the future it will afford a sound basis.

We may fittingly close with Winslow Homer's *credo* as conveyed in Mr. Downes's introductory note. Homer stood firm on the realistic theory that true art lies in copying a selected bit of nature as nearly as may be. As a matter of fact, the reader hardly

needs to be reminded, he made the usual compositional adjustment between the sketch and the canvas, and he carried an artful and forceful simplification to a point which the post-impressionists prate about without achieving. He is one more example of the paradox that the artist, while perforce an improver of nature, must believe that he is her humble amanuensis. Despite Leonardo da Vinci, pretty much all the great art of the world has been, and apparently must be, based on false theory. But back to Prout's Neck and the Homeric realities:

> There comes to my mind an incident [writes Mr. Downes] which will illustrate his unyielding attitude towards absolute truth. On the occasion of one of my visits to his home, we were picking our way along the coast over the shelving rocks he painted so often and with such insight and power, when I suddenly said:
>
> "Mr. Homer, do you ever take any liberty, in painting nature, of modifying the color of any part?"
>
> The inquiry seemed to startle him. Arresting his steps for an instant, he firmly clenched his hand, and, bringing it down with a quick action, exclaimed:
>
> "Never! Never! When I have selected the thing carefully, I paint it exactly as it appears." . . . "Never!" he reiterated, as we moved on in the direction of the sea.

The incident may possibly explain why the quintessence of what Winslow Homer seems to be in his incomparably just and vivid water-color sketches rather than in the greater works. His art seems to be related to the art that is admittedly central and great, somewhat as the Icelandic sagas are to the greatest literature. It should be no offence to the Viking spirit to add that its magnificent, barbaric note inevitably yields in human importance to the more fully modulated expressions of completer civilizations.

A new volume is added this month to Scribners' Library of Art series—"The Painters of the School of Ferrara," by Edmund G. Gardner.

The chief work of the Egypt Exploration Fund during the coming season will be the continued excavation of the Osireion at Abydos, a great subterranean building connected with the Temple of Seti. The junction of the Osireion with the Seti temple remains to be discovered, and this is a most interesting task. It may clear up many obscure mythological references besides making considerable addition to our knowledge of Egyptian architecture. If new inscriptions are found, these may, like those already uncovered, add to our knowledge of funerary ritual. The work will be carried out by Prof. E. Naville, LL.D., fellow of King's College, London, and member of the Institute of France, the discoverer of the Biblical Pithom and of the Route of the Exodus, and excavator of the Temple of Queen Hatshepsu at Deir el-Bahari; assisted by T. E. Peet, Prof. Thomas Whittemore of Tufts College, J. Droop, and the Hon. Robert Trefusis, who has previously worked at Abydos. Checks should be made payable to the Egypt Exploration Fund and sent to Mrs. Marie N. Buckman, secretary for the United States, No. 527 Tremont Temple, Boston, Mass. Illustrated circular will be sent upon request.

Finance

RETROSPECT.

Every year has a character of its own, but it is not always possible to determine its real place in financial history until some time after it is over. Few people got a clear comprehension of 1909, for instance, before the first half of 1910 had disclosed the real nature and meaning of the boom which was still in an uncertain condition at the end of December. Such a year as 1899 was not really understood until 1901—perhaps not until some years later.

In some important respects, 1911 will have to be described as a year of disappointed hopes. There was certainly a very prevalent feeling, early in the year, that the long-deferred financial and industrial recovery was at hand. We had had our false start, our premature boom, in 1909. It had ended with that year, and the country had spent nearly all of 1910 in thoroughgoing and drastic liquidation. Prices had been brought down, for commodities as for stocks; speculation curbed; unwarranted extension of credit curtailed; bank resources restored.

At the beginning of 1911, therefore, there were not wanting experienced judges to predict that we were in shape for a progressive forward movement in finance and industry. As a rule, these prophecies were conditioned on the harvesting of satisfactory crops, and it is true that, through a good part of 1911, it looked as if the harvests would be a serious disappointment. But we now know that this impression was erroneous. Our wheat and corn crops have been smaller than in 1909; but two or three years ago, both would have been greeted as extremely gratifying yields, and our 15,000,000-bale cotton crop is a noteworthy agricultural windfall.

Nevertheless, the favorable predictions of January and May have not at all been fulfilled. People who backed those predictions on the market, with their money, have suffered heavy losses. Even after the markets had taken on hope, as a consequence of the Supreme Court's conservative interpretation of the Anti-Trust law in the spring, they began to falter in mid-summer, and with the end of the summer season swept into a violent and demoralizing decline which, in the later autumn, plunged the entire community into a gulf of the blackest financial pessimism. What was the real trouble?

The answer which will be made in many quarters is that the whole trouble lay in the Government's unexpected Anti-Trust law prosecutions. It is difficult to accept this explanation as sufficient, however; because the Government's policy and purposes were perfectly well known a year ago. The reassuring influence of the Supreme Court opinions, with their positive rejection of the theory that all corporations and all partnerships restrained trade illegally and were subject to prosecution, had just as much legitimate scope in September as in May. Nothing happened in this regard, in the second half of 1911, which might not have been predicted in the first half—except perhaps for the fact that it had become tradition that the Steel Corporation was immune from prosecution. Yet even as regards the Steel Trust, we have seen what was the result when the trust was actually sued.

One must therefore ask whether any other influences were at work, of large enough scope to block the predicted recovery. There have been such influences. The prolonged uncertainty over the grain harvest, even if ultimately removed, had its effect on sentiment. We know to-day, moreover—what was not seriously imagined in this country at the time—that in the later weeks of summer Europe, if not actually on the verge of the most formidable war in ferty years, was at any rate in a situation where the act or word of a single imprudent statesman might have made such a war inevitable. Secret knowledge or uneasy apprehension of that situation may have been the real cause of the autumn decline.

But behind this stood another singularly interesting fact. At no time—even when Wall Street's hopes of financial and industrial revival were at their highest pitch—was there any sign that the outside public, the genuine consumer, believed that prices of merchandise or securities were so low as to provide an inviting basis for a general purchasing movement. That may have been because of belief that existing prices were too high on general principles, or it may have been because investors and consumers were feeling poor, and did not reckon themselves able to buy on the old-time scale. As to which is the proper explanation, opinions differ. But of the general fact there is no difference of opinion.

When a merchant cannot sell his goods, and is holding them on the basis of borrowed money, he will sooner or later cut his prices to get customers, and that is exactly what happened, on the Stock Exchange as in general trade, when the outside public would not buy last summer. Naturally, now that the price-cutting process has halted, and buyers from somewhere or other have arrived in such numbers as to change the aspect of affairs, it will be asked, just what was the real economic signifi-

cance of the episode? Perhaps we shall have to wait awhile to see.

BOOKS OF THE WEEK.

Allingham. Letters to William Allingham. Edited by H. Allingham and E. B. Williams. Longmans.

Baron de Blay de Gaïx. Lettres du Baron de Castelnau, officier (1728-1793). Paris: H. Champion. 3.50 francs.

AMERICANS: An Impression
By Alexander Francis

SECOND IMPRESSION

THE NEW LAOKOON

An Essay on the Confusion of the Arts

By IRVING BABBITT

RICHARD MÜLLER-FREIENFELS in ZEITSCHRIFT FÜR ÄSTHETIK: "Ohne Zweifel haben wir es hier mit einer Leistung zu tun, die nicht nur eine respektable Gelehrsamkeit, sondern auch eigne und selbständige Gedanken in Fülle aufweist. Auch dort, wo man nicht unbedingt überzeugt wird, muss man doch überall die durchdachte und persönliche Stellungnahme des Autors anerkennen. . . . Als Ganzes ist's ein geschicktes, ein interessantes, ein anregendes Buch."

TH. A. MEYER in EUPHORION: "Meines Erachtens ist die ästhetische Ideenwelt, aus der Lessing's Laokoon zu verstehen ist, nirgends so klar und verständnisvoll entwickelt wie hier."

H. DIPTMAR in BLÄTTER FÜR DAS GYMNASIAL-SCHULWESEN: "Dieser 'Neue Laokoon' ist so wenig wie der alte von Lessing eine leichte Lektüre, aber wie dieser ist er fesselnd und anregend, weil er den Problemen des zeitgenössischen Geisteslebens nicht aus dem Wege geht, sondern sie nach ihren geschichtlichen Wurzeln zu erfassen und zu erklären sucht."

RICHARD M. MEYER in ZEITSCHRIFT FÜR DEUTSCHES ALTERTUM: "Im Ganzen ist die Reaktion des common sense gegen den centrifugalen Individualismus mit seinem Buch bereits in Wirksamkeit getreten."

CHARLES LALO in REVUE PHILOSOPHIQUE: "Cette étude, solidement documentée, atteste une connaissance approfondie des littératures anglaise, allemande et surtout française. Elle se lit avec intérêt et profit et ne manque pas de pages suggestives."

REVUE GERMANIQUE: "Le livre est substantiel, d'une lecture facile et agréable, l'auteur ayant évité également les vaines et ennuyeuses spéculations métaphysiques et la phraséologie prétentieuse. C'est de la bonne et utile esthétique expérimentale."

The Nation

VOL. XCIV.—NO. 2428 THURSDAY, JANUARY 11, 1912 Reg. U. S. Pat. Office. PRICE TEN CENTS

"THE MOST IMPORTANT WORK UPON THE MAKING OF MODERN ITALY WHICH HAS BEEN PUBLISHED IN ENGLISH, AND THE MOST COMPLETE CRITICAL STUDY OF CAVOUR WHICH HAS APPEARED IN ANY LANGUAGE."—The Nation.

THE LIFE AND TIMES OF CAVOUR

By WILLIAM ROSCOE THAYER

"The first full and adequate study in our language of the work of Cavour, the statesman to whom, even above Victor Emanuel, Garibaldi, and Mazzini, Italy owes her unity and freedom. . . . Excellently illustrated, excellently indexed, Mr. Thayer's work is not one for students alone, but for all who love the story of great deeds, exalted lives and heroic times."—*London Daily Mail.*

"Those who have read Mr. Thayer's 'Dawn of Italian Independence' will be glad to read this history of Italy's deliverance from the enfeebling yoke of a divided rule, and of the great man whose daring genius conceived and carried out his country's emancipation."—*The Literary Digest.*

"A masterpiece of biography and history combined."—*Minneapolis Journal.*

"This exhaustive and very delightful historic biography must take its place as the authoritative record of the life of the great Italian statesman."—*Boston Transcript.*

The Boston Herald says there are three reasons why the book should be read.

1—"In the first place it is the epitome of a fascinating time—when romanticism was shading off into that phase of idealistic realism which we call Nationalism."

2—"Should be read also because of the extraordinary character of the hero. Mr. Thayer compels every careful reader to agree with Metternich and Guizot and Monckton Milnes in regarding Cavour as the greatest statesman of his time. His character is as massive as his statesmanship."

3—"Finally, the book should be read as a study in Opportunism. Cavour had but one purpose, for which he brought vast personal sacrifice—to establish and maintain liberty in Italy."

"Mr. Thayer has done justice to a great personality and produced a historic work of solid value."—*Boston Advertiser.*

"The style is so pleasing that students and the literati can find their reward both in the reading and in the study of a great historical character and a great historical career, which these volumes afford."—*St. Louis Globe-Democrat.*

"The story of the greatness of the man and of his infinitely difficult achievement is told with a sobriety yet fulness of detail that makes the two thick octavo volumes seem short."—*Philadelphia Ledger.*

"Mr. Thayer has given us a life of Cavour commensurate in scope with the importance of the subject. . . . The author has the rare merit of making his people real. Garibaldi, d'Azeglio, Farina, Victor Emanuel, Brofferio, are not so many lay figures, but men of flesh and blood, that the reader comes to know apart, and to like, too, in their different ways. . . . Of Cavour we have on the whole a faithful and certainly a most engaging portrait; while the exposition of his aims, and of his transcendent genius in meeting and overcoming the difficulties that faced him on every side, leaves little to be desired."—*The Dial.*

The February "Atlantic" will contain a critical article on Mr. Thayer's "Cavour" by George M. Trevelyan, the historian.

In two volumes. Illustrated. $7.50 *net. Postpaid* $7.89.

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme"

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Life's Basis and Life's Ideal

The Fundamentals of a New Philosophy of Life By RUDOLF EUCKEN

The translator, Alban G. Widgery, suggests that the philosophy of the famous Jena Professor would form a rallying point for Idealists of various kinds; and the suggestion is a tribute to its unity and comprehensiveness. There are few who will not gain much from the inspiration and originality of its author, one of those whom the Nobel Prize judges rank among the men contributing most freely to the advance of modern philosophy. *Cloth, 8vo, $2.50 net; by mail, $2.65.*

TO BE READY NEXT WEEK

The Modern Woman's Rights Movement

By DR. KAETHE SCHIRMACHER

Translated from the second German edition by Carl Conrad Eckhardt, Ph.D., Instructor in History in the University of Colorado.

Cloth, 12mo, $1.50 net.

Readings on Parties and Elections in the United States

By CHESTER LLOYD JONES

Associate Professor of Political Science in the University of Wisconsin, who aims to make easy of access some of the best discussions of the history of party government, of its defects and the best remedies for them.

Cloth. Ready this week.

Initiative, Referendum, and Recall Documents

By CHARLES A. BEARD

Associate Professor of Politics in Columbia University, and Birl E. Schultz. A convenient compendium for those interested in typical statutes and the most important proposed schemes.

Cloth. Ready this week.

Great Educators of Three Centuries

By FRANK PIERREPONT GRAVES, Ph.D.

Professor of the History of Education in the Ohio State University, Author of "A History of Education." *Cloth, 12mo, $1.10 net.*

Socialism and the Ethics of Jesus

By HENRY C. VEDDER

A sympathetic study of the principles on which modern Socialism is based, and a candid comparison of the ethics of Socialism and the ethics of Jesus. *Ready next week.*

NOW READY

The Principles of Economics

By PROFESSOR F. W. TAUSSIG

"Especially valuable and timely. . . . Strict attention is given to that which is now of actual, practical importance . . . authoritative, not too elementary, and still not too abstruse or technical." *In two volumes, $4 net.*

The American Commonwealth

By JAMES BRYCE

Third printing of the new, revised edition. "More emphatically than ever is it the most noteworthy treatise on our political and social system."—*The Dial, Chicago.* *In two volumes, $4.00 net.*

The Government of England

By A. LAWRENCE LOWELL

"It stands in distinguished isolation by reason of its comprehensive plan, the masterly way in which the plan has developed, and the sympathetic insight with which Mr. Lowell has described and analyzed the spirit in which the English people work their institutions."—*American Hist. Review.*

Cloth, 8vo, $4.00 net.

The Promise of American Life

By HERBERT CROLY

"In the long list of political books his stands out for breadth of vision, sanity of judgment, and inspiration. . . . Few recent books have been so vital." $2.00 *net.*

The New Democracy

By WALTER E. WEYL

"Expresses in cogent, striking fashion the growing sentiment of the country." *Ready very shortly.*

THE BEST OF THE NEW NOVELS

Mr. Robert Herrick's *new novel* The Healer

"Mr. Herrick has the merciless honesty and the trenchant courage of the great French and Russian masters," say the most discriminating critics.

The Nation

NEW YORK, THURSDAY, JANUARY 11, 1912.

The Week

Jackson Day oratory is seldom of the kind that emits more light than heat, and one would scarcely read the speeches in Washington Monday night with the hope of finding in them a definite Democratic programme. Rhetoric naturally got the better of cold logic, and appeals and warnings were more prominent than argument. If Carlyle had been present, he would have heard little to modify his conviction of the futility of public speaking. Nevertheless, there was one idea so common to all the addresses as to indicate the prevailing sentiment regarding the great political issue of the present year. It is the reform of the tariff. Whether the reduction of high duties be looked upon as a practical way of cutting down needless taxation, or as a blow at the whole theory of protection, with its inevitable creation of classes privileged before the law and exercising a baleful influence on our political life, it is evidently a work to which the Democrats are now thoroughly committed. On this subject, at least, even the oratorical Jacksonian trumpets gave no uncertain sound. And when we take into account the fact that a Republican President is now calling upon his party to lower tariff taxes, there can be no doubt that the coming Presidential campaign will see the protective tariff submitted to sharper debate and rougher handling than the country has known for many years.

If any proof were needed that Gov. Wilson's candidacy is gaining ground, it is seen in the increasing attacks upon him. So often have we heard that his application to the Carnegie Foundation has completely ruined his chances for the Presidential nomination, that we are surprised that the National Democratic Club should permit him to speak on the tariff or any other question. Now we learn, too, the real reason why the Governor is talking tariff. We had thought it was because he had always opposed protection as the cause of many political and economic troubles. But, Heaven help us, we were too innocent. The real reason for the Governor's pounding the tariff is, it appears, a desperate desire to overcome the effect of his disastrous speeches on the initiative and referendum, his opposition to the recall of judges, and his attack on the money power. These speeches, we learn from a wholly unbiassed source, have completely turned public opinion against him and greatly inflated the Harmon boom. Hence, the Governor is to forget all about the new-fangled ideas of the West and blaze away at the tariff, which, it is now recalled, is the one issue upon which the Democrats have won since the Civil War. There you have his iniquity fully unveiled—he talks about the tariff, not because it is the party's chief issue, in the opinion of its leaders in Congress, but merely because Grover Cleveland won office by it twenty years ago.

More than usual weight is naturally given to Secretary Stimson's statement of Monday morning respecting Mr. Roosevelt's possible candidacy. As Mr. Stimson points out, he is a warm personal friend of Col. Roosevelt's and also a friend of President Taft's, under whom he now holds office. He states that he finds no difficulty in maintaining this double loyalty, though one seems to detect in his words the determination of the head of the War Department to attempt in a gallant and soldierly spirit what might appear to others to be an impossible task. But in the matter mainly of interest just now, there is no reason to doubt either Mr. Stimson's sincerity or his information from headquarters when he declares that Mr. Roosevelt will not make himself a candidate in opposition to President Taft. Yet this is obviously not to say that the Colonel will not take the nomination if it comes to him. This, in fact, is what is ordinarily understood when a man limits himself to saying: "I am not a candidate." As another of Mr. Roosevelt's friends explains, the Colonel will not actively seek a nomination, but if his party "hurls" it at him, he will not dodge. Thus the only question is how much of a shining mark he will make of himself in order to invite the hurling.

The report on the arbitration treaties filed in the Senate by Mr. Rayner, as a member of the Committee on Foreign Relations, is a strong and straightforward reply to the leading objections made against them. Particularly convincing are his remarks on the scope of the powers of the joint high commission contemplated in the treaty. Senator Rayner holds, without hesitation, that the commission's decision as to whether a question is or is not "justiciable" will, under the treaties, be final and, if affirmative, will bind our Government to submit that question to arbitration; but he insists that it will be impossible for the commission to declare justiciable questions that belong to the domain of fundamental national policy. Seeing that the differences to be arbitrated are defined in Article I of the treaty as those "which are justiciable in their nature by reason of being susceptible of decision by the application of the principles of law or equity," it is plain that no encroachment is intended on the power of any nation to maintain its vital institutions or policies. When it is further remembered that we cannot be compelled to submit a question to arbitration, unless all three of the commissioners of the other country decide that the question is justiciable in this sense, and unless also two at least of our three commissioners agree with them, the idea of danger to our national integrity becomes truly fanciful. Mr. Rayner finds the objection that the treaties are a surrender of the Senate's Constitutional power equally baseless.

Protests against the appointment of Judge Hook to the United States Supreme Court are piling up, and still Mr. Taft is reported as much in favor of the Kansas jurist. Is not that characteristic of the foolish obstinacy of the man? Is it any wonder that from practical men in the Republican party comes the plaint that Mr. Taft cannot be re-elected? Here we are in a Presidential year, and less than six months to Convention time. Mr. Taft needs all the friends he has. He cannot afford to create additional disloyalties by refusing to give heed to Republican Senators, Governors, and commissioners, such as have raised their voice against the appointment of Judge Hook. And yet Mr.

Taft hesitates, because at heart he is not convinced that a really good case has been made out. What use are personal convictions in a Presidential year? Aren't there plenty of other Federal judges who could qualify for the Supreme Court bench and whose appointment would make friends instead of enemies? We imagine a more practical man than Mr. Taft in the White House planning to appoint Judge Hook. We imagine the same volume of opposition ensuing. And immediately we see Judge Hook go down with a thump heard round the country.

Congressional paralysis is expected in the "Presidential year" on subjects that involve a close balancing of considerations of party advantage; but it ought not to extend to topics on which there is substantial unanimity in the nation at large. Such a topic, we feel sure, is presented by the Alaskan question; and here the country has the additional advantage of possessing in the present Secretary of the Interior a man who commands the confidence of the people irrespective of party, and whose judgment, arrived at after careful study, is entitled to great weight. His leading recommendations concerning Alaskan resources are for "the construction by the Federal Government of a central trunk line railroad from tidewater to the Tanana and the Yukon," and for "the passage of a liberal but carefully guarded leasing law for the development of its mineral resources, and especially of its coal lands." On the second of these propositions we know of absolutely no reason why there should not be prompt and energetic agreement on the part of Republicans and Democrats, "progressives" and "reactionaries" alike; and there is certainly much to be said in favor of the first. With the disappearance of purely contentious matter through the rejection of the Cunningham claims, all excuse for further futile quarrelling over the matter has ceased to exist. Those who have accused the conservationists of standing in the way of Alaskan development should now put their shoulders to the wheel.

Two recommendations made by Secretary Nagel on the subject of immigration are deserving of the earnest attention of Congress. One is that larger discretion should be lodged with officials to admit unfortunate members of incoming families where it is shown that society would be protected against burden and danger; the other that examinations of immigrants be made before they embark for this country. Both of these improvements in the existing system are demanded by clear considerations of ordinary humanity. The agonizing experiences frequently undergone by helpless and innocent persons seeking our shores, or by their kinsfolk already here, without the serving of any large public purpose, are deeply discreditable to the country.

The proposal in Chairman Hay's much-mooted army bill to extend the period of enlistment from three to five years appears to be opposed by the bulk of the officers of the army. The shorter period of service has not, it is true, had any effect on desertions, which have been, if anything, a little more numerous of late years; nor do we think that many would contend that the personnel is of a much higher character than when a man bound himself for five years. The point is that, with a shorter enlistment, more men get some kind of military training and thus constitute in a sense a sort of trained reserve. This appeals to the service, for it is indisputable that many men who had been in the regulars prior to 1898 went back to the ranks of the army or volunteers at the outbreak of war. This question of a real reserve also agitates our militarists mightily. They would accept a five-year enlistment if three years were to be with the colors and two in civil life but with an obligation to serve brief periods during the latter part of the contract. The difficulty of adopting this European system is that it would be almost impossible to keep track of the soldiers in civil life, even if small payments were statedly made to them. The men who enlist are often of a roving type. The country is vast and people shift their habitations constantly. It is not as on the Continent, where the police keep a list of all persons who enter a town, with a note of their residence, business, etc. Moreover, the whole scheme is so revolutionary and un-American that it would be scarcely possible to induce Congress to accede to it.

"By so simple a programme," says Mr. James J. Hill, after making a swift survey of the economic field, "may the country not only enjoy a new and prolonged prosperity, but achieve a distinction, both industrial and civic, such as it never knew before." Encouraged by these words of cheer, one turns back to see what the programme is, in the hope of doing one's modest share towards its prompt fulfilment. It consists of only half a dozen items, which in point of simplicity leave nothing to be desired. Thus Mr. Hill asks merely for "an improvement in agriculture that will double our farm product," for "the social ostracism and political retirement of the demagogue who sows evils a thousand times more deadly than those he professes to cure," for "the establishment of strict economy in expenditure, both in public and private life," and a few other things equally easy to name.

The main results of the census of 1910 are presented in compact but unusually interesting, as well as unusually accurate, form by the Chief Statistician of the Census Bureau, Mr. Joseph A. Hill, in an article in the New York *Times*. He is careful to point out that the extraordinary advance for the decade shown by aggregate values of all kinds, as measured in money, must be ascribed in large measure to the general rise of prices, but nevertheless does not hesitate to say that the figures "indicate an unparalleled growth of wealth and increase in national prosperity during the past ten years." That this is true of the farming population admits, of course, of no doubt; the figures fully confirm the impression that common observation and common report abundantly convey. The value of farm land and buildings reached, in 1910, the enormous total of $34,681,000,000, as against $16,614,000,000 in 1900; and this with only a very slight increase (4 per cent.) in the total acreage, and an increase of only 10½ per cent. in the number of farms.

That wages have increased along with prices is clearly shown by the census figures giving the average annual earnings of the wage-earners of the country, which were $518 in 1910 as against $426 in 1900, an increase of about 22 per cent.; quite possibly, too, this advance has been sufficient, or more than sufficient, to offset the advance in the price of the workmen's necessaries;

but even so, the question remains whether there has not been a prevention or retardation of the advance in real wages which would probably have been made if the money standard had not depreciated. As to the national wealth, taken as a whole, the Chief Statistician, after plainly stating that all figures on this are subject to grave question, hazards the rough estimate that, measured in money, the total wealth of the United States has increased about 60 per cent. in the decade, making the total in 1910 about $142,000,000,000.

Gustave Le Bon, well known as the author of "Psychology of Crowds," has set out to condense his philosophy of life into a series of aphorisms. A first instalment, dealing with "political psychology," was published in the Paris *Figaro* of December 23. His sayings are in the traditional form of maxims or *pensées*, and some of them are not without sagacity and a keen eye upon prevailing tendencies. It is as true of Governors and Presidents as Le Bon says it is of governments, that they "fall oftener through their own weakness than by the attack of enemies." The mania for profuse law-making has its rebuke in the aphorism: "Legislators would pass very few laws if they could see at a glance the remote consequences." Finally, we cite one remark of the French philosopher which the present attitude of the tariff-protected classes in this country neatly illustrates: "To legislate exclusively in the interest of a single class is to increase indefinitely its demands and to condemn one's self soon to have it for an enemy."

The right to hiss in the theatre is ancient, but of recent years it has fallen into disuse. That it ought to be revived is the contention of Prof. George P. Baker of Harvard, who is also at the head of the Drama League of Boston. His argument is the entirely sound one that it would be a good thing both for playwrights and theatrical managers if audiences were more free to express disapproval. It is not a question of boisterous manifestations or "booing," but of rendering an adverse verdict when it is obviously due. A drama is offered to the public for its opinion, yet the absurd custom has grown up of objecting to anything but a favorable opinion. Spectators may applaud, but they must not hiss. Professor Baker is sensible enough to see the advantage of the older fashion. It was illustrated in Moore's story of the Frenchman at the Comédie who, when a bad actor delivered the line, "Ou laissez-moi régner, ou laissez-moi périr," rose and said: "Ou laissez-moi siffler, ou laissez-moi sortir."

According to a bulletin issued by the Federal Bureau of Education, the forty-three Legislatures showed themselves during the year just closed, "practically without exception," friendly to public education. There will be some curiosity, when the full report is published, to see what State or States were the exception. We have had unfortunate instances of political meddling in the case of one or two State universities, but to be classified as actually unfriendly to public education is a rare distinction. One of the developments noted is the tendency to lengthen the school term by reducing the number of holidays. The loud complaints against the additions that have been made to the curriculum in recent years must have owed part of their force to the decrease in the number of days in which they could be taught. It ought to be possible to bring about a better adjustment between the time at a student's disposal and the use he is at present compelled to make of it.

It is shocking to learn that in 1911 no less than sixty drivers of automobiles in New York city ran away and left their victims dead or injured in the street. This is the statement made by Col. Edward S. Cornell, Secretary of the National Highways Protective Association, from the records of the Association. He says, too, that the recent decision of the Appellate Division against the constitutionality of the statute requiring a driver to stop and give his name in the event of accident has operated as a discouragement to prosecutions. The Association will now seek to obtain fresh legislation designed to accomplish the same object, without incurring the Constitutional difficulty. But the original issue is still pending, the case having been taken to the Court of Appeals, where we trust it will be vigorously pushed. For the matter is of marked importance, quite apart from its bearing on the particular question in hand. The invalidation of the law, on the plea of immunity from self-incrimination, strikes sensible laymen—and many lawyers, too—as a manifestation of overgrown development of "the criminal's privilege."

Pierre Loti's impassioned protest against the spoliation of the Mohammedan world in the name of Christian civilization has the force that inheres in every plea for elemental justice. It has also the painful weakness that inheres in the process of the pot calling the kettle black. Why should M. Loti have singled out Italy's treatment of Turkey for specific denunciation? It is certain that the seizure of Tripoli would not have come when it did but for the example of what was going on under French and Spanish auspices in Morocco. "Pierre Loti" is the pseudonym of Commander Viaud of the French navy, to whom was recently presented a Government decoration of high rank, on board a French battleship, amidst much military pomp. As a lover of the exotic Mohammedan world, M. Loti is undoubtedly sincere in his denunciation of the methods of rapine and bloodshed which European "civilization" is now displaying in Morocco, in Tripoli, and in Persia. But what would be the conduct of Commander Viaud (retired) in case the French fleet was ordered to bombard Tangiers?

There is sufficient substance to the rumor of approaching peace between Italy and Turkey to lend basis for the hope that this peculiarly shameful episode in the history of European colonial expansion may be speedily brought to a close. Considering the suddenness of the attack upon Tripoli and the totally unprepared condition of the Turkish troops in that province, the latter have carried on the war with a degree of courage and persistence that should enable them to give up the unequal contest with honor saved. As for Italy, it goes without saying that she will be glad to withdraw from that evil eminence where she has stood exposed to the scorn of right-thinking men. The least that she can do is to offer the Turkish Government substantial compensation. The financial necessities of the new Turkish régime are great, and a goodly sum, to be disbursed for much-needed public works and schools, would be some counterbalance to the loss of a province.

THE MONETARY COMMISSION'S REPORT.

The Monetary Commission's formal report to Congress on Monday, embodying its recommendations for reform of the country's banking and currency system, is the sequel to a somewhat unusual episode in legislation. The Commission was appointed in May, 1908, under the authority of the so-called Aldrich-Vreeland Emergency Currency bill. That measure itself, hastily drawn up in response to discussion which followed the panic of 1907, was admittedly a temporizing and unscientific law, and satisfied nobody; it therefore provided for a commission of nine Senators and nine Representatives to study the general question and "report to Congress at the earliest date practicable."

The Commission's work was from the start taken personally in hand by its Chairman, Senator Aldrich; but during nearly all of its three first years of existence, its work was confined to investigation of the European banking systems by a subcommittee and to preparation of monographs on various aspects of the problem. What plan would be recommended was not known until in January, 1911, Mr. Aldrich personally gave out what he described as a "suggested plan of monetary legislation." This elaborate outline of a scheme for a central banking organization, to be owned and controlled exclusively by the banks of the United States, with due representation of the Government on its official board, was further revised by Mr. Aldrich last October. It is the plan then published which, in virtually all its details, the Monetary Commission has now recommended to Congress. It is within the facts to say that the Commission as an official body held no formal meetings until, last autumn, Senator Cummins's resolution calling for a report on January 8, 1912, was adopted by Congress.

The Commission's report is confined to general discussion of the problem; it is to be followed by submission of a perfected bill, which has already been made public. The report points out that the present banking system is weak because it admits of no concentration of the country's banking reserve of cash for use in time of trouble; that under it our banknote circulation fails to respond, by automatic expansion and contraction, to the changing needs of business; that it gives no effective means for coöperation by banking institutions at a time of crisis; that it does not enable our market to regulate properly the foreign exchanges; that it does not extend to interior communities the benefits of ready access to the general money market; that it leads to congestion of banking resources at the large financial centres, stimulating speculation when those resources are accumulating, and upsetting the market when they are withdrawn, and, finally, that the custodianship of its own funds by the Government leads to constant unsettlement of bank reserves.

To rectify these evils the Commission proposes to incorporate a National Reserve Association with $100,000,000 initial capital, which shall absorb the note-issue function now enjoyed by the 7,000 national banks, shall discount only for other banks, and shall hold on deposit the United States Government's surplus funds and the re-deposited funds of banks, but no private deposits. Against all its demand liabilities (including deposits and circulation) this central association is to maintain a 50 per cent. gold reserve. The national banks, meantime, are still required to hold against their own demand deposits the percentage of cash reserve now stipulated by law, except that they may count as part or the whole of that reserve the notes of the central institution or their own credit balances with that institution.

In all these particulars the Commission's proposals follow the lines already made familiar through public discussion of Mr. Aldrich's plan. The one innovation of the present report is its new proviso for election of the central management. The distinguishing feature of Mr. Aldrich's plan was the proposed division of the country into fifteen districts, in each of which the banking interests of the section were to be supervised by a district association of banks, managed through delegates from the various local associations. The directors of the national association were to be chosen by the boards of these district associations; with the national board enlarged, however, by designated officers of the United States Government and by a given number of directors chosen by the board itself.

The selection of the central management therefore devolved, in the last analysis, on the vote of the banks themselves, mainly voting as units; and this, early in the discussion of the plan, led to widespread inquiry as to whether control of a group of banks by a single individual or institution would not give such owner a large voice in election of the national directorate. Mr. Aldrich endeavored to meet this criticism by limiting the number of directors who might be chosen from any one district. Secretary MacVeagh, in his recent Treasury report, recommended decidedly that the new law should forbid any bank coming under its provisions from owning stock in any other independent bank. The Monetary Commission's bill approaches the matter in yet another way, declaring that when any bank owns 40 per cent. of the stock of any other bank in the association membership, or when 40 per cent. respectively of the stock in two or more banks is owned, "directly or indirectly, by the same person, persons, co-partnership, voluntary association, trustee, or corporation," then such banks shall be entitled, not to one vote apiece in the choice of officers, but only to one vote as a group.

This, the one wholly new provision in the Commission's formal report, is by no means the least interesting part of its recommendations. It is manifestly designed to meet the popular objection to the entire pending plan of banking reform, that control of the new association might indirectly be acquired by powerful financial interests such as have already obtained so extensive control over groups of existing institutions.

A BILL OF PARTICULARS.

It is difficult to get up much excitement over the alleged efforts to "smoke out" Col. Roosevelt. He will doubtless be "out" in due time, and with flame and explosions as well as smoke. But there is one respect in which the campaign that his friends are making against President Taft is rapidly approaching a definite issue which must squarely be met. The question is, if Mr. Taft is not to be renominated by his party, why not? What are the reasons —the public reasons—that can fairly be urged? The need of a clear answer is accentuated by the President's own declaration that he is in the fight to stay. It had foolishly been hoped, apparently, that fault-finding and nagging and

dashes of cold water, if kept up long enough, would so disgust or discourage Mr. Taft that he would take himself out of the contest. That wish, father to the thought, is now extinguished. The President explicitly asks the Republicans to make him their candidate again. If they refuse, on what grounds can they do it?

The newspapers have been filled recently with long accounts of the roots of bitterness that have sprung up between the President and the ex-President. All the rumors and gossip, together with some of the well-known facts, that have been retailed since March, 1909, are now massed and printed. They make a formidable showing, but it is entirely a showing of private offences. No question of public policy is involved. It is all a twice-told tale of slights, real or fancied, of pique, of offended dignity, of resentment. But is the Republican party to do what it has never done before, and decline to give an elected President a second nomination, for the sole reason that an ex-President dislikes him? What anti-Taft delegate will get up in the National Convention and say that the President must not be renominated, because he refused to keep Mr. Garfield in the Cabinet? What other will argue that Taft is out of the question, because he invited "Dear Maria" to dine at the White House? Similarly of the awful crime of Taft's Attorney-General in putting into the moving papers for the dissolution of the Steel Trust the allegation that President Roosevelt was hoodwinked in the matter of the Tennessee Coal and Iron Company.

And if we give the inquiry a broader and more impersonal scope, and take up the hostility to Taft shown by many Progressive Republicans, here also we find a great deal that is vague and only a little that is definite. The President is entitled to a bill of particulars. Serious public men should not assert emphatically that they do not love Dr. Fell, but add that the reason why they cannot tell. That the Progressive Republicans had some warrant in 1909 and 1910 for being dissatisfied with President Taft, we do not deny. But this is 1912, and they are bound to point out the exact things in his policy and attitude to-day which they condemn. Is it the tariff? His position on that is at least as aggressive as theirs; they cannot make an issue of that. Is it conservation? He is now as fully committed to the doctrine as they are. Is it the initiative and referendum? That is not a national question. Even Mr. Bryan declares that it will not be proposed for either platform. Is it the Trust problem and the enforcement of the Sherman law? We have never seen any resolution of the Progressive Republicans on this subject which made out a sound case against President Taft, or did not, in fact, cause his position to seem clearer and more vigorous than theirs. We are not now questioning their motives. Many of them are estimable and indubitably patriotic gentlemen. But it is a particular and very practical matter to which they are now addressing themselves, and in dealing with it they must, in order to produce any effect, be explicit and precise.

Taft "cannot be elected." This feeling is undoubtedly the true reason why many Republicans have faintly hoped that he would withdraw from the field. But as he has now definitely and even defiantly refused to withdraw, the real question before the party is: "If Taft cannot be elected, can any Republican?" More specifically, the question is whether any Republican can be elected over Taft's dead body. It is confidently said that Roosevelt could be elected, but could he? Could he, that is, if he first had to go out and make open war upon Taft, with all the imputations of false friendship and desperate ambitions upon his head, with his party torn asunder in the process, and with countless Republican enemies eager to pay off old spites? Under those circumstances, it would not be a cool judgment that maintained he could win. Thus the famous dictum of 1908 will be differently phrased this year. Then it was: If they don't take Taft, they'll get me. At present it is: If they don't take Taft, whom can they take?

THE CANAL AND SUBSIDIES.

English opinion seems to have been a good deal stirred up—possibly with a little artificial help from certain newspapers—over the proposal to make the Panama Canal virtually free to American shipping, while charging tolls upon the vessels of other nations. Stated thus baldly, the scheme would be in obvious violation of the canal treaty. To this imputation the language of some of President Taft's speeches in the West undoubtedly laid him open; and the severe comment upon his reported views was justified. But in his message to Congress he was careful to place the matter on a fairer legal basis. There can be no question, the President said, of our obligation to make the canal charges equal and uniform for all nations. American ships must pay the fixed rate per ton just like others. Only—and this is the point—there can be no doubt of the power of Congress, urges Mr. Taft, if it chooses to do so, to vote as a special subsidy to American shipowners the exact amount which they pay for passing through the canal. Granting this as a mere matter of stark power, the question of propriety and of wisdom remains.

There are preliminaries first to be settled. What is to be our general financial policy respecting the canal? Are we to give up entirely the idea of ever getting back even the interest on the money we have spent in building it? From the first the project was represented as a "good investment." The volume of tonnage seeking the canal was certain to be so great as to meet all interest charges and the expense of administration and up-keep. But as the estimates and expenditures have gone on mounting, that original expectation is now generally held to be illusory. Experienced shipping men do not believe that the returns from the canal will for many years to come meet even approximately the fixed charges. It is partly a realization of this, no doubt, that led Mr. John Barrett of the Bureau of American Republics to come out in favor of making the canal absolutely free, and abandoning the notion that we might reimburse ourselves.

No such plan, however, is contemplated by the Administration. In recommending to Congress early action upon the question, the President sets forth the purpose of getting as much out of the Isthmian traffic as it will bear, so as to come as near as possible to meeting the interest on the debt. But if this be so, what is the sense of giving back with one hand what is taken with the other? If the hope is to make the canal pay, or nearly pay, why set aside a certain portion of the receipts for tolls and make a present of them to favored shippers? In this light, the canal appears only as an excuse for subsidies. Every kind of basis for a shipping subsidy has been advocated, but here is a new one. American

shipowners will have to pay out good money to get through the Panama Canal. Horrible thought! Let us try a new dodge and vote the money straight back to them. Really, when you come to think of it, the canal was not built for ships, but for subsidies.

How fondly this idea is doted upon may be seen in a recent article by Lewis Nixon. It must be said for him that he is thorough-going. No petty juggling with canal rates will satisfy him. He would go the whole figure and impose discriminating rates upon foreign shipping in all our ports. To do this, he is aware that it would be necessary to tear up all our commercial treaties, but what of that? Let them be terminated at once. Then let us "extend our coasting trade laws, by treaties, to all of North, Central, and South America," so that no ship not built on this side the Atlantic, or carrying a flag of one of the Americas, could enter into that trade at all. Mr. Nixon does not indicate how he would carry out this modest proposal. Probably it would be by fiat, in the sense of Mr. Olney when he said that the word of the United States was a fiat for all South America. Once the thing were done—once we plunged into a commercial war with all nations, and drew upon our entire resources, in order to build a few ships, there can be no doubt that we should be able to build them. But to everybody except Mr. Nixon it might occur to ask whether ships would not be too costly on those terms.

SENSE AND HYSTERIA ON THE M'NAMARA AFFAIR.

On December 30 there was presented to President Taft a petition asking that the President and Congress of the United States would appoint a commission to "investigate, study, and consider the grave problems of internal statesmanship" connected with the conditions affecting labor in this country. It was signed by a number of men and women deeply interested in the improvement of the existing situation, and many of them of high national reputation. That the problems to which the petition refers exist, that they are grave, that help towards their solution may be hoped for from such an investigation as this, few will deny, or would have denied at any time these many years past. What is perhaps less important, but is nevertheless not without serious significance, is the way in which the proposal is put forward. The idea that the McNamara revelation suddenly cast upon the situation a new and lurid light, that it showed the American people to be at the parting of the ways, that we must choose now between an era of violence and bloodshed on the one hand and an era of conciliation and peaceful progress on the other, is not indeed explicitly embodied in the communication; but there runs through it an implication of something very like this.

When we say that this is a serious matter, we have in mind its bearing on that outburst of hysteria which has been so interesting a sequel of the McNamara confessions. Of this the symposium contained in the same number of the *Survey* in which the above-mentioned petition was published furnishes several examples. An extract from a single one of the contributions may serve as sufficient illustration. Mr. Paul Kennaday, secretary of the New York Association for Labor Legislation, gives us the benefit of his wisdom as follows:

> The workers have been driven until at last even they are turned. And now that they have been shown how easy it is, after all, to avenge their wrongs and to attack their masters at the one vulnerable point, property, we shall have more of murder and arson before we shall have less—unless those who control the courts and the Legislatures, and warp public opinion as they will, shall come to realize that the American workingman will not stand much longer this our present fashion of turning out "get-rich-quicks" at one end of the scale, and consumptive, poisoned, maimed, and penniless workers at the other.

So it is only "at last" that there has come labor-union violence; there were no Molly Maguires; there was no 1877 railway strike, with burning and fighting that make this McNamara affair a small matter; no 1894 Chicago trouble, quelled only by the strong arm of the Federal Government. And it was "easy, after all," for the McNamaras to accomplish their object, though it still remains wholly unattained, while they themselves are in prison and repudiated.

Fortunately there happens to be comprised among the sober and sensible contributions to the symposium one that emanates from a man who has done devoted service for remedial measures in behalf of working men and women, and who is one of the leading members of the Association for Labor Legislation, Prof. Henry R. Seager. His column of comment is sound sense throughout. He addresses to the labor unions, as a friend should, the words of truth and soberness. He admits that there is, and has long been, a class struggle; but "more fundamental than the class struggle," he says, "are those elementary convictions and habits of thought which are shared by all classes, and which the late Professor Sumner called the *mores* of a people. In the *mores* of the average American there is no place for the dynamiter." Until such lawlessness is suppressed, he declares, efforts to liberalize the law will fail to command from the average American the support which they deserve. "The best friends of labor in this crisis," says Professor Seager in conclusion, "are, in my judgment, those who urge the labor organizations to place themselves squarely and unequivocally on the side of law and order." And the flood of mushy sentiment to which less virile thinkers have given utterance is responsible in no small measure for the failure of labor organizations to do "squarely and unequivocally" that which would inure most signally to their benefit.

In point of fact, however, we do not believe that the hysterical view of the McNamara affair is entertained by any considerable portion of the people. Bursting suddenly upon the nation, flashed before the eyes of millions of people, from California to Maine, at a single moment in thousands of newspapers, the confessions were the theme of unusual excitement and interest for a few days; but the erection of the affair into a thing of stupendous import, an unheard-of portent, a sign of the wrath to come, has been purely factitious. We have had incomparably more serious and more formidable manifestations of the "class struggle" many a time in the past thirty or forty years; it represents no new element whatsoever in the situation. We cannot afford to be indifferent about it, simply because we cannot afford to be indifferent to the duty of ameliorating social evils which are capable of being ameliorated. The work of grappling with them will go on; every year there will be a greater and greater number of men and women devoted to that work; every year, we trust, there will be progress, now in this direction, now in that. But it is chimerical to expect that any improvement which law or pri-

vate effort may effect in any future now worth reckoning with will suffice to satisfy those who are disposed to accomplish their objects by the short-cut of murder or arson. The way to deal with that peril is by upholding, without compromise or apology, the sanctity and the vigor of the law; whatever may be done towards the bettering of conditions must he done because it is right, and not in the vain hope of placating the enemies of the social order.

CRIME AND CONFESSION.

The Beattie confession, the McNamara confession, and the Richeson confession, coming so close together, bid fair to exercise a desirable corrective influence on the attitude of a great many people towards the entire subject of crime, its detection and its punishment. Had the young Virginia wife-murderer refused to admit his guilt within the very shadow of death, there would have been many people to assert that an innocent man had been punished, and uncounted pitiful sighs would have gone out in memory of the "poor boy." Had the McNamaras decided to stand trial and been convicted, there can be little doubt that they would have become "martyrs" in the cause of labor, and hundreds of thousands of men and women would have believed sincerely in the innocence of the two brothers. And in the case of Richeson, the Boston clergyman, despite the mass of evidence piled up by the State against him, the fountains of sentiment would have gushed out freely towards him, if he had not confessed.

Sentiment is the name usually bestowed on this popular tendency to take sides with the prisoner in the dock against his accusers. And this feeling might deserve to be called sentiment if it were based on an innate reverence for human life and on a belief in the goodness of humanity. To hold that any man is *prima facie* incapable of committing murder, may look like idealism. But, as a rule, the sentimental attitude towards the man in the murderer's row is based on no such idealistic considerations. It is, rather, a survival of the anarchistic instinct which thousands of years of civilization have failed to eradicate in us. It is the instinct which is always "agin" the Government, rather than for the man whom society accuses of having violated its laws. It is the instinct against the police and for the man who succeeds in breaking away from the "cop." It is quite true that fancy refuses to glow over the thought of a policeman. But his is one of the ugly and necessary occupations that underlie the social structure. To assume that the police are always ready to "frame up" cases against innocent men; to assume that the criminal courts of law grind away in clumsy inefficiency, denying justice to the innocent and failing to reach the guilty; to assume that the whole basis of evidence and trial is an elaborate and costly piece of guesswork; to assume that circumstantial evidence is an unholy method of putting a man out of the way—that is the mental attitude of altogether too large a part of the community. And it is that mental attitude which will receive a rude and healthy shock from the three notable confessions we have mentioned.

On this whole subject of crime and its punishment, especially when crime consists in the taking of human life, we are still largely under the influence of what may be described as the Byronic point of view—that, namely, of the individual who is out of gear with society, because society is at its best a clumsy arrangement, at its worst a vicious one. Courts of justice, as part of the social structure, are open to the same charge. The Romantic theory does not countenance murder; it objects to murder being judged and punished in accordance with man-made laws. Nature herself will supply the punishment. It will work upon the guilty man through the power of conscience; it will turn his eyes upon his own soul and work that moral regeneration which is a thing to be sought for. Thus there grew up the great Romantic tradition of the murderer who is haunted by the material wraith of his victim, or is driven to confession by the furies of remorse. It is not necessary to enter into the details of a completely worked out scheme of spiritual retribution. We catch echoes of it in the news of the present day. A murderer is arrested at the scene of his crime to which he has been irresistibly attracted. The McNamaras confess because, according to one of the brothers, he could not sleep. The tradition goes back to Macbeth's shadowy dagger and beyond. It is a theory that pleases in its comprehensiveness. It asserts that murder is not always murder, as the laws of man would make it; but when it is, that the laws of man are not necessary for its expiation. Nature will attend to that, through ways of her own.

But here again the three confessions we have been discussing speak loudly in behalf of common sense as against fancy. If conscience had driven these men to confess their guilt, why should conscience have waited until society, through its policemen and its man-made laws, had drawn a formidable net about them, as with the McNamaras and Richeson, or had actually passed on the accused man's fate, as with young Beattie? It would be absurd to say that conscience no longer operates in men, or that murder has lost its power to turn the soul back upon itself in unquestioning horror. But there are exceptions, and unfortunately it is the exceptions with whom the courts have to deal. Beattie, a mere stripling, has taken his wife out of doors and done her to death in the most cold-blooded fashion. The next morning he sits on the veranda of his home, a bottle of beer at his elbow, and discusses the fate of the woman whose body is being prepared for burial upstairs. "I am sorry it happened," he tells his cousin, as if it were of a lost purse or a broken engagement. Modern science has any number of names to describe a nature like Beattie's. He may be a defective, or a victim of neurosis, or a reversion to type. The important fact, however, is that he exists.

THE BUFFALO MEETINGS.

MADISON, Wis., January 3.

The attendance at the meetings of the American Historical Association and the American Political Science Association, held in Buffalo, Ithaca, and Toronto last week, was somewhat smaller than it has been in recent years. The fact that the Middle West was the scene of the 1910 meeting, while the societies had been in New York city as recently as 1909, may account for the absence of many of those living in the region and in the habit of irregular attendance. There were few vacancies in the ranks of the regulars. Both programmes were marred by numerous delinquencies among those who had promised to read papers.

At the opening session, on Wednesday night, after an address of welcome by the Hon. Henry W. Hill, on behalf of the Buffalo Historical Society, the two bodies listened to the addresses of their respective presidents. Prof. William M.

Sloane, for the historians, spoke upon "The Substance and Vision of History," and replied at some length to the paper of his Columbia colleague, J. H. Robinson, which terminated the Indianapolis meeting of 1910. In opposition to Professor Robinson's thesis that history is suffering from the neglect by historians of the fields of archæology, ethnology, and psychology, Professor Sloane contended that history must keep to its trade, and not drift into the debatable ground of the social sciences. Gov. Simeon E. Baldwin represented the political scientists. Choosing for his title "The Progressive Unfolding of the Powers of the United States," he restated the orthodox democratic view of the dangers imminent in an extension of Federal influence, and allowed his imagination to roam among the possibilities in interpretation that remain as yet unused by courts and Congress. The interdependence of the two societies was emphasized by the fact that both Gov. Baldwin and Prof. Albert Bushnell Hart, who was chosen to succeed him as president of the Political Science Association, have been presidents of the American Historical Association, while the latter and older body chose as its new head the eminent practical political scientist, Mr. Theodore Roosevelt.

A second joint session of the two societies, upon Latin and Anglo-American relations, was held on Friday night, and brought forth "The Point of View of Latin America," from Henry Gil, a young Argentinian scholar, who took occasion to protest in the name of the strongest South American republic against the self-constituted guardianship of the United States. The other papers were historical, and included one by another foreign scholar, H. W. V. Temperley of Peterhouse, Cambridge. After this programme, and a smoker at the Buffalo Club, the associations abandoned Buffalo, for Toronto and Ithaca, where sessions were held Saturday afternoon on European history and Canadian government. At Ithaca, the senior surviving ex-president of the American Historical Association, Andrew D. White, gave a reception to the visitors.

The most notable paper on the programme of the Political Science Association was entitled "The Courts in their Relation to Constitutions and Statutes," and was read by Prof. Roscoe Pound on Thursday morning. The general topic of the session was "The Courts and Judges as Governing Bodies," and had been touched upon by Gov. Baldwin the night before. Professor Pound traced with keenness and precision the relation of the courts to popular views of the Constitution, found historical explanation for the general reliance upon interpretation as a corrective of legislation, and was not distressed lest the extension of the power of the courts, or of power through the courts, should wreck the United States. In later meetings, the association took up "State Constitution Making," with papers by J. P. Dunn of Indianapolis, and Prof. J. Q. Dealey of Brown; also "The County Problem in Municipal Government," in which F. D. Bramhall, of the University of Chicago, gave an admirable survey of the intricate corporate control over Cook County, and in which the absence of city attorneys from St. Louis and San Francisco showed the unwisdom of relying upon men of affairs in the study of scientific problems. On Friday morning, Herbert Croly led a discussion of "State Political Organization."

The historical meetings were much as usual. Two afternoons were given over to small conferences in which minute specialization was possible. The subjects of these were ancient history, Southwestern history, public archives, State and local historical societies, the report of the Committee of Eight on history in the grades, and the materials for advanced work in European history. Besides these, there were three meetings of all the historians. On Thursday the regular joint session with the Mississippi Valley Historical Association devoted itself to four papers on frontier problems, political and economic. In one of these R. G. Wellington dealt with the tariff and the public lands, showing, with new materials, how political log-rolling tied these two matters together in the West. British Imperial problems formed the general topic for Thursday night and drew two Canadian scholars into the programme. Prof. W. L. Grant, who holds the new chair of colonial history at Queen's, spoke on "Canada or Guadalupe—An Episode of the Seven Years' War," while Prof. C. W. Colby of McGill interpreted the defeat of reciprocity in September last. At the same session C. W. Alvord made a searching analysis of British political factions on the eve of the American Revolution. A session on international relations was held in the building of the Buffalo Historical Society on Friday morning.

The business meeting of the American Historical Association brought no surprises, but was exceedingly interesting in showing the range of activity of the society. Most of the seventeen heads of business reported on represented scholarly activity. The progress of Professor Cheyney's committee, charged with preparing a bibliography of English history, makes it probable that a first instalment may be expected in a year or two. Professor Richardson presented tabulations showing the location in America of standard files on European history, and provided the first guides for libraries in filling in their gaps. A new enterprise was undertaken by the Association when it granted a board of editors and a subsidy to the *History Teachers' Magazine*, which Albert E. McKinley has conducted for two years with distinguished success. The associations adjourned to meet in Boston and Cambridge, in 1912, and in Charleston in 1913. P.

AMERICAN ECONOMIC ASSOCIATION.

BALTIMORE, January 8.

The American Economic Association held its twenty-fourth annual meeting in Washington December 27-30. The American Statistical Association, the American Sociological Society, and the American Association for Labor Legislation, as has been customary for some years, met at the same time and place. The programme of the Economic Association included joint sessions with all of these associations. Section I of the American Association for the Advancement of Science and the American Civic Alliance also held sessions independently on economic subjects.

A feature of the meeting was the participation of a number of the economists now in Government service. The increasing drift of economists into the public service has been much commented upon in recent years, but it has never been brought home more forcibly than at this meeting. Director Durand of the Census, Commissioner Neill of the Bureau of Labor, Chairman Emery of the Tariff Board, Assistant Secretary Andrew of the Treasury Department, either presided at sessions or read papers. Additional official recognition was given by the presence of President Taft as the guest of honor at the luncheon of the Association on Thursday. Secretary MacVeagh presided at one of the sessions and Secretary Fisher at another. Secretary and Mrs. MacVeagh received the members of the Association at their home on Friday afternoon.

The sessions were devoted almost exclusively to economic questions of pressing political importance. The tendency to limit the amount of time devoted to economic theory has been evident for some years, and is probably to be accounted for chiefly by the increasing desire to make the Association more largely an agency for the dissemination of information on economic subjects. The rapid increase in membership in the last two or three years has raised the proportion of members whose chief interest is in current economic questions. The contrast in this respect even with last year's programme was marked. At St. Louis, one entire session was devoted to pure economic theory and another session to the theory of money. At the Washington meeting, the only time given to theoretical economics was at one of three round-table conferences held on Friday afternoon.

In his presidential address, entitled "The Economic Utilization of History," Prof. Henry W. Farnam of Yale Uni-

versity maintained, against the weight of J. S. Mill's authority, the value of experiment as a means of extending economic knowledge, and pointed out the advantages of the economic history of the United States as material for studies in economic experimentation.

The session devoted to the tariff was noteworthy in that the papers were based more largely than at any of the other principal sessions on general economic principles, and less on detailed investigation of special points. Chairman Emery of the Tariff Board, who read the first of the principal papers, gave his opinion that the cost of production at home and abroad of protected commodities might be ascertained with sufficient exactness to serve as a guide to tariff-makers. Prof. H. Parker Willis of George Washington University argued that the differences in cost of production among sections of the country and among producers are so great as to make it impossible to settle on any sum as fairly representative of the cost of production in a country.

The data yielded by the census of 1910 was much in evidence at the session on Rural Conditions. Dr. John L. Coulter's discussion of the problems of Southern agriculture was suggestive. Prof. B. H. Hibbard of Iowa State Agricultural College, in a paper on the "Decline of the Rural Population of the United States," brought to bear on the extent and causes of this interesting phenomenon a large amount of statistical data as to area of farms, value of stock, and of agricultural implements. His chief conclusion was that the decrease in population was most largely due to the increasing use of machinery and to other economies in labor.

The first of the principal papers at the session on Immigration was read by Prof. H. P. Fairchild of Yale University and dealt with the question of restriction. Professor Fairchild seemed inclined to favor the plan of fixing a minimum wage which immigrants must receive as the best protection against the lowering of the standard of living through the competition of immigrant labor. The paper of W. W. Husband, secretary of the Immigration Commission, was a careful study of the extent and character of the emigration from the United States to Canada.

At the first of the three round-table meetings on Friday afternoon, under the leadership of Prof. Frank A. Fetter of Princeton University, the subject of discussion was "The Price Concept in Relation to Value." The second meeting, on "An International Commission on the Cost of Living," was presided over by Prof. Irving Fisher of Yale University. The discussion here turned largely on the possibility of procuring by international agreement the adoption of some form of multiple standard in place of a metallic standard. The third meeting, on "Industrial Efficiency and the Interests of Labor," under the leadership of Prof. H. S. Pearson of Dartmouth, was noteworthy, chiefly for the great differences in opinion among the speakers as to what effect the new efficiency systems, with their varying and intricate plans of wage payment, have on the health of the laborers.

At the final session, on "Safety and Health in the Mining Industry," the principal papers were read by John Mitchell, ex-president of the United Mine Workers; by S. C. Hotchkiss of the United States Public Health and Marine Hospital Service; by J. A. Holmes, director of the United States Bureau of Mines, and by J. R. Haynes. The papers were too technical to be of great interest to many economists, but marked a decided advance in the careful study of occupational risk and disease in the United States.

The secretary-treasurer reported a large increase in the membership, which now stands at 2,300. In view, however, of the large increase in the expenses of the Association, it was decided to raise the annual dues from $3 to $5. Prof. Frank A. Fetter of Princeton University was elected president for the ensuing year, and Prof. T. N. Carver was re-elected secretary-treasurer. B.

THE PHILOLOGISTS AND ARCHÆOLOGISTS.

GRANVILLE, O., January 1.

In numbers, the combined meeting of philologists and archæologists at Pittsburgh, December 27-29, was below the average. Possibly a meeting-point which would enable members from a distance to combine business with a holiday visit to New York city would procure for the meetings a better attendance than they can otherwise command. There is another factor, however, which need not be concealed, and that is a growing feeling that the relation between the Archæological Institute and the Philological Association has not been worked out with sufficient precision to prevent an undesirable clashing of interests. For this reason separate meetings may possibly be held next winter, though the fact that so many are members of both organizations would make such a move regrettable.

The annual address of the president of the Philological Association, Dr. John C. Rolfe of the University of Pennsylvania, might have been listened to with profit by college presidents and trustees all over the land. With "Teaching and Research in Classical Philology" as his subject, Dr. Rolfe discussed at some length, and with sound reasoning, the present relation of the doctorate in philosophy to the work of undergraduate teaching. If the degree indicated several years of graduate study along lines intelligently chosen to prepare the student for the kind of work which he intends to do, there would be no objection. As it is, he can get his doctorate only by submitting to special training for the work of original research. Dr. Rolfe did not in any way belittle the importance of original research in classical studies. Still, such investigations can never be the primary work of the college teacher, and the years which he can devote to graduate study should be so directed as best to fit him for the work which he is to do. The speaker made it plain, of course, that he did not have in mind the narrow lines of "normal" or "pedagogical" training to which some have pinned their faith. While no easy path out of the difficulty was indicated, it is encouraging to see the evil so clearly realized by an educator in Dr. Rolfe's position.

In spite of the success of young reporters for the Pittsburgh dailies in discovering "startling propositions," "sensational reversals of long-established theories," etc., the papers presented opened no new eras in philological research. About twenty of the papers emanated from a dozen institutions west of the Alleghanies, and two or three from the South. Four of the philological papers were presented by women from the faculty of Vassar College. The American School at Athens was represented by two papers, one on the "Treasuries of Delphi," sent by W. B. Dinsmoor, and the other an account of the excavations of the past year, presented by Bert H. Hill, director of the School. An extremely interesting stereopticon presentation of the excavations at Cyrene was made by Joseph C. Hoppin, a member of the staff of the expedition, which carried out its first campaign during the past year. The second campaign at Sardis was presented by Dr. Howard Crosby Butler, director of the expedition. It may be said here that these attractive stereopticon lectures, legitimately so large a part of the programme of the archæologists, are one of the sources of difficulty before referred to. And when the stereopticon combined its appeal with an address by the distinguished French visitor, Dr. Franz Cumont, at an hour set for the reading of papers before the Philological Association, the latter body was, of course, forced for the time being to adjourn. This is said in no spirit of censure. The conflict of interests may have been unavoidable at the time, but it was none the less unfortunate.

Professor West presented to the managing committee of the American School at Rome a full report of the negotiations for the separation of the School from its connection with the Archæological Institute, and its union with the American Academy in Rome. It will take two years to bring this about, and in the meantime the managing committee remains in complete control, as hereto-

fore. Eventually, this body will be reconstituted as an advisory committee. The combination has the unanimous approval of the present governing bodies of both institutions, and members of the managing committee of the School have already been chosen into the board of trustees of the Academy. The plan makes adequate provision for the maintenance in perpetuity of the School of Classical Studies, under its own director. Prof. Francis W. Kelsey of the University of Michigan was reëlected president of the Archæological Institute, and Prof. Thomas D. Goodell of Yale chosen as head of the Philological Association. The place of meeting for next year was not finally settled, and hinges to some extent on the possibility of satisfactorily adjusting a combined programme. J.

Correspondence

"TELLS HIS TALE."

To the Editor of The Nation:

Sir: Milton's well-known line

> And every shepherd *tells his tale,*

has been much discussed, editorial opinion gradually tending to the view that the phrase means: counts the tale (number) of his sheep. Now comes the Oxford Dictionary and throws all the weight of its authority on the other side. Its words (sub. *Tell* No. 17, p. 154 *c*), are worth quoting:

> In the passage 1632 Milton L'Allegro 67, "And every Shepherd tells his tale Under the Hawthorn in the dale," *tells his tale* probably belongs here [*i. e.,* in the sense of relating a story], though some modern editors refer it to sense 21, taking it as "Counts his number or sum (*i. e.,* of sheep)"; but no instance has been found *before the 19th c.* [italics are mine], of "tell his (or a) tale" in a numerical sense; while the expression in its ordinary sense has been common since the thirteenth century. *Cf.* also quot. 1549 for the telling of tales by each shepherd in turn, and see also the whole passage, also the context of quotation 1613 in sense 21, where "underneath a hawthorn" appears as the place of the shepherd's recreation.

The *Athenæum,* July 29, 1911, in its review of the Oxford Dictionary, cites this opinion with decided approval, intimating that the dictionary's "probably" is too modest.

What, then, is the situation in Milton's lines? Early morning, even daybreak:

> Right against the eastern gate,
> Robed in flames and amber light,
> The clouds in thousand liveries dight;
> While the ploughman, near at hand,
> Whistles o'er the furrowed land,
> And the milkmaid singeth blithe,
> And the mower whets his scythe,
> And every shepherd tells his tale etc., etc.

In other words, the ploughman, the milkmaid, the mower are *at work,* but the shepherds (note Milton's "every") get together and exchange stories! Can we imagine this at sunrise?

Now a few words upon the Oxford Dictionary's references. The quotation 1613 is from W. Browne's "Pastorals," Pipe V. Undoubtedly Milton had the "Pastorals" in mind. Unfortunately the Dictionary does not quote enough to illuminate the situation. This Pipe V begins:

> Morn hath got the start of night;
> Labouring men were ready dight
> With their shovels and their spades. . . .
> When the shepherds from the fold
> All their bleating charges told
> And (full careful) searched if one
> Of all their flock were hurt or gone, etc.

Cuddie and Willie each counts his flock, and finds that none are missing. Then, verse 44, Cuddie and Willie, under a hawthorn, begin to play "and with rhymes wear out the day."

It is easy enough to imagine that *two* shepherds, *after* carefully counting their flocks, should get together and pass the day in company. But that *all* the shepherds, immediately on rising, should proceed to exchange stories, is inconceivable.

The quotation 1549 is from the Compl. Scot, vi. 63: "I think it best that euyrie ane of vs tell ane gude tayl or fabil, to pas the tyme *quhil euyn* etc." Yes, while *evening* is here. Evening is proverbially the time for laboring men to exchange stories. Have the editors of the Dictionary forgotten the Towneley Second Shepherds' Play? Here the three shepherds, after comparing, not stories, but grievances, lie down with Mak in their midst, and, on rising in the morning, discover Mak's theft.

Lastly, when the editors of the Dictionary assert that "no instance has been found before the 19th c. of 'to tell his (or a) tale' in a numerical sense," I would fain correct them out of their own mouth. Turning to the word *Tale,* p. 52, No. 6, I find from the "Cursor Mundi" (year 1300), verse 7174: "O that hethen folk he feld A thusand that wit tal was teld," meaning: Of the heathen he felled a thousand, counted by count. Further, p. 53, No. 9, where the meaning of *tale* is "account," rather than "count," I find, from the same "Cursor Mundi," 7554: "Ful littel tale of him he teld," and from the "Lambeth Hom." (year 1175): "Thet he telle swa lutel tale ther of."

These examples demonstrate that the phrase, "to tell a tale," in the "numerical sense," was current centuries before Milton. The only peculiarity of the "Cursor" and the "Homilies" is the use of *teld* for *told.* That, however, is a matter for historical English grammar; the sense is identical. J. M. Hart.

FOREIGN AMERICANS.

To the Editor of The Nation:

Sir: Professor Fairchild presents in the *Nation* of December 28 a gloomy picture of the future of the American commonwealth torn by internal racial conflicts. This picture is suggested by the fixed belief that the present unrestricted tide of immigration constitutes the chief danger which our country has to face. In another column of the same number of the *Nation* we read that the average net immigration for the past five years is only one-half of one per cent. of the present population of the country. Now the melting-pot is a pretty large one—the grandchildren of those who came over in the fifties are barely distinguishable in appearance, education, and habits of thought from the descendants of those who came over in the seventeenth and eighteenth centuries. The square-headed sons of the Mediterranean race are said even to lengthen out their skulls in conformity with what we are told is the American type. The immigrants of the past few decades are indeed not Americanized, nor will they ever be—completely; but their children, and still more their grandchildren will be. What is more natural than that these aliens should hark back to the traditions of their native lands, or that they should club together in the effort to keep alive national and racial traditions—including even the effort to keep alive the language to which they were born, and the wide-open Sunday that means much to many of them? Just as long as the American Governments refrain from coercing them into Americanism, all these tendencies are bound, however, to be expiring efforts. The only known way to keep the racial and national instincts of these "foreign Americans" thoroughly alive is to treat them as Prussia treats the Poles.

Roscoe J. Ham.

Brunswick, Me., December 31.

FACSIMILES OF EARLY ENGLISH TEXTS.

To the Editor of The Nation:

Sir: May I ask your good offices to communicate to the members of the Modern Language Association and others interested some information which arrived just too late to be reported at the recent meeting of the Association at Chicago? Professor Gollancz writes that arrangements have been made through the generosity of a private donor for the publication of the facsimile of the Cædmon MS. by the Oxford University Press for the British Academy to commemorate the tercentenary of the Authorized Version of the Bible. It is expected that the facsimile will be issued early next year, and it is understood that the rights of American subscribers are to be safeguarded, *i. e.,* subscribers under the last scheme will not be obliged to accept this reproduction, but will have the privilege of renewing their subscriptions at the same price, five guineas. The ordinary published price will not be less than six guineas. Any other member of the Modern Language Association of America who subscribes through the undersigned before the date of publication is to have a copy at the lower price. Professor Gollancz writes that the Early English Text Society has now ready facsimiles of Cotton Nero Ax (containing "Pearl," "Cleanness," "Patience," and "Sir Gawayne"), the first issue of the series to commemorate the lamented founder and director of the society, Dr. Furnivall. The first volume will be limited to 250 copies, and the published price will be three guineas; members of the Modern Language Association of America who subscribe through the undersigned before March 1 are to have the volume at £2 5s.; the reproduction contains the illustrations as well as the texts, and is of the same size as the MS. In addition to the whole MS., 150 copies of "Pearl," each page printed on a separate sheet, have been prepared. The price of this volume, or rather portfolio, will be 25 shillings. Subscribers before publication, who are members of the Mod-

ern Language Association, may obtain the "Pearl" facsimile for one guinea, by ordering through the undersigned. No money is to be sent to me—merely the formal order for the facsimile desired.

J. W. CUNLIFFE,
Chairman of the M. L. A. Committee for the Reproduction of Early Texts.

University of Wisconsin, Madison, January 3.

THE "GEMUETLICHKEIT" OF DICKENS.

TO THE EDITOR OF THE NATION:

SIR: Coming recently upon the word *gemütlichkeit*, and being in want of fit English translation, I asked a scholarly friend to help me out. He writes: "It means a feeling of good will to all the world about one, the wish to be happy and comfortable—to have all your surroundings in like condition." Instantly I felt I had chanced upon the fittest combination of consonants and vowels the world around to describe those stories which will be recalled so affectionately in the coming February, through the centenary celebrations of "Boz." Why not render the German word here referred to as "the-atmosphere-of-the-works-of-Dickens"?

And *à propos* of this coming anniversary, it may be of some slight passing interest to call attention to the fact that a jury recently empanelled at Melbourne, Australia, contained a Dickens, a Dombey, and a Scrooge. One rather wonders that the last had not made legal application to change his name. WARWICK JAMES PRICE.

Philadelphia, January 3.

Literature

TREVELYAN'S "GARIBALDI."

Garibaldi and the Making of Italy. By George Macaulay Trevelyan. New York: Longmans, Green & Co. $2.25 net.

With this volume, Mr. Trevelyan concludes what some English reviewers call his Garibaldian trilogy. The book is hardly so interesting intrinsically as its predecessors, because, having to deal with a twofold theme—the military and the political—it magnifies the former at the expense of the latter. But on its strong side it is very good, and it contains passages equal to the best in the earlier volumes. It confirms the impression that Mr. Trevelyan's brightest talent is that of narration. One might read many pages, and even whole chapters, of his descriptions of Garibaldi's exploits, and suppose they were written on the spot by a first-class war correspondent, like Steevens. This is a fine tribute to Mr. Trevelyan's vividness, to his ability to make the past seem real. Without this gift, it is idle to protest that one is erudite and impartial. Mr. Trevelyan possesses the advantage over the war correspondent of not only seeing events in the making, but of knowing, often better than the actors themselves could know, their causes and effects.

Books composed on this plan run the double risk of being written too near their material and of appealing so exclusively to the eye that they present surface but not substance, motions but not emotions, foreground but not perspective. On the other hand, they gain in freshness, and they pulse with the writer's feelings at the moment of composition. If to any critic Mr. Trevelyan seems at times too pictorial, we would reply that his pictures are wonderfully well drawn and that, after all, pictorial history as he writes it is such a rarity that any reader who does not enjoy it is to be pitied.

This volume completes the story of Garibaldi's liberation of the Two Sicilies in the summer and autumn of 1860. It finds him, early in June, master of Palermo; it leaves him, early in November, setting sail for Caprera after having consigned to Victor Emanuel the kingdom he had rescued from the Bourbons. The chief topics are, on the military side, the march of Garibaldi's columns through Sicily, the battle of Milazzo, the crossing to Calabria and triumphal entry into Naples, and the battle of the Volturno.

Each of these Mr. Trevelyan treats with ample knowledge and vividness. Having retraced the route, notebook in hand, he is able to add everywhere the bit of local color which serves as a credential to veracity. Only in his account of the battle of the Volturno does he lapse from his usual clearness, from fixing his attention on too many unrelated details. Though the battle was, indeed, a jumble, the historian should not be jumbled: Polonius was dull, but not Shakespeare in portraying him. Admirable, on the other hand, is the story of the Garibaldians at Messina, of their passage of the Strait, and of the hero's dash northward and first days in Naples. On all these points and many others Mr. Trevelyan speaks the latest word; and if he does not cause us to change our general view, he adds many particulars. What is really novel is his open-air, epic treatment of each episode. At his best, he holds his own with the best current writers of romance in telling his tale of marvellous adventure.

Only half of Garibaldi's achievement, however, was military, and that the easier half. His task was both to put to flight the Bourbon troops, and to promote the harmonious union of the South Italians with the North; and here his personal pique, his egotism and political incapacity, fostered feuds the regrettable consequences of which are felt to-day. It is precisely on this side that Mr. Trevelyan disappoints us. His outlines of international diplomacy during that summer are distinct. He has had access to Lord John Russell's papers, to the British Foreign Office archives, and to various private or inedited British sources which enable him to construct a logical account. He uses discreetly the Trecchi documents and Litta Modignani's. But while stating his conclusions, he hesitates to apply them to Garibaldi. He does not deny, for instance, that the Garibaldian régime at Naples was bad, but he lets us blame Crispi, Bertani, and other extremists, who could not have stood up a day without Garibaldi's favor. The old maxim, "he who does a thing by the agency of another, does it himself," rules in history as well as in law.

Mr. Trevelyan may have hoped to ward off criticism by admitting once for all that Garibaldi was a child in politics, who wholly misunderstood Cavour, but such an admission is too vague to help readers, not otherwise informed, to judge the last months of the dictatorship. This is all the more regrettable, because Mr. Trevelyan's candor in discussing, in his second volume, the sailing of the Thousand, led us to expect similar candor here.

Were not Garibaldi's virtues so genuine, or were Mr. Trevelyan less successful in impressing us with their genuineness, the picture of this "superman," as he calls him, might appear to be a composite of Mr. Pickwick in benevolence, of Roland in valor, of Bayard in knightliness, and of Washington in patriotism. But though Garibaldi, on occasion, displayed each of these traits, he had others, less ideal, which greatly influenced his action, and therefore should be regarded as historic elements. His egotism made him the victim of flatterers; he believed calumnies without inquiry, and, after he knew them to be calumnies, he unblushingly perpetuated them in his memoirs; he set himself above the law, although obedience to the law was the best service that an Italian could render; he clung to power to the very last moment, and thereby greatly increased the danger of civil war.

In the autumn of 1860, the world outside heard chiefly of Garibaldi's magnanimity—how, having conquered a kingdom, he gave it up, and retired like Cincinnatus to his farm. In truth, however, he did not consent to the elections for annexation until the Italian Parliament had overwhelmingly repudiated his policy of delay, and the approach of the Royal army warned him that he must either acquiesce or fight. So, too, his retreat to Caprera was idealized: for he departed only after he had very emphatically demanded of Victor Emanuel to make him dictator with full powers for a year or longer, and the king had not only refused—as he was bound to do, if he meant to give Italy union and peace—but had made Garibaldi understand that the Royal Government did not fear him.

It is possible, of course, to over-emphasize this aspect, but to tone it down, or to omit it, is to leave much of the history of that fateful year almost un-

intelligible. Such omission awakes in us a haunting sense of unreality, as when at the opera the moon's effulgence obligingly follows the tenor up and down the stage. This used to be the accepted method of biographers, but, except among Germans when they write of Goethe or of Bismarck, it has fallen into disrepute. It too evidently defeats its object: witness the attempt to deify Washington, with the result that for half a century everybody regarded the Father of his Country as a myth. Mr. Trevelyan does not deify indiscriminately: he simply selects those of Garibaldi's qualities and acts that appear heroic, and implies that the rest, being irrelevant, need not be recorded.

We suspect, however, that this is a mistake. Modern readers insist upon knowing the entire psychology, and not selected fragments, of great men. That Lincoln, before presenting to his Cabinet the most momentous document ever conceived by an American President, read aloud Artemus Ward's latest bit of horseplay, has meaning for those who can see. We ask, therefore, and posterity will ask more insistently, what was the *total* Garibaldi? In what sort of personality was the modern paladin put up? We see how his virtues helped: tell us how his defects harmed Italy.

Mr. Trevelyan's reply may be inferred from this passage from his epilogue:

> Now that [Garibaldi] is dead, the poetry in his character and career is all gain in his race for immortal laurels. The history of events is ephemeral and for the scholar; the poetry of events is eternal and for the multitude. It is the acted poem that lives in the hearts of millions to whom the written words of history and the written words of poetry are alike an unopened book. . . . As the centuries slip by, carrying into oblivion almost all that once was noble or renowned, Mazzini's soul and Cavour's wisdom will be forgotten by the Italian who tends the vine or sweats beside the furnace, sooner than the old gray cloak and the red shirt and that face of simple faith and love.

And so Mr. Trevelyan enlists with the legend-makers.

We have a rooted conviction that the historian makes a fatal mistake when he strays into the field of the epic poet. Garibaldi himself would cry out against being reduced to the stature of a popular fetish-idol, like St. Januarius or any of the thaumaturgic creatures of South Italian superstition. The proletariat that believed in them never gave him support. And the true lover of liberty must hope that the time will come when even the Italian who tends the vine will be too enlightened to take Garibaldi, or any other saint or hero, whole. If the Neapolitans are incapable of being lifted above the level of crass superstition and brutish instincts, it was futile for Garibaldi to free them from the Bourbons.

We should not press this point, if it did not concern the foundations of biographical writing. In his earlier volumes and in the first chapters of this volume, Mr. Trevelyan holds the balance so fairly that we are all the more disappointed when, towards the end, he seems to abandon himself to a sort of infatuation.

But we cannot close our review of this memorable work with a disparaging note. In its entirety, it is the most successful narrative biography of a man of action written in English in our time. Among his other qualifications, Mr. Trevelyan has had youth, a passion for out-of-door scenes and military adventures, and a certain contagious enthusiasm. Caring little for the intricacies of psychological analysis, it is the acts, rather than the motives of his personages that chiefly engage him. To have produced three such volumes in less than five years, measures his capacity for working at a high rate of speed; and the numerous appendices to each volume show with what zest he has ferreted out the facts in special cases. A purist might object to his occasional lapse into colloquialisms, like "wire" (for "telegraph"), "on the spree," "tussle," etc. At his best—and he has nothing better than the opening to his first volume—Mr. Trevelyan writes very well; and throughout he is clear and unmannered. One fault, however, should be corrected—his frequent use of foreign words. A biographer of Kossuth or of Togo would not lard his English text with Magyar or with Japanese, as Mr. Trevelyan does his with Italian, French, and Latin.

Mr. Trevelyan's "Trilogy," although, unlike Wagner's, it purposely avoids "The Twilight of the Gods," has done more than any recent English work to raise biography to its proper place. It furnishes a sympathetic portrait of the most romantic of modern heroes, and, incidentally, it affords vivid glimpses of the noble drama of the Risorgimento. It cannot fail to stimulate other biographers.

CURRENT FICTION.

Jennie Gerhardt. By Theodore Dreiser. New York: Harper & Bros.

In "Sister Carrie" Mr. Dreiser aspired to be an American Balzac; in "Jennie Gerhardt" he has contented himself with being an American Sudermann. Sister Carrie herself was the American equivalent of that debonair and amiable epitome of Parisian success, Rastignac; Jennie Gerhardt is a debrutalized Regina—a Regina intelligibly transposed into terms of American life. The cross-section of American society placed before us in "Sister Carrie" was fresh, containing types and relationships never before seriously recognized in an American novel without some display of phariseeism. It was handled without either squeamishness or effrontery, and from this suspension of moral judgment we hoped great things. From this present espousal of the perverted ideal of feminine character which naturalism has fathered in the earnest German mind, much less is to be hoped.

Docile, submissive, and exquisitely tender-hearted, physically beautiful and strong, Jennie Gerhardt is the perfection of passivity. Early in the story a definition of virtue is propounded which shall precisely fit this predestined victim of masculine selfishness—"virtue is the wishing well and the doing well unto others. Virtue is *that quality of generosity which offers itself willingly for another's service.*" Then, provided only that opportunity shall always coincide with some exigent family plight—a brother arrested, the father incapacitated by accident—the sensual complaisance of the German immigrant's daughter easily assumes the guise of "generosity," or even of that sterner virtue, "self-sacrifice." Mother of an illegitimate child at eighteen, and subsequently the sharer for many years of a second illicit union, she steadily gathers strength and sweetness under the burden of her false position, and eventually emerges from those dubiously shadowed experiences with all the gentle dignity of self-abnegation. Even granting the "natural refinement" of which no American novelist has yet been rude enough to deprive a heroine, and which Mr. Dreiser has taken care to include in Jennie's equipment, we still mistrust this conclusion.

Less ambitious than his treatment of feminine types, and far more notably successful, are his studies of individual men. Senator Brander is no lay figure. Sympathetic insight is lavished upon the interplay of benevolence and self-indulgence which culminates in the seduction of his young beneficiary. To Lester Kane, who from the first moment of encounter exercises over Jennie an almost hypnotic control and who eventually relinquishes her with considerable reluctance in order to marry and resume his proper social and financial rôle, an equally generous understanding is extended. The type is easily recognizable—cynical, good-natured, accustomed to large calculations, contemptuous of authority, endowed with greater powers of resistance than of self-direction, and a protective trick of self-deprecation. Mr. Dreiser has reported him and accounted for him with thoroughness, without being at all able to convey the enlivening tone of Irish-American banter. The triumph of the book is the delineation of Gerhardt, the old German glass-blower whose innate sturdy honesty and religious bigotry are ill-matched against the insidious economic and social forces that make for the disintegration of the German-American household. His physical hardships and his spiritual concessions are alike

eloquent of grim necessity; and the busy frugality of his old age, sheltered and humored in the luxurious household whose extravagances he constantly and ineffectually endeavors to censor, offers a sadly humorous commentary on the relentless uses of adversity. One would swear that the portrait had been drawn from life, and that, with a genuine Teutonic love of actuality, every deep-cut line of the rugged old face had been faithfully transcribed.

The Life Everlasting. By Marie Corelli. New York: George H. Doran Co.

It is easy enough to laugh at this writer as a sort of Brummagem prophetess, straining to impress upon the world a message which she would find it hard to put in plain words. She has been so laughed at from the beginning, and in consequence nourishes a grudge against all critics which she never loses a chance to express in forms of contempt. There is no doubt, at least, that she takes herself seriously. What she has is the story-teller's knack, a talent to which she attaches little value. Her attitude towards her work in the introduction to the present narrative is almost prayerful in its solemnity. This is, she says, the third number in a trilogy which utters the best of her teaching. She does not expect that it will be popular; but popularity she despises almost as much as criticism. Her concern is to complete what she regards as a species of epic of the higher life. In this loftier mood we make her out as a species of mystic with a theory of human perfectibility which includes physical immortality on this earth. The hero is a man of sixty-odd, who has learned the secret, is wise as a god and radiant as a youth, and for the rest amuses himself for the most part in traversing the seas in a yacht driven by sails which are supplied with a private breeze, by means of an electrical apparatus carried on board. This has the merit of novelty: an electrically driven propeller would now have been a commonplace; and besides Miss Corelli wanted the sails for purposes of picturesqueness. In contact with this hero comes the woman who is supposed to tell the story. They have often met before in ages past, and have more than once stood on the verge of perfect union; but some fault of their own or some obstacle of circumstance has always intervened. We are, of course, destined to assist at the occasion of their final and permanent espousals. To be worthy of this, the heroine has to go through a rigorous test in "the House of Aselzion"—a master of the as yet small brotherhood of perfectibility. And there is a villain, who has successfully kept the pair apart in other lives, to be disposed of in this one. It is all rather absurd; Miss Corelli does not do what she has more than once done—make a good story in spite of herself out of what was intended for a discourse.

Mis' Beauty. By Helen S. Woodruff. New York: The Alice Harriman Co.

This little volume is, in fact, a Southern negro dialect recital. On it, as usual in such cases, the whites sit darkly. But it matters not. The negro folk are the thing. Their monologues, dialogues, and utterances of all sorts are reported at times verbatim, one is assured and can well believe, and always with a sympathetic and humorous understanding. Uncle Shoddy's sermon, Mammy's diplomacy in matters matrimonial, Cookie's thankfulness that she had been delivered from marrying, "like all dese females dat's supportin' gemmans dat ain't wuth it," are no less characteristic of them than their entire devotion to the "Quality" whom they serve. Loyalty and comic irresponsibility flourish as in the days before the war, but eloquence has waxed to the point of seeming occasionally manufactured. Thus "naked-as-a-jay" for "negligé" sounds like either exploitation or imagination. The illustrations, by the author, are few and could with advantage have been fewer. The book should be excellent for reading aloud, if the reader have the correct accent.

ROMAN RELIGION.

The Religious Experience of the Roman People, from the Earliest Times to the Age of Augustus. The Gifford Lectures for 1909-1910, delivered in Edinburgh University. By W. Warde Fowler, M.A. New York: The Macmillan Co. $4 net.

If one may judge by literary output, there can be no dearth of interest in the study of the Roman religion. We noticed but a few weeks ago the appearance in English dress of Cumont's "Oriental Religions in Roman Paganism," and soon after the admirable volume of Lowell Lectures by Professor Carter of the American School of Classical Studies in Rome, outlining the subject from the earliest times down to Gregory and the Lombards, at the close of the sixth century. And now we have the Gifford Lectures by Professor Fowler, whose scope is sufficiently indicated in the title. Mr. Fowler adopts from Ira W. Howerth, in the *International Journal of Ethics*, his definition of religion as "the effective desire to be in right relation to the Power manifesting itself in the universe," a definition which treats religion as essentially a feeling, an instinctive desire, manifesting itself in actions undertaken to procure a desired end. Among the primitive Romans this instinct doubtless manifested itself in many quaint acts, often of a magical or quasi-magical character, such as survive in the lowest stratum of religious life among all peoples, ancient or modern. So far as religion was a state function, however, Mr. Fowler holds that the early Roman authorities deliberately eliminated from their *ius divinum*, or rules of worship, almost all that was magical, barbarous, or, as later Romans would have defined it, superstitious. The resort to magic, of course, survived among individuals, as in the spells and charms used against disease, of which we get some information from Cato and Varro.

Lack of evidence makes very difficult the question of the relation of this primitive Roman religion to personal morality, but the author finds himself unable to follow those who hold with Dr. Westermarck that there was no relation between the two at all. "In the earliest times, in the old Roman family, and then in the budding state, the whole life of the Roman seems to me so inextricably bound up with his religion that I cannot possibly see how that religion can have been distinguishable from his simple idea of duty and discipline." The deities of early Rome were, of course, not the anthropomorphized beings of a later date, when borrowings from other lands had introduced endless confusion. Mr. Fowler quotes with warm approval from Aust's "Religion der Römer": "The deities of Rome were deities of the cult only. They had no human form; they had not the human heart, with its virtues and vices. They had no intercourse with each other, and no common or permanent residence; they enjoyed no nectar and ambrosia; . . . they had no children, no parental relation." Their existence was betrayed simply in the exercise of certain powers, which might either hurt or benefit man, and the enlistment of which on his side was the task of the officially constituted Roman priesthood. And in the carrying out of this task the intermediary priesthood, with its highly formalized methods, gradually sapped all vitality from the gods themselves. And thus the way is paved for the eventual lack of contact between religion and individual morality which Westermarck and his school hold to have been original.

In harmony with his general willingness to see more of the really "religious" in the Roman religion, Mr. Fowler takes issue with the prevalent tendency to describe the ritual as a mere system of clever bargaining with the gods, partaking of the nature of a legal contract, the divine side of which must be fulfilled before the stipulated pay is forthcoming.

In spite of the comparatively lifeless formalism which seized so early upon the native Roman religion, and the numerous foreign accretions of a later time, Mr. Fowler will not grant that it suffered actual death at so early a date as some assume. He does not think that the early Christian Fathers were fighting a mere literary survival, found in

the pages of writers like Varro, when they attacked the old native Roman cults rather than the new Oriental faiths. The new Oriental importations naturally attracted attention, but the old was still on the ground. This means, of course, the assignment of a deeper and more lasting character than some would grant to the revival undertaken by Augustus, in which Horace and Virgil had their part. Cumont has shown that the Oriental faiths paved the way to the adoption of Christianity by spreading many ideas in common with it, such as the vivid belief in an existence beyond, and the duty of a spiritual preparation for it in this life. It is Mr. Fowler's contention that the survival of the primitive Roman religion, through its Augustan renaissance, was also contributory to the interests of Christianity. The idea of the connection between religion and the state, and of the religious duties of the individual towards the state, was thus renewed, at a time when Oriental ideas of religion were in danger of carrying individualism too far. Had the old forms gone utterly to ruin, the Roman state as such would have been left without religion, or might have carried the worship of the Cæsars to a disastrous prominence, or possibly might have adopted some such cult as that of Isis or Mithras, before the grasp of Christianity could be fixed upon it. In the decency and order of its traditional ritual, too, the Roman religion handed over to Latin Christianity a legacy which, if not indeed spiritual, was none the less of some value. The casual reader will not find this volume as easy reading as the lectures of Cumont or Carter, partly because its plan involves a much larger amount of comparatively uninteresting detail, but to some extent, in the reviewer's opinion, because of a comparative inferiority in expression. We are glad to give it high credit not only for its careful scholarship, but for an unusually satisfactory index.

The Reform of the Criminal Law and Procedure. Edited by Henry Raymond Mussey. Vol. I, Number 4 of the Proceedings of the Academy of Political Science. New York: Columbia University. $1.50.

We know of no other book so well calculated to initiate even the layman into the difficult problem of a reform of our criminal laws as this collection of articles, some of which originated in addresses delivered at the New York Conference on the Reform of the Criminal Law and Procedure in May, 1911. President Taft's short address—since become so famous—on the "Needed Changes in Criminal Procedure," in which he holds up England's administration of criminal law as worthy of emulation, and earnestly laments "the lighter regard for law and its enforcement on the part of the American people as a whole," may be said to form the backbone of the book. Whoever then wishes to gain a deep insight into the efficient mechanism of English procedure cannot do better than to place himself under the guidance of Prof. Edwin Keedy of the Northwestern University. Professor Keedy compares criminal justice in the two countries, and, in a few pages, explains the causes that make the enforcement of criminal law in America a farce. He has the courage as well rightly to accuse two American idols—the sensational press and the separate State Constitutions as interpreted by the courts—of being great obstacles to changes in the law, hence also to the reform of criminal law.

Professor Keedy's article might easily lead to discouragement, for after reading it, we feel that virtually everything remains to be done, that it is not a matter of the reform of our laws alone, but above all of our whole public life, and that the ultimate cure of our law is the widening and deepening of our ethics. An antidote for this pessimism is provided, however, in the eminently practical studies by Homer Folks and Arthur W. Towne of "Probation in the Juvenile Court," and in Madeleine Zabriskie Doty's "Treatment of Minor Cases of Juvenile Delinquency." In this field alone, where politics, constitutional limitations, etc., can scarcely play a considerable part, America has stepped in advance of the world as a lawmaker. In this direction, from the beginning, experts, not alone in history and psychology, but also in sociology, have been at work, and not "a congressional mob run by committees run by individuals who are run by interests."

This last quotation is from the longest and stylistically finest article in the book, from William M. Ivins's "What Is Crime?" Mr. Ivins's intimate knowledge of English, French, and Italian philosophers of law is extraordinary, but he does not seem to have made full use of the important studies which, in Germany and Austria, have sprung from the struggle between the so-called "classic" and the "Young German" *Kriminalisten-Schule*. Yet, from whatever source, he has arrived at the very conclusions which have for years formed the ethical basis of the efforts of those men who have rallied about the great reformer of criminal law, Franz von Liszt.

It is obviously impossible to deal separately with each of the sixteen articles that make up this volume. Yet mention must be made at least of the penetrating ideas in Prof. Felix Adler's "Ethics of Punishment," of Prof. Franklin H. Giddings's "The Relation of the Criminal to Society," and of the discussions and addresses in the Appendix, among which we would emphasize especially Professor Kirchwey's graceful and fearless confessions.

Thomas Carlyle: A Study of His Literary Apprenticeship, 1814-1831. By William Savage Johnson. New Haven: Yale University Press; London: Henry Frowde. $1.

This study originated in an attempt to elucidate "Sartor Resartus" by the light of the social conditions which produced it, and by the light of the critical labors, chiefly on German topics, which preceded it. After a sober analysis of the "Critical Essays," Professor Johnson concludes that "Carlyle had formulated before 1831 all of the important doctrines which constitute the gospel that he was to preach during the next thirty-five years." In a rather vague sense this is true; just as it is true that the year 1900 contains all the important doctrines that will be preached in 1950. One who insists too resolutely, however, upon this truth will be likely to lose sight of a significant development in Carlyle's ideas. Strictly considered, the angry anti-democratic doctrines enunciated in the "Latter-day Pamphlets," 1850, "The Nigger Question," 1853, and "Shooting Niagara," 1867, are neither explicit nor safely predictable in "Signs of the Times," 1829, "Characteristics," 1831, or "Corn Law Rhymes," 1832.

In his earlier career, Carlyle is politically on the fence; he is the philosophical spectator at a struggle in which he is at most but incidentally concerned. Avowedly, he is an "anti-mechanist," and *his* cause is not being attended to. Unconsciously, he is, in his stern, unsentimental fashion, a Christian, confused as to his own identity by the rosy humanitarianism which passes around him for Christianity. He is publicly confessing his discipleship to a German poet—apparently unaware that he is no more like his master than he is like Leonardo da Vinci, and that he is infinitely nearer to Wyclif and Knox than to either Leonardo or Goethe. He has contemptuously rejected Hebrew "old clothes" only to reclothe himself in second-hand Jewish garb out of a German workshop; he has repudiated the language of the Book of Common Prayer only to reaffirm its essentials with increased vehemence in another dialect. He does not relish "renunciation" from the lips of Christ, but he is enchanted with *Entsagen* from the mouth of Goethe, and the burden of his cry in the wilderness, wonderfully borne on the winds of an impassioned rhetoric and bosomed in a cloud of transcendental metaphysics, is this: The kingdom of God is within you. This is the novel message that he wishes might be heard above the din of political reformation. Yet so far as he has any political sympathies—Scotch peasant of genius, bred

in an independent faith, without titled connections, without territorial interest of any kind in the country, and smarting in every relation under the sting of social inequality—his spontaneous sympathies are inevitably popular and radical. In the "Sartor" he looks on with a certain grim satisfaction at the good destructive work, the idol-breaking, of the Utilitarians. But as a matter of fact, he has not yet given much serious attention to political parties in England. As a consistent anti-mechanist he subscribes to the reassuring couplet in Goldsmith's "Traveller":

> How small of all that human hearts endure,
> That part which laws or kings can cause or cure.

Now, the outstanding fact about the author of "Latter-Day Pamphlets" is that he has ceased entirely to be an anti-mechanist. There is where he essentially differs from Matthew Arnold, who, with the "sweet reasonableness" in which Carlyle was so deficient, took up and carried on Carlyle's earlier gospel of "inner regeneration." Carlyle himself is now become the almost frenzied advocate of a complex, hierarchical social and political order under which, alone, he declares, modern nations can hope for salvation. Exactly what he had in mind, no man can say with assurance. One thing is certain: it was some kind of very rigid and very intricate "machine"—perhaps, in the last analysis, a chimerical, archangelic form of socialism. What thoughts formulated before 1831 led the ironical spectator to that "dolorous pass"—or, more accurately, to that no-thoroughfare—Professor Johnson, if he has considered, has by no means made obvious. Was it some deep bias given to his mind in early childhood by the virile discipline of his religious parents outlasting and triumphing over the German conversion? Professor Johnson passes over the early training in silence and takes no account of his Scotch inheritance. Was it, that in the period of the "Critical Essays" he had not yet perceived clearly how organic is the relation between the spiritual and the secular hierarchies? Was it only after prolonged study of "atheistical" revolution in France, after intimate contact with atheistical philosophic radicals in England, after face-to-face acquaintance with atheistical Chartism in the forties—was it only then that he fully recognized what Burke had recognized long before, that the axe which shattered political absolutism was whetted and dedicated to the destruction of the absolute and eternal in every sphere of ideas? Or as Paine would have put it, that the liberties of the people are not safe so long as there remains a tyrant in heaven? The forces which animated that tremendous recoil of Carlyle's mind after 1831 lie deeper than any scrutiny to which Professor Johnson has subjected them.

An Irish Beauty of the Regency. Compiled from "Mes Souvenirs," the unpublished journals of the Hon. Mrs. Calvert, 1789-1822. By Mrs. Warrenne Blake. With frontispiece in photogravure and thirty-two other illustrations. New York: John Lane. $5 net.

This green-bound volume decorated with the harp that once twanged through Tara's halls contains the diary kept from 1789 to 1822 by the wife of Nicolson Calvert, who was for thirty years a Liberal member of Parliament. In it can be traced few of the movements which distinguished that period. Of the industrial revolution that transformed life from its mediæval to its modern aspect we find only the slightest notice in a reference to the discontent following the Napoleonic wars. Of the romantic movement in literature the sole trace is in the record that a daughter read "The Lady of the Lake" while in love. Singers and actors attracted Mrs. Calvert scarcely at all. She was more than once in company with Mrs. Siddons without making any note of her bearing or conversation. Of Miss O'Neil she wrote: "She is certainly a most charming actress, but I hate tragedies and cannot endure 'Romeo and Juliet.'" In the events of the Napoleonic wars she took more interest, as a son served on the Peninsula and fought at Waterloo, but her record is too scanty and personal to include anything of value. In short, this is not a mine for historians.

To present-day leaders in the feminine world this Irish beauty, who was the friend of Mrs. Fitzherbert, was highly regarded by the Prince Regent, and mingled familiarly with royal society, will seem deplorably old-fashioned. Once her sister, while electioneering for Lord Cochrane, was heartily cheered by a cartful of sailors. The family was in a fright "lest she should get into the papers," and Mrs. Calvert herself was of opinion that her sister was crazy. At another time she exhibited the daring independence of starting towards Ireland with her sister, but, her courage failing her, she waited in an inn, "afraid of everything and everybody," until some male members of the family arrived. She noted: "I trust Mr. C. will not be angry, but I do dread seeing him. If he is not angry, I shall not tell him I was afraid he would be, lest I should put it into his head." Indeed, she was hopelessly old-fashioned. During her crowded social career she bore six daughters and six sons, besides keeping a diary.

An interesting sidelight on the easy standards of the age is afforded by her relations with Prince George and Mrs. Fitzherbert. On her arrival in London she evinced an instinctive dislike of the Prince's mistress, though the notorious Prince himself was not included in her aversion. The cordiality of Mrs. Fitzherbert soon won her over so far that she sympathized with the woman when the Prince flirted with Lady Jersey or made love to Lady Hertford. George, however, did not forfeit her admiration thereby. She was from the first "quite enchanted with his manners, which are superior to every one's." These and his flattering favor blinded her entirely to his brutal treatment of his wife, Queen Caroline of Brunswick, and of his daughter, the Princess Charlotte. "Right or wrong," she said, "I side with the Prince." When Queen Caroline passed away with the sympathy of the whole nation for her wrongs, Mrs. Calvert spoke of her as a good-for-nothing!

The volume is uncommonly well edited to meet the exacting English taste in such fine matters. A genealogical sheet displays all the descendants of the Irish lady. Nearly every name in the long record is honored with a note giving invaluable details as to the possessor's noble affiliations. The index is exhaustive and fairly accurate. In short, one concludes that the glorious British trait of pride in family is responsible for the publishing of such a voluminous diary by a forgotten beauty.

Notes

The first volume of "George the Third and Charles Fox," the concluding part of "The American Revolution," by Sir George Trevelyan, is promised shortly by Longmans.

The Riccardi Press will publish a complete Virgil as the next volume in the Scriptorum Classicorum Bibliotheca Riccardiana. It will be in two volumes, in an edition limited to 500 copies; the Nettleship text will be used.

"The Challenge," by Harold Begbie, announced by Doran, is a novel of life in England and India; the same house states that Halliwell Sutcliffe's new novel, "The Lone Adventure," deals with the Jacobean revolt.

Letters belonging to the years when Dickens was editing *Household Words* will be brought out in the spring by Sturgis & Walton with the title "Dickens as Editor: Some Four Hundred Hitherto Unpublished Letters of Charles Dickens," edited by R. C. Lehman of *Punch*.

Another book promised by this house is "The Drunkard," by Guy Thorne.

On January 13 Houghton Mifflin Co. will have ready "The Wrong Woman," by Charles D. Stewart; "The Factory," by Jonathan Thayer Lincoln; "Essentials of Poetry," by William Allan Neilson; "A Troop of the Guard," a volume of poems by Hermann Hagedorn, and "The Status of the Teacher," by Arthur C. Perry, jr.

The Putnams announce in fiction: "The Way of an Eagle," by E. M. Dell; "The Joyous Wayfarer," by Humfrey Jordan; "Jacquine of the Hut," by E. Gallienne Robin, and "The Shape of the World," by Evelyn St. Leger.—Miscellaneous: "The

Revolutionary Function of the Modern Church," by the Rev. John Haynes Holmes; "What Is Judaism?" by Dr. Abram S. Isaacs; "The Realm of Ends, or Pluralism and Theism," by Prof. James Ward; "Henry Demarest Lloyd," by Caro Lloyd; "Railways in the United States," by the late Simon Sterne, and "Grammar and Thinking," by Alfred Dwight Sheffield.

As representatives of the Cambridge University Press, the Putnams have in hand the following Cambridge County Geographies: "East London," by G. F. Bosworth; "Northamptonshire," by M. W. Brown; "Monmouthshire," by Herbert A. Evans, and "The Isle of Man," by the Rev. John Quine.—Miscellaneous: "The Lay of the Nibelung Men," from the old German by Arthur S. Way; "Twelve Cambridge Sermons," by Prof. John E. B. Mayor; "The Thunderweapon in Religion and Folklore," by Chr. Blinkenberg; "Selected Poems of Robert Browning," edited by W. T. Young; "Heroes, Hero-Worship, and the Heroic in History," by Thomas Carlyle, edited by George Wherry; "The Second Book of Kings," edited by T. H. Hennessy, and "The Second Book of Samuel," edited by R. O. Hutchinson.

G. W. Dillingham Company has in press: "The Apaches of New York," by Alfred Henry Lewis; "The Greater Joy," by Margaret Blake; "Rudra," a romance of reincarnation, by Arthur J. Westermayr; "Mavericks," a story of the cattle range, by William M. Raine; "Bat," an idyl of New York, by Edward Marshall, and "The Mystery Queen," by Fergus Hume.

E. Phillips Oppenheim publishes this month, through Little, Brown & Co., "Peter Ruff and the Double Four," which deals with the investigation of crime.

The Rev. Dr. James Lindsay publishes this month through Blackwood two books of essays on philosophical and literary topics.

The Baker & Taylor Co. has sold its publishing business to Doubleday, Page & Co. It will confine itself hereafter to marketing at wholesale the output of other publishers.

At the meeting of the English Association in London on Friday and Saturday of this week a special conference directed by Professor Boas will be devoted to "The Teaching of English Composition in Schools."

Professor Bergson has accepted the offer of the Gifford Lectureship in the University of Edinburgh, 1913-15.

To the green-and-gold series of the Oxford Press there has been added a reprint of the "Lyrical Ballads" of 1798. Except that the Errata of 1798 have been incorporated in the text, and the lines numbered, it offers a verbatim and literatim reprint of the great original. The editor is Harold Littledale.

The Florence Press (New York: E. P. Dutton & Co.) has issued a beautifully printed edition of Blake's "Marriage of Heaven and Hell," with an introduction by Francis Griffin Stokes. The text follows in spelling and capitalization the Bodleian copy, Douce Collection, MM. 834. The punctuation has been modified, "since it is often conjectural in the original." The best passages in Mr. Stokes's Introduction are those that compare Blake's philosophy with Swedenborg and Berkeley.

In 1907 Lady Strachey published a volume of Edward Lear's letters with the promise of a second volume if the first found public favor. This second volume now appears under the title of "Later Letters of Edward Lear" (Duffield), including the correspondence from October 19, 1861, to November 10, 1887, only a few weeks before his death. The character of the letters is much the same as that of the earlier collection. They show the same lovable, impulsive man, dear to his friends and to children and servants, full of quaint likes and dislikes. The humor is of the old breathless, punning, phonetic sort, most delightful to receive fresh from the hand of a correspondent, no doubt, but rather uncertain in its effect when printed. A fair example of Lear's wit is this exordium to a letter from Nice:

Concerning the ink of which you complain, this place is so wonderfully dry that nothing can be kept moist. I never was in so dry a place in all my life. When the little children cry, they cry dust and not tears. There is some water in the sea, but not much:—all the wet-nurses cease to be so immediately on arriving:—Dryden is the only book read:—the neighborhood abounds with Dryads and Hammerdryads; and veterinary surgeons are quite unknown.

Lear saw many interesting people, but his haste rarely permits him to do more than mention them. He meets Mérimée, for instance, and has only this to say: "He lives here in winter and came to my rooms two weeks ago. He speaks English well, which is a comfort to me who hate speaking French." The funny pen sketches that go with many of the letters are capital in their rough-and-ready way.

"Metternich" (Brentano's), by G. A. C. Sandeman, is a disappointing book. The author justly says that there is no adequate English biography of Metternich, but his compilation, largely based on Schmidt-Weissenfels and other German writers, is far from supplying the want. In his dry recital of the main incidents of his hero's diplomatic career, he does not seem to have consulted with sufficient care even Metternich's own memoirs, as abundant misstatements testify; while his final judgment of the man is of the crudest. "Conceit, extravagance, and a moral standard not above that of the century in which he was born" he finds in his private character, but "otherwise there is little to urge against him." In Mr. Sandeman's eyes, Metternich "does not deserve his sinister reputation." The inhabitants of the Austrian Empire "were happier and more prosperous under Metternich's régime than ever before." Still, "somehow Metternich leaves a bad taste in the mouth." It is scarcely worth while to point out historical inaccuracies in a work of this kind, but the number of misprints and errors of every sort transcends any ordinary measure. In 1836 Metternich is said to have relied upon the support "of the heir-apparent, Archduke Francis Joseph." Francis Joseph was then just six years old; nor was he the heir-apparent. The most common names, some of which occur dozens of times, are constantly misspelled. "Schmidt-Wessenfels" and "Sedlinitzky," for Sedlnitzky; "Catalini," "Sulkowsta," "Regentsburg," "Wurtemburg," "Fanny Essler," "Pesti Hislap," and "Hans, Hof, and Staatskanslei" are merely a few samples of the writer's and proofreaders' carelessness. The book is one of a class of which there is an increasing output. One can only wonder what part of the public demands biographies that are semi-historical, semi-anecdotal, and wholly slovenly and uninteresting.

Col. Elbridge J. Copp of the Third New Hampshire Volunteers, "the youngest commissioned officer in the Union army who rose from the ranks," has published his "Reminiscences of the War of the Rebellion" (Nashua, N. H.: Telegraph Publishing Company). The chief interest of the book, aside from such light as all such narratives throw on the minor details of campaigning, is in its explanation of the ordinary routine of military organization and camp life, a considerable acquaintance with which is too often assumed by writers of war books intended, as this one originally was, for young readers. Time has not wholly softened the author's feelings towards his old opponents, and he is still clear that the South richly deserved all the punishment it received. The style is modest, and there are a good many reproductions of contemporary pictures.

"The Choice: a Dialogue" (Macmillan), by Robert Douglas, is an eloquent apology for the minor artist. The interlocutors are a well-placed English bureaucrat who is resigning to write poetry and a sympathetic acquaintance who opposes the project sufficiently to keep the enthusiast going. He asserts the social value of all who earnestly lead the imaginative life. They are about the only makeweight for prevailing materialism. They provide the atmosphere of contemplation and appreciation in which alone genius can thrive. Granting the supposition that the minor artist is a whole and strong man, the case for his utility seems proved. The book is fastidiously written, but, like much well-considered English criticism, not quite masculine.

With the advantages of an engaging personality, a beautiful voice, and a high-powered motor car, an intelligent woman may go far in Italian society. Tryphosa Bates Batcheller, who writes on "Italian Castles and Country Seats" (Longmans), thus witnessed Italian country life from the Vale of Aosta to Palermo. From her letters home and her snapshots, this book is put together. Her contact with the life she describes, was at least comprehensive. From royalty to the new manufacturing barons everybody was amiable to Mrs. Batcheller, and her book faithfully requites such courtesies in kind. It is a superficial survey and about twice too long, but it is written with taste and sense. It is useful particularly in correcting conventional views of the infelicities of international marriages, in emphasizing the domestic character of the best Italians, and in revealing the multiform charitable activities of that sturdy aristocracy. This is by no means the whole truth, but perhaps it is the truth that has been most neglected in books on Italy. For the rest, Stendhal is still excellent authority.

Two good books on Holland have recently been issued. The slighter of the two, "The Spell of Holland" (L. C. Page & Co.), by Burton E. Stevenson, gives a picture of two alert, impressible Americans, the writer and his wife, making the usual tour of

the little country, from south to north and then east into the hills. The account is spirited and human with no little smartness of phrase—"The Island of Marken, Limited" will give comfort to many who have contributed to the support of that rich community. Dutch the author is not strong in, as he admits, but it is surprising that he should have slipped up on the word for motor car, which he gives as "snelpaardeloos-zoondeerspoorwegpitroolrytuig." The Dutch say simply "automobile"; and in general they are wont to use foreign terms for objects which have lately come into being. So no one thinks of calling an elevator by its native name—"heffer." Gouda, the town, is not pronounced, as stated, "Howda"; the older spelling, "Ghent," which English has adopted, indicates the complex sound for which the Dutch "g" stands. Those who have tried to "help themselves" to a foreign language will readily believe that the author's Dutch dictionary failed to contain the word "windmill," and will not think it incredible that an Englishman jotted down on his cuff, so as not to get lost, the name of the street in which he was stopping as "Verboden te Plakken," Post no Bills!

A much more thorough study of the country is "Home Life in Holland" (Macmillan), by D. S. Meldrum, an Englishman. He has lived in that land, among *boers* and nobles and middle classes, has learned its language, and caught its spirit. The following extract explains vividly the secret of Holland's spell over visitors, at least over many visitors:

> Like the gaudy bonnet pitched upon the gold *oorijzer* of the North Holland woman, the new is everywhere superimposed upon the visible old. The Middle Ages jostle the twentieth century, as the old-model wagons the automobile on the dike. The Utrecht farm-hand lays down his flail, and mounting his cycle rides off to see Mrs. Wynmalen fly. The Limburg *knecht* gives his team of oxen a holiday while he visits the exhibition at Brussels. . . . The householder in the Islands turns off the electric light and puts himself to bed when the *Klapper*, following the round of ten generations of the night-watch, sounds his rattle under the window and proclaims that the clock gives ten.

The book contains an enormous amount of information which the tourist would not be likely to acquire. When one is invited out to dinner it is expected that one shall give the cook a tip of a guilder; to luncheon, or "coffee-drinking," "twee kwartjes"—twenty cents. And in advertisements for maids the magic phrase is often seen "Veel verval" (many tips). When a girl is about to be married she makes out a list of desirable presents that her friends may consult it. Edam cheese is not excavated, but is sliced off, and the Dutch have a saying, "Die myn kaas snydt als een schuyt, die jaag ik myn deur uit": whoso cuts my cheese like a boat, to him I show the door. For the benefit of the "van Somethings in New York" the author confides that the prefix *van* is not necessarily a sign of nobility. He gives an excellent account of the "Sint Niklaas" festival which comes on December 5 and which in gayety somewhat overshadows a Dutch Christmas; of the students' social life in which on occasions professors more heartily join than in any other country; of the "deftige burger man" so well known to the Dutch through "De Familie Kegge." Many sides of Dutch life are touched on suggestively and, so far as we have observed, accurately.

Two monographs recently issued in the Columbia University Studies in History, Economics, and Public Law deal with the little-worked field of State politics in the North during the Civil War period. There has been no end of military histories covering the participation of the several States in the war. But writers of political history have usually concerned themselves with the broader aspects of the struggle, and have referred to the course of politics in the States only incidentally. The internal history of the State Administrations, the new alignment of parties, and the new issues arising from the war have been very generally neglected. For these reasons George H. Porter's "Ohio Politics During the Civil War Period" and Sidney D. Brummer's "Political History of New York State During the Period of the Civil War" are welcome contributions. Ohio, because of the prominence of her leaders, her central location, and the fact that her State elections came in October, was the scene of bitter political struggles throughout the war that attracted the attention of the whole country. Mr. Porter's view of her politics is comprehensive, beginning in 1857 and concluding in 1867. Mr. Brummer's monograph on New York politics covers only the four years 1860 to 1864, virtually the period included in the third volume of De Alva S. Alexander's political history of that State. He confines himself more strictly to State issues than Mr. Alexander, and his view is more critical.

A large debt of gratitude is owing to Prof. Albert S. Cook for his "Concordance to Beowulf" (G. E. Stechert & Co.), prepared some years ago as the first instalment of a projected concordance to the complete remains of Old English poetry. It is idle to complain that what we really have here is a concordance to the *Wyatt text* of "Beowulf"; as the compiler points out in his modest preface, concordances must deal with the texts in existence when they are made. And the four hundred and thirty-six amply spaced pages provide room enough for the scholar to write in his favorite variants. The entry of every inflectional form as a separate head-word makes it easy to run down a given line; but it sometimes requires a little searching to assemble all the appearances of a given word; four compounds intervene, for example, between *death* and *deathe*. The type-setting seems to have been done with remarkable correctness.

"Undiscovered Russia" (Lane), by Stephen Graham, is the record of a tramp trip in northern Russia, mainly in the provinces of Archangel and Vologda, by a mind of second-rate sensitiveness. Entertaining and even illuminating descriptions of scenery, habits of life, and types of character in a little-known quarter of the world, fail to compensate for the bastard poetical style of the book and for pages of pseudo-philosophic drivel about Russia's mystical holiness.

In "The Magic of Spain" (Lane), modestly described as "a collection of stray notes," Aubrey F. G. Bell has collected various impressions of Spain, the Spanish people, their literature, and their art. An enthusiastic Hispanist, he has studied the Iberian peninsula with unusual thoroughness, both at first hand and in books. Few books of travel are so erudite as this. A passion for quotation is carried to excess, and certain chapters are so over-burdened with foot-notes and learned citations as to suggest the doctor's dissertation. Many languages and literatures are drawn upon. The reader is not even spared quotations from the Arabic and the Basque. But while this method may repel the casual reader, the book contains much of value to the serious worker in the Spanish field. No better appreciations of Pareda and the Condesa Pardo Bazán have appeared in English. The almost untranslatable nature of the works of these two novelists doubtless explains why publishers have never offered their works to the English-speaking public, which has thus been able to form no adequate idea of the true strength of contemporary Spanish fiction. Mr. Bell, therefore, has done a real service in analyzing and criticising the masterpieces of these writers. Still more valuable is the author's chapter on the novel of the twentieth century, in which are discussed the works of such meritorious, but little known, authors as Jacinto Octavio Picón, Pío Baroja, Martínez Ruíz, Ramón del Valle-Inclán, and Ricardo León. The material here offered is nowhere else to be found, and will be new even to professed Spanish scholars. In other chapters, the author abandons his pedantic manner and devotes himself to descriptions of scenery. There are pen-pictures of the Basque country, Old Castile, Seville, the east coast of Catalonia. Local customs come in for their share of attention, notably the quaint Valencian ceremony of "the judging of the waters," familiar to all readers of Blasco Ibáñez. Art lovers will enjoy the sympathetic study devoted to El Greco.

Under the title "Le Droit du plus fort" Paul Louis, writing in the *Mercure de France*, examines some of the motives which have prompted the recent international conflicts. He inveighs against the practice of cabinet ministers precipitating war without first presenting the case to the people. It was a secret treaty, known to about a dozen persons, which divided Morocco between France and Spain; another secret treaty concluded by a French Minister authorized Italy to make conquest of Tripoli; and the whole German nation was taken by surprise when it beheld the Panther at Agadir. "Abuse of force and secret diplomacy, such is the double formula which sums up the action of European Powers in the first years of the twentieth century." The writer contrasts with forcible irony the precept and the practice of our great civilized nations. Our students are taught in France, in Germany, and England that might does not make right and that adversaries weak or strong should be treated with justice and generosity. Yet, how little this advice squares with recent practice! Again, though talk of universal arbitration is in the air, suppose the Moroccans had appealed to the Hague Tribunal. They would have been told that the Sultan Mulai Hafid had provoked and solicited intervention. The Turks, brutally attacked by the Italians, made some show of appealing to the arbitrament of a peaceful court, but they learned that the cannon would be the only magistrate. Another interesting article in this journal sketches the career of Robert Louis Stevenson.

Rear-Admiral Robley Dunglison Evans, who died at his home in Washington last week, aged sixty-five, was the author of one book, "A Sailor's Log."

Alfred Tennyson Dickens, eldest surviving son of Charles Dickens and a godson of Tennyson, died suddenly last week at the Hotel Astor in New York. When he was twenty years of age he set out, on the advice of his father, for Australia, where he lived. Mr. Dickens lectured in that country, in England, and in America on reminiscences of his father.

The death is reported from Nice, in his fiftieth year, of Paul Mariéton, an enthusiastic student and champion of Provence. On that subject he wrote "La Terre provençale" and other works.

Hugo von Lubliner, who died recently in Berlin in his sixty-sixth year, is known as both novelist and dramatist. "Gläubiger des Glücks" and "Roman eines anständigen Mädchens" may be singled out from among his many novels; "Auf der Brautfahrt," "Aus der menschlichen Komödie," and "Das fünfte Rad" are plays.

From Breslau, Germany, comes the report of the death of Prof. Felix S. Dahn, historian, novelist, and poet, at the age of seventy-seven. In 1857 he began to lecture at the University of Munich on German law, and in 1862 he was appointed professor. In 1888 he accepted a call to Breslau. He wrote several standard juristic works, also a number of books on the early history of the Germanic and Romanic peoples. But it was as a writer of novels that he became most widely known. "Der Kampf um Rom," though in four volumes, has passed through more than thirty editions. Among his other works, his epic poem, "Sind Götter?" and "Moltke als Erzieher" are well known.

Mario Rapisardi, a Sicilian poet and formerly professor of Italian literature in the University of Catania, died a week ago.

Science

"Examples in Applied Mechanics and Elementary Theory of Structures," by Charles E. Inglis, is one of the Cambridge University Press books announced by the Putnams.

"Astronomy," by A. R. Hinks; "Psychic Research," by Prof. W. F. Barrett, and "An Introduction to Science," by Prof. J. Arthur Thomson, are additions to the Home University Library of Modern Knowledge series announced by Holt.

The discovery that several of the most serious diseases of mankind are transmitted solely by mosquitoes has greatly stimulated the study of these insects and has emphasized the importance of reducing them. During the past decade there have appeared not only many extended publications dealing with the general subject, but several devoted especially to methods of combating the pests. The latest of these is E. H. Ross's "The Reduction of Domestic Mosquitoes" (Philadelphia: Blakiston's Sons & Co.). It is based upon the author's experience as health officer of Port Said and the Suez Canal District. He writes feelingly of mosquitoes as a pest in the tropics—"no rest, no peace. It is bang, flap, scratch, rub, itch, rub again, complaining incessantly." That anti-mosquito campaigns are feasible and that, properly conducted, they may gain the approval and support of even the most ignorant, is shown by the author's experience at Port Said. The house-to-house weekly visit of the mosquito brigade is now a regular institution, and has been the means of accomplishing many other sanitary reforms under difficult political conditions. The discussion of methods of organizing, financing, and carrying on the work is interesting and will prove of value to those working where labor and general administrative conditions are similar. Aside from the portions based upon the direct experience of the author, the book is a decided disappointment, being marred by many mistakes and loose statements. For instance, of the natural enemies of mosquito larvæ, it is only under exceptional circumstances that "chief of these are the goldfish." Notonecta is not a "water-beetle," but a true bug, and has no "jaws" with which "it catches the breathing mosquito larva or pupa." The use of oil as a larvacide was not "discovered by Aaron in America in 1890," but was in common use in some localities a half-century, or more, before Mrs. Aaron reported her experiments. Many of the statements regarding the habits of adult mosquitoes might have been corrected if the author had been acquainted with the American work of recent years. The extensive studies of Dr. Howard and his staff in the Bureau of Entomology, and of Dr. John B. Smith, State Entomologist of New Jersey, receive no mention, though they are of fundamental importance.

The "Committee to Visit the Astronomical Observatory" of Harvard University has as chairman the Rev. Joel H. Metcalf of Winchester, himself an enthusiastic discoverer of small planets and builder of telescopes; the other members being George L. Alden, George R. Agassiz, Charles F. Choate, jr., Charles R. Cross, Mrs. Anna Palmer Draper (a generous patron of the Observatory), Erasmus D. Leavitt, and Elihu Thomson. Their report makes brief mention of the lines of activity previous to the appointment of Prof. E. C. Pickering as director, in 1877, and the new fields entered upon since then are well summarized. Investigations begun and consistently pursued by Professor Pickering and his staff have for their object the physical peculiarities of the light of stars—accurate measurement of the intensity of light, instead of stellar positions. Four fundamental systems are developed: (1) A scale of photometric magnitudes, (2) a scale of photographic magnitudes, (3) a system of classification of variable stars (by which large numbers have been discovered), and (4) a system of classification of stellar spectra which has also led to the discovery of several thousand stars having peculiar spectra of a character hitherto unsuspected. Two hundred thousand photographic plates of stars have been taken, and are preserved in a fireproof building. Nothing like this collection in extent and completeness exists elsewhere. It is a history of the entire sky for twenty-five years. The work represents the efforts of about forty persons for thirty years, and the expenditure of a million and a half dollars, including the issue of seventy quarto volumes of Annals. It is exceedingly important for an observatory to specialize and carry on continuously the line of work it elects for itself. In spite of generous endowment, expenses still exceed income, and a fireproof building for the library is greatly needed.

Dr. Algernon Coolidge, jr., died at his home in Boston a week ago. He was assistant professor of laryngology in the Harvard Medical School, and was fifty-one years of age.

The death is reported from England of the eminent botanist, George Robert Milne Murray, aged fifty-three. He was keeper of the department of botany in the British Museum, and the author of books on cryptogamic botany, and on seaweeds.

Another distinguished botanist is dead in Paris, Jean-Baptiste-Edouard Bornet, at the age of eighty-three. He was an authority on algæ, and had won the gold medal of the Linnean Society of London. He was a member of the Académie des Sciences.

Drama

Shakespeare on the Stage. By William Winter. New York: Moffat, Yard & Co. $3 net.

In this work, of which the present volume is only the beginning, Mr. Winter assumes the heavy task of summarizing the manner in which Shakespeare's plays have been presented upon the English-speaking stage from the earliest recorded instances to the present day, adding such details of the dress and "business" of the famous actors as can be gathered from the best authorities. In other words, he has undertaken to cull from the vast mass of Shakespeareana, historical, analytical, and critical, such salient fact and opinion as may be of practical assistance to the Shakespearean student. Perhaps no living writer is better qualified than Mr. Winter—by virtue of his poetic and dramatic instinct—to act in this double capacity of commentator and compiler. If the seven chapters composing this first volume, of nearly 600 pages, may be accepted as a fair sample, it is safe to say that the completed work will constitute the most valuable and interesting contribution made to theatrical literature in many years. It will contain the essence of the best Shakespearean commentary and the choicest theatrical biographies, ancient and modern.

By way of introduction, Mr. Winter devotes a chapter to the annihilation of the old managerial pretence that Shakespeare upon the stage is unprofitable. Citing the examples of Edwin Booth, Lawrence Barrett, Henry Irving, Robert Mantell, Richard Mansfield, E. H. Sothern, and many others who have flourished during the last half-century, he quotes official figures that furnish indisputable proof to the contrary. The most striking case of all is

that of Samuel Phelps, who, by giving Shakespeare well, reaped fame and fortune cut of one of the dullest, dirtiest, and poorest of London suburbs. Mr. Winter then discusses six of Shakespeare's plays, "Richard III," "The Merchant of Venice," "Othello," "Hamlet," "Macbeth," and "Henry VIII," briefly noting the known or suggested sources of their origin, the dates and places of their earliest presentments, the names of the principal performers, at various times, of the leading characters, changes and curiosities of costume, traditional readings of famous passages, peculiarities in "make-up" or "business," the verdicts of contemporaneous criticism, etc., enriching the whole with apposite anecdotes and his own eloquent, witty, and enlightening comment.

It is impossible to do more than refer briefly to one or two prominent features of a book which is a veritable mine of information and reflection. Of the facts, of course, few, if any, are absolutely new, but the ample and judicious selection of them compels admiration. The mass of authority that has been sorted and sifted is immense, and the amount of surplusage or repetition exceedingly small. Concerning the distinctive literary and dramatic qualities of the plays and the moral and intellectual attributes of their chief personges, Mr. Winter speaks with fine acumen. The text is as familiar to him as the alphabet, and he quotes it in support of his opinions with most felicitous ingenuity. Some of the finest powers of his mind and pen are displayed in his analysis of Hamlet, and his interpretations of Macbeth and Shylock are scarcely inferior in respect of insight and imaginative description. He has no patience with the theory that ascribes to the bloodthirsty Jew any element of patriarchal grandeur. A notable illustration of his faculty of minute observation is afforded in his almost photographic description of Irving's picturesque portrayal of the usurer, and in his poetic appreciation of Ellen Terry's Portia.

Much space, of course, is bestowed upon the famous players, of whom Mr. Winter had personal knowledge. His opinions of them are known to all lovers of the theatre. Most of his views have the weight of standard authority, but to some it is possible to take exception. None will dispute, however, the preëminence which he assigns to Edwin Booth in Hamlet, Richard III, Iago, and Macbeth; to Ellen Terry in Portia; to Henry Irving in Hamlet and Wolsey. His dissertations upon these and other illustrious performers, living and dead, in various characters, are full of learning and observation. He is a stanch upholder of the thesis that no player in a foreign tongue can hope to compete with the English-speaking actor in the great characters of Shakespeare, who wrote, thought, and felt as an Englishman, and gave all the creatures of his fancy an essentially British cast. This is an old argument, which is not, perhaps, quite so sound as it seems. It certainly suggests limitations, not generally admitted, upon the inventive genius of Shakespeare. Is it as true, for instance, of Othello as it is of Hamlet? Is Iago essentially British, familiar as he is with "small beer"? Mr. Winter—magnificent tribute as he pays to his abilities in other parts—confidently denies to Salvini the capacity of rightfully interpreting Othello, because of his ferocity in the murder scene. From Mr. Winter's own point of view he is doubtless right, but may not Salvini have had some justification for his, which he illustrated so superbly. The point is open to question, but, on the broad proposition that English idiom is untranslatable and therefore unfathomable to the ordinary foreign actor, Mr. Winter is on firm ground, and he uses his advantage mercilessly, and most humorously, in his excoriation of the travesties of Shakespeare furnished by certain foreign performers, notably Madame Bernhardt and Signor Novelli.

There is much excellent reading, with plentiful common sense, in Mr. Winter's remarks upon the vagaries of Shakespearean commentators, but these cannot be dwelt upon now. They are commended, however, as is the whole book, to all true lovers of Shakespeare. Succeeding volumes will be awaited with eager expectation.

The Putnams are about to publish, in two volumes, the "Irish Folk History Plays" of Lady Gregory.

"The Nun of Kent" (Putnam), a drama in five acts, by Grace Denio Litchfield, is a work of uncommon imagination and ability, although it would require considerable modifications to make it suitable to the modern stage. For one thing its many long soliloquies, admirable as some of them are as denotements of character and the conflict of internal emotions, would have to be dealt with ruthlessly. The story is founded upon incidents in the career of Elizabeth Barton, better known as the Maid of Kent, but pays little attention to the known facts of history. She is depicted here as the innocent gull of the aspiring Father Bocking (Bockling) and other monks, who, taking advantage of her epileptic fits, convince her that she is another Joan of Arc, and make her the mouthpiece of their own forged prophecies, in order to stir up a revolt against Henry VIII and hasten the accession of Queen Mary. She confides her mission to Cuthbert Vane, the lover from whom the monks have separated her, and he, as a faithful Protestant, reveals the plot to the authorities. Elizabeth and her advisers are arrested and condemned to death. Cuthbert attempts to rescue her, but she refuses to escape, preferring to die in expiation of her innocent treason, and, as she goes to the scaffold, he commits suicide. The piece is written in blank verse which, if it only occasionally rises to the regions of actual poetry, is consistently fluent, vigorous, and picturesque, while the different personages are sketched with freedom, boldness, and sharp individuality. The character of Elizabeth, an ignorant, loving, vain, impressionable, honest girl, blind in her credulity, pitiful in her disillusion, and heroic in her penitence, is a notably truthful study of distressed, deceived, and ecstatic womanhood. Other figures are vital, especially that of Bocking, and the author exhibits a keen sense of theatrical situation, even when her construction is faulty. The play makes good reading, except in its scenes of monastic life, which are not in the best taste.

"The Bird of Paradise," which was produced with some success in Daly's Theatre on Monday evening, is an ambitious and interesting, but not highly competent, effort to make use of novel and excellent dramatic material. The scene is placed in Hawaii twenty years ago, and the interest centres upon the fortunes of a native princess, Luana, who, becoming infatuated with a white man, weds him, with disastrous consequences to both. The husband, a young American physician, abandoning himself to indolence and dissipation, loses all capacity and self-respect, while Luana, who, for his sake, has denied her gods and outraged her people, falls a victim to native superstition, and sacrifices herself in the fiery crater of Kilauea. Another American, who has sunk into the depths, rallies under the inspiration of love, acquires fame and fortune, and marries the white heroine. There is stuff here for an excellent romantic drama—to say nothing of the American sugar intrigues, which supply part of the motive; but the author, Richard Walton Tully, has put it to such conventional and unimaginative use that it is largely wasted. His white folk are, for the most part, the shabbiest and oldest of theatrical puppets. But the Hawaiian part of the drama is better made and, as a rule, better acted, and the mystic rites and the songs and religious incantations, in which the performers are native Hawaiians, are new and singularly interesting. The piece is exquisitely mounted. A night scene in a garden, with a moonlit bay in the background, is charming, and the crater of Kilauea is a masterpiece of its kind.

"He and She" is the name of a new play by Rachel Crothers, which has just been put into rehearsal by Viola Allen, and will be seen before long. Edwin Arden will play the chief male character.

The next set of productions by Charles Frohman will include "Preserving Mr. Panmure," tho latest of Pinero's comedies; "The Doll Girl," a new Viennese operetta; "The Perplexed Husband," Alfred Sutro's new comedy on woman suffrage; and a new play of New York life by Porter Emerson Browne. A new Pinero comedy is almost finished and may be expected before long.

Arrangements have been made by which William Faversham will appear in London in "The Fawn," under the management of Fred. C. Whitney.

Of the recent performance in English of "Alcestis" at the University of London, the *Athenæum* says:

Mr. William Poel very ably fulfilled the promise of the programme. Death, and the triumph over Death, dominated the whole.

In order, no doubt, to make the significance of the play rather human and universal than historical, Mr. Poel did not hesitate to import into this work of the fifth century B. C., by means of the music and the grouping of the figures, associations which have gathered round Death in the course of Christian centuries. Alcestis was brought in lying on her bier; and the chorus knelt around her, after the fashion familiar in pictures of the death of a saint. When all was over, four nunlike figures in black came and knelt, praying, two and two, at her head and her feet. The music was drawn from Bach, Purcell, and other sources, and, where it approached nearest to a pagan character, reminded one of the old Northern dirge, with the "fire and fleet and candle-light," and the soul journeying over the Brig o' Dread. The effect was, on the one hand, to heighten immensely the emotional significance of the play, and on the other to deprive it of any element of the comic.

Much dispute has been aroused by the performance over the question whether Euripides intended that Alcestis should really die.

The death is announced of that excellent actor, William Mollison, who drew his last breath in his native city of Dundee. He was only fifty years old. His first attempts on the stage were made as an amateur, but he soon adopted acting as a profession, and quickly attracted critical attention by his rarely intelligent Shakespearean interpretations. He had toured England first with Miss Marriott, later with F. R. Benson and Ellen Terry, and made such a good Henry IV at the Theatre Royal, Manchester, that Sir Herbert Tree engaged him for the same part at the Haymarket. In 1900, he joined forces with Lewis Waller in producing "Henry V," and his Pistol was praised by the critics as the best of the age. Jacques, in "As You Like It," was another of his triumphs, and he played it on tour with Julia Neilson, and at the St. James's Theatre, London, in 1905. He was a member of Sir Henry Irving's company both in London and America, and was with him in 1903 at Drury Lane in the famous production of "Dante." More recently he toured in Shakespearean repertory, Macbeth and Shylock being two of his best parts. A fine elocutionist, he had a Scotch accent when it was needed, as all will remember who saw him in "Beside the Bonnie Brier Bush." Perhaps one of his best pieces of work was his blind old captain in Stevenson and Henley's "Admiral Guinea."

George C. Boniface, who died in New York a week ago, aged eighty-seven, was one of the sound actors of the second class. Trained in all departments of the drama, he was associated with J. B. and Edwin Booth, Forrest, Murdock, Charlotte Cushman, and many others. In such character parts as John Browdie in the stage version of "Nicholas Nickleby," he was exceedingly effective.

Music

Style in Singing. By W. E. Haslam. New York: G. Schirmer.

The Mastersingers of Nuremberg. By Richard Wagner. English Translation by Ernest Newman. New York: Breitkopf & Härtel.

Perhaps the best characterization of charlatans is that of Oscar Commettant, who defined them as persons who are "not able to achieve possibilities, so they promise miracles." In the world of music it is these who attract the largest number of pupils, especially if they also publish a book containing "the only correct method." Of these worse than useless "methods," so many are issued that the bewildered student finds it more and more difficult to make intelligent choice of an instruction book. It would have been well if Mr. Haslam, in his admirable little volume on "Style in Singing," had printed a list of trustworthy works on the anatomical, physiological, and psychological aspects of the art of singing. His own brief treatise does not discuss the technical questions of tone production, but proceeds at once to what pupils call "finishing touches," with but vague notions of what these touches are. Students of instrumental music (particularly of the piano) have not been without works on interpretation, but in vocal music Mr. Haslam opens up new ground. No doubt chapters on style in singing are to be found in various books, but he is the first, so far as we remember, who has written a special treatise on the subject—a treatise which, be it said at once, cannot be too highly commended to all students and professionals, no matter of what method they are followers.

In his analysis of style the author discusses, in successive sections, color, accent, intensity, phrasing, portamento, and variations of tempo. He defines style as the application of the laws of artistic taste to the interpretation of music. Attempts to acquire style are premature until the pose and technique of a voice are satisfactory; pose being another name for emission of voice; technique, "the discipline of the voice considered as a musical instrument." Speaking of pose, the writer utters a most timely warning on the present mania for dragging voices up. The compass of the voice remains the same; the misguided singer has merely exchanged several excellent tones below for some poor ones above: "Tolerable baritones have been transformed into very mediocre tenors, capable mezzo-soprani into very indifferent dramatic soprani, and so on." There are prominent singers at the Metropolitan Opera House and elsewhere who would do well to ponder this question of what in the musical jargon is called *tessitura.*

When the voice is misplaced and strained there can be little real expression, which is largely a matter of coloring the voice. A pianist can, by using the soft pedal, give his tones a darker, more sombre quality. A violinist can give his tones either a more reed-like or a more flute-like color by drawing his bow across the strings close to, or distant from, the bridge. In the human voice endless gradations in coloring are possible. French singers like Faure and Renaud, in particular, have the gift of greatly varying the shades of one color in their singing of certain rôles. The author's remarks on this topic are highly suggestive; as are also the pages devoted to the questions of tradition and a singer's right to make alterations in text or music. The best artists are not infrequently censured by pedantic critics for sacrificing the letter to the spirit when, as a matter of fact, they were actually following the letter also:

> Very often during rehearsals, when the composer begins really to hear his own work, he makes modifications in certain passages, alterations of the words, or suppressions of the notes that are either ineffective, or lie awkwardly for the voice. But the opera has already been printed for the convenience of the singers and choristers studying the rôles and choruses; consequently such modifications, rearrangements, and "cuts" (as excisions are named), do not find their way into the published scores.

So frequently does it occur, moreover, that at a performance the notes of a phrase have to be modified or rearranged so as to bring it within the natural capabilities of the artist who sings it, that a special word, "pointage," has been coined for this proceeding. The relations between this pointage and tradition are most instructively discussed in a chapter of thirty pages. Modifications are not only allowable, but imperative, in the by no means infrequent cases where the composers were heedless of the text. Handel, though he lived nearly all his life in England, never quite mastered its language; hence the numerous cases of the misplacing of syllables in his oratorios. Meyerbeer blundered similarly with his French texts; while Verdi, though master of his own language, was in his early operas guilty of neglect of the verbal punctuation which is in marked contrast with the care he bestowed on it (under the influence of Wagner's example) in "Aïda," and, still more, in his last two operas, "Otello" and "Falstaff."

Time was when music-lovers were indifferent to the niceties of adjustment of music to text. It is so no longer, and herein lies the chief obstacle to carrying out the plans of those who would have German and French works sung in English versions at our opera houses. Audiences would laugh aloud at the ludicrous perversions of the text made (chiefly for the sake of the rhyme) in the librettos now in use. It is possible, but not probable, that an international congress of poets and composers might result in satisfactory translations. Wagner, in his letters to Mathilde Wesendonck, tells of the insuperable difficulties he had in making, with the aid of a Parisian poet, a satisfactory translation

of "Tannhäuser"; "seeking with him, often by the hour, for the best turn of speech, the right word." It took them months to do the work, and then they were not satisfied.

The most satisfactory translation into English of a Wagner opera ever made is that of "Die Meistersinger," by Ernest Newman. A thorough musician, as well as one of the best of English writers, he has done wonders with a difficult task; and yet, one who knows the original text well can hardly open a page without being annoyed by finding the musical emphasis placed on a different word from the one used by Wagner, even though the poetic and the melodic accents have been made to coincide. For private study and enjoyment at the pianoforte, however, this English version of Wagner's comic opera must be highly commended. The title-page says, "Complete Vocal Score by Otto Singer." But, fortunately, Mr. Singer has acted only as editor, simplifying a bar here and there, but otherwise retaining the wonderful version of Karl Tausig.

Last season the most prominent of Italy's operatic composers, Puccini, and one of Germany's two most prominent opera composers, Humperdinck, crossed the ocean to be present at the first productions anywhere of their latest works. This season the nearest approach to that "record" is the arrival of Ermanno Wolf-Ferrari, just in time to hear the second performance of his "Le Donne Curiose" at the Metropolitan Opera House. He was duly honored, and then started for Chicago, where his latest opera, "The Madonna's Jewels," is to be sung this week for the first time in America. On January 21 he will be back in New York to conduct his cantata, "La Vita Nuova," at a Metropolitan Sunday concert. Wolf-Ferrari's father is a German, his mother an Italian, and, while he got his musical education mostly in Germany, his activity has been chiefly in Italy, and his operas are written to Italian texts. Yet, while the Germans have produced his operas in translations, the Italians have ignored them, and he had to come to America to hear them in the original. So far as "Le Donne Curiose" is concerned, its peculiarities are such that even those who think that operas should, if possible, be given with their original text, may admit that in this case it would have been better if the work had been given here in an English version. The opera is based on one of Goldoni's farces, which, even without music, would have been unintelligible to the vast majority of a Metropolitan audience, partly because of ignorance of the Italian language, partly because of the vast size of the auditorium, which, to be sure, would have made an English version also unintelligible to all those sitting more than a dozen rows of seats from the stage. Evidently the composer made a mistake in choosing this kind of a play for his libretto—a mistake emphasized by the triviality of the play itself; it is concerned with a group of Venetian men who belong to a club where "Women Are Not Admitted." This sign naturally arouses the suspicions of their wives or sweethearts, who manage to secure admission to the building, but find, on looking through the keyhole, that the men are doing nothing more dreadful than enjoying a good dinner. This joke is spread out over three long acts, which Rossini or Mozart, with their inexhaustible fund of melody might have made interesting. Wolf-Ferrari has plenty of skill and cleverness, but very little melody; hence his long-drawn-out musical joke proved to be decidedly tiresome. His model was Verdi's "Falstaff." He should have chosen the same composer's "Aïda" as a prototype. In the last act there is a charming melody; but it happens to be a Venetian popular song, "La Biondina in Gondoletta." However, it is better to borrow than to bore.

Among the promising young American singers now in Germany who are likely some day to be brought back for our Metropolitan is Miss Julia Heinrich, the daughter of the famous baritone, Max Heinrich. She is singing at present at Elberfeld, and the newspapers speak highly of her voice and her dramatic art. She won special praise as Elizabeth in "Tannhäuser," Micaela in "Carmen," and Agathe in the "Freischütz."

"Ocaso de los Dioses" is the Spanish name for "Götterdämmerung." With the Wagnerian masterwork the opera season was opened in Madrid. The silence with which the opera was listened to was as eloquent of the audience's rapture over this music as was the tumultuous applause after the curtains. The women in the audience made, according to a correspondent of the *Frankfurter Zeitung*, a garland of beauty such as could not be seen anywhere else in Europe. The same writer remarks: "Wagner's art is not so foreign to the Spanish character as it might seem at first thought, for its elemental, impetuous qualities, as well as its exquisite tenderness, strangely approximate it to the Spanish folk-recitative, the *canto hondo*, whose old melodies are laughing, weeping, fervent nature-sounds that seem to well from the soul's most yearning depths."

Life on a modern battleship is depicted in a piece of programme music, recently perpetrated by an English composer, Bruce Steane, and performed at Bournemouth by Dan Godfrey's band. "Dreadnought" is its title, and it is divided into four movements, respectively labelled thus: (1) The Launch of the Dreadnought; (2) In the Breeze; (3) The Calm, leading to the Storm; (4) Prayer —Full Steam Ahead—In England Again. The great ship herself is typified by a leitmotif of a chromatic character, suggestive, we are told, of "the perfect symmetry and strength of her form from turret to waterline." In the second movement life on the ocean leviathan is depicted in full swing; the character of the third is sufficiently indicated by the label attached to it, and quoted above. "The final movement," it is stated, "is ushered in by a prayer, through the solemn strains of which are heard the wailing cries of the seagulls." Then, after a fugal section, comes a passage illustrating the command, "Full steam ahead for home," while the final page proclaims "the triumph of the ship's maiden trip and the joy of the crew at being in England again."

Art

SEPARATIST ART BODIES.

When some of the young men of the Viennese secession drafted a programme for their endeavor to evolve a new style in the arts, they made agitation one of their first duties. "We are neither for nor against tradition," they declared. "There is no question of a development or a change in art, but merely of art." What they proposed to do was to make a stir. They did so, and much that is interesting has come of it. Though at the start their profession of intent may have been rather specious, or at least not too clearly put, it expressed a temper which is often characteristic of those who set out on new paths. They revolt, but just what it is that they revolt from is at times not so plain. This is not because they have no grievance or may not by their later fruits demonstrate a justification. It is rather because the impulses of the more or less loosely organized groups are if anything almost more baffling and intangible than the moods of the individual artist. They follow a natural instinct in organizing at all and an equally natural one in occasional partial disbandment. Confederation and secession are the two principles which for more than a generation have kept the art community alert and productive.

The announcement of a new society here, "The American Painters and Sculptors," may prove to be an instance in point. In its charter members it gives promise of strength. It includes several members of the National Academy, other men whose work has kept them apart while winning a ready welcome of appreciation from collectors and critics, with a proportion of men still young but already favorably known. The Society is launched under auspices that suggest good financial backing. If we add that the membership includes relentless and eloquent reprovers of the Academy, we have gone as far as present indications will allow in characterizing this new separatist group. What it may accomplish, how long it may endure, what influence it may exercise, we must wait for time to show.

It is clear, however, that if the appearance of the new body were to sap the strength of the Academy, it would be unfortunate that the movement should occur at this time when a new chapter in the history of the Academy seems about to open with the prospect of better exhibition facilities. For societies of artists of this sort have their most important function in the display of their product. They are a means of intercommunication with the public. Without exhibitions they are of comparatively little use either to themselves or to their environment. It has been inevitable that the Academy should suffer so

long as its facilities lag behind its needs. A sense of fair play would prompt the suggestion that, with better conditions now in sight, steps at subdivision be postponed until the chance to retrieve shortcomings has been tried out. This should seem the more reasonable in that the Academy has of late shown a growing catholicity and regard for a widening public taste. As its current exhibition indicates, it has not failed to be generous of its restricted wall space in extending a welcome to the work of outsiders.

Yet all this may be to take an amiable habit of drawing up bodies of by-laws too seriously. It is only about six years ago that the Society of American Artists returned to the fold after almost thirty years of independent existence. That lesson should not be forgotten. On the other hand, the coalescing of outside groups is a symptom of energy rather than a slackening of the pulse of organization. In this country we have perhaps had too little of such activity, fraught though it is with a certain amount of wasted power in internal dissension. In England and on the Continent the condition has been more pronounced. To be sure, the tendency to a kaleidescopic breaking up and rearrangement of subsidiary groups is a somewhat recent phenomenon. We may be only just taking the infection. The Grosvenor Gallery dates back to 1877, the year in which the Society of American Artists was formed, but it was less schismatic than supplementary. The New English Art Club dates from 1885, the break in the French Salon from 1889, the International Society of Sculptors, Painters, and Gravers brings us down to 1898. The Vienna secession held its first exhibition in the same year after breaking with the old *Künstlergenossenschaft* two years before. The pictorial photographers split off from the English Photographic Society in 1891 to form the international body, "The Linked Ring."

Perhaps Brussels boasts the most complex example of division and subdivision, with its Free Society of Fine Arts, the Chrysolide, the Essor, the Circle of Twenty, the Society for Art, the Libre Esthétique, the Sillon and Labeur Clubs. Antwerp, too, has its Als ik Kan, the Independent Art Club, and the XIII. In comparison we seem on the whole inclined to be regular and loyal. Where we find ourselves impelled to divide forces, we might do worse, perhaps, than to take a leaf out of the book of the Brussels "XX" Club. Founded on a secession from the Essor in 1884, this body limited itself in advance and arbitrarily to an existence of ten years. The disadvantage in having two or more bodies, all aiming at comprehensive and representative membership, is manifest, but the sanction for separation that arises from the incompatibility with the main body of a mutually attractive group is undeniable. In its results, too, the small group has much to commend it, for it has many of the stimulating qualities due to association, while it misses the dead weight of unwieldy numbers. It speaks to its public in an individual yet varied tongue. A society formed under the limitation of a definite time-period could hardly undertake to be all-embracing or have opportunity to grow monotonous, or, with increasing age, to take on those qualities of established bodies which it had been formed in the first place to avoid. The plan of the "XX" does not appear to have been imitated. Separatists might go further and fare worse for a model.

Early this year John Lane Co. will issue A. E. Gallatin's book, "Whistler's Pastels and Other Modern Profiles," in an edition limited to 250 copies, printed at the Merrymount Press. The illustrations, twenty-two in number, include nine hitherto unpublished drawings by Whistler.

The anatomical manuscripts of Leonardo da Vinci at Windsor (thirteen sheets in all) are to be published in folio facsimile, under Norwegian auspices. The editors are Messrs. Vangenstein, Fonahn, and Hopstock. The first of three volumes is ready and may be ordered from Jacob Dybwad, Christiania. There will be a critical text with German and English translation. The edition is limited to 248 copies and the price is £3 8s.

Prof. R. Lanciani has discovered within the area of the Baths of Caracalla the remains of a magnificent portico, where the bathers could take shelter from the summer sun and the winter rain and cold. In the Middle Ages this site was used as a Christian burial ground, for a number of tombs of that period have come to light. This is the first exploration made in the Zona Monumentale, or Archæological Park, which extends from the Arch of Constantine to the Porte di S. Sebastiano and Latina.

Dispatches from Tripoli report an interesting discovery during excavations by Italian soldiers in the sands of Ainzara. The find consists of a Roman temple, described as virtually intact and containing the skeletons of a number of persons who were apparently overtaken by death whilst attempting to flee from some danger. Several urns, of which one was filled with gold and silver coins, have been found in the temple. The excavations are being continued, and it is stated that already the other buildings, containing statuary and some fine columns, have been brought to light.

Paul Vayson, the landscape artist, who died recently, was born at Gordes (Vaucluse). Though he painted mostly in the Midi, his scenes of Fontainebleau and Algeria are memorable.

Honoré Daumet, the French architect, is dead in Paris at the age of eighty-five. Among his works is the Palais de Justice, Paris. He was elected in 1885 a member of the Académie des Beaux-Arts.

The recent death of Valentin A. Syeroff at Moscow at the age of forty-six removes an important figure in Russian art. As the son of the composer, Alexander Syeroff, he grew up in an atmosphere of vigorous artistic discussions. Remarkable portraits of Alexander III and the Grand Duke Paul, as well as of several actors, constitute his best work.

Finance

A PRESIDENTIAL YEAR.

Perhaps the most frequent doubt, among the many financiers who have expressed their views on the present year's business outlook, has concerned the question, How would the story of 1912 be influenced by the Presidential contest?

We shall hear a good deal, in the coming eight or ten months, about the influence of this impending political contest on finance and industry. The general impression undoubtedly is, that all Presidential years are seasons of unsettled business and agitated finance. But that idea is far from correct, and a review of the years in point gives some oddly conflicting precedent. To begin with the most recent of them: 1908 opened with such extremely unfavorable signs, from the standpoint of finance alone, that a year of black depression might have been fairly looked for, even without the Presidential contest. The approaching campaign was confidently expected, four years ago this month, to make a very bad business situation considerably worse. Yet it did nothing of the kind. It would be difficult to say, in reviewing 1908, that the political struggle had any influence whatever on the markets. They were hopeful and confident throughout the months between January and November. To all appearances, the Presidential campaign itself exerted no adverse influence whatever. The so-called "political scare" on the Stock Exchange in October was a mere matter of transient professional speculation.

Nor will a study of 1904 altogether confirm the traditional idea. It is true that business was halting and uncertain, with much unsettlement in certain lines of trade—the steel industry in particular scoring the lowest prices of the year in September. But no one then ascribed the business unsettlement to politics; it was the sequel to the financial shocks of 1903, and the Wall Street point of view, at any rate, was shown by the continuous and rapid advance on the Stock Exchange, from the first week of July until after election.

But of the two preceding Presidential years, 1900 and 1896, most people believed, and still believe, that politics was the dominant influence. Something unusual certainly seemed to be the matter with 1900. The year before had been a year of "booms," of prosperous busi-

ness and particularly of enormous promotions and combinations in corporate industry. All at once, when the new year had begun, the horizon was overclouded. A "price war" broke out in the steel trade and in some other industries, and the business unsettlement was accompanied by a sweeping decline on the Stock Exchange. The paralyzed markets, financial apprehension, and stagnant industry of 1896, from the early springtime up to the day when a premium was bid on gold in election week, with call money at prohibitive figures and the New York banks taking tentative measures to deal with a possible crisis, will not have been forgotten by any one who lived through that period.

So that the record of the four latest Presidential years is just a bit perplexing to people who wish to draw exact conclusions. Why should the effect of the political campaign have varied so widely on those several occasions? It may perhaps be answered that in 1908 and 1904 the result of the Presidential contest was believed by experienced observers to be assured beforehand, whereas in 1896, at any rate, it was an extremely doubtful contest until the later days of autumn. But this plausible explanation does not apply at all to 1900; when Bryan's campaign against the renominated McKinley was as clearly doomed in advance, in the eyes of all observant men, as was his later candidacy of 1908.

The explanation which will possibly fit better to all four precedents is that the character of the financial and industrial movement, in the years respectively preceding 1896 and 1900, had been such as to predispose business to the depressing influence of political uncertainties, real or imaginary; whereas the year preceding 1904, and the year preceding 1908, had in a way anticipated all such influences. To speak more particularly; 1895 had been just such a rashly overdone "boom year," on inadequate resources and in an adverse economic situation, as was 1909 in a later after-panic period.

It was naturally followed by a year of reaction and liquidation. But the existence of such demoralizing tendencies made it certain that politics should bulk larger than usual in the apprehensive public mind, and the political issue was gravely disturbing. So, in a way, of 1900. The boom of 1899 had been one of extraordinary recklessness; new company incorporations to the amount of $3,500,000,000 were a heavy burden for any year to bear, and Europe's financial prosperity, which had largely been utilized to promote our own, had gone to wreck in the Boer war panic of the autumn of 1899. The American markets entered 1900 in a mood to jump at shadows.

So that the Presidential years which followed a period of speculative excitement and activity were years when politics seemed to be seriously disturbing. But 1903 and 1907 had represented as thorough and drastic a financial housecleaning as could well be imagined. On both occasions, so low a level of reaction and depression had been reached, before the Presidential campaigns of 1904 and 1908 had actually begun, that even an unfavorable political outcome could not, in the public view, make matters very much worse, while a favorable outcome might easily make them very much better. These are among the considerations which will serve as a basis for estimating the probable bearing of the campaign of 1912 on the business situation.

BOOKS OF THE WEEK.

The Home University Library of Modern Knowledge

"Exceedingly worth while."—The Nation.

New Price **50 cents** *per volume net; by mail, 55 cents*

Experience thus far with The Home University Library has shown the prospect of a larger market at a lower price sufficient to induce the publishers to change the books to a form which can be sold at 50 cents instead of 75 cents a volume.

New Volumes

Eleven volumes are just ready. Each is absolutely new, and specially written for the Library. There are no reprints.

THE CIVIL WAR

By Frederic L. Paxson, Professor of American History in the University of Wisconsin. The purpose and result of the great struggle are pictured as "a stake and a game." Consideration is given to the domestic politics with which Lincoln had to contend, and to the foreign dangers which were avoided by Seward and Adams. Brilliant paragraphs delineate the personalities of the chief figures.

HISTORY OF OUR TIME (1885-1911)

By C. P. Gooch. The chief developments of the period in The British Empire, France, The Latin South of Europe, Germany, and Austria-Hungary, Eastern Europe, and America are described, special attention being given to The Balance of Power, The Awakening of the East, and The Colonization of Africa. A chapter discusses Arbitration, Socialism, the relation of white and colored races, etc.

THE PAPACY AND MODERN TIMES

By Rev. William Barry, D.D., Author of "The Papal Monarchy," etc. The story of the rise and fall of the Temporal Power.

THE EVOLUTION OF INDUSTRY

By Professor D. H. Macgregor. An outline of the recent changes that have given us the present conditions of the working classes and the principles involved. One of the most eminent American economists says: "I do not think it is exaggeration to describe this as a brilliant example of succinct description and constructive analysis."

THE DAWN OF HISTORY

By Professor J. L. Myres. The first brief and simple survey of the history of very early times.

THE CIVILIZATION OF CHINA

By Professor H. A. Giles. A vivid sketch of Chinese life by one who knows it well and admires the remarkable gifts of the Chinese people.

MODERN ENGLISH LITERATURE

By G. H. Mair. This brilliant young writer rapidly surveys English Literature from the Middle Ages to the present day.

AN INTRODUCTION TO SCIENCE

By Professor J. Arthur Thomson. For those unacquainted with the scientific volumes in the series, this would prove an excellent introduction.

ASTRONOMY

By A. R. Hinks, Chief Assistant at the Cambridge Observatory.

PSYCHICAL RESEARCH

By Professor W. F. Barrett. Subjects thought-transference and other phenomena of "The Borderland" to a strictly scientific examination.

ELEMENTS OF ENGLISH LAW

By Professor W. M. Geldart. A simple statement of the basic principles of the English legal system.

EARLIER VOLUMES

Eighteen volumes were issued in 1911. Every volume is written by a recognized authority on its subject, and the Library is published under the direction of four eminent scholars—Professor Gilbert Murray, H. A. L. Fisher, Professor J. Arthur Thomson, and Professor W. T. Brewster.

THE FRENCH REVOLUTION. By Hilaire Belloc.
IRISH NATIONALITY. By Mrs. J. R. Green.
SHAKESPEARE. By John Masefield.
A SHORT HISTORY OF WAR AND PEACE. By G. H. Perris.
THE SOCIALIST MOVEMENT. By J. Ramsay Macdonald.
THE STOCK EXCHANGE. By F. W. Hirst.
MODERN GEOGRAPHY. By Dr. Marion Newbigin. (Illustrated.)
POLAR EXPLORATION. By Dr. W. S. Bruce. (With maps.)
PARLIAMENT. By Sir C. P. Ilbert, Clerk of the House of Commons.
THE EVOLUTION OF PLANTS. By Dr. D. H. Scott. (Fully illustrated.)
THE SCIENCE OF WEALTH. By J. A. Hobson.
INTRODUCTION TO MATHEMATICS. By A. N. Whitehead.
THE ANIMAL WORLD. By Prof. F. W. Gamble. (Fully illustrated.)
EVOLUTION. By Prof. J. Arthur Thomson and Prof. Patrick Geddes.
LIBERALISM. By Prof. L. T. Hobhouse.
THE OPENING-UP OF AFRICA. By Sir H. H. Johnston.
MEDIEVAL EUROPE. By H. W. C. Davis.
CRIME AND INSANITY. By Dr. C. A. Mercier.

Sets of new volumes will be issued every few months. Lists will be sent on request.

Henry Holt and Company 34 W. 33d St. NEW YORK

THROUGH TRACKLESS LABRADOR

By H. Hesketh Prichard, F.R.G.S.

Author of "Hunting Camps in Wood and Wilderness," "Don Q.," etc.

The stirring record of a perilous trip, fit to please sportsmen, naturalists, and lovers of adventure, across the uncharted Barrens of Labrador. Written by a big-game hunter and explorer of international repute. Unmatched illustrations from photographs by the author. (*Small quarto. Fully Illustrated.* $4.00 *net; postpaid,* $4.25.)

THEIR MAJESTIES AS I KNEW THEM

By Xavier Paoli.

The author's intimate and highly entertaining recollections of Emperors, Empresses, Kings, Queens, and other titled and distinguished personages whom, as deputy of the French Government, he safeguarded during their visits to France. In this volume the great ones of the world are familiarly met as men and women quite human in their oddities and failings. (*Crown 8vo. Profusely Illustrated.* $2.50 *net; postpaid,* $2.70.)

NEW MACMILLAN BOOKS ON SOCIAL SUBJECTS

AN "ADMIRABLY CLEAR, COMPREHENSIVE, AND WELL-BALANCED" BOOK.

Social Pathology

By SAMUEL GEORGE SMITH, Ph.D., LL.D. *8vo, $2.00 net*

The author's equipment has been most practical, as the Founder and President of St. Paul Associated Charities, President Minnesota State Board of Visitors, Commissioner to Visit European Institutions, as a former President of the National Conference of Charities and Correction, and present head of the Department of Sociology and Anthropology, University of Minnesota.

"Mr. Smith," says the *New York Tribune*, "thoroughly equipped by wide, practical experience and even wider reading, is a sane optimist. . . . A constant felicity of terse statement marks this work, and makes its reading as easy as it is soundly and systematically informing."

"It is a mine of useful information." "Singularly commonsensible . . . a valuable work."

Social Adjustment

By SCOTT NEARING, Ph.D., of the Wharton School, University of Pennsylvania. *$1.50 net*

"As things are to-day, the greatest social service one can render is to show the possibility of effective remedies. . . . This Professor Nearing does, and he has therefore produced a book of incalculable value."—*Boston Evening Transcript.*

Making Both Ends Meet

By Mrs. SUE AINSLIE CLARK and EDITH WYATT *Cloth, $1.50 net*

"It can be recommended especially to every one who is interested in the grave problems involved in the new and untoward conditions of women's work."—*New York Sun.*

Social Reform and the Constitution

By FRANK J. GOODNOW, LL.D., Columbia University. *Cloth, $1.50 net*

"The book shows wide and scholarly knowledge and that massing of clear-cut and logical thought on the subjects considered which mark the writings of Dr. Goodnow. The work is well worth not only reading but study."—*Boston Evening Transcript.*

The Law of the Employment of Labor

By L. D. CLARK, of the U. S. Bureau of Commerce and Labor. *Cloth, $1.60 net*

"One of the handiest and most opportune books for wage-earners and employers that has been issued in many years."—*The Labor World.*

Social Forces in American History

By A. M. SIMONS *Cloth, $1.50 net*

"At every page one pauses, wondering: Why did I not know this before? It is a book for every student of social, political, and economic conditions, for every reader whose mind thrills to the impact of new knowledge, for all men and women who desire to know the true history of their native country."—*Chicago Evening Post.*

Increasing Human Efficiency in Business

By WALTER DILL SCOTT *Cloth, $1.25 net*

A contribution to the psychology of business which aims to put any intelligent reader in fuller control of his own efficiency and that of his assistants. "Definitely practical and suggestive."

Mr. E. TEMPLE THURSTON'S

latest novel

THE GARDEN OF RESURRECTION

"The story is full of the wild beauty of the sea cliffs, of the bloom of gorse and heather, of the joy of growing things, of the happiness of a life close to the earth. Mr. Thurston has written a little pastoral, the memory of which will be cherished long by those who read it." —*Boston Herald.*

Three months' trial subscription, 50 cents

MITCHELL KENNERLEY Publisher, NEW YORK

THE REMINISCENCES OF
JAMES BURRILL ANGELL

With Portrait in double-tone on cameo-plate paper. Crown 8vo. $1.35 *net; by mail*, $1.44.

CONTENTS:—From Birth to Graduation—1829-1849. The Southern Journey. Civil Engineering and Study in Europe. Professorship in Brown University. Presidency of the University of Vermont. The Mission to China. The Canadian Fisheries Commission. Summer Trips to Europe. Mission to Ottoman Empire. Presidency of the University of Michigan.

"Throughout his long career as editor, diplomat, and educator he has been keenly observant, and in this work recounts the course and sum of his observations.

"It is a running record of racy comment, witty allusion, and appropriate anecdote—manifestly written largely from memory, and bearing internal evidences of spontaneity and nonpartisanship."—*Philadelphia North American.*

Studies in History, Economics and Public Law

Edited by the Faculty of Political Science of Columbia University.

Vol. XLII—ATTITUDE OF AMERICAN COURTS IN LABOR CASES

A Study in Social Legislation. By GEORGE GORHAM GROAT, Ph.D., Professor of Economics and Sociology, Ohio Wesleyan University. *Cloth*, $3.00*; *Paper Covers*, $2.50.*

The purpose of this volume is to present the various views expressed by judges in their decisions in labor cases. They are stated as nearly as possible in the words of the judges themselves.

LETTERS TO WILLIAM ALLINGHAM

Edited by H. ALLINGHAM and E. BAUMER WILLIAMS. With a Portrait and 5 Facsimiles. 8vo. Pp. viii+314. $2.50 *net.*

The greater part of the letters here collected was written during the twenty years before 1870, when Allingham came to live in London. Among his correspondents were Leigh Hunt, the Brownings, Tennyson, Thackeray, Carlyle, Emerson, Morris, Burne-Jones, and Ruskin.

MEMOIRS AND LETTERS OF THE RIGHT HON. SIR ROBERT MORIER. G.C.B., FROM 1826-1876

Edited by his Daughter Mrs. ROSSLYN WEMYSS. In Two Volumes. With 6 Portraits. 8vo. Pp. xx+836. $8.75 *net.*

These two volumes of the Memoirs and Letters of a very eminent diplomatist are of value, not only from a literary, but also from an historical point of view, containing as they do, a graphic and lucid description of the various events that went to make up the history of Germany from 1853 to 1876.

"Two well-filled volumes, packed with material of the very highest interest to the political student, commendably devoid of padding and decoration, and admirably frank in their comment upon the European history of the second half of the nineteenth century."—*London Daily Telegraph.*

NEW YORK, THURSDAY, JANUARY 18, 1912.

The Week

"Acquisition of the telegraph lines of the United States by the Government and their operation as a part of the postal service will be recommended to Congress in a short time by Postmaster-General Hitchcock"—such is the statement given out by the Postmaster-General or in his name, as if it were the function of the Postmaster-General to make recommendations to Congress. The White House explanation of this amazing pronunciamento explains nothing, but will deepen the impression that our good-natured Administration takes life much too easily. The Postmaster-General had, it appears, discussed this question of Government ownership a year or so ago with the President, and Mr. Taft seems to have liked it, but waved it aside then—there were so many other pressing questions. Now Mr. Hitchcock, who is not without a keen sense of what creates public discussion, throws out this radical suggestion without having again touched upon it with the President, because he had to leave town suddenly and forgot to give orders to have the matter withheld until his return! It is idle to stress the situation thus disclosed. But it must be maddening to all friends of the President that the many fine things Mr. Taft has accomplished, his steadfast refusal to desist from enforcing the laws impartially and without regard to persons, his rigid abstaining from working for his own profit, are so often obscured by just such happenings as this—to the joy of his political enemies and his false friends.

As to the proposition itself, the vast addition that the scheme would make to the army of Federal employees would, not very long ago, have constituted, in the minds of all sober thinkers, a fatal objection to it. If it is now entitled to serious discussion, this can only be because the progress of the merit system in the Federal service has lessened incalculably the dangers of the power of appointment. But over against this admission must be placed several considerations which point in the opposite direction. One is the vast increase in the scale of the telegraph operations, especially when the connection with the telephone is considered. Another is the benefits that have actually come from the competition of two systems. Still another lies in the fact that an alternative exists in the extension of the jurisdiction of the Interstate Commerce Commission to cover telegraphs and telephones. And finally, so far as concerns the old objection to increase of Government functions and enlargement of the possibilities of patronage and political control, one may concede that it has not now the same kind of force as in the old days of the spoils system, without at all admitting that it is no longer of serious importance.

That was not a bad point which Gov. Harmon made in his speech at East St. Louis last Friday, coupling the McKinley tariff act with the Sherman Anti-Trust act. These two acts were passed at the same session of Congress, and the McKinley act, as Mr. Harmon says, went far beyond earlier laws in the bestowal of special favors. But the Republican leaders, he declares, "did not dare to face the country on it without a law to prevent the stifling of competition, from which great benefits were promised to the people." Whether there was historically so close a political connection between the enactment of the one law and the other may be doubted; but it cannot be doubted that the tariff system of which the McKinley act marked a culminating point was the potent breeder of the monopolistic combinations for which the Sherman act was designed to furnish a remedy. And Gov. Harmon is justified, too, in pointing out—what is so often and so strangely forgotten—that it was in Mr. Cleveland's Administration that the first victories of the Anti-Trust law were won in the Supreme Court; namely, those in the Trans-Missouri case, in the Joint Traffic case, and in the Addyston Pipe case. "It appeared," he adds, "not to be the policy of the succeeding Administration to proceed further against such concerns." In these days of multitudinous progressive stirrings, it is only fair to the men of a less noisy time to remember that it was the stolid Cleveland and his Attorney-General, this same Mr. Harmon, who first put the Anti-Trust law into successful operation.

Much of the popular interest in the Supreme Court's decisions of Monday relating to the Employers' Liability act will attach to the circumstance that they included a reversal of Judge Baldwin's decision in the Connecticut case which gave rise to the famous controversy between the veteran jurist and Col. Roosevelt. But while that result is itself important, affirming as it does the duty of State courts to assume the task of carrying out the requirements of Federal laws—provided, of course, that they are Constitutional—even when they conflict with the policies embodied in the State's legal system, yet the greatest significance of the decisions is to be found in other aspects of them. The power of Congress to regulate the agencies of interstate commerce is affirmed in the most sweeping and emphatic language; and short work is made of the sanctity of the common-law fellow-servant principle. No person, the Court declares, has a "vested interest in any rule of the common law"; and Congress is not in the least obliged to take into account the question whether the co-employee to whose fault the injury may have been due was engaged in work of interstate commerce or not. The decisions will be received with hearty satisfaction by right-minded persons generally, without distinction of party, economic opinion, or station in life.

Senator Lorimer explained to the Senate Investigating Committee last Friday that he was the victim of a conspiracy. Gov. Deneen and the Chicago *Tribune*, it seems, made a "frame-up" against him; the bribery dynamite was not genuine, but "planted" by his persecutors. The Committee will doubtless give due weight to his testimony upon this point, but it will at the same time, we fear, share the desire of the country for more specific information from the Senator concerning the charges against him. There is a persistent feeling, which Mr. Lorimer apparently does not understand, that the fundamental issue in his case is whether or not his high office was obtained by bribery.

There are indications at Albany which both Old Guard leaders in the Republican Assembly and Tammany agents in the Democratic Senate would do well to heed. In both houses and in both parties there is an insistent demand for measures that will strengthen the defective direct primary bill passed at the last session. With the two houses differing in political complexion, partisan legislation is out of the question. Speaker Merritt therefore voices a widely popular desire when he declares for the passage of the departmental and appropriation bills and an immediate adjournment. But it is clear that he has adopted the short-session slogan for the purpose of shutting off amendments to the primary law and other progressive legislation. The Tammany leaders, with their fingers crossed, will put in bills carrying out the Governor's meagre recommendations for relief. Beyond that they will not go. It is right here that a vigorous assertion of their legislative prerogatives by the more independent members in both parties may prove effective.

Week after week we study our well-written, well-edited, well-printed, and well-bound copy of the *Outlook* and wonder who does it all. It cannot be the Contributing Editor, because he is busy receiving visitors who come to interview him about the Chinese situation, the prospects of grand opera in English, the canals on Mars, and other delightfully interesting topics of the day. It cannot be the Chief Editor, because he is busy explaining just what the Contributing Editor did mean and did not mean at last night's dinner or in this morning's letter in the newspapers. It cannot be the Managing Editor, because he is busy setting straight certain wrong impressions regarding the Contributing Editor's business plans after March 4, 1913. It cannot be the Literary Editor, because he is busy reconciling his own views on English style with those of the Contributing Editor. So the mystery remains: Who does get out the *Outlook*, week after week, well written, well edited, well printed, and well bound?

Princeton University is to be congratulated on the satisfactory settlement of its long-standing problem of the presidency. Like Dr. Finney, to whom the post was offered a few months ago, Professor Hibben is a Princeton man, and one who is both liked and esteemed by the great body of its alumni and students, as well as by the Faculty. Although he took sides in the recent controversies concerning the "quad" system and the graduate school, it appears that both parties in these divisions are satisfied with the choice of Professor Hibben. Entering upon his duties at the age of fifty, and after a familiarity with the affairs of the university acquired during twenty years' connection with its teaching staff, President Hibben has before him the prospect of distinguished service in the development of one of the foremost of American institutions of learning. With the preceptorial system introduced by President Wilson as a distinguishing feature, and with the graduate school about to be developed as the result of a liberal endowment, there is material in the Princeton situation for much effective thinking and planning.

Following the example of Chicago, Cleveland has placed a woman at the head of its school system. Miss Harriet L. Keeler, who has been nearly forty years in the service of the city schools, is now to have entire charge of them, and the Board of Education's selection seems to meet with universal approval. At least we have yet to see a complaint that this is taking manhood out of the schools and dangerously feminizing them. The Cleveland newspapers, on the other hand, have called attention to the fact that Miss Keeler is the sixth woman to take office in Cleveland. Of the others, the most interesting is Miss Mildred Chadsey, who is chief of the sanitary police. Why not? As Miss Chadsey puts it: "It's a housekeeper's job. I am only a housekeeper on a large scale." But a few years ago the suggestion that a woman should be a policeman would have roused the interest only of writers of comic-opera librettos. The other Cleveland women officials are connected with outdoor relief, the school board, and the library. The Cleveland *Leader* lays the responsibility for these new officials at the door of the suffragists and the Men's League for Women's Suffrage.

The public is becoming familiar of late with the excluded reporter. The public reads, for instance:

> At this point the speaker requested that all reporters be excluded from the room. This was done and the speaker then went on to say,

etc., through a long and detailed transcription of the remarks which the reporters were banned from. How did the account get into print, one wonders. Did the banished newspaper man, thrust out at the door, return through the window accompanied by seven other newspaper men worse than himself? A distinguished statesman addresses six hundred diners and no reporters, and discovers to his horror that his remarks have got into print. A Senatorial committee goes into executive session and decides this, that, and the other thing. (See the newspaper columns of the day.) The Socialists call a party meeting at Cooper Union for the threshing out of questions of party policy. The public, including the reporters, is excluded, but the Socialist *Call* next morning publishes an account of the debates that were not meet for common ears. What sense is there in the practice? The news comes out anyhow, and it only subjects private individuals to the peril of an Ananias Club election, instead of leaving it to the men with whom that danger is part of the day's work.

> There is only one thing which the Filipinos ask of the United States, and that is, to free them from all foreign intervention. This is the only thing which will make them a prosperous and happy people.

In these words, published in the *Independent*, Dr. Quezon, Resident Commissioner from the Philippines to the United States, answers the question which we find ourselves asking somewhat uneasily from time to time: Are the Filipinos contented under American control? The Commissioner gives point to his answer by quoting Webster's words regarding the impossibility of contentment under foreign rule, "no matter how lightly it sits upon the shoulders." Nor does he stop with generalities. Our Constitution, he suggests, was not framed for alien subjects, and the constant ebb and flow of our politics precludes the development of wise administrators, the men having to do with the Philippines being recalled just as they are becoming familiar with the conditions of their task. He even refuses us the satisfaction of thinking that the Filipinos

are so much better off under us than they were under Spain that they cannot reasonably aspire to the management of their own affairs. It is the Filipinos, he reminds us, who are paying for their schools and roads, not merely by taxes, but to some extent by voluntary popular contributions, and he goes so far as to say that a large part of the credit for the improvement in the islands is due to the enthusiastic coöperation of the Filipinos, who took the American side in 1898 because "they had been led to believe that the independence which they had all but achieved from Spain would be recognized by the United States after the war was over."

Henry Labouchere never figured among the great statesmen of his time, was not intimately associated in the public mind with the origination or the passage of any epoch-making measure; he was commonly regarded, by those who knew him not, as a sort of amusing and irresponsible Robin Goodfellow, with an infinite capacity for mischief of every kind, whereas, in reality, for all his flippancy, cynicism, and extravagance, he was one of the shrewdest politicians of his day, with a remarkable grasp of all the different phases of the great problems of the time. It was as an independent force, a free-lance riding atilt at every imaginable abuse, or what he deemed an abuse, that he achieved the notoriety and the popularity which accompanied him during the greater part of his career. But it was not only in attack that he could be many-sided. The purely human element in him was strong. He was a lover of his kind as well as the satirist of it, and he was as much the indefatigable champion of worthy charities as he was the inveterate and deadly foe of every variety of sham and humbug.

In many circles Labouchere's death—which, at his age, however, cannot be called untimely—will leave a great void. Clubland has lost a gossip of the brightest and cheeriest and most informing kind; general society a charming host and fascinating guest; music, the theatre, and the arts an experienced and discerning critic; and his journalistic subordinates a most inspiring chief. He will long be remembered in London life as a finished specimen of the man of the world—polished, accomplished, cynical, knowing life in all its deeps and shallows, and yet retaining a certain freshness of heart which made him the champion of the poor and oppressed and the kindliest friend of sick and suffering children. Nowhere will the exit of "Labby" be more deplored than in the hospitals, where thousands of crippled children for many years have been made happy at Christmas by the fruits of the annual *Truth* Doll Show. The world could better have spared many a greater man.

Sir Edward Grey's management of British foreign policy is severely assailed from within the ranks of his own party. The Radical element is opposed to the whole-hearted way in which the Foreign Secretary threw himself on the side of France during the recent Morocco crisis. That opening, however, does not promise much for attack, because the majority of the nation is undoubtedly content with the outcome of the Franco-German negotiations. Hence the malcontents have directed their fire against Sir Edward's policy in Persia, and there they unquestionably have excellent reasons for complaint. It is supposed that the British Foreign Secretary has been anxious to retain Russia's friendship as an important factor in the general European situation. But whatever may have been his motives, Sir Edward has placed Great Britain in a most unhappy position in Persia. He has made her a partner of Russia in the shameful assault upon Persian independence, and has been driven into virtually admitting that the treaty with Russia of four years ago, in which the two Powers delimited their spheres of interest in Persia, was, in effect, a treaty of partition. Sir Edward Grey has not even the consolation that there was profit in the crime against Persia. The partitioning of that empire brings England and Russia face to face along hundreds of miles of frontier, a condition of menace which British policy has for years been trying to avoid.

The report that a large sum, approximating half a million dollars, has been given by a wealthy Jewish resident of British India for the purpose of establishing a university at Jerusalem, calls attention to the changed aspect of Jewish aspirations with regard to Palestine during the last few years. The precise date of such a change may be given as the overthrow of Abdul Hamid II and the establishment of a Constitutional régime in Turkey. For the Ottoman Empire at large the change was a blessing; but the Zionist movement suffered badly. Under Abdul Hamid II it did seem at one time as if the Porte's consent might be obtained to the establishment of a partially autonomous Jewish "state" in the Holy Land; that was the "political Zionism" favored by the founder of the movement, Dr. Theodor Herzl. But with the advent of the Young Turks and their ambition to consolidate and strengthen the Empire, the addition of another autonomous people to the welter of races with which the Government had to contend became impossible. Political Zionism has lost its hold upon the Jewish people of late. The majority of Zionists are now in favor of a peaceful conquest of the Holy Land by means of Jewish colonization, industrial development, and the creation of just such cultural centres as a university at Jerusalem would constitute.

The success of the Socialists in the elections for the German Reichstag has not been beyond widely-entertained expectations, but it has been sufficient deeply to disappoint the conservative parties. Just what the membership of the party will be in the new Reichstag cannot be known until after the holding of the second elections, in no less than 122 of which Socialist candidates are concerned. But it is already certain that the party will go beyond its high-water mark in the Imperial Parliament; and the popular vote, as shown in the first elections, is far beyond precedent. Just what the gains made by the Social Democrats at the expense of the National Liberals and the Radicals may mean will also probably be more apparent after the second elections are held; on the face of the matter, it seems to signify a crystallization of anti-conservative sentiment in favor of the most extreme party in the field. The one thing which, to a distant observer, seems most certain—not only as a showing of this election, but as evidenced by the whole story of German politics—is that in so far as the social-reform policies of the last decade or more have been inspired by the hope of checking the growth of the Socialist, or Social-Democratic, party, they have proved as ineffective as was the old policy of repression.

THE ARBITRATION COMPROMISE.

Differing interpretations have been put upon the proviso which Senator Lodge reported to the Senate last Thursday, covering the ratification of the pending treatles of unlversal arbitration with Great Britain and France. In effect, it states that the Senate agrees to approve the treaties on the understanding that the American members of the Joint High Commission shall be appointed by the President by and with the advice and consent of the Senate, and also that the Senate shall have full right to pass upon any special agreement proposed by the said Commission. All this is said by some to take the vitality out of the treaties, and the President's acceptance of the proviso is affirmed by them to be a surrender. On one point, Mr. Taft has never made any difficulty. He has always been ready to make his appointments to the Joint High Commission subject to approval by the Senate. With the other matter it is different, and the report that the President has acquiesced in it "reluctantly" may well be believed. In his address before the American Bar Association last August, he declared that he was "most anxious" that the Joint High Commission should be left in the treaties just as it was, the reason being that he desired to get a "binding effect."

The question now is whether the binding effect is seriously impaired by the Lodge proviso. It must be remembered that this puts upon the treaties only an interpretation which many contended from the first necessarily inhered in them. This was Secretary Knox's view originally. And he now stands by the opinion that the treaty never contemplated taking away from the Senate the power to disapprove any special agreement for arbitration. This was also the contention of the minority report of the Senate Committee on Foreign Affairs. And if we pass from Constitutional theory to the probable facts in practice, there is every reason to agree with what Senator Burton said in his separate report urging the ratification of the treaties as they stood, namely:

> It is practically impossible that the Senate would ever have occasion to refuse its approval of the arbitration of a question which the Commission of Inquiry has reported to be within the scope of Article I of the treaty. The treaty provides ample safeguards against any such possibility. In the first place, the question must be reported for arbitration by a vote of all or all but one of the members of the joint commission, one-half of the membership of which commission must be appointed by a President in whose opinion such question is not properly subject to arbitration under the treaties. In the second place, it is within the power of the Senate to insist upon amendments to special agreements submitting questions to arbitration under Article I, by virtue of which power the Senate can determine the character and composition of the tribunal to which the question is to be referred. In like manner the Senate may also define the scope of the powers of the arbitrators and the question or questions at issue; it may settle the terms of reference and fix the procedure. In other words, the Senate has the power in any case to remake by amendment the terms of the special agreement and to make its approval and consent conditional upon the acceptance of such terms.

These aspects of the treaties are confessedly debatable and must perhaps remain in a degree of uncertainty. But there are other things not open to doubt, features in the treaties which, if the Senate consents to their ratification, will represent a great positive achievement and a marked step in advance. We have, in the first place, the explicit undertaking to settle by arbitration or judicial decision "all differences," which are in their nature "justiciable," that may arise. None of the old tricking exceptions are made—questions of "honor" or "vital interest," under which, of course, every controversy could be brought at the pleasure of either side. To-day we have the inspiring example of three great nations willing to bind themselves to adjust *all* disagreements without recourse to arms. This is the chief progress marked by the treaties, and this remains, irrespective of any question about the machinery or the methods by which the solemn pledge is to be carried into effect. Moreover, there is a provision in Article II which is unaffected by any of the discussions about the mode of interpretation or ratifying proviso, and which is by itself of great value. We mean the stipulation for the delay of one year, at the request of either party, in case there is a dispute and a failure to agree upon the terms under which it is to be submitted to the Joint High Commission. This period is designed to afford time for further diplomatic discussion, but it also affords time for hot spirits to cool off. If such an agreement had existed between the United States and Spain in 1898, there can be little reasonable doubt that Spain would, in the end, have consented peacefully to evacuate Cuba.

From the beginning, it has been the moral and humane importance of the treaties that has elicited such enthusiastic support. About the legal details people have not so much cared. Three powerful nations are agreeing to make war among them so unlikely that it can be dismissod from the reckonings of prudent men; this is the thing—this magnanimous gesture of international peace—which has so strongly appealed to men of good will everywhere, and has brought to President Taft, for his initiative in the great work, the deserved plaudits of the best in the land. And we think it can confidently be said that this greatest influence of the treaties will not be seriously affected by the method now proposed of ratifying them. If once put in force, they will be not only a bulwark of peace between the nations directly affected, but an inspiring model for all the world to follow.

SLIGHTED NEW YORK.

In selecting Baltimore as Convention city, the Democratic National Committee seemed to take special pains despitefully to use New York. It chose a seaboard city, thus ignoring the argument of Chicago, St. Louis, and Denver that any one of them would be "central" and convenient, but turned a deaf ear to the plea of New York that, if any Eastern city at all was to be designated, New York should be the place. In fact, this city got just one vote—that of her own committeeman. The whole enthusiastic campaign to bring the Convention here—which every sensible man knew from the start was doomed to failure—thus issued in a rejection which was almost an affront. The State which has the most delegates and the most electoral votes, the great Democratic city with the largest and most numerous hotels and a fine Convention hall, which was ready to guarantee all expenses, had the mortification of being left as a wallflower while Baltimore was invited to dance.

So far as Democratic politics entered into this humiliation of New York, the reasoning of the National Committee is both obvious and sound. The passing over of New York was a plain shrinking from the shadow of Tammany. To hold the Convention here would be recklessly to invite the charge that it was under the blighting domination of Mur-

phy. The strongest and most confident party in the world could not afford to run that risk; for the Democrats needlessly to incur it, fighting their way back to respectability as they are, would be madness. This is really an old story. The dislike and fear of Tammany are deeply rooted in the hearts of the Democrats of the country. Indeed, for years past Tammany delegates to National Conventions, as they themselves have bitterly complained, have been looked upon with suspicion and aversion. "Great is Tammany, and Croker is its prophet!" cried Mr. Bryan in one of his speeches at the Wigwam, but this was only one proof more that he did not understand the true sentiment of his party. Before the National Committee, the heralded "backing" of Murphy for the effort to get the Convention for New York amounted to a single vote. It was the first opportunity to slap Tammany in the face, and it was seized upon.

This is, of course, not the whole of it. In both parties there is observable just now a marked unwillingness to appear to be identified, in either policies or candidates, with New York. If a possible nominee for the Presidency can somehow be dubbed the favorite of Wall Street, both he and his friends feel instant alarm, while his enemies are filled with glee. It should seem that to this city had suddenly been assigned the position of "a malefactor of great wealth," and that ostracism had been decreed for it by the apprehensive politicians of both parties. It is known, for example, that the friends of Gov. Harmon have discouraged anything like an organized movement for him here. A Democratic candidate might be glad to have the New York delegation swing over to him in the end, but would feel that approval by Tammany in advance would be wellnigh fatal. In the other party, there is a similar offishness. Those close to the President are remarking with much satisfaction upon the evidences of Wall Street hostility to Mr. Taft. They think it will help both in nominating and electing him. It is intimated here and there that Wall Street would look with a kindly eye upon the Colonel again, which may be explained by a desire to harm him with professed favor. Once bitten, twice shy, is a proverb that is valid in Wall Street; where it is well understood that, if Mr. Roosevelt got a chance again, he would do unutterable things to what he used to call with scorn "that little speck on the map."

Things were not ever thus. It used to be a great asset for a party or a candidate to be on good terms with "the solid business interests of the country." Political managers were wont to take the first train for New York in order to see to the sinews of war. That part of it will probably not be omitted this year. Pilgrims from afar will doubtless visit the metropolis furtively to seek campaign funds; and emissaries from party committees will not demand proof that money is not "tainted" before they consent to accept it. Yet the present political attitude towards New York, taken as a whole, represents a great change. Instead of being eagerly courted, she is ostentatiously avoided. More wealthy than ever, with more votes at command and seemingly with greater political power than ever, New York is slighted. The cold shoulder turned upon her by the Democratic National Committee is only typical of the political treatment she is receiving from all sides. All this is one item more for John Adams's famous "incomprehensibles" of New York politics. It is not, however, so very incomprehensible when you stop to think of it!

PRICE-REGULATION BY GOVERNMENT.

Mr. Carnegie's advocacy, as an alternative to prosecution against the Trusts, of a Government commission to fix maximum prices in manufacturing industry, is interesting chiefly because it accords with the similar (and, we may add, the equally vague) proposal of Chairman Gary of the Steel Corporation. We suppose that many readers of these two proposals will resort to some such explanation as this: Both Judge Gary and Mr. Carnegie are interested in the Steel Trust's perpetuation, the dissolution of the Trust is threatened, they recognize that the power of the Trust over prices, and especially Judge Gary's repudiation of supply and demand as a regulator of prices, are prejudicial to the case of the Trust, and both, therefore, accept as the lesser evil the idea of arbitrary Government regulation. But we do not wish to base our examination of the matter on any presumption of self-interest. The idea of Federal regulation of prices of Trust-controlled products is not confined to the Chairman of the Steel Trust or the principal holder of its bonds. It is advocated, more or less obscurely, by a number of other people who are disturbed by the policy of suing for dissolution of such industrial combinations as the Steel Trust—among them, Mr. Roosevelt.

Before discussing the merits of this contention it may be well to say a word of the status of the anti-Trust litigation. Observant people are aware that the Supreme Court decisions of last spring in some respects shifted the ground from the Northern Securities decision of 1904. The Oil and Tobacco Trusts were ordered to dissolve, not only because their form of organization was such as to promote restraint of trade, but because the testimony showed them to have restrained trade by overt and proven acts. Northern Securities, on the other hand, was dissolved in spite of its counsel's undisputed contention that the holding company had performed no overt act whatever, beyond receiving and disbursing dividends. But the majority opinions of the Court of 1904 insisted strongly on the fact of potential monopoly and restraint. The deciding opinion in that case was indeed avowedly based on admission of counsel that the same machinery which Northern Securities had used to buy up two competing railways might conceivably be utilized to place under control of three or four individuals all the railways of the country.

At the time, the decision was greeted by thinking men as the most important of all possible barriers to the ambitions and aspirations of the excited industrial promoters of 1899 and 1901. The service rendered by the law of 1890, in that highly critical period of our industrial and social history, would be difficult to exaggerate—this quite regardless of the familiar criticism, repeated in the Tobacco case, that the same people owned the disintegrated parts as had owned the whole. Every man of the slightest business experience knew that, whatever might happen in the competitive field in the next few months or years, the dream of a self-perpetuating, self-extending, and self-enforcing corporate monopoly was at an end. But it was only ended on the presumption that the law would continue to be enforced.

Is it, then, to be said that the Anti-Trust law, having stopped the extremely dangerous possibilities or probabilities

of the system, has done its work, and should give way to a plan of Government supervision? The answer involves an inquiry into the probable workings of that plan itself. To the extremely vague suggestions of Judge Gary and Mr. Roosevelt, Mr. Carnegie adds the definite proposal that the Government should fix maximum prices every month. We very strongly doubt if these eminent advocates of the plan, much less the general business public, have fairly considered what this thing would mean. It is the fashion to point comfortably to the authority over railway rates, now possessed under the law by the Interstate Commerce Commission. But this function is to the plan proposed by Mr. Carnegie as simple arithmetic is to integral calculus. The American railway system has, on the one hand, grown to be something very much like a natural monopoly; on the other hand, the principles underlying the fixing of rates involve a comparatively easy problem.

The instant such authority is thrust into manufacturing industry, a thousand complicating considerations will intrude. Location, experience, access to raw material, invention, practice of economies, capacity for specializing—every one of these influences, and a vast number of others, affect the question of the legitimate price, and affect it in a score or more of industries wholly different from one another. Supposing, what we should be very slow to concede, that a commission adequate to pass on all these conflicting problems could be formed, what is to be said of the courts which must pass on the justice of the commissioners' yearly or monthly or daily schedules? For, let it be observed, the whole world-wide realm of trade, finance, and economics must be called upon to decide what are the circumstances making a given price in a given industry at a given moment just or not. To our mind, the easy-going proposals of Mr. Carnegie and Judge Gary run pretty close to copying the most obnoxious fallacy of the extreme Socialistic school—that we need only confer on Government the power of saying a given arbitrary schedule in trade, finance, industry, or production is right, and it will be right.

That their further argument—to the effect that dissolution of the Trusts will leave industry subject to the rule of "destructive competition," with resultant survival of the fittest or most powerful, and reëstablishment of monopoly—may require some consideration by itself, we are not prepared to deny. President Taft himself has said, in his message of last December, that he can "see decided advantages in the enactment of a law which shall describe and denounce methods of competition which are unfair." The power of concentrated capital may conceivably, in these days, be used for such purposes, through cutting prices low enough to drive rivals out of business, quite as well as for fixing artificially high prices by corporate combination. But we hold that the plan of commission supervision, with maximum prices fixed by Government, does not touch the matter at all—unless, indeed, its adherents wish the commissioners to fix minimum as well as maximum, and dictate exactly what the American consumer is to pay for what he buys. We have heard of nobody so daring as to suggest this plan, and we have a very clear idea of the kind of reception it would meet with from the public.

FIRES AND HUMAN NATURE.

A few days ago, if anybody in New York had been asked to name the buildings most free from the danger of destruction by fire, he would have been almost sure to place the Equitable Building in the list, and near the top of it. He would probably have thought the building fireproof in the fullest sense of the word, to begin with; and he would have felt sure that the precautions against fire, over and above the protection afforded by the nature of the structure, were such as would correspond to the stupendous moneyed interests represented in the building. But Tuesday of last week told a different tale. The fire started in an act of carelessness such as might have taken place under the humblest roof; and in undertaking to fight it without sending in an alarm until it had attained great headway, the person in charge of the building showed that he was not under the government of proper rules of conduct in an emergency. But, as ex-Fire Chief Croker says, "of course this Equitable fire ought to have been stopped before it started, by proper prevention. Just so long as you leave waste paper in an office building at night you are in danger of a fire. All paper ought to be taken out as soon as it is collected. As I hear it, this blaze began in a storage room, and then went up the elevator shaft. Storing paper and things like that is giving the fire a handicap against the Department."

It will doubtless be said, by way of defence, that all this lack of careful management was due to the conviction that the building was "absolutely fireproof." Such was doubtless the belief of people generally; but the heads of the institution knew better, or were to blame if they did not. "The building," says Fire Commissioner Johnson, "was known to the underwriters as 'sub-standard construction.' This simply means that the building was not fireproof"; and he goes on to speak of its being "allowed to stand in the heart of the financial district" as an anomaly. Elsewhere the special defect to which the fire owed its destructiveness is thus commented on: "The presence of an elevator shaft fitted in wood, running the height of the building, or of wood staircases, renders any large building an easy prey to flames. The flames were sucked up the Equitable shaft, and the heat concentrated at the cupola of the building was so enormous that the entire structure was almost immediately wrecked." And it should be added that there was not even a wall of special thickness, or fire-resisting quality, to separate the restaurant storeroom (in which the fire started) from this fire-spreading chimney in the shape of an elevator shaft.

Now, nobody will pretend for a moment that the Equitable Company deliberately refused to spend the trifling sum that would have been required to make the precautions against the spread of a fire in the building practically invincible. To consult the foremost of fire experts as to the necessary measures, and to employ such a permanent skilled staff as might be necessary to carry them out, would have been the merest bagatelle in its budget. These things were not done, simply because nobody gave the matter serious thought. The like things, upon their more modest scale, are not done by any of us individually in our own houses, are not insisted on by any of us on the part of the owners of the apartments we occupy. They are not done by us collectively as inhabitants of a great city, or as business men with colossal material interests involved in its safety. Experts, we are told, "have come to the

conclusion that New York would have been practically helpless if another big fire had broken out downtown on the same morning." It is highly improbable that a double event of the kind will happen; but it is far from impossible, and yet we all know that no radical measures will be taken to meet such a contingency, or, if taken at all, will not be taken in the near future. In a word, there is a vast deal of inertia in human nature. In some directions, we ought to fight that inertia, might and main; in some directions we must brand it as criminal and sternly punish it; but after all is said and done a great deal of it will remain, and must remain so long as we continue to be human.

Considerations like these have a bearing far wider than as they relate to the tactics of fire prevention. They should mitigate the ardors of some of our declaimers against the brutality and selfishness of the individualist or "capitalist" régime. Not every life lost in the working of the machinery of modern enterprise is a cold-blooded sacrifice on the altar of Mammon. Something must be allowed for that indifference to an infrequent possibility, that inertia in regard to an improbable disaster, which is illustrated so abundantly in instances with which the consideration of the saving of money has nothing to do. Just how far this kind of consideration should serve as excuse or palliation is matter for level-headed judgment in each case. It offers no refuge for the violator of laws designed to protect the lives of workers; it furnishes no excuse for the sordid wretch who locks the factory door as a cheap means of preventing pilfering by his employees, knowing, as he must, that he thereby directly diminishes the chance of their escape from a horrible death in the event of a fire. But it is a consideration that stands in the way of frantic general denunciations, and that stamps as false those pictures of society which represent the capitalist class as unfeeling monsters instead of human beings with their share of the weakness, the imperfection, the inertia which human beings exhibit in all stations of life, and which they will be quite sure to carry with them even into the coming Utopia.

FRENCH POLITICS AND THE ENTENTE CORDIALE.

The character of the new Ministry organized by M. Raymond Poincaré was determined by causes more permanent than usually shape the formation of a new Cabinet in France. The regular procedure is that the men who bring about the fall of a Cabinet take unto themselves the prize of victory. The struggle is a factional one between the "ins" and the "outs." But, however personal may have been the motives that brought about the fall of M. Caillaux, it is no single faction that has profited by the event. M. Poincaré's Cabinet is not only a Ministry of all talents in the sense that it comprises a large number of distinguished men of affairs; it represents also a greater number of groups and tendencies than any Cabinet for the past ten years. Omitting the Socialists on one wing and the Conservatives and Conservative Republicans on the other, it reflects every other shade of sentiment in Parliament, from the Moderate Republicans to the Socialist Radicals. It is a Cabinet of veterans. Two of its members, Bourgeois and Briand, are former Premiers. M. Poincaré has held the Portfolio of Finance with distinction. Millerand has several times held office, and is generally recognized as one of the most brilliant men in public life. Théophile Delcassé's rôle in French politics during the past fifteen years has been of the highest importance. There is so much talent in this new French Ministry that one fears for it the fate of other Ministries "of all the talents" in France and elsewhere.

But for the time being the appearance of what is described as a "national Ministry," instead of a merely partisan Ministry, is significant of the profound change that has come over French public opinion in the past two years. The nation has long been aware of the excessive play of personal politics and partisan intrigue that has gone on in Paris; but the nation, as a whole, has been indifferent. Partly this has been the result of the moral exhaustion following the tremendous strain of the Dreyfus affair. Partly it has been mere contentment with the steady economic well-being which France has been experiencing in contrast with other countries. Intent upon maintaining and increasing its prosperity, the French people demanded peace at any price. Because it wanted peace abroad, it repeatedly yielded to German intimidation. And because it had peace and prosperity at home, the nation was content to let the politicians in Paris knock each other about to their heart's content.

The change came not very long ago when the latest reappearance of the German menace under the old form of Morocco finally brought it home to the great majority of Frenchmen that peace by submission was not to be had. There were moments of acute crisis in last year's Moroccan controversy, but the temper of the French people had changed. All observers agree that a spirit of quiet determination possessed the French nation, a firm resolve to fight, if fight it must. And to this firm bearing on the part of France, taken in conjunction with England's support of her partner in the *entente cordiale*, the defeat of German diplomacy is attributed. That it was a defeat is acknowledged even in Germany. If there are Frenchmen who criticise the terms of the agreement over Morocco and the Congo, it is because they think that France could have obtained even more than she got. At any rate, even taking into account the existence of a difference of opinion as to the precise advantages gained by France, it is plain that French self-confidence to-day runs high. The national spirit, once awakened by the contest with Germany, has reacted on the internal situation. The indifference of the elector to the carryings on in the Chamber of Deputies has waned. The desire has manifested itself for a Government that shall not represent the ambitions of groups and individuals, but shall stand forth as the adequate embodiment of the nation's present high state of self-satisfaction. Some such popular state of mind has helped to shape the character of the new Ministry. How long this state of mind will last is another question.

That the new régime will bring about a change in the relations with England is altogether improbable. The mere presence in the Cabinet of M. Delcassé, architect of the *entente cordiale*, would show that. At the present moment British opinion is said to be greatly stirred up at the revelation of M. Caillaux's underhand negotiations with Germany; surely, here was an attempt to make peace with the common enemy

and leave England in the lurch. But only a few weeks ago there were Frenchmen who accused England of playing her own game in Morocco. She permitted affairs to come to the verge of war until she obtained Germany's assurance that British trade-routes would not be menaced by a new German naval station in Morocco. Then Britain was content, and allowed France to get out of the difficulty as she could. But such suspicions are common in all political alliances. There is no love lost among the members of the Triple Alliance, for instance. Whatever may be the ultimate motives that underlie the *entente cordiale*, it is apparent that both parties have profited by it. England rejoices in a diplomatic victory over Germany, and in France conditions are as we have explained. Perhaps it is not the least advantage accruing from the Anglo-French understanding as it functioned in the course of recent events, that better relations between Germany and France and between Germany and England are now spoken of as a possibility of the near future.

ROUSSEAUISM.

It is no new thing in politics to sunder the democracy of Rousseau from the democracy of Montesquieu; but that democratic element, which critics all concede as one of the main forces in literature during the past hundred and fifty years, knows little or nothing of such a distinction. Jean-Jacques, with his gospel of the ego, his doctrine of popular sovereignty, his belief in man's natural goodness, has the field to himself. Literary democracy is always Rousseau's democracy, always the explosive kind, salutary so far as it wakes European letters into new life and sets up cosmopolitan ideals, but powerless in its own cause, and perishing at last of its own tragic absurdity. Critics and poets, who recoiled from the extreme step of Rousseauism, had no refuge, it would appear, in a restrained and reasoned democracy, such as Montesquieu gave the political world, such as commended itself to an American Federalist; in art and letters, no halting seems to be allowed between the doctrine that every man is an æsthetic law unto himself and the doctrine of a kingdom by divine right. Who are the democrats as one reckons them in English poetry? Burns, of course, and Byron, and Blake; the young Wordsworth, Shelley, Landor, in his own way—a Mirabeau in verse—and Swinburne; consummately, Walt Whitman—Rousseauists to a man, impatient of law, and foes to social order. Whitman's democracy is outright Rousseauism; but it sounds already in Wordsworth's poem of 1791:

> Once, Man, entirely free, alone and wild,
> Was blest as free—for he was Nature's child. . . .
> Confessed no law but what his reason taught,
> Did all he wished, and wished but what he ought.

Man, that is to say, was born free, has been corrupted by the community, and will be good again if he be set free from communal bonds. Here is the palpable opposite of Montesquieu's doctrine about law which the freeman imposes upon his own freedom, the opposite of Montesquieu's idea that individuals are at their best when they submit themselves to the highest social order, seek laws for defining that order, lay stress upon coherence, uphold standards, frown upon all that is merely individual and expansive, and praise what William James has called the "contractile" elements. In other words, to the democracy of Rousseau is opposed the democracy of Montesquieu, which is another thing from the Tory doctrine as shown in the feudalism of Scott and in the submissive scheme of converts like Friedrich Schlegel; and this saner democracy was both preached and practiced by many a poet, many a critic and historian, whose ideas are credited to Jean-Jacques.

Herder, to begin with a conspicuous instance, is set down as a Rousseauist of the extreme left. Yet more than one of his biographers can find no name to fit him so well as Humanist. Studies of Greek art and Greek letters busied his maturity, filled his last years; if he chides modern culture, he opposes to it not Rousseau's blameless savage, but the self-restrained freeman of Hellenic life at its best. He would use the classics, not in Landor's way, not in Pater's way, as fuel for that clear, hard flame of the intellectual life, but as an aid in humanizing the Christian ideal. True, he did not renounce and revile the apostle of freedom; but, like other men of genius whose pulses stirred in youth to the nobler note of Rousseau's appeal, Herder finally parted from his Lucifer in a kind of revolt against revolt. He got a glimpse of the other democratic banner, which floats above "the army of unalterable law." He saw that justice, which is cosmic, makes a higher ideal than mercy, which tends to the chaotic; that obedience to good laws, in art as in life, is the better part of freedom; and that Calvinism, hard as it is to hear, not only tells a truer tale than the vague account of the deists, but is to be heard rather for its fidelity to the facts of life, its assertion of the powerlessness of individuals, its encouragement of coherence in community and state, than for its vague assumptions of primitive innocence and natural goodness as Rousseau chose to interpret them. The Calvinist idea of retribution is unlovely; but Rousseau's idea of the kingdom of good impulses is impossible. Nothing so crossed his scheme as the idea of punishment. Yet it is to the powers that punish and not to the powers that forgive, it is to justice and not to mercy, that Herder at last dedicates his volume of poetry of the people. He believes in punishment, in that "mountain," as Dante said, which makes straight what the world has made crooked; as mature critic and historian he is no longer hysteric, hardly dithyrambic; he is seeking for laws, for the spirit of the law, whether in literary development or in the progress of humanity at large. That wonderful book, begun when Herder was forty years old, the "Ideas for the Philosophy of the History of Mankind," shows on nearly every page the trail of this search for law, this attempt to prove an orderly evolution, this gathering of the evidence for divine justice. Here and there a phrase like *verfeinte Schwachheit* still echoes Rousseau; and in the discussion of climate the "Discourse on Inequality" is treated with respect. But sentiment has mainly made way for science. "Here is no place," he says once, "to discuss the good or the harm done by these social institutions." He sees, as with modern eyes, all the evil and waste of the world, and he half-concedes the futility of it; then, with the nobler democratic hope at heart, he points out and praises the scheme by which the dear labors of mankind, *süsse Mühe der Menschen*, will come out more than conqueror. In sum, he will search history, just as Montesquieu advised, for the proof of laws; he will seek out the higher order.

"There is an old poet's saying," wrote Goethe in the year 1802, "which I once learned without comprehending it, but which now I understand, because it brings me blessing and success." What is this talismanic precept? Goethe proceeds to embody it in his famous sonnet about the master-artist who is revealed only by his self-restraint; in art, that is, "nothing but law can give us liberty." Now, if one wishes a phrase for the democratic movement in letters, this sonnet should at least proclaim that "return to nature" has no clearer title than "search for law." Moreover, catchwords like "people" and "race," often used to characterize certain theories in literary criticism, have as good right to Montesquieu's interpretation as to Rousseau's, which is their inevitable gloss. Nobody, it may be said with confidence, has disturbed the peace of the modern critic more than Jacob Grimm, Herder's own disciple, has done by his phrases about race-made epic and the people in verse. True, his "Old-German Forests" were a tangled and dark haunt of ideas which Rousseau would have approved; but Wilhelm Schlegel's sharp and just criticism drove Grimm from those ob-

scurities, and set him not only to the orderly planting and harvesting of his German Grammar, but to the demonstration of that great law which bears his name. The hallmark of Grimm's research is not passion for the lower freedom, but reverence for the higher law. Even to his doctrine about poetry one may apply the spirit of that praise which Mr. Chesterton has recently expressed for "the real and ancient emotion of the *salus populi*, almost extinct in our oligarchical chaos." Let the extravagant and dithyrambic part of the doctrine go; but keep, or rather bring back, Grimm's spirit of reverence for tradition, for the sense of kin and kind, his power of visualizing community or state even for literary ends, his respect for law, his belief in orderly progress.

Thus in the stubborn but not wholly unyielding material of literature and criticism can be traced lines analogous to those which are so deeply cut upon the political record. The account, moreover, is not yet closed. Rousseau's democracy of "myself" and Montesquieu's democracy of "my country" are still pitted one against the other in our national life. Rousseauism sticks in every champion of individual rights at the expense of the community, in every abuse of the power of that irresponsible individual, the corporation under private control, and in the travesty of justice which allows absurd range to the defendant in a criminal suit. The cause of reform is inevitably the cause of the community, of law, of the higher social order. And has this cause, to touch the analogy once more, no place in critical and creative literary fields? Have poets nothing to learn from the higher democracy? In criticism, in history, is the blue pencil to be drawn across all the pages of the democratic message; and shall so inadequate a label as "Rousseauism" condemn alike the mistakes and the inspired exhortation? There is no task so attractive to scholar, critic, man of letters, as to return upon the whole democratic movement and make salvage of its nobler and forgotten achievements. Whoever will carefully follow this movement on artistic, literary, and critical ground, must deny the supremacy of Rousseau, and must allow that "the real and ancient emotion of the *salus populi*" found, and ought always to find, its highest expression not in liberty, but in law.

FRANCIS B. GUMMERE.

Haverford, Penn.

MISCELLANEOUS GERMAN BOOKS.

A useful book of reference has just been published by the old firm of E. S. Mittler & Son, in Berlin. It is a "Philosophen-Lexikon" of about nine hundred pages, compiled and edited by Dr. Rudolf Eisler, and surveying the life, work, and teachings of the world's great thinkers. Another work likely to engage attention is the collection of essays by Adolf Harnack, entitled "Aus Wissenschaft und Leben," which is imported by G. E. Stechert & Co. To a more popular taste appeals another importation of the same firm, Dr. Otto Henne am Rhyn's "Illustrierte Religions- und Sittengeschichte aller Zeiten und Völker," with ten full-page plates and many illustrations in the text. From Eugen Diederichs of Jena, who publishes many works in that department, comes a book by Wilhelm Müller which treats with commendable judgment the creeds and churches of this country, "Das religiöse Leben in Amerika." The same house has brought out a translation of Percival Lowell's "Soul of the Far East," and Rütten & Löning of Frankfurt a volume of selections from the writings of Lafcadio Hearn, under the title "Japan-Buch."

Folklore and travel are largely represented in the season's bookmart. A unique work, published by Rütten & Löning (also known as Literarische Anstalt), is "Das Buch des Lappen Johann Turi." It is the first original work of its kind written by a Lap, and is edited by a Danish woman, Fräulein Demant, who for a year shared the author's life and made him write what he knew of the life and lore of his people. The same firm publishes a volume of Chinese ghost and love stories of the seventeenth century in an *édition de luxe* on China paper and bound in silk. Of travel books one of the most striking is the sumptuously illustrated volume by Oscar Kauffmann, "Aus Indiens Dschungeln," which is imported by Stechert. From the firm of B. G. Teubner in Leipzig comes a book by E. von Hoffmeister, "Durch Armenien: Eine Wanderung und der Zug Xenophons bis zum Schwarzen Meer."

Karl Scheffler, a subtle critic and brilliant essayist, has edited for the Insel-Verlag of Leipzig a work called "Deutsche Maler und Zeichner im 19. Jahrhundert," which has been imported by Lemcke & Buechner. It is a large volume with about seventy illustrations, which are in themselves valuable. Another ambitious art work, entitled "Deutsche Kunst in Wort und Farbe," is edited by Dr. Richard Graul, and published by E. A. Seeman of Leipzig (imported by Stechert). It contains ninety-five color plates of paintings by Böcklin, Leibl, Liebermann, Stuck, Thoma, Menzel, and others. Of Karl Woermann's "Geschichte der Kunst aller Zeiten und Völker," the third volume has been imported by Lemcke & Buechner; it is devoted to the art of the Christian nations from the sixteenth to the end of the nineteenth centuries.

Among the books for the music-lover and musician the biography of Richard Strauss by Max Steinitzer is likely to be much talked of. It is a volume of three hundred pages, with fifty-six illustrations and numerous portraits. The centenary of Liszt justifies calling attention to August Göllerich's "Franz Liszt," published by Marquardt & Co. of Berlin, a volume of above three hundred pages, with some excellent portraits and four hitherto unpublished compositions. Untiring in his efforts at exploiting the subject of Goethe from every point of view, Wilhelm Bode appears as the author of a work in two volumes, "Die Tonkunst in Goethe's Leben," in which he traces the relation of Goethe to the musicians of his time: Kayser, Reichhardt, Schütz, Hummel, Zelter, Gluck, Mozart, Beethoven, and Schubert, not forgetting the author of the first and very naïve setting of the "Erlking," the fair singer Corona Schröter, and the venerable musical *savant* Freiherr von Rochlitz. Besides the book of selections from the writings of Richard Wagner made by Houston Stewart Chamberlain for the Insel-Verlag about a year ago ("Auswahl seiner Schriften"), there appears among this season's publications a little year-book of quotations for every day, "Aussprüche über Musik und Musiker," compiled by Daniela Thode, and dedicated to her brother, Siegfried Wagner. It is a dainty little book in leather binding, imported, like the other works on music, by Stechert.

A number of books on literary subjects have recently appeared in attractive editions. Albert Soergel's "Dichtung und Dichter der Zeit" is a compendium of modern German letters. It is a volume of nearly nine hundred pages, containing three hundred and forty-five portraits, among them the painfully true and striking portrait of Nietzsche by Klinger. Wolfgang Golther's essays, collected under the title, "Zur deutschen Sage und Dichtung," deal so much with Wagner and his relation to Schiller and Goethe that they appeal both to the reader with the literary interest and the music-lover. A notable volume, bearing the familiar Brockhaus imprint, is Dr. H. H. Houben's book on the Young Germany of the thirties, "Jungdeutscher Sturm und Drang."

An unusual number of historical works published within the last few years in Germany are concerned with studies of the Renaissance. A part of the catalogue of Eugen Diederichs of Jena is devoted to such works. The Insel-Verlag has a new edition of the historical scenes by Arthur Count Gobineau, entitled "Die Renaissance," on excellent paper in leather binding with reproductions of portraits from rare originals. A new history of the German people, "Geschichte des deutschen Volkes," by Emil Michael, is presented in a volume of 443 pages by the Herder'sche Verlagsbuchhandlung in Freiburg. German-American readers will be interested in a book by Wilhelm Kaufmann: "Die Deutschen im amerikanischen Bürgerkriege," a volume of nearly six hundred

pages, imported by Lemcke & Buechner.

Among books of biography there is as usual an abundance of works pertaining to the giants of classical Weimar. Paul Kühne passes in review the interesting circle that hovered about Goethe, in an attractively illustrated volume, called "Die Frauen um Goethe," which is imported by Stechert. Wilhelm Bode's "Charlotte von Stein" is an exhaustive study of that remarkable character; it is a volume of 665 pages with forty-eight illustrations, among them silhouettes of the period. There is also a book on "Charlotte von Kalb," by Ida Boy-Ed, the novelist, which bears the imprint of Eugen Diederichs of Jena. It is an admirable psychological portrait of the woman who enjoyed the friendship of Goethe and Herder, was called the Titanide by Jean Paul, was a favorite of the Princess Amalia, and yet died literally in obscurity, having lost her eyesight and been reduced to poverty. The one-hundredth anniversary of the death of Heinrich von Kleist has been observed by the publication of an important biographical work, Ernst Schur's "Heinrich von Kleist: In seinen Briefen," published by the Schiller-Buchhandlung, Charlottenburg.

Among the collections of popular tales usually classed with juveniles there are some new editions of Grimm's "Kinder- und Haus-Märchen" and the Arabian Nights, "Tausend und eine Nacht," both in the Insel-Verlag. Of complete editions there is a great abundance, the classics heading the list. Of the "Shakespeare in deutscher Sprache" in twelve volumes, mostly in new translations by Friedrich Gundolf, seven volumes are ready. They are published by George Bondi of Berlin and are distinguished by their artistic makeup. The new revised edition of Lessing's complete works, edited by Georg Witkowski and published by the Bibliographische Institut of Leipzig, has reached its seventh volume. The historical and critical edition of Hebbel's complete works, which is being prepared by Richard Maria Werner and is called the Säkular-Ausgabe, is planned to comprise sixteen volumes, and it seems doubtful whether it will be completed in the year of his centenary, 1913. The Insel-Verlag has a new Lenau in six volumes.

A. von Ende.

NEWS FOR BIBLIOPHILES.

Among the word portraits sketched by William Ernest Henley with such precision and sureness of touch as to remind one of the masters of etching, there is one of a visitor to the Old Infirmary in Edinburgh, when the poet was a patient in that house of healing. It is a sonnet, and, therefore, short enough for quotation, and fine enough to deserve frequent repetition:

A VISITOR.

Her little face is like a walnut shell
With wrinkling lines; her soft white hair adorns
Her either brow in quaint straight curls, like horns,
And all about her clings an old sweet smell.
She wears prim stuffs and puritanic shawls,
Her bonnets might well have been born on her.
Can you conceive a fairy godmother
Devoted to conventicles and calls?

In snow or shine from bed to bed she runs,
Her mittened hands that always give, or pray,
Bearing a sheaf of tracts, a bag of buns:
All twinkling smiles and texts and pious tales,
A wee old maid that sweeps the Bridegroom's way,
Strong in a cheerful trust that never fails.

This was printed in the number for July, 1875, of the *Cornhill Magazine*, and may now be read in the first volume of the Works of William Ernest Henley, published in 1908.

Every one who reads the sonnet will feel that it is a lifelike portrait. But who was the original? The answer to that question will be found in a privately printed booklet devoted to the memory of a saintly Scotswoman, Barbara Abercrombie.* The portrait which forms the frontispiece shows an antique figure with a lofty brow and a kindly face. She was born January 7, 1811, and died March 7, 1891. Her father, a "beloved physician," had also the Scottish talent for philosophy. His house was a gathering ground of the men who came out of the Established Kirk in the Great Disruption of 1843—a calamity which might have been avoided if either English lawyers or English statesmen had been less obstinately ignorant of Scottish business and Scottish sentiment. She was a member of the Free Church from the beginning, and after her father's death she continued the hospitable tradition which made it a centre of religious and philanthropic effort. She was one of the founders of the Ladies' Society for Highland Schools, and for more than thirty years was its assiduous secretary. To one of the teachers she wrote:

I am so glad you gave your son the Scripture quilt, it is quite a thing for a sailor. We were much interested in your account of the elderly woman learning to read. I have sent in your parcel a small box, with eight pairs of spectacles for different eyes, and I have told Mr. L. if he wants a pair for anybody else to ask them from you. In your parcel there is a little tea for sick people, given by an invalid friend who is since dead; also some things I hope may be useful in your own family.

This may serve for the practical side of Barbara Abercrombie's character; on the spiritual side there is a letter of condolence to the widow of a Highland Catechist, an excellent man, who died in the prime of life from a sore throat, caught while nursing his own sick children; and a letter to a young girl who has just partaken of her first communion. Miss Abercrombie's charities were not, as is sometimes the case, confined to those who were remote from her. The lowest cellars and the highest attics of the socially variegated Edinburgh knew her gentle spirit and her generous hand. "This care for the poor," said the Rev. Andrew Keay, "was her ruling passion, and it was strong in death, for the last words she uttered before the final unconsciousness set in had reference to a sum of money she wished to send to a poor widow." In a letter of condolence, written in 1887, she says: "I have no black-edged paper here, but I have a black dress, and I have put it on." What a tenderly naïve sentence! The booklet includes many tributes to the sincerity and helpfulness of Barbara Abercrombie, and Henley's poem is included. Mr. Keay records a characteristic saying. "I remember," he says, "how she once told me that when she felt inclined to be discontented her cure for it was a visit to the infirmary." It was on such visits that Henley saw her.

William E. A. Axon.

Correspondence

A REPLY BY HANNIS TAYLOR.

To the Editor of The Nation:

Sir: In your issue of December 28, Mr. Gaillard Hunt made an attack upon Madison in order to injure the fame of Pelatiah Webster. He begins by warming over an old story originated by Bancroft, who denied the truth of the following statement made by Madison in his famous Papers published by Gilpin in 1841:

In a pamphlet published in May, 1781, at the seat of Congress, Pelatiah Webster, an able though not conspicuous citizen, after discussing the fiscal system of the United States and suggesting among other remedial provisions, one including a national bank, remarks that "the authority of Congress at present is very inadequate to perform their duties; and this indicates the necessity of their calling a Continental Convention for the express purpose of ascertaining, defining, enlarging, and limiting the duties and powers of their Constitution."

Mr. Hunt tells us that "Madison's sketch in which the error of attributing the pamphlet to Webster occurred was written by him in extreme old age and was not one of the papers which he prepared for posthumous publication." As an historical critic Mr. Hunt is really a more reliable witness than Bancroft.

But what I really object to is Mr. Hunt's attempt to make it appear that I have attached vital importance to the announcement which Madison says Pelatiah Webster made in the summer of 1781 as to the calling of a "Continental Convention." In my recent work I said: "No attention should be paid to Bancroft's vain attempt to discredit Madison's statement. Apart from Madison's great accuracy and Bancroft's well-known inaccuracy stands the fact that the call of 1781 was a natural part of Pelatiah Webster's initiative as now understood. Madison was on the ground and knew the facts; Bancroft's inference is based on flimsy hearsay nearly a century after the event. Bancroft never grasped the importance of Webster's work." In commenting on that statement Mr. Hunt has said: "Here he welds the pamphlets of 1781 and 1783 together more strongly than ever before, so that when one falls, the other must have a precarious standing." That is one of Mr. Hunt's many inventions. He attempts to make it appear, without any basis of fact whatever, that I have made the pamphlet of 1783, as to whose authority there is no possible question, hang upon a few comparatively unimportant lines in the pamphlet of 1781. The plain answer is, I have done nothing of the kind; there is no motive for any such contention on my part. The epoch-making paper of 1783 is just as important, just as authentic, even if it should be proven that the comparatively unimportant paper of 1781 never existed.

Pass to Mr. Hunt's attempt to analyze the epoch-making paper of February 16, 1783, in which Pelatiah Webster announced to the world, as his invention, "the great discovery in political science," now embodied in our existing Constitution. The critic of our complex Constitution who does not understand that the history of the single States that compose the substructure is one thing, and that the history of the two Federal Constitutions that have held them together is quite another thing, is lost. The starting point is the fact that no Federal government that existed prior to February 16, 1783, had ever possessed the power to levy a penny of taxes. For that reason all such Federal governments had been failures. The framers of the Articles of Confederation perfectly understood that fact, as we know from John Adams. Dr. Franklin, who made the first draft of the Articles of Confederation in 1775 (it survives in his handwriting), had just as good an opportunity to create a new Federal system as Pelatiah Webster. But, genius as he was, he was perfectly sterile because the question to be solved was one of finance, and he was not a financier. Webster was; and in that way he conceived of a new Federal creation armed, for the first time in the world's history, with the power to tax. No school boy should be guilty of this statement which Mr. Hunt makes: "It contains only two features which also appear in the Constitution—the power of Federal taxation and the bicameral Legislature—and there were no two principles of government better understood in the States at the time Webster wrote than these." People in the States understood how single States like England or Virginia had the power to tax; how such single States could have a bicameral Legislature; but no one had dreamed of a Federal State with the independent power of taxation; no one had dreamed of a Federal Legislature divided into two chambers; no one had dreamed of a Federal State divided into three departments, executive, legislative, and judicial. It was the application of those conceptions to a Federal State that constituted the invention.

It is strange that Mr. Hunt should not understand Webster's quaint, yet lucid English, when he describes, in his marvelous essay of October 12, 1787, the three coordinate powers that are to take part, under his novel scheme, in the enactment of Federal legislation. Under the Confederation, all legislation was enacted by a one-chamber assembly, without the concurrence of an executive. Under Webster's plan, now in force, Federal legislation is enacted by three powers or bodies—the Executive, the House of Representatives, and the Senate. The President of the United States is a part of the law-making power. That is what Webster said, no more, no less. As Mr. Hunt lives in the National Library, in the midst of documents, he should believe Ch.-V. Langlois, who has told us that "History is studied from documents. Documents are the traces which have been left by the thoughts and actions of men of former times. There is no substitute for documents: no documents, no history." He can put his hand every day upon an original copy of the epoch-making document of February 16, 1783, of forty-seven printed pages, and read it just as it was issued from the press of T. Bradford, who sold it within a few blocks of the doors of the Continental Congress, in which Madison and Hamilton were sitting on the day of its publication, and in which Charles Pinckney took his place not long afterwards. It was the contents of the great document of February 16, 1783, that was presented to the Federal Convention of 1787, in the three "plans," so-called, drafted by Madison, Pinckney, and Hamilton. In the light of that fact, how amusing it is to have any one say that the work of Webster was ignored by the Convention. It was the basis of its proceedings. Webster's invention was presented to the Convention on the very first day it met for real business in the "plans" offered on that day by Randolph and Pinckney. From May 29 to the close, the single question before the secret conclave, *which worked only eighty-six days,* was as to the form in which the great invention of February 16, 1783, should be adapted to then existing conditions as a working system of government. Washington, D. C., January 5.

A JAPANESE VIEW OF CHINA.

TO THE EDITOR OF THE NATION:

SIR: To observers like us, who see not one instance in China's longest history of her becoming one consolidated empire, as if she were a dragon with eight heads and tails (in fact, Southern China appears to have been always independent), the present revolutionary movement loses much of its own significance. And the word revolution, quite dynamic and new in the West since the French Revolution, is really an old thing in China like republicanism or equality, another effective word in the West. Although the fall of an empire or dynasty, especially when connected with the sudden cry for a republic, may sound to Western ears almost startling, we who have studied the Chinese literature and history as the Western students do the Greek, only receive the impression from the present disturbance that China again is repeating her own history; the Chinese history is but changes of Emperors and a sort of series of revolutions. There never existed loyalty in the Chinese mind as we Japanese understand it, as they have never known an Emperor one and eternal as we in Japan; they have thought it nothing strange to change or put aside their Emperor when they found him unfitted to be their own representative. It is quite natural that the present Chinese, I mean the Han people, cannot see why they should not send the Tartar Emperor away, against whom they had even reason for impeachment; besides, he was originally a barbarian, they declare, from the Manchurian field or mountain, who conquered them with cruel hand. We have in Japan a time-honored phrase: "Loyalty springs from the bosom of filial piety." The trouble with the Ch'ing Dynasty was that they could not openly and vigorously encourage the sense of loyalty as conquerors.

K'ang Hsi (accession 1662), who is said to have been the best among the Manchu Emperors and who reigned during sixty long years, emphasized in his Educational Edict the points that the people should never think of war, and that the universal peace was to be kept, but he could not dare to speak the word loyalty, as he was afraid that it might stir up the patriotism in the old hearts of the Han people to rise against the Manchu House. And another unjust attempt was the destruction of history from the same fear that it might awaken them to self-consciousness; when poetry, art, and chirography were generally encouraged, it was from the motive to make the people less sensitive to politics and state affairs. The neglect of ethical study made them gradually weak in their human existence; the sense of filial piety which even the Manchu Government encouraged most strongly, made the family more important in China than the country's welfare; and their family's safety a matter to consider first of all, and again it resulted in making them, as we see, phantoms self-seeking and money-loving. And that sort of filial piety has furnished the foundation of their ancestor worship. What China got from such an encouragement was the perfecting of one of the most significant examples in the world of a nation weak and poor in spiritual existence, with such a vastness in population. Certainly there should be a limit to population for any nation if her happiness and dignity as a nation are to be considered first; what use, like China, to have such a population whose education and interest cannot be insured by the nation? Again I should like to question what sort of a republic (though beautiful the name) those young ambitious revolutionists can make out from their own people, the majority of them ignorant, and worse than that, self-centred. They might be taught in time the lesson of freedom, equality, and fraternity, even in the Western sense; but you must have, at the very start, a better sort of patriotism than that required for any imperial country, because the ideal of republicanism must be the betterment of civilization and humanity of the world in general.

I see no meaning, as in the vastness of the Chinese population, again in her vastness of land; the most curious fact, that those vast lands, though loosely, still have kept the appearance of one Empire in her long history, has been recognized as it seems to-day by the world's policy of "Preservation of China." But that is for the convenience of the Western nations and Japan, who have acted and will more act in China as if they had all rights they wish there. If I were to plan for China's own benefit, I have often thought, she should confer the places far away from her central Government, powerless to control and useless for her own purpose, upon the proper nations when such an act should not immediately break the balance of power either in the West or East; and to make her strength more easy to concentrate and more effective, she should confine herself within the provinces where the real influence of the Government could be felt. And better still, those provinces, I dare wish, should be divided into three or four countries; that, I am sure, would be the proper answer for the question of the Chinese reformation. Speaking from the point of Life whose fulness and development should be the first and last question of this world, it would be most inexcusable to leave the people, I mean the Chinese people here, in the hand of ruin and ignorance; what will the Chinese Republic, supposing it shall appear, do if the Government newly built is found to be equally powerless as the old one? And there is reason to imagine

that so it will be, as a crow cannot turn to a stork at once; beside, that republicanism was not, as in the case of the beginnings of America, the determination of all the people whose realization was a prophecy itself. It is said that there are not more than fifty people who started and are working out the present revolutionary movement. The soldiers wearing a piece of white cotton on their arm as revolutionists only fight against the Government for the sake of better payment; who knows if they will not take the Government's side to-morrow again in consideration of the payment they shall receive? Indeed, the true story that I have heard from the valley of the Yangtse-kiang makes me rather discouraged.

I have been lately studying the Chinese history, especially how Ming, the former dynasty, fell, and the Ch'ing rose; it is told that the better class of people under Ming indulged, so to say, in empty discussion and playing with literature, and as a bad result of the political system of making too much of the popular voice (in fact, China of the Ming dynasty was more republican than despotic), the national soldiers grew weakened and effeminate. It seems some historians insist on the point that it was not the Tartars who ruined the Ming dynasty, but the Hans themselves, whose most unfortunate characteristic was their love of quarrel more or less for the purposes of selfishness and self-glorification; the great interest in the study of the history of the Ming dynasty is that I can apply it, of course with some modification, to the present Han people, who are to-day attempting to overthrow the Manchus. It is said that too great freedom of speech was given in that age, from the officials to the common masses; a hundred clubs, societies, and parties, political as well as social, existed, which were always wrongly used to self-interest. It was perfectly appalling to see what a mighty power gold had; it was only money that made name and popularity, and again that made the public opinion and political influence; no one can tell if such will not be the case again for a Chinese Republic which the revolutionists are pleased to dream. One thing I can tell you even with evidence is that their love of "empty discussion" and quarrel are already troubling the general course of the movement to-day; it is most sad not to have a great personality for the success of the revolution, who will at once silence the petty quarrels among the leaders and unite all the provinces by one principle, and make them act as one state. It is said in the paper that Dr. Sun Yat-Sen is expected soon at home; can he ever become that man? YONE NOGUCHI.

Keio University, Tokio, December 5.

AN UNDERGRADUATE VIEW.

TO THE EDITOR OF THE NATION:

SIR: Few undergraduates of the highest intellectual type become teachers. I will go further: few undergraduates of the higher intellectual types become teachers. Yet if there is one profession which needs powerful personalities, it is the teaching profession; if there is one profession which is filled as a whole with decrepit personalities, it is the teaching profession. I am not unaware of the widespread conception that teaching is, after the ministry, the noblest and most altruistic, as well as the most interesting and most influential, profession; and that, accordingly, those who study to become teachers are noble in their ideals, altruistic in their endeavors, interesting in their personalities, and influential in their curricula of life. Allow me, then to sketch the attitude of the noble, altruistic, interesting, and influential undergraduate—for such a curiosity does exist, if in comparatively smaller number than formerly—towards the profession of university teaching.

(1.) He looks askance upon the necessity for research work. Necessity it is, for only by research are success and prominence attained. His enthusiasm for teaching the subject in which he would specialize is not sufficient warrant for original investigation into that subject; his delight in the whole will not presuppose his delight in its constituent elements. He avoids what the logicians term the fallacy of composition.

(2.) He looks askance upon the character of that research work. If he does not lay siege to an out-of-the-way and unimportant fortress of research, he will be always an obscure private, or, at most, a corporal; and if he does lay siege to the fortress and capture it, he realizes that, although he may win promotion, he has not benefited the entire country of scholarship. He has only opened the way to booty for himself and his small battalion. He has devoted the best years of his life to the siege; the fortress has been taken; but its capture is of no broad significance. And a siege is a tedious and a wasting undertaking.

(3.) He does not live that he may acquire money; but he must acquire money in order that he may live; and on a university professor's salary, he cannot live according to his ideals. He does not desire an automobile, but he does desire opera tickets. He does not desire orchestra chairs when an attractive play is presented, but he does not desire to crouch in the top gallery. He does not desire to give elaborate social functions, but he wishes to mingle in a class of society congenial to him. He wants to buy books and to subscribe to magazines; he wants to travel; he wants to feel himself able to marry without demanding enormous sacrifices of his wife; he wants to provide his children with the same educational benefits that he himself has enjoyed. He has consciously relinquished the material pleasures of the world in favor of the intellectual pleasures incident upon his profession; but, in doing so, he wants to enjoy these intellectual pleasures to the utmost. Now, although the cost of living has increased enormously in recent years, the salaries of members of college faculties have remained virtually stationary; and college instructors can no longer revel to their heart's content or even occasionally browse free from care in the fragrant meadows of a scholar's life.

(4.) If he could devote his life to instructing the young, not only in the subject he teaches, but also by his own example, in the fundamentals of life, he could feel that the world was better for his existence in it. But if he devotes his life primarily to research work and to the acquisition of knowledge which is merely interesting, and interesting to merely a very insignificant part of the world, he labels himself and his life work as selfish. At a time when he realizes that so much of the misery imbedded in the world could be removed by preventive machinery, must he not say that a life devoted to the happiness of one man and of his few associates is a selfish life? In Tomlinson, Kipling has sketched a wretch who, when called before the bar of judgment, shamefacedly confesses that he had lived for himself, and had done neither good nor evil for the mass of humanity; is not a university instructor, reasons the undergraduate, in so far as he must pay more attention to his research work than to the instruction of his students, a Tomlinson?

Accordingly, the body of graduate students who intend to be teachers in universities is composed to-day, for the most part, of persons who pursue this profession because it is the most remunerative profession open to them. And the person who cannot earn more in other fields than he can earn in teaching is necessarily a man of little brilliancy, of uninspiring personality, of a mind built for arithmetical-like investigations rather than for a broad outlook over the general realm of scholarship. The weakness of the American college faculty lies not in the character of the work which its members pursue, but in the personnel of its members, who are, for the greater part, unfit to pursue any other character of work.

BERTRAM BENEDICT.

Baltimore, January 12.

[We print this letter because it probably expresses the views of a large number of undergraduate students.—ED. THE NATION.]

Literature

YOUNG AMERICA.

Is There Anything New Under the Sun? By Edwin Björkman. New York: Mitchell Kennerley. $1.25 net.

Mr. Björkman belongs to that interesting group of young men who are now somewhat excitedly flinging their caps for posterity. ("Youth," according to our author, is that emotional period which extends normally from the twentieth to the forty-fifth year.) He has laid hold of a new purpose, wrung from the message with which science is fraught. And this has changed him, he tells us, "from a believer in the past and in the part to a builder of the future and the whole." It behooves us to keep an eye upon the builders of the future! In the volume before us, Mr. Björkman's purpose and his views of the message of science are set forth in several essays of a rather indescribably critical-scientific-historical-psychological-philosophical-sociological character—of which the upshot is, that he is an ardent evolutionist of the latest issue of the revised edition, believing in the illimitable progress of life towards perfection, not to speak of various related doctrines. Without raising any question concerning the absolute novelty of this view,

we are ready to admit that it is a cheerful variation from the languorous æsthetic outlook fashionable among "advanced thinkers" within the memory of man. Mr. Björkman follows up the general announcements of the "new humanism" with discussions of several spirits, presumably regarded as kindred, who are significantly stirring the erstwhile stagnant pool of modern thought —James, Bergson, Shaw, Galsworthy, Söderberg. He winds up all with a programme for the art, poetry, and criticism of the future.

It falls not here to inquire whether these new wines have made the vintners drunk; it may be said, however, briefly and soberly that they have made the young men bold. The immediate effect of rendering philosophy vital has been to persuade all the young men that they are philosophers. Intensely earnest, sanguine, disdainful of the past, equipped with mother-wit and copies of "Pragmatism" and "Creative Evolution," they are ready at a moment's notice to interpret the data of science, dismiss the problems of free-will and evil, and lead us by fine new highways into the philosophical New Jerusalem. Now, the obvious risk we run in entrusting our hopes to guides so independent of spiritual history and geography is that we shall bring up at last not in the New Jerusalem, but in Rome, Athens, or Palestine. The atmosphere in which the young men have been reared has been extremely favorable to the decay of traditions; so that they are quite as likely to discover "new truths" by opening a history of Greek thinkers as by grappling single-handed in the arena with the Absolute. We cannot, in short, avoid the suspicion that the grandiose expectations of the young men, no less than their unparalleled recklessness of assertion, are due rather to their ignorance of the past than to their vision of the future, rather to the failure of their logic than to the success of their insight.

We cannot, for example, easily reconcile Mr. Björkman's magnificently consolatory assurance that "behind us, we shall find the life planes ranging themselves in chronological sequence, with the tide of life rising steadily from one to the other," with his assertion that "genuine pessimism seems to have been unknown to classic antiquity." True pessimism, says our author, is to be found in the words of Schopenhauer: "Each individual existence is a definite mistake, a blunder, something that would be better not to have been, and the object of existence should be to end it." If such comment on life were in reality a novel fruit left by the rising "life-urge" on the latest and therefore highest "life plane," we might be inclined to dwell on the inconsistency of Mr. Björkman's evolutionist enthusiasm, with the history of recent thought. But, as matters stand, we are more concerned to reconcile his assertion of the modernity of genuine pessimism with what we know of classic antiquity: with certain epigrams in the Greek Anthology—with this of Glycon, "All is laughter, and all is dust, and all is nothing; for out of unreason is all that is"—with this of Theognis, "Of all things not to be born into the world is best, nor to see the beams of the keen sun; but, being born, as swiftly as may be to pass the gates of Hades, and lie under a heavy heap of earth"; with this from the profoundly sad and beautiful chorus of Sophocles, "Not to be born, excels on the whole account; and for him who has seen the light to go whence he came is next best by far"; with Plutarch's collection for Apollonius on the evils of life from Simonides, Pindar, and Euripides; with certain passages in which Marcus Aurelius combats the dark insurgency of the thought that "all things have been and all things always will be bad, and that no power has ever been found in so many gods to rectify these things, but the world has been condemned to be bound in never-ceasing evil. The rottenness of the matter which is the foundation of everything!" If these utterances do not reflect a deliberate and mature pessimism, the word needs re-definition.

We recall these witnesses of ancient bitterness not to dampen the enthusiasm of Schopenhauer's youthful apostles—an enthusiasm which is a refreshing spiritual symptom; but to encourage sobriety in speech, which to the eyes of some of us still retains a simple and satisfying loveliness of its own. Mr. Björkman's wealth of sweeping generalizations and his poverty of facts in which the reader can set his teeth are all too suggestive of the present authority among us of a sonorous type of theorizing—in education without reference to any specific subject matter; in science without the aid of any of the sciences; in history without reference to men, events, or dates; in sociology without the support of history or economics. The product of such speculation almost invariably has all the froth of genuine yeast without any of the raising power. To illustrate the way in which Mr. Björkman's faith is built and bastioned upon the ramparts of the wind, we submit the following:

> If we consider not exceptional periods or places or peoples, but *civilized mankind everywhere and in all ages* (our italics), it may safely be asserted that *until recently* (our italics) all but an insignificantly small number of men used to be completely engrossed with the support and protection of life. Fighting was the one manly, honorable, and profitable occupation. Relief from it was found only in love—another kind of war then—and in coarse material pleasures. The perfective forces could not assert themselves, except in their most selfish and primitive form.

Though it be true, as our author declares, that "the new is always better than the old," it is desperately serious business, this discovering of novelties, and the steps of the modernist are beset with the pitfalls of irony. To say nothing of new truth, it is by no means child's play to find new forms of expression. For instance, this modish magniloquence of speech, the careless grandeur of this gesture towards civilized man everywhere and in all ages, the abysmal vagueness of this "until recently," all hark back to the village politician and the old-fashioned clergyman. Further than that—they hark back through the ages two thousand years to a precisely similar vice in speech condemned by Cicero in the treatise, "De Natura Deorum," through the mouth of the genial Cotta. "That the existence of the gods seems credible to men of all nations and classes," says Cotta, "you declared was a sufficiently valid reason why we should admit that there are gods. The argument is not merely slight, but unsound as well. For, in the first place, how are the opinions of all nations known to you? Now, I am inclined to believe that there are many peoples so wholly uncultivated (*immanitate efferatas*) as to be without any inkling of the gods." *Sequimur te, sancte deorum!* Under the august sanction of Cicero, we should like to inquire whence Mr. Björkman derives his familiarity with the percentages engaged in various occupations among "civilized mankind everywhere and in all ages." We do not know where to lay hands on the figures, but we have been inclined to believe that the decline of the monastic ideal and of religious consecration in general, the fall of the feudal system, the abolition of serfdom and slavery, the decline of patronage in the fine arts, the great rewards held out by modern industrial enterprises, together with the wide dissemination in the nineteenth century of a formulated gospel of work, have, on the whole, tended to *reduce* the leisure classes not engaged in the support and protection of life. But if the reader desires an it-may-safely-be-asserted prefixed to his opinion, he must cleave to Mr. Björkman.

Whatever the merits of this particular question, it may be laid down as a general maxim that it is as easy to prove progress with the aid of history as without it. Whether there is anything very new under the sun to justify a renascence of faith in the goal of evolution, is a problem hardly to be settled by the enthusiasm or the cap-flinging of the young men. Its determination involves an ever-renewed consultation of that profound past to whose ideas and institutions the young men are devoting but fugitive glances from the dizzy rear of the express-train that is speeding them out of it. To these exhilarated and self-appointed torch-bearers unto

the next age one is disposed to repeat the grave words of Epictetus to candidates for the priesthood:

> A man should come with sacrifices and prayers, previously purified, and his mind affected with a sense that he is approaching to sacred and ancient rites. . . . You have not the garment that is necessary for a priest, nor the hair or the girdle that is necessary; nor the voice nor the age; nor have you purified yourself like him.

And when Mr. Björkman and other members of that little knot who profess themselves in the foremost files of time assure us that we are now beginning to "see with the brilliant clearness of unobstructed vision—that the new is always better than the old," when they declare that it is now "safe to conclude that whatever life does or causes its creatures to do has for its ultimate end the preservation and the perfection of life itself"—in the face of these hot assurances we find a wholesome and restorative virtue in turning back to a somewhat sombre meditation on change recorded in what Mr. Björkman calls the "pre-scientific" age, long before M. Bergson, in the crude old times when love and war were the only occupations of men, before the "perfective forces" could assert themselves:

> The earth, too, will change, and the things also which result from change will continue to change forever, and these again forever. For if a man reflects on the changes and transformations which follow one another like wave after wave and their rapidity, he will despise everything which is perishable . . . The universal cause is like a winter torrent: it carries everything along with it. . . . Set thyself in motion, if it is in thy power, and do not look about thee to see if any one will observe it; nor yet expect Plato's Republic: but be content if the smallest thing goes well. . . . Simple and modest is the work of philosophy. Draw me not aside to insolence and pride.

CURRENT FICTION.

Under Western Eyes. By Joseph Conrad. New York: Harper & Bros.

We suppose that under a very large majority of Western eyes the Russian character and springs of action are nearly or altogether incomprehensible. Even a great picture like "Anna Karenina," with its clear marks of truth to life, leaves one in a mood of uneasy wonder as to what that life amounts to, how far the human nature it expresses is a sane or even tolerable human nature. We suspect that the "average American" thinks of the Russian people as a race of goblins, and of their existence, political or other, as of the stuff nightmares are made of. That it is a difficult and almost desperate feat to interpret for Europe these northern Orientals is acknowledged in the opening pages of this book. The narrative is supposed to be made up of extracts from the diary of a Russian, edited and supplemented by the hand of an English teacher of languages, living in Geneva.

The chronicler confesses that, although he has known many Russians, he has "no comprehension of the Russian character. The illogicality of their attitude, the arbitrariness of their conclusions, the frequency of the exceptional, should present no difficulty to the student of many grammars, but there must be something else in the way, some special human trait—one of those subtle differences that are beyond the ken of mere professors . . ." or of any mere Westerner, we take Mr. Conrad to mean. For the professor's story does not, as might be expected, suggest an interpretation of which he himself is unconscious: its last page leaves us almost as much in the dark as the first. We can only feel sure that certain actual facts have been presented, and that there is probably an explanation of them if we could only hit upon it. The central figure, Razumov, is a thinking young Russian, of scholarly habits and aims, who honestly believes in the stability and integrity of the Government. A prominent official is assassinated, and the slayer, a fellow-student, takes refuge with Razumov. Razumov betrays him to the police, and he is hanged. The victim's fellow-revolutionaries do not suspect Razumov of his part in the affair, and regard him as virtually one of them. The upshot is that presently the betrayer finds himself dispatched as a Government spy among the Russian revolutionaries in Switzerland. Here he becomes intimate with the mother and the sister of his victim, and falls in love with the latter. He lives in constant apprehension lest his responsibility for her brother's death should become known; but the hour arrives when he finds himself safe from suspicion, and an accepted lover. This is the moment of supreme test, and his way of meeting it—or the spirit in which he meets it—is the one thing in the book which appears natural and normal to Western eyes. Otherwise these pages might almost be a translation from the work of some Russian novelist—a version possessing the distinction of style which belongs to all of Mr. Conrad's writing.

The Money Moon. By Jeffery Farnol. New York: Dodd, Mead & Co.

Whether or not, as rumor suggests, this novel is an earlier work than "The Broad Highway," its sources of inspiration are evidently the same. The action takes place in "the Garden of England," and concerns the adventures of a young man (an American, as it chances) of large fortune, imperturbable manner, and an excellent talent with his fists. Being crossed in love, he sets out upon a walking journey, walks five miles, travels ten in a hay-cart (this ride being varied by a fight with the wagoner), and brings up at the "Arcadia" of Dapplemere. The mistress of Dapplemere is named Anthea Devine, and our adventurer, Bellew, is of the opinion, at first sight of her, that she is "handsomer, lovelier, statelier, and altogether more desirable than all the beautiful ladies of King Arthur's court—or any other court soever." An incredible urchin, her nephew, has piloted him to her, and plays his ornamental part in the slight action that follows. This involves a rich and designing squire, who covets Miss Anthea for himself; a grasping and gasping tallow-chandler, who holds a mortgage on Dapplemere; and numerous peasants, servants, etc., who know their places in the comedy. Most of the male characters are either Georges or Adams, these being the robustious names Mr. Farnol evidently prefers to the "John" which has done such excellent service in recent romances—ever since Blackmore set the fashion in "Lorna Doone." Of course, our wandering George is destined to get the better of squire and tallow-chandler; to rescue Dapplemere for Miss Anthea, Miss Anthea for himself. The style is the style of "The Broad Highway"—a compound of Dickens and Borrow, pleasant enough in its reminders, but not quite clear of affectation.

In the Shadow of Islam. By Demetra Vaka. Boston: Houghton Mifflin Co.

In "Haremlik" Mrs. Kenneth-Brown gave a study of the real life of Turkish women as contrasted with the traditional theory of it, developed long ago in Europe and cherished romantically to this day. The book found an audience, and the present story is a natural sequel. It is not a powerful piece of fiction. An American girl visits Turkey with the general intention of bringing the light of Western civilization to that darkened land. She possesses "radiant beauty": her lips, for example, "might have been chiseled by the hand of Praxiteles himself," and she is otherwise all that a heroine should be. She quickly discovers that Turks are not the totally benighted people she has fancied—that the harem, in particular, is not uniformly the abode of misery and despair, or even of ignorance. And it is not long before she finds herself strongly attracted to a handsome Turk, who makes love to her in a perfectly acceptable way. She is prevented from marrying him by an instinctive feeling that the act would entail a sort of infidelity to herself and to her race: she would have to lose her individuality and become like other Turkish wives. She draws back, to the fury of the Turk. Her consequent abduction, and the adventures which precede her rescue, are composed of good romantic materials, but they are rather mechanically composed. The truth is, the writer, who knows her modern Turkish soci-

ety well, has no natural bent for story-telling, and would do better to cast her information frankly in the form of commentary.

THE AUTHOR OF "CRANFORD."

Mrs. Gaskell: Haunts, Homes, and Stories. By Mrs. Ellis H. Chadwick. New York: Frederick A. Stokes Co. $5 net.

"Having spent the greater part of my life in the Gaskell country, and having discussed the novelist and her stories with those who knew her intimately, I have attempted to trace her scenes and characters to their originals; and wherever possible have let Mrs. Gaskell give her own descriptions and tell her own life story"—thus Mrs. Chadwick defines her pretensions in the preface to a thick volume of Gaskelliana, proffered in lieu of the biography proper which loyalty to the novelist's express wish forbids.

Mrs. Chadwick's extended labors only serve to confirm the opinion that the novelist's injunction was as wise as it was modest. The even tenor of her useful and serene life combined with the peculiarly innocuous quality of her genius—its "benign spirit," as a recent critic has it, in more properly tender phrase—to render her particularly liable to maladroit praises. One example will show how maladroit:

Mrs. Gaskell, says her present critic, who seldom attempts to distinguish between the art of living and the art of writing, "wrote for humanity's sake rather than for art's sake. When writing these little Lancashire sketches, Mrs. Gaskell always had her Sunday-school scholars in mind, and some of her short stories were published in the popular magazines for the benefit of the working classes."

Of all that Mrs. Chadwick has zealously assembled, the identification of particular buildings, and of local scenes and customs, which often appear minutely described in Mrs. Gaskell's pages, offers most of permanent interest; it is supplemented in almost every case by adequate illustration. Knutsford, the original Cranford, is treated at length; Henry Green's "Knutsford: Its Traditions and its History" being drawn upon to an even greater extent than the quotation marks indicate. Unfortunately, however, in the case of Higgins, the Knutsford Highwayman, whose house and amazing history Mrs. Gaskell commemorated in "The Squire's Story," Mr. Green's spirited account does not appear, but a tame abridgment instead. Of course, the invariably cited testimony of the aged Knutsfordite to whom Mr. Green lent a copy of "Cranford" is not omitted ("'Why, sir! that "Cranford" is all about Knutsford; my old mistress, Miss Harker, is mentioned in it; and our poor cow, she did go to the field in a large flannel waistcoat, because she had burned herself in a lime-pit'"). A later and very entertaining chapter on Whitby, the "Monkshaven" of "Sylvia's Lovers," includes a less well-worn but equally conclusive proof of the habitual exactitude with which Mrs. Gaskell described actual places. Du Maurier

> when reading "Sylvia's Lovers," with a view to illustrating it, talked the matter over with . . . Charles Keene, and he, having made some sketches of Whitby the year before, offered to lend them to Du Maurier because they seemed to resemble the place described by Mrs. Gaskell. They did not learn until later that Whitby and Monkshaven were one and the same place.

Much less interesting are the efforts to assign fictitious characters to real originals. Readers of a later generation can better understand than share the pleasurable stir which the recognition of these portrayals occasioned in Mrs. Gaskell's own circle: "Even her children would sometimes recognize the characters, and say, 'Oh! so-and-so is just like Mr. Blank,' and she would reply, 'So he is, but I never meant it for him.'" The admission itself seems to convey a warning against a too serious insistence on such likenesses. Concerning the local worthies whose fame was thus unintentionally perpetuated—these human flies in amber—the authentic information Mrs. Chadwick offers is scanty and, for the most part, exceedingly dry.

But it is when it comes to the piecing together of a biography, or rather an autobiographical mosaic, from fragments of the author's fiction, that credulity halts amazed, between amusement and indignation. Would not the reluctant subject have found her worst fears realized here? Sketches of a few columns each in the Encyclopædia Britannica and the Dictionary of National Biography contain virtually all the data afforded by this book. Reiteration, conjecture, eulogy, and copious quotation—all too often re-duplicated—have swelled its bulk without enhancing its value. This patchwork design is bound to confuse the reader. Finding himself confronted on page 289 with precisely the same charming extract from Charlotte Brontë's correspondence which he has noted with interest on page 228, he may well wonder if he is not making a circuitous progress. The collection of comments and tributes which Mrs. Gaskell's writings and personality elicited from her contemporaries seems to be tolerably complete. Lord Houghton's dictum upon "Cranford": "The purest piece of humoristic description that has been added to English literature since Charles Lamb"—is the only familiar bit of laud which we have not found herein.

An Open Letter to Society. By "Convict 1776." New York: Fleming H. Revell Co. 75 cents net.

This is a remarkable document. It is introduced by Maud Ballington Booth, who tells us that the author has seen life in one or two of the far Western prisons. He himself explains that he is serving a sentence for the eighth time and hopes to be free in two or three years. For the rest, his account is utterly impersonal, save that the examples given are said to be the result of direct observation. There is no rancor or mawkish appeal, and the style in its composure and range of allusion suggests the days when Raleigh and Cervantes were "doing time." Quotations from Bacon, Epictetus, Homer, Shakespeare, and numerous out-of-the-way writers smile their approval upon his arguments. Whatever may be the force of his case when properly weighed, he at least succeeds in piquing the reader to know more of this well-stocked and well-poised mind and to learn what may be its criminal weakness.

After attempting to prove that, speaking widely and without reference to merely formal distinctions, there is no such thing as a "criminal class," since many in prison have some of the main and best characteristics of those without, he centres his argument on these points—the fallibility of judges in pronouncing sentence, and the motives which prompt to imprisonment, together with the working results of the present system. Of the first point he gives the scattered examples which any one might suspect really exist. A young man who forges a check for $35 while intoxicated gets the same amount of time as the forger for many thousands. While not in any way impugning the integrity of the bench, the writer insists that accidents must of necessity enter into its decisions, as well as into those of other human beings, and that one case of the kind does immeasurable harm. A prisoner with an unduly long term upon him finds himself surrounded with instances of the same crime judged more leniently, and losing his respect for justice, spreads his feeling widely. If bitterness is created in big institutions of the outer world by uneven and unjust promotions, how like hatred is the consciousness in prisons that justice is partial and ignorant. It is the writer's belief that justice would suffer less in the felon's estimation if judgment were passed, as it were, automatically, in accordance with a predetermined system. For though the element of clemency would be removed, to guard against the possibility of a judge seeming unfair is of infinitely more importance.

The great majority of persons to-day undoubtedly think of our prisons as a protector of society. To take a flagrant case, when an insane man commits murder he is locked up because people

would not feel safe with him at large. Here the motive of the punishment is perfectly clear, and in the popular mind the same motive is present, however vaguely, with respect to other cases. It is to reveal the futility of this view and to replace it that the author of the "Open Letter" takes such pains. His main contention is that our prisons, as they are now conducted, endanger society more than they protect it. Convicts lacking encouragement, and often even the decency of fair treatment, are made irretrievable criminals, in the very institutions in which it is supposed that they are being corrected before release.

All of the author's contact with prisoners convinces him that the most effective view to take of punishment is as a corrective, pure and simple. He is aware of the efforts already being made to alleviate prison conditions and to install the practice of probation, but believes that the more fundamental question of point of view must be settled before real reform can be wrought. Is a convict to be thought of as a patient and as a victim of adverse conditions? "Convict 1776" believes that he is and that as such he should receive expert treatment. He does not urge that prisons be done away with, rather that prison discipline be regulated scientifically and made flexible enough to meet the needs of individual cases. He insists also that this more charitable regard for criminals would not impair the practice of those who try to deter the weak from crime by holding before them the fear of punishment; since the punishment administered under his plan would still be severe, though not barbarous. This is, of course, the crux of the whole matter, and we do not pretend to say that the author has established his case; but his Letter will be read with interest and profit by those who are grappling with the fundamental conceptions of penology.

Social Value: A Study in Economic Theory Critical and Constructive. By B. M. Anderson, jr., Ph.D. Boston: Houghton Mifflin Co. $1 net.

This work obtained for Mr. Anderson the second prize in the Hart, Schaffner & Marx Economic Prize Contest of 1910. It is really the outgrowth of investigations in the "quantity theory" of money carried on at the University of Missouri in the term 1904-5. Mr. Anderson became convinced at that time that a satisfactory general theory of value must underlie any adequate treatment of the problem of the value of money, and that there was little agreement among monetary theorists concerning the general theory of value. Time only deepened the feeling in his mind that the value problem remained unsolved. Hence the present book.

It has been prophesied in certain quarters that this work will rank as one of the most important contributions to economic theory of recent years, on the ground that it has remained for Mr. Anderson—to-day an instructor in political economy at Columbia University—to establish the positive conception of value upon the basis of a sound psychology and sociology. Certainly, that is no small feat. The world has heard much about "social value" of late years. In its most definite form the theory asserts that the value of an economic good is determined by, and precisely accords with, the marginal utility of the good to society, considered as a unitary organism. This conception, Mr. Anderson contends, has never been adequately developed or criticised, though its friends have found it a convenient and useful working hypothesis. The most searching investigation of the theory has come from unfriendly critics. Pitted against these, we now find Mr. Anderson, with a highly acute dialectic and an exceptional command of the literature of economics, pyschology, and philosophy.

Social marginal utility, as a determinant of value, cannot be, in our author's judgment, the marginal utility of a good to some particular individual who stands out as *the* marginal individual in society, nor can it be an average of individual marginal utilities, nor a sum of individual marginal utilities, nor any other possible arithmetical combination of individual marginal utilities. For the term, social marginal utility, he can find only a vague analogical meaning, if any at all, unless we identify it outright with social value, in which case it is a superfluous term, which itself not only explains nothing, but rather presents complications which call for explanation. Mr. Anderson finds no place for the social utility concept in his analysis. On the other hand, he finds the conception of social value a necessity for the validation of economic analysis, and a conception which he believes present-day psychological and sociological theory abundantly warrants us in accepting.

Mr. Anderson concerns himself with a "critique of current value theory," with "the presuppositions of economic theory," and with "a positive theory of social value." In discussing the first of these three aspects of his subject he asks, Is value a quantity or a relation? Unmistakably the former, is his answer. This at the start distinguishes him from the classical economists, and from the Austrian school (except Wieser). He traces three main stages in philosophic thought, both in the ancient and the modern world—dogmatism, skepticism, and criticism. The first of these stages is exemplified in the modern cycle by Descartes and Spinoza, the second by Hume, the movement away from skepticism beginning with Kant. We have in Hegel, especially, society to the fore, and the individual real only as a part of society. The failure to recognize all this has vitiated very much thinking in the field of economic theory. "Economic thought," Mr. Anderson declares, "is to-day very largely based on philosophic conceptions which characterized the period in which economics began to be a differentiated science—the skeptical doctrines of David Hume, the close friend of Adam Smith."

His contention is that society is an organism—that there is a mind of society. He holds that the mind of society, like the mind of a man, is primarily volitional, and not intellectual. The individual monad is a myth. His machinery of thought—language and logic—is socially given him, his ideals and interests, his tastes even in matters of food and drink, are socially given—apart from social intercourse his human-mental life would be mere potentiality. The values in the mind of an individual constitute, we are told, no self-complete and independent system, either in their origin, in their interactions, or in their consequences for action. Their "presuppositions" include elements in the minds of other men, and they themselves constitute part of the "presuppositions" of the values in the minds of other men. Finally, there are values which correspond to the values of no individual mind, great social values, whose presuppositions are tremendously complex, including individual values in the minds of many men, as well as other factors, great social values whose motivating power directs the activities of nations, of great industries, of literary and artistic "schools," of church and other social organizations, as well as the daily lives of every man and woman—impelling them in paths which no individual man foresaw or purposed.

Values, our author declares, are determined by multitudinous social forces. But values must be distinguished from prices. Values are quantities; prices are the ratios in which values exchange. The function of economic values is the motivation of the economic activities of society.

It is held by many that social optimism and social pessimism are in an essential way linked with the social theory of value. It is asserted by Professor Schumpeter, for example, that an optimistic social outlook is a necessary corollary of this theory. Wieser's objection to the doctrine that economic value signifies social importance is based on the belief that the doctrine means, not merely that society is responsible for the existing value situation, but also that that situation is consequently a just and righteous one. And he is not alone in this belief. Mr. Anderson contends, however, that no implication, either optimistic or pessimistic, as to the existing social order, can be drawn

from the theory which he defends. Whether or not economic values in particular cases correspond with ethical values, whether or not goods are ranked on the basis of their import for the ultimate welfare of society, and the extent to which this is the case, will depend on the extent to which the ethical forces in society prevail over the anti-ethical. The justification of the existing social order, in his opinion, is to be sought elsewhere—the theory of economic value, as such, does not contain it.

The Life of Edward, Earl of Clarendon. By Sir Henry Craik, K.C.B., LL.D. 2 vols. New York: The Macmillan Co. $5.50 net.

The biography of any statesman who lives through and plays a prominent part in a long period of upheaval and revolution is bound to present unusual difficulties. Sometimes it is the story of clever and rapid shiftings with the ebbs and flows of political factions, sometimes the tale of obstinate, consistent adherence to a single platform, maintained alike in days of sunshine and in days of storm. The life of Edward Hyde, Earl of Clarendon, is a salient example of the latter sort. A moderate reformer in the years preceding the assembling of the Long Parliament, he gladly supported the first measures passed by that memorable assembly, such as the abolition of the Courts of Star Chamber and High Commission, and the restriction of the crown's extra-Parliamentary revenue; and he did not oppose the bill of attainder against Strafford. But a little later he broke with the more radical wing of the Puritan party in the struggles over the Root and Branch bill and the Grand Remonstrance, and finally, with his friends Falkland and Digby, was driven over to the Royalists when war was declared. Not that he had in the least abandoned his earlier enthusiasm for moderate reform—quite the reverse; the constitution of church and state as it had been before 1641 was only slightly less repugnant to him than it was to become after 1649; between the two extremes of monarchical absolutism and persecuting episcopacy on the one hand, and unchecked republicanism and rampant dissent on the other, he had sought a middle way. He cast in his lot with Charles when the crisis came, because the retention of the middle position was no longer possible, because of the excesses of the Puritan party, and of his innate loyalty to monarchical institutions, and perhaps also because he may have thought that there was more chance of his extorting liberal concessions from Charles after a few defeats in the field should have taught him wisdom, than of mitigating the revolutionary ardor of the Roundheads.

The ideal of Hyde was ultimately unrealizable, and in that very fact lies probably the best explanation of his failure to arouse the enthusiasm of modern historians in any such way as men like either Cromwell or Strafford have done. Yet the lesson taught by his career, and by the failure of the religious and political ideals for which he stood, was one which England had to learn, before she could hope to apply the principles of modern democracy.

Sir Henry Craik's book has much to recommend it. Though frankly favorable to Hyde, it is on the whole accurate in its statements of fact, and, save for the literary side of its subject's career (which Sir Henry has deliberately forborne to discuss), it is unusually full and complete. It is beautifully printed, and enriched by numerous excellent portraits. The trouble with it is that the author does not possess that fundamental knowledge of the period as a whole which is indispensable for any permanently satisfactory biography of a man of Clarendon's importance. Evidences of this may be found at frequent intervals. Significant, for example, are the persistent attacks on the late Professor Gardiner, whom Sir Henry accuses of "contempt" and "rancor" in his judgments of Hyde; no one who really knows the seventeenth century would thus characterize the man to whom, above all others, our present full and accurate knowledge of the period is due. More serious are an indefinable lack of sureness of touch, and a complete absence of anything like "light and shade." Sir Henry does not seem in the least to realize where and what the real turning-points are. He does not distinguish the important from the unimportant; as much emphasis is often laid upon the insignificant details of Hyde's private life as upon his action in grave constitutional crises; and the final result is that a "pleasing haze" gradually spreads itself over the entire picture. In his preface, Sir Henry discusses, without arriving at any very definite conclusion, the problem of entering "the domain of History by the pathway of Biography," of determining "how far it is permissible to stray from the narrow pathway we have chosen and expatiate upon aspects of the time, which do not fall within the personal experience of him whose life we attempt to portray." The answer, as far as the finished product goes, will vary widely; but there can be no question that the background of general knowledge which the really competent biographer should have in his head, should be far wider than is usually the case in these days. However narrowly the limits of the "life" may be restricted, evidences, direct or indirect, of the presence or absence, as the case may be, of such a background are ultimately certain to crop out.

Notes

A complete edition of the works of O. Henry, to be known as the Manuscript Edition, is in preparation by Doubleday, Page & Co. Only 125 sets (each consisting of twelve volumes) will be printed; the price will be $120—$100 if subscribed before the date of publication.

The following numbers of Holt's Home University Library will be issued immediately: "The Civil War," by Prof. F. L. Paxson; "The Dawn of History," by Prof. J. L. Myres; "The Papacy and Modern Times," by Rev. William Barry; "A History of Our Times" (1885-1911), by C. P. Gooch; "The Civilization of China," by Prof. H. A. Giles; "Modern English Literature," by G. H. Mair; "The Evolution of Industry," by Prof. D. H. Macgregor, and "Elements of English Law," by Prof. W. M. Geldart. Messrs. Holt have found it desirable to change the form of future issues in such a way that they can be sold at fifty cents the volume.

In Frederick A. Stokes's list of announcements for publication this spring we note, in fiction: "Vane of the Timberlands," by Harold Bindloss; "Cap'n Joe's Sister," by Alice Louise Lee; "A Painter of Souls," by David Lisle; "To M. L. G.," anonymous; "Buttered Side Down," by Edna Ferber, and "Stover at Yale," by Owen Johnson.—Miscellaneous: "Boys' Book of Steamships," by J. R. Howden; "A Negro Explorer at the North Pole," by Matt Henson, and "The Montessori Method," translated from the Italian by Anna E. George.

Arnold Bennett is bringing out, through the George H. Doran Company, a volume of short stories, entitled "The Matador of the Five Towns, and Other Stories."

The same house announces: "The Davosers," by Dorothy Brandon; "The Noble Rogue," by Baroness Orczy; "Fame-Seekers," by Mrs. Alice Woods Ullman, and "The Simpkins Plot," by G. A. Birmingham.

Included in Moffat, Yard & Co.'s forthcoming series dealing with the regeneration of the race, and having the general title New Tracts for the Times, are the following: "Literature—The Word of Life or of Death," by the Rev. William Canon Barry; "Modern Industrialism and Race-Regeneration," by C. F. G. Masterman; "Religion and Race-Regeneration," by the Rev F. B. Meyer; "Social Environment and Moral Progress," by A. Russel Wallace; "National Ideals and Race-Regeneration," by the Rev. R. F. Horton; "The Spiritual Life and Race-Regeneration," by the Bishop of Durham; "Womanhood and Race-Regeneration," by Mary Scharlieb, and "Education and Race-Regeneration," by Sir John Gorst.

The parts of Matthew Arnold's works dealing with educational problems will be brought out in one volume by Smith & Elder; Leonard Huxley is the editor.

"Cardinal Newman's Life," by Wilfrid Ward, will be brought out shortly by Longmans.

The new "Who's Who" for 1912 comes to us from Macmillans, with 2,364 pages this year, against 2,246 last year. There are no

novel features to report, and indeed we can think of no changes that would better the general style and plan of the book.

China occupies the most prominent place in the December number of the *National Geographic Magazine*. Frederic McCormick, the well-known war correspondent at Peking, tells of the present conditions in the country and throws much light on the causes of the revolution. His sympathies are not with the rebels, for he believes that the Manchu policy of a centralized government is the best for the people. A visit to its largest province, Szechuan, is narrated by R. T. Chamberlin, who calls attention to the fact that it is one of the most productive regions in the world, through its wonderful irrigation works, some of which were constructed 2,100 years ago. Hugh M. Smith, deputy commissioner of fisheries, gives much information about the Alaskan fur seal, which since 1867 have diminished from about four million to 150,000, mainly through pelagic sealing. Through the prohibition of this and the scientific supervision of the herds he anticipates confidently the restoration of the old conditions. An interesting account of the sacred city of Kairowan, in Tunis, with its eighty-five mosques, some of which have remarkable architectural decorations, is given by F. E. Johnson. The closing article is President Taft's Cincinnati address on the arbitration treaties revised by him for publication in the magazine. There are eighty-three illustrations and two maps.

Under the title "Poets and Poetry" (Clarendon Press: Frowde) John Bailey has collected in book form a number of his reviews which have appeared in the literary supplement of the London *Times*. Though in the nature of the case lacking the freedom of essays, they contrive to bring breadth and freshness into the discussions and to fire the reader with no little enthusiasm for literature. The author's style has a background of simple eloquence, which is controlled by a habit of vigorous thought. Typical of the book is the delicate insight of the following passage:

> The fact, perhaps, is that the pleasurable excitement afforded by metre, and the higher mood in which poetry is usually written, carry us into an atmosphere in which we are less conscious of changed fashions in thought and expression than we inevitably are in prose. There is in poetry an element of strangeness which makes us ready to welcome a certain unlikeness to our ways of speech and our own point of view. But that is not so in prose.

Volumes nine to twelve of Longman's "Collected Works of William Morris" bring this magnificent edition half-way to completion. In running over the Introductions of Miss May Morris, the eye is caught by the first words in the volume containing "The Æneids of Virgil": "Now and then amid these notes I try to pause and take breath; but the poet, translator, designer, engraver, illuminator, scribe, allows one no time." It is this multiplicity of interests that forms the chief interest of Morris's life and produces the chief characteristic of his work, at least of his literary work. We are carried on breathlessly, but cry out at times for a relaxation of energy. Miss Morris, it must be added, has been happily successful through these contributions in keeping her father's manifold interests in sight without confusing the reader. In the volume just mentioned, for instance, besides giving the proper data in regard to the translation of the "Æneid" and the great illuminated book in which it was to appear, she writes an interesting account of Morris's activities as a dyer and of his difficulties in procuring durable dyes. Perhaps the most astonishing thing in Morris's method of composition was not his speed of writing, but the amount of revision his principal works underwent, though it is still characteristic that this revision commonly took the form of completely rewriting instead of the correcting and filing which less impulsive authors employ. Some hints of this method—already well enough known, for that matter—with some fragments from his MSS., we get in the Introductions to two other volumes in the present instalment, "Sigurd" and "Love is Enough." The important MSS. of the former are in the British Museum, and from one of these Miss Morris quotes a long rejected passage from the dialogue of Sigurd and Brynhild in Brynhild's chamber. Some of these lines flow with splendid passion, but even more interesting in a way is the ballad stanza from the first draft of "Sigurd," showing how the poem started in his mind:

> There was a dwelling of Kings
> Ere the world was waxen old,
> Dukes were the door-wards there
> And the roof was thatched with gold.

Miss Morris tells us that "Sigurd" was always regarded by her father as his crowning achievement. Not often does a poet estimate his own work so justly. The fourth volume contains "Three Northern Love Stories" and "Beowulf." The illustrations, excellent photogravures, give pictures of Morris and his family, Burne-Jones's designs for the great "Æneid," etc.

Miss Lilian Whiting assures us that her new book, "The Brownings—Their Life and Art" (Little, Brown), is a work "than which none was ever more completely a labor of love." It was, we are further informed, from its initiation, "invested with the cordial assent" of Mr. Robert Barrett Browning; it was also "invested with added charm" by the courtesy of various publishers; it was clothed on by the "characteristically lovely kindness" of "Edith Contessa Rucellai (nata Bronson)," who put at the disposal of the author a number of unpublished letters written by Browning to Mrs. Arthur Bronson. Its chief investiture, however—not to break the wind of the poor phrase—is due to the writer herself—an all-enveloping atmosphere, quivering with sympathy, redolent of culture, glowing with romantic enthusiasm, and iridescent and fragrant with the colors and flowers of speech. The fact is, that Miss Whiting's pen is particularly susceptible to three intoxicants—poetry, love, and society; and in this theme she tastes all three in delicious—not to say delirious—union. In this peerless pair she sees the Romeo and Juliet of her dream of the life of art. Before the exquisite idyll of their married life, language swoons and imagination clasps its hands in ecstasy. According to other biographies, there were occasional ripples in the stream of their intercourse—illnesses, misunderstandings, even some sharp differences of opinion respecting the value of spiritualistic mediums; for, in short, there was a certain human element even in the Brownings. Miss Whiting diligently breaks all the thorns from the roses, and goes about to strain the salt from the sea. No masculine contempt or black fits of passion, no feminine pique or petulance, does she suffer to serve as a foil to the cloying sweetness of the story. Yet she never forgets that she is writing primarily a social biography of the poet-lovers. Where they dined, and whom they met, description of the guests, their station in life, beauty and intellectual achievements, maiden names if matrons, description of salons, mosaics, palest green flush of Venetian windows, richly painted ceilings, portraits, pastels, rare souvenirs, swinging lamps, rustling of pearl satin gowns with flowing trains—it is perhaps by the enchanting sensuous ardor with which she realizes these things for us that Miss Whiting excels all previous biographers.

The "Encyclopædia of Sports and Games," (second ed., Lippincott), edited by the Earl of Suffolk and Berkshire, is virtually a new publication, for the first edition was largely in the nature of an experiment and included certain activities which are not properly sports. These have been omitted in the present edition and their places taken by sports which have developed in the last decade, notably aeronautics and motoring. The former was omitted from the earlier volumes due to the non-existence of aeroplanes, and the latter because it lacked competitive character. The subject of aeronautics is treated in two parts—heavier than air machines and dirigible balloons—and is written by the well-known authority, Lord Montagu of Beaulieu. The history of the aeroplane begins with the first efforts with gliders in England. The British experiments with these machines came to a sudden end after the death of Lilienthal and Pilcher, but in America the work progressed with the experiments of Chanute, Herring, Langley, and others. The actual beginning of practical flying is credited to the Wrights of America, who made their first successful flying machine with an engine in 1903, though not until 1905 did they succeed in flying a considerable distance—24¼ miles. Two years later, Santos Dumont, Voisin, Blériot, and others came on the scene. In 1908, when the Wrights made their first trip to Europe, the sport of flying began to grow by leaps and bounds. The article is capitally illustrated with pictures of all types of machines and their component parts. Ballooning is brought up to date and the picures of dirigibles are excellent.

The article on motoring gives many interesting facts. The prototypes of the present high-power motor car were the steam coaches, which were run on London streets by Trevithick in 1803. The Daimler gas engine made its first appearance in 1883, but was not practicable until 1885, in which year the Benz machine was first seen. The first application of the gas engine to motor cars was made in 1886, when Daimler fitted a motor to a four-wheeled wagonette. In the first road race, held in England, in 1894, the victor was a De Dion steam car which covered eighty miles in about six hours. Soon after that France began to make great strides in the gasoleno car and for a long time was ahead of the world in this industry. Valuable details are given of car and engine construction, together with the records of racing up to 1911.

The use and the manufacture of bicycles are described exhaustively. The article on dogs is elaborate and valuable to both owners and breeders. W. R. H. Garland, in a copiously illustrated article, writes authoritatively on driving. In the section on tennis, the part devoted to the game in this country is very deficient. The same fault may be found with the account of yachting, which is a remarkably comprehensive history of the sport on the other side of the water, but which makes only casual mention of the America's cup races. Being in four volumes, the work is much more convenient than the two-volume first edition; the type is clear and the illustrations are good.

Dr. William H. Allen's new volume, "Woman's Part in Government—Whether She Votes or Not" (Dodd, Mead), is a valuable handbook for women who desire opportunities for service to city and State. It is essentially a text-book, giving many facts, asking many pertinent questions, and suggesting scientific methods of making effective the volunteer work now undertaken in almost every field by public-spirited women. Dr. Allen's sub-title indicates that his book is intended for women with or without the ballot, but it is interesting to note that he puts on record his belief that the time is coming before long when women will not only be permitted, but will be expected, to vote.

The primary title of "The Village Labourer, 1760-1832, a Study in the Government of England before the Reform Bill" (Longmans, Green), by J. L. Hammond and Barbara Hammond, is somewhat misleading. The village laborer receives but comparatively scant consideration in a general survey of the life of the poor of this time; nor is the work strictly "A Study in the Government of England before the Reform Bill," but rather what the authors assert in the preface, an attempt "to show what was, in fact, happening to the working classes under a government in which they had no share." The authors have waded through an intricate mass of documentary records and papers, and have taken account of some traditional and hearsay evidence. Unfortunately, however, there is a suspicion that an *ex-parte* case is advocated, and that there is another side to the question. On p. 26 the authors write:

> We are not concerned to corroborate or to dispute the contention that enclosure made England more productive, or to discuss the merits of progress in the eighteenth century. Our business is with the changes that the enclosures carried in the social structure of England.

In this dissertation the reader is provided with an arraignment of the integrity of royalty, the arrogance of the nobility and aristocracy, the abuse of parliamentary power and procedure, the injustice of the judiciary, the partiality of commissioners—in fact, everything conceivable, to prove that all forces were combined with wilful intent upon robbing and suppressing the poor. A very sad case is made out, and with much truth, no doubt, but there is a significant absence of any reference to the honest objects of the Enclosure acts, and why so many were enacted during the period referred to; to their public policy as a means to agricultural progress, to whether they increased the productivity and resources of the state. No mention is made of the all-important fact that England at this critical time was, perhaps more than ever, fighting for her very existence in her wars with European nations and with America, and that the enormous expense of these wars weighed very heavily upon all classes all over the country. The efforts of such famous and earnest champions of the poor as Pitt, Fox, and Edmund Burke, as well as the very effective opposition which the Whigs exerted to the Tories and "the governing class," get no recognition. Not enough is made of the many mechanical inventions of the time, which served immensely to alleviate agricultural distress, to provide employment for laborers, and to relieve the poor generally; and there is no serious condemnation of lawbreakers.

It is not so much with the land of the Walloons as with that of the Flemings, the northern half of the country, that Clive Holland is concerned in his book on "The Belgians at Home" (Little, Brown). There is nothing profound in the volume, the facts and impressions of which were gathered by the author while touring on his bicycle. But he tells picturesquely what he has seen and furnishes a pleasant guide-book for travellers. He finds the military and official classes less insolent than is usual on the Continent. Industry is everywhere, no doubt because nearly eight millions of people must live (and they do so comfortably) on fewer than twelve thousand square miles, much of which is sandy and unfertile. In Ghent and Bruges he lingered longest, cities where the impression is apt to steal upon one that Belgium more than any other country is the land of art. Of the illustrations, all full-page, sixteen by Douglas Snowdon are in color, and twenty are from the author's photographs. There is a good index of names and dates.

Although a sister of Henry VIII and a Queen of France, Mary Tudor lacked sufficient ability and positive character to make herself more than a pawn in the political game, and, except for the years 1514-1516, led an uneventful existence that left little to record. In "Mary Tudor, Queen of France" (Putnam), Mary Croom Brown has verified and set forth pleasantly the few facts already known about her, and has described at length her family, friends, and environment. Mary's letters, however, have all been printed before, either in full or in abstract; the portraits are familiar, and the retelling of the general history of the period has not added anything to our knowledge. A few new but minor facts are adduced, the most important of which—the changing of the date of Mary's birth from 1496 to 1495—is not convincingly set forth. A little wider search in family histories and in French manuscript repositories might have yielded some new and perhaps important material. Except for the fact that the spelling of many quotations has been modernized, and that of others given in the original, the book is scholarly; and, while it was hardly necessary to retell so much familiar narrative to elucidate Mary's share in it, and while the constant presence of so many larger figures and issues robs Mary of real prominence in her own biography, this is the best life of her yet written.

In the first volume of his "Pioneer Priests of North America" (reviewed in the *Nation*, October 8, 1908), the Rev. T. J. Campbell, S.J., confined himself to the Jesuit mission to the Iroquois, made famous by the heroism of such men as Jogues, Bressani, Chaumonot, and Ragueneau. In the second and third volumes, now issued (New York: The American Press), he takes up the story of the Huron mission and the mission to the Algonquins. The first of these two volumes includes an account of the early Acadian mission, with special reference to the lives of Biard and Masse. As might be expected, Father Campbell shows Peter Biard in a more favorable light than Parkman, accepting unreservedly his own account of the capture of Port Royal by Argall in 1613; but a knowledge of all the facts will scarcely acquit Biard of complicity in the attack on his fellow-countrymen, and his subsequent career hardly bears out the assertion that he possessed "the usual Jesuitical virtue of sincerity." On the history of the Huron mission, and of the lives of the Christian martyrs whose names must be forever associated with it, the author is admirably full. His account, together with Father Jones's elaborate memoir on "Old Huronia" (Fifth Report of the Bureau of Archives for the Province of Ontario, 1908), of which he has made excellent use, may be accepted as almost the last word on one of the most dramatic and tragic incidents in the history of New France.

The third volume of Father Campbell's work, devoted to the labors of Jesuit missionaries among the Algonquins, necessarily takes us much farther afield. The Hurons were confined to a comparatively small region; the Algonquins were scattered over half a continent. We follow Buteux to the upper waters of the St. Maurice; Druillettes to Sault Ste. Marie; Albanel to Hudson Bay; Allouez to Lake Superior; Marquette to the Mississippi; Rale to the Abnaki country, and Aulneau to the Lake of the Woods. The author has not only brought together material from widely scattered printed sources, but he has added new facts, dug out of the archives at Quebec, Montreal, and Ottawa, which often throw an entirely new light on the men and their achievements. Father Campbell's chief fault as an historian is a certain lack of perspective and proportion. All the Jesuit missionaries of New France were heroes, apostles, saints; superlatives are applied indiscriminately; emotionalism runs riot. However deserving, Brébeuf, Lalemant, Daniel, and one or two others may have been, there is little in the life of Aulneau to justify such praise as "a hero and perhaps a saint," and nothing whatever to support the comparison of Aulneau to Jogues—"those two young apostles." Father Aulneau, by the evidence of his own letters, quoted by Father Campbell, went to Fort St. Charles, La Vérendrye's trading post on the Lake of the Woods, because he was ordered to do so by his superior. It was "the hardest trial of his life"; it filled him with "intense aversion." When he finally reached Fort St. Charles, he gave La Vérendrye no peace until he had started him back again towards civilization, and the explorer's son had to accompany him as a guide and companion. Aulneau,

young La Vérendrye, and their men were all murdered by the Sioux, on an island in the Lake of the Woods.

"The Chattanooga Campaign," by Michael Hendrick Fitch, is the fourth number of the series called Original Papers and published by the Wisconsin History Commission. Mr. Fitch is a military man, with the rank of lieutenant-colonel, who served in the Civil War in the Twenty-first Wisconsin Infantry. The present work is a somewhat detailed account of the military movements beginning with the march of the Union army from Murfreesboro, June 23, 1863, and ending with the Battle of Missionary Ridge, November 25, 1863. In matters military, Col. Fitch seems well informed, and the significance of the various movements and battles leading up to the taking of Chattanooga, as well as the importance of the whole campaign, is clearly indicated. Yet when it comes to individual battles the layman finds it difficult to follow the narrative intelligently. This seems to be due partly to the fact that the author has not the highest skill in subordinating and grouping details, and partly to the fact that the maps, all of which are adapted from Fiske's "The Mississippi Valley in the Civil War," are not elaborate enough for so detailed a narrative. We are not told what the author's sources of information were, but from the few citations one judges that the Rebellion Records have been used primarily. Col. Fitch aims to present all the facts and to draw the just conclusion, and so far as we can judge he has not fallen far short of his aim. When he ventures away from military matters, which he rarely does, his judgments reveal the point of view of the men of '61, who saved the Union.

Among the Knights created at New Year are several who have won distinction in literature and education: Valentine Chirol of the London *Times;* Prof. Henry Jones, known especially for his studies in Browning; H. A. Miers, principal of the University of London; B. C. A. Windle, president of the University of Cork, and Rider Haggard. E. K. Chambers, an investigator of Elizabethan drama, receives the C.B.

Henry Labouchere, the editor of the London *Truth,* died at his villa in Florence on Tuesday. He was born in London in 1831, and after graduating from Cambridge travelled in Mexico and the United States. Always possessed of a fondness for adventure, he joined a party of Indians at St. Paul, with whom he lived for six months. He entered diplomatic service in 1854, and for two years was a member of the English Legation at Washington. In Parliament he was always accounted an interesting figure; he was a pronounced Radical, who contrived to hold the respectful attention of the House. He was in Paris during the siege, and wrote a most realistic account of it. After some connection with the *World* he started *Truth,* which kept London both amused and alarmed at his clever personal sallies. Failing in health, he had lived in Italy since 1906.

Gen. Sir Frederick Maurice, whose death in his seventy-second year is reported from London, was one of the ablest writers in the British army. Among his works are "Popular History of Ashanti Campaign," "Hostilities Without Declaration of War," "Official History of 1882 Campaign," and "National Defences."

The death is reported from England, at the age of forty-eight, of Rosamund Marriott Watson, a writer of some choice poems on nature, including "The Ballad of the Bird-Bride, and other Poems," "A Summer Night, and other Poems," "After Sunset," and "The Heart of a Garden."

The Rev. Dr. James Oswald Dykes, who died recently at Edinburgh, aged seventy-six, was principal emeritus of Westminster College, Cambridge, and the author of several works on religious subjects, among them "Beatitudes of the Kingdom," "Plain Words on Great Themes," and "The Divine Worker in Creation and Providence."

Another Scotch writer, Francis Espinasse, is dead at the age of eighty-seven. He was a close friend of Carlyle, who directed him in his literary plans. Later he contributed to the Dictionary of National Biography, and was the author of "Voltaire" and "Renan" in the Great Writers series.

The Russian novelist, N. N. Zlatovratsky, is dead. Together with others of his school he hoped for a regeneration of the upper classes through a return to the homely virtues of the peasants. "Golden Hearts," "Everyday Life in the Village," "Peasant Jurymen," and "Foundation" fairly represent the tendencies of his faith.

Science

Forthcoming science books in Holt's Home University Library include: "Psychical Research," by Prof. W. F. Barrett; "An Introduction to Science," by Prof. J. Arthur Thomson, and "Astronomy," by A. R. Hinks.

Moffat, Yard & Co. announce the immediate publication of a new series dealing with the regeneration of the race, and bearing the general title, New Tracts for the Times. The first three volumes, which will be issued this month, are: "The Problem of Race-Regeneration," by Dr. Havelock Ellis; "The Methods of Race-Regeneration," by Dr. C. W. Saleeby, and "The Declining Birth-Rate—Its National and International Significance," by Dr. A. Newsholme. Another scientific member of the series is "The Problems of Sex," by Prof. J. A. Thomson and Prof. P. Geddes.

"Medical and Surgical Science," by Dr. S. Hillier, is in Stokes's spring list.

Fannie Merritt Farmer's "Catering for Special Occasions" (David McKay) includes twelve subjects: New Year's Afternoon Teas, St. Valentine's Spreads, Easter Dinners, Thanksgiving Dinners, Wedding Receptions, Birthday Feasting, Children's Parties, etc. For each there is a half-tone engraving of a set table, two to three menus, and the directions for their preparation. Marginal decorations, attractive type, and good paper combine to make a pleasing appearance.

Mushroom collectors will be interested in the little "Mushroom Hand Book" (Ogilvie), by Elizabeth L. Lathrop. Twenty of the more common varieties are simply described, in as many brief chapters, accompanied by illustrations to mark their characteristic features. Chapter xxi gives some recipes.

How to combine unrelated bits into tempting dishes is told by Helen C. Clarke and Phoebe D. Ruton, in four hundred or more recipes, under the title of "The Cook Book of Left-Overs" (Harper). Both of the authors have had experience as instructors in cookery and dietetics.

A unique idea is Ruth Alden's "Corona Cook Book" (Abbey Co.). Each recipe is printed on a separate card and filed under its proper classification, in the manner of a card index, and the whole is contained in a trim case fashioned in imitation of a book. New recipes can be added and set in alphabetical order by the owner.

A writer in the *Revue de Paris* gives an interesting sketch of the considerable thought and experiment devoted to aviation by Frenchmen in the eighteenth century, and particularly from 1781 to 1785. The author of a secret correspondence thus describes a hydroplane invented by François Blanchard, in the inventor's own words:

On one foot, in the form of a cross, is placed a little boat four feet long and two feet wide, very sturdy, although constructed with slender rods [*minces baguettes*]; on two sides of the structure rise two poles six to seven feet long, which support four wings, each ten feet long; together these form a parasol twenty feet in diameter, and, consequently, more than sixty feet in circumference. The four wings move with surprising facility. The machine, though voluminous, can easily be lifted by two men. It is almost completed; all that has still to be done is to put on the covering, for which I hope to use taffeta, and I shall do it to the best of my ability. After that you will see me rising to whatever height I please, going an immense distance in no time, descending where I wish, even on the water, for my ship can do it. . . .

Of Blanchard's experiments we hear nothing, unfortunately, because ballooning soon became the rage. After sheep, chickens, and ducks had been sent up, men were emboldened to try it themselves. The whole country became tremendously excited, and it seemed as though the control of the air had already been won. Literature glowed with the glory of France and its "pioneers of the air." Histories of aerial navigation and treatises explaining how to fly were legion. "Monsieur Sens-frold" and "Monsieur Tout-de-feu" tore each other's hair in the *Année littéraire.* The theatre took up the craze, and on October 19, 1783, there was presented at the Comédie Italienne "Le Cabriolet volant, ou Arlequin-Mahomet," of which the following is the scenario:

A mechanician presents Arlequin with a flying carriage, which he uses to escape from his creditors. Arrived in a foreign country, he learns that a princess, having refused to marry a king who seeks her hand, has shut herself up in a tower to resist the attack of the furious, disdained lover. Arlequin assumes the robes of Mahomet, enters the tower with his machine, announces himself like the prophet, is revered, adored, and finishes by cutting off the head of the besieger.

It was natural that the new world opening before them should have gone to the heads of the poets, even as to-day a Breton poet is insisting that the aeroplane is accomplishing France's moral regeneration. One poet wrote:

Sur mer comme sur terre
Nous allons dominer,
Rien ne pourra nous résister,
Nous lancerons la foudre
Où bon nous semblera
Par les moyens du gaz . . .

Characteristically, before the science had

progressed far, Frenchmen were concerning themselves with most of the regulations which to-day are under discussion. So they required that a man should use only his own machine. No one not thoroughly skilled in the science should be permitted to construct machines. The machine should be kept in a public depot and could be used by individuals if provided with a chauffeur licensed by the Government. Considerable thought was also given to ways and means of policing the air.

New Year honors include the names of several scientists. Among the Knights are Dr. E. B. Tylor, who is eminent in anthropology; Dr. J. H. Benson, president of the Royal College of Physicians, Ireland; Dr. R. J. Collie, who has written on workmen's compensation; Dr. J. M. Davidson, well known for his work in the X-ray; A. B. Kempe, barrister and mathematician, and Dr. W. F. Barrett, the physicist.

We regret that, following an error in the daily press, we reported last week the death of Dr. Algernon Coolidge, jr., professor of laryngology in the Harvard Medical School. The notice should have referred to Dr. Algernon Coolidge, senior, of Boston, who graduated from the Harvard Medical School in 1853, and has died at the age of eighty-one.

Drama

The Children's Educational Theatre. By Alice Minnie Herts. New York: Harper & Bros. $1.25 net.

The record of her six years' labor in the Children's Educational Theatre, in connection with the work of the Educational Alliance, which Miss Herts has summarized in this little volume, is a most interesting and valuable addition to modern theatrical literature. Particularly is it significant in its bearing upon the highest and most legitimate functions of the stage. No student of the social problems among the poorer classes, which are daily becoming more urgent, should fail to read it. Having done so, most persons, even ardent Sabbatarians, will regret that the operation of the Sunday law should have put an end, if only temporarily, to an enterprise so philanthropic and so logical. The object and nature of the work are probably unknown to the general public—although familiar enough to East Side settlement workers—and it is well that they should be explained. In the first place it must be clearly understood that neither Miss Herts, nor her associates, in organizing the Children's Educational Theatre, ever had the least notion of qualifying the young performers for a dramatic career, or of influencing their ambitions in that direction. The teachers did not concern themselves with elocution, pose, or gesture, or other technical accomplishments included in the art of acting, but simply strove, by an appeal to the dramatic instinct, the joy in make-believe so deeply rooted in all child nature, to stimulate imagination, instil morality, and thus administer wholesome instruction in the guise of amusement.

This actually was a practical application of the philosophy in which the theatre as an institution finds its strongest vindication. Those who would know how the end justified the means must be referred to the pages of Miss Herts, which are crammed with the most pregnant illustrations and examples. The mere fact that, in a wonderfully short space of time, these almost illiterate children were capable of giving intelligent performances of such plays as "The Tempest" and "As You Like It," is but a small part of the story. For each play there were many different casts, one as good as another, and there was a constant interchange of parts among the players. Not only this, but each child was encouraged to play his part, according to his own conception of it. Moreover the children supplied the carpenters, the scene-shifters, the property-men, and the orchestra. They helped to make the scenery and the costumes. The carpenter of to-day might be the leading man of to-morrow. Punctuality, order, industry, coöperation, obedience, discipline of every kind were rigorously enforced and eagerly adopted. In the study of diverse characters, the practice of new and strange employments, and the observance of new manners, relations, and responsibilities, the children underwent an unconscious transformation, acquiring the rudiments of a civilization of which the influence was soon reflected in their homes. It is a fascinating and suggestive story told by Miss Herts, with a most eloquent and convincing simplicity.

She leaves no room for doubt of the enormous social value of the work which was abandoned, in deference to public principle, just when its beneficial effect was beginning to be widespread. Doubtless, she is right when she declares that any attempt to reëstablish it upon a paying financial basis would make it valueless. A nominal charge for admission to performances, which if wholly free would attract unmanageable crowds—as experience has proved—is essential, but anything more would defeat the whole intent of the scheme. But she is the victim of a common delusion when she argues that the fundamental principle of her juvenile theatre—edification in amusement—is inapplicable to the commercial stage. Her own experience ought to have taught her the contrary. The parrot cry of the modern manager that he must give what the public demands has no truth in it. The public has no means of making a demand. It has to take what it can get. It generally selects the best.

Percy MacKaye will bring out, through Stokes, "To-morrow," a play in three acts.

"A Butterfly on the Wheel," a play which enjoyed much public favor in London, and is running successfully in the Thirty-ninth Street Theatre here, must be counted among the more notable productions of the season, because it is cleverly written, contains one remarkably effective act, and is uncommonly well presented. It is the work of two eminent English lawyers, E. G. Hemmerde, K. C., and Francis Neilson, M. P., and is supposed to imply a protest against the license permitted to cross-examiners in the British Divorce Court, by which an innocent defendant might conceivably be made to appear guilty. Dramatically, as a whole, it is of small account, because the premises of the presented case, though barely possible, are highly improbable and plainly manufactured to meet the exigencies of a desired situation, and because the heroine, who is involved in the legal toils, is made to behave so foolishly that her conviction in any court must have been almost a foregone conclusion. The whole story, indeed, is incredible. But the scene in which she is cross-examined on the witness stand, is an extraordinarily realistic reproduction of an actual incident in English divorce court proceedings. It does, in its way, hold the mirror up to nature and creates a very positive illusion. The interior of the court, with the presiding justice, the be-wigged and gowned barristers, the jury, witnesses, spectators, and attendants, is a copy of the original, photographic in its accuracy, and the details of the trial itself are no less accurate. The impersonation of the leading barrister for the prosecution by Sidney Valentine is a little masterpiece of legal comedy. The professional carriage of the actor, the significance of his tone and gesture, his elaborate courtesies, his irony, his virtuous indignation, his guileful insinuations, and his triumphant retorts are all features of a highly finished and thoroughly artistic study. Such work is very rare on the stage to-day. Miss Madge Titheradge, the clever daughter of the distinguished Australian actor, who enacts the harassed heroine, also acts exceedingly well, with great variety of mood and manner—in which confidence, hesitancy, confusion, and increasing alarm are vividly portrayed—and at the last, when all her defences have been broken down, with true and eloquent emotion. Every player in the cast is capable and this fact gives the representation a special value.

The exhibition of her artistic resources in Owen Johnson's translation of Maurice Donnay's "The Return from Jerusalem," now to be seen in the Hudson Theatre, is the most convincing justification of her Parisian reputation which Madame Simone has yet afforded in this country. It demonstrates her polished skill in comedy and her power of emotional expression. It is easy to understand why the play created a great stir in Paris, coming, as it did, at a time when prejudices were inflamed by the Dreyfus case, and, beyond question, it is cleverly made and in many places brilliantly written, with many elements of theatrical strength, but it is not a great or particularly significant drama. In its innumerable discussions upon the rights and wrongs of men and women—into which the question of mutual responsibilities never enters—anarchism, free love, Hebraism, and what not, it opens up no new aspect, offers no fresh solutions. Its main story of the gifted, resolute, fanatical, and in-

spired Jewess—supposed to be symbolical of the Semitic peril—is, like that of so many other thesis plays, based upon a special instance, which can have no general application. The end—under the prescribed circumstances—is perfectly logical, but proves nothing, except that the stronger nature will dominate the weaker, and that in the clash of interests the latter is likely to suffer. Michael Aubier, a brilliant Gentile author and visionary, a happy husband, and affectionate father, is fascinated by the intellectual glitter of the Jewish Judith, then loves her passionately, but hesitates to wrong his wife and children. She chides his irresolution, enlarges upon the rights of pre-ordained affinities, and upon the glorious work they might achieve together in the enlightenment and regeneration of the world. After a jealous quarrel with his wife, he starts with his enchantress, now his mistress in more senses than one, for Jerusalem, where she is transported with new racial ardor. For a space he lives in a fool's paradise, until he discovers, by bitter experience, that she is Jewess first and philanthropist afterward, and that the Utopia she dreams of is a Hebrew one. After a passionate scene they part, mutually disillusioned, and he finds himself alone in the world, bereft of happiness and hope, unless, indeed, he can effect a reconciliation with the once doting wife who is divorcing him. It is only in the conditions which existed in Paris a few years ago that such a play would seem to be laden with pregnant meaning. But it does provide a splendid opportunity for Madame Simone, whose Judith is a creature fully capable of the mischief she is supposed to do—fascinating, intellectual, and courageous, seductive and, upon occasion, volcanic.

Owing to the success of his production of "A Butterfly on the Wheel," at the Thirty-ninth Street Theatre, Lewis Waller announces that he has determined to enter the managerial field here on a larger scale. His attractions for next year, as planned at present, will include two companies in "A Butterfly on the Wheel"; two new comedy productions; and a somewhat ambitious presentation, presumably "Henry V," in which he will star himself. With this purpose in view, he has postponed his Australian tour set for next year until the succeeding season.

Charles Frohman has procured three new plays for production here between now and September. The first is a new comedy by Sir A. W. Pinero, called "The-Mind-the-Paint-Girl." The heroine of this piece, a music-hall singer, will be played in London by Marie Löhr. The second piece is "The Spy," an English version of "La Flambée." The third play is the "Bella Donna" of Mr. Hichens, in which Mrs. Campbell and Sir George Alexander have won success in London.

"Peter Pan" has reached its nine hundredth performance and "The Blue Bird" its six hundredth at the Queen's Theatre, London.

Some of the leading citizens of Pittsfield, Mass., being dissatisfied with the commercial management of the principal theatre in the town, have bought the house with the avowed purpose of conducting it upon lines more worthy of intelligent public support.

"Milestones," a new play by Edward Knoblauch, will be produced in London next month by J. E. Vedrenne.

A Chinese play entitled "Turandot," composed by Dr. Volmoeller, author of "The Miracle," has just been produced in Berlin by Professor Reinhardt. Sir George Alexander has procured the English rights. It recalls in a distant way the episode of the casket scene in "The Merchant of Venice." A beautiful Chinese princess has publicly announced that whosoever shall guess a certain riddle shall become her consort The penalty of failure is death, and a row of grinning heads leaves no doubt that the princess is in deadly earnest. Womanlike, however, she claims the privilege of changing her mind, and when the lucky man who has succeeded in guessing the riddle demands the reward of his astuteness she turns disdainfully from him. The ladies of her court are more discerning, and every opportunity is afforded the newcomer of consoling himself elsewhere. The sequel may be guessed. "Turandot" is rich in spectacle and in action, and the Chinese costumes and scenery make a delightful picture.

Music

Mr. Gatti-Casazza is ready to submit his third operatic novelty of the season to the patrons of the Metropolitan Opera House on Saturday afternoon. It is Leo Blech's "Versiegelt" ("Sealed Up"), and lasts only fifty minutes.

The reëngagement for three more years of Giulio Gatti-Casazza and Arturo Toscanini as manager and chief conductor of the Metropolitan Opera House also gives cause for sincere congratulations. These two men have worked important reforms by introducing here, as far as possible, the way of presenting operas which prevails in Milan, where they formerly presided. The Milan plan consists in giving only seven or eight operas each season, but not putting those on the stage until after the most thorough rehearsing. In New York such rehearsing has not been practicable in case of all the operas, because the repertory is necessarily much larger, but it has been applied as far as possible. Italian and German operas have, in the main, fared well; but owing to an apparent prejudice of the manager and his chief, French opera has been treated in a reprehensibly shabby manner. "Carmen," which, with a star cast, would be sure of eight or ten crowded audiences, has been dropped entirely, and the equally popular "Faust" is pitchforked on the stage with scant rehearsal and only one or two good singers. The centenary of Ambroise Thomas should have suggested the revival of his "Mignon," for which an ideal cast was available; but nothing has been done, for no apparent reason except the prejudice referred to.

The Boston Symphony Orchestra, which has long been "permanent," thanks to the million set aside for it by Henry Lee Higginson in 1881, also makes a tour of Eastern cities once a month, while the New York Symphony, the Russian Symphony, and the Philadelphia and Theodore Thomas orchestras travel likewise, so that many of our cities are now tolerably well supplied. Probably most of the patrons of the Boston Orchestra's concerts were glad to read the announcement made a few days ago that Dr. Muck will return to Boston as its conductor next season. Mr. Fiedler, who followed him for a few years, is a good drill-master, but he lacks emotional force and poetic refinement, and his programmes have often been uninteresting and ill-constructed.

A letter written in 1889 by Theodore Thomas and printed on pp. 344-5 of the Memoirs recently brought out by his widow, gives a vivid account of the difficulties a conductor has to contend with when his orchestra is not "permanent"; that is, when its members meet only occasionally for rehearsal, playing in the meantime under all sorts of conditions and conductors, in cafés and dance halls. "When they come back to me after a short interval," he concludes, "it always takes half of the first rehearsal before they realize the proportions and proper conditions again." On one particular occasion "it was a terrible fight—over a hundred men of ability, trying for something, and one man beating the stand, shouting at the top of his lungs, scolding, entreating, etc., and finally taking out his watch to show them that all this had taken an hour." It was not till he got to Chicago that Thomas had a permanent orchestra. The New York Philharmonic, of which he was the leader for a number of years, became permanent only two years ago, when a large fund was collected to make it possible to procure a hundred first-class players who are not allowed, during the season, to play except with their regular conductor. This was, to be sure, a most expensive arrangement, and there was no certainty that the orchestra, as reorganized, would be "permanent" more than three years; but the gift of half a million at the critical moment by the late Joseph Pulitzer removed that uncertainty. It is not New York alone that is benefited by this generous legacy. With its reorganization, the Philharmonic adopted the policy (originated by Theodore Thomas with his private orchestra) of going on the road occasionally. Under its new and aggressive manager, Loudon Charlton, the Philharmonic gave fifteen concerts last year in other cities. This year the number has been doubled. Altogether the orchestra is giving eighty-five concerts this season, against sixty-five last, and forty-five the season before. The second trip, during the last two weeks of March, will extend as far west as the Missouri River. The reëlection of Josef Stransky for three more years, moreover, ensures the Philharmonic patrons performances of varied programmes that will be thoroughly enjoyable.

The telephone is now employed by organ builders for tuning purposes. The *Diapason*, a Chicago periodical devoted to the organ, refers to the fact that in many of the instruments of a prominent American builder, telephone transmitters are fixed permanently above the pitch octave in the diapason department, and the whole organ is so wired that wherever the tuner may happen to be working he can, by pushing in a convenient plug, hear through the little telephone attached to his head the exact pitch of the diapason pipes.

Munich will, as usual, have its Mozart and

Wagner festivals next August and September.

The rules have been issued of an international musical contest organized by the Council of the City of Paris and the County of the Seine under the patronage of the French Government. The contest will take place in Paris on May 26, 27, and 28 next. The days will be occupied as follows: May 26, instrument contest; May 27, choral contest, and May 28 festival concert.

Art

FROM REYNOLDS TO ABBEY.

LONDON, January 1.

The Royal Academy has been organizing winter exhibitions of old masters for almost half a century, and still manages to make them interesting, though this year the interest centres upon the work of Reynolds, the Academy's first president, and of Abbey, who receives the tribute paid by Academicians to members dying within the year, and has a special show of his own.

Of the rest of the collection there is little to be said that bas not been said before. Many paintings have no particular merit except the chance they give to critics for ingenious argument in attributing them to anybody save the painters whose names appear in the catalogue; many are already known, or are by masters of whom they do not suggest anything new to add to the much already written. There are several Rembrandts, none of the larger and more important, but two or three very beautiful and characteristic, especially a small interior—The Cradle—with figures gathered round a light emerging from the mysterious shadows, and a Portrait of a Man, put in simply, with broad, direct touches. There is a portrait of a Spanish nobleman, dignified and refined, but with hardly the technical mark of Velasquez for whom it is now claimed. There are a few Van Dycks, the most striking a portrait of Sir Kenelm Digby, with a huge sunflower at his side: striking, however, chiefly as a curious biographical record. There are examples of the various Italian schools, not one standing out more powerfully than a Music Party, by Caravaggio, a wonderfully well observed and vigorously expressed study of three men, and an eloquent reminder of the small appreciation hitherto accorded to that great master. And there are other pictures here and there that should be mentioned in passing: Among the British pictures, I should at least refer to the Portrait of Thomas Simon, by William Dobson, of whom, as of Caravaggio, far too little has been heard; to the group of Hogarths, if only to regret that most of them should appear with his name attached; to the landscapes by Wilson and Turner, though not their most distinguished. But, when all is said and even if other names should be added to this list, there is no question that the chief interest of the exhibition is in the important series by Reynolds and Abbey.

The first gallery has been devoted entirely to Reynolds. The collection includes only twenty-two paintings, but almost all can be ranked among the finest examples of his art. An exception is the Portrait of Dr. Johnson which the catalogue describes as "a repetition of the one painted for Henry Thrale and now in the National Gallery"; "a copy" will occur to most people as a better description, though it is said to have been done for Topham Beauclerc, and seems to have a genuine pedigree. Reynolds, however, was not without assistants and pupils in his studio. On the other hand, he never painted anything more splendid in color and design than the portrait of himself, seated, wearing rich red official robes, and so noble a figure that the bust of Michael Angelo, the only detail he added to a composition whose great beauty was in its simplicity, is felt not to be in unworthy company. There are other portraits of only lesser note, but my attention was more particularly drawn to the series of eight long narrow panels, the original designs for the west window of the Chapel of New College, Oxford, which I have never seen before—which have never been shown before at the Royal Academy, as far as I can remember, during the last quarter of a century. Reynolds was often decorative in his portraits, but seldom in his successful career as portrait painter did he have time for purely decorative work. His subjects for the series are Faith, Hope, Charity, Temperance, Justice, Fortitude, Prudence, and, in the eighth, the Nativity, with himself and Thomas Jervais, who executed the design in glass, posing as shepherds. There is nothing in the originals to suggest the medium in which they were intended to be carried out; they are not the cartoons to which the modern designers of stained glass have accustomed us at the Arts-and-Crafts and similar exhibitions, but elaborate and finished paintings—and fortunately they have not, like many Reynoldses, suffered from time or injudicious restoration. I have not seen the window for many years, but, as I remember it, the color struck me as rather weak and washed out. If so, this must have been the fault of Jervais, for in the originals the color is rich and sumptuous. The figures, admirably placed in the panels, are full of grace and dignity—the allegory is unobtrusive, the lines rhythmical, and you wonder, as you look, if Reynolds, had the opportunity offered, could not have rivalled the great Venetians as a decorative painter. The only drawback to pleasure in the series comes from the unintelligent hanging at the Academy. The walls are not overcrowded as in the summer exhibitions. There is plenty of space to give each picture the margin round it, which it demands. But the decoration of the walls ruins the whole scheme of hanging in the Reynolds room. These walls are red, with a gray frieze, so low that the dividing line between the two colors is passed by the long upright panels. The result is restlessness, which is the more unpardonable because it would have been so simple to add the necessary few inches of red and make this line help to frame in the paintings and form part of the arrangement.

But it is when you come to the four galleries devoted to Abbey that it is most difficult to forgive the hanging. That the effort has been made to honor Abbey by getting together a representative collection of his work is plain: there are drawings of almost every period, water-colors, pastels, paintings, studies for his large mural decorations. But it is plainer still that, by the arrangement, the least possible has been made of the collection, and that it will detract from rather than add to his reputation. The galleries are hung like an auction-room, more particularly the two filled, or almost filled, with drawings. In one there is that discordant and tedious invention, a screen for the overflow from the walls; in the other a few paintings and studies in color are included, but with so little care for appropriateness and effect that you might think the gallery a room at Christie's. In both, the frames seem to jostle each other, they fit in so tight, and there is no idea of symmetry of line or harmony of balance. Only the series of illustrations for "She Stoops to Conquer" tells with anything like effect, and this is because a group, or an attempt to form a group, has been made, and a space somewhat apart from the others reserved for it.

Without the help of the exhibition our generation would realize the enormous influence Abbey has had on illustrators, not only in his own but in almost every country of Europe. He was always a master of pen-and-ink; the few designs in wash now on the walls show how much less successful he was when he worked with a brush. He had real feeling for line, he knew better almost than any draughtsman what technically could be done, what avoided, with his medium. He was also sensitive to the charm of grace and graciousness in a pretty woman, of picturesqueness in an old building or an old bit of furniture. He was conscientious, and was known to travel from one end of Europe to the other for a background or a costume. And of this you are conscious in the illustrations for the Old English Songs and for the Goldsmith, which are here. They are full of life, full of observation. Seriousness, care, and truth are the foundation of that more superficial

charm which is all his innumerable following have managed to imitate. But when you turn to the later Shakespeare series, you cannot help feeling that gradually Abbey looked to the tale or the verses less for the drama and movement and meaning than for the figures his models could pose for, that his observation was more for detail in itself than in its relation to his theme. His men and women are doing nothing, they are posing; his architecture, beautifully drawn as it usually is, was evidently studied apart from the scene of which it is the background. Everything is correct, but lifeless. The change may not be so apparent in the comedies, for they gave him the subjects with which he was most in sympathy—motives that suited his light, graceful, and dainty method. But it is only too evident in the tragedies which, if they alone survived, would hardly justify to future generations his fame as illustrator. And yet, with careful hanging, I have no doubt that Abbey's comparative failures could now at the Academy have been overshadowed by his great achievement in the illustrations of his finest period.

This preoccupation with the model and detail is more apparent in his paintings than in his drawings. Not so much in some of the earlier watercolors that have the same unity, the same vivacity as the illustrations for "She Stoops to Conquer"; nor even in a somewhat later picture, like The Pavane, dated 1897, where the figures moving in the stately measure of the dance, against an embroidered curtain worked out with the patient elaboration of the Pre-Raphaelites, are so essentially parts of the pictorial pattern that, despite the minute study of detail, you forget the model and the studio altogether. But you cannot forget them in some of the more ambitious subjects—Hamlet, The Trial of Queen Katharine, Lear and Cordelia. These are hung in the Central Hall, with the Crusaders Sighting Jerusalem and the Duke of Gloucester and the Lady Ann, this last by far the best in the painting of detail, in the grouping, in the arrangement of color. The effect of the five seen together is unexpectedly dull and perfunctory. The lighting may be one cause of this, and the hanging another. Certainly, the color seemed to me more brilliant when I saw the same canvases in the different summer exhibitions of the Academy to which they were first sent. But the fault lies also to some extent with the painter's treatment of the subject. In each his motive was pictorial anecdote, to which there can be no legitimate objection, if it is treated pictorially. What were some of the masterpieces of Veronese and Tintoretto, of Rembrandt and Velasquez but pictorial anecdote? Abbey, however, does not give the anecdote as a pictorial whole, throbbing with life and color, told in rhythmical lines and well-balanced spaces. You see the models posing, the studio properties being built up. True, he succeeded infinitely better than the younger men, like Frank Craig, Cadogan, Cowper, and the others, of whom he has been the inspiration and who now reap the laurels that should have fallen to him. True, you have only to go to the Royal Exchange to understand how much more decorative he is in composition, after all, than any of the British painters who have covered its walls, including Brangwyn and only excepting Leighton. But compare him to the Frenchmen who do these huge decorative *machines*, to Jean-Paul Laurens, or Gervais, for instance, and you are forced to admit that Abbey had not the knowledge or the power to compete with masters of the craft. Or go no further than the Caravaggio in the same exhibition, and you will understand the difference between the painter's spirited rendering of men as he sees them actually busy about their own work, and the patient study of models posing. Or, again, take the pictures of Baron Leys, who undoubtedly was Abbey's master: the people in them are real people and are all occupied with their respective tasks or amusements, not merely hired models sitting or standing in the desired pose. And, in this connection, it is suggestive to contrast Menzel's official pictures at Berlin, in which real ceremonies are being conducted before your eyes, with Abbey's Coronation of King Edward VII, the most important canvas in the collection: not a royal commission, but done for Messrs. Agnew, primarily for reproduction, and now the property of King George. Here Abbey had as subject a tremendous pageant and tremendous space in which to deal with it. It, too, was pictorial anecdote in its fashion, and the King and Queen the chief actors. But what do you see when you look at the great canvas? The first things your eyes fall upon are the armorial bearings that decorate the stonework above the central group. Then, with much trouble, searching through the confused mass of figures, the King is discovered on his throne. Whatever may be said of the late King, it cannot be denied that he was a man of distinct character in appearance and the right appreciation of his importance as a royal and imperial figurehead. Here he is as sleek and slim and insignificant as a tailor's dummy. But for the many familiar portraits and photographs of Queen Alexandria, she might not be discovered at all. Those who have been present at either of the recent Coronations at Westminster will tell you that the pageant was so skilfully arranged as to leave the King and Queen the prominent actors throughout. In Abbey's version they are the least prominent.

I saw nothing of Abbey's mural decorations, as the only records of them at the Academy are small studies for part of the Pittsburgh series. The pastels I thought so amazingly brilliant when I first saw them, here strike me as dingy and disappointing, but I am sure that for this impression the hanging is responsible. It may be because the critics have made no allowance for the hanging that, so far, they have shown little appreciation in their notices, though it may also be because they do not regret the chance of slighting the Royal Academician who, it happens, was an American. The liberality of the Academy in admitting Americans as members is often praised, but not invariably appreciated, at least in England. The present treatment of Abbey is a case in point, while it is curious to note the tendency of late to belittle even Sargent in favor of smaller men who have learned everything they know from him.

N. N.

Meissonier and Puvis de Chavannes will be added shortly by Stokes to the Masterpieces in Color series, and De Hooch and Vermeer to the Painters' series. The same house has in hand Ernest F. Fenollosa's "Epochs of Chinese and Japanese Art."

The exhibition of paintings by Walter Greaves at the Goupil Gallery in London last May was the signal for a very Donnybrook fair for critics. That anything connected with the personality of Whistler should be the occasion of a fight is not surprising. Mr. Greaves, who has already reached his three-score years and ten, was a pupil of Whistler's, and not known even as that. Then suddenly he is discovered, exhibited, interviewed, his art written up for all it's worth, and written down for less than nothing. Acclaim and execration fell in one sudden douche upon his "top-hat and rusty frock coat." He was naturally surprised, not to say bewildered. Mr. Marchant's exhibition has been transported by Cottier & Co. to New York, and is now on view at No. 3 East Fortieth Street, where it is to hang for a month. There are thirty-nine oil paintings, including half a dozen portraits, and a group of thirty-odd drawings, the latter the work of Mr. Greaves and his brother Henry, done in collaboration.

The visitors to the exhibition here, and in all likelihood they will be many, may very well feel that though Mr. Greaves was a pupil of Whistler, he should not have been; or at any rate that he should not have remained so for so long a time. This thought will arise in respect to the product and quite aside from any question of personal relationship and loyalty. A pupil who had so little in common temperamentally with his master would not be expected to tolerate him so patiently. If, in the matter of personality, this gentleness, not to say meekness, suggests an attractive amiability of character, it spells, in the matter of authentic artistic impulse, something very like an indictment of weakness. Walter Greaves did not, indeed, need the impulse from Whistler to catch the contagion of oils and canvas. Before that and before his majority he was a painter, as witness the

Boat Race Day, Hammersmith Bridge, a canvas which we should weigh against all the remainder. For the novice who produced this captivating crowd, a more ill-adjusted influence than Whistler's can hardly be imagined. Doubtless the association with the facile master was an inestimable privilege, and certainly some inspiriting guidance was needed for a season of strengthening aid. But Whistler was the man to duck him, not to teach him to swim. In the dispute as to the indebtedness of master and pupil, some of the sponsors for this Chelsea artist suggest, quite as much by innuendo as by direct statement, that the facts of the master's attitude, patronizing, overbearing at times, indicate a deliberate submerging of the younger man. This is not the sense in which we intend the word. It was Whistler's art, rather than Whistler's oracularity, that tyrannized over Mr. Greaves. And for this he has to blame himself, or, it may seem more just to say, the measure with which the gods doled out his talents.

Frederick Wedmore, the art critic, was knighted at New Year.

Miss Emma Barbee Shields, the portrait painter, died in New York on Sunday, at the age of forty-eight. She organized the American Association of Allied Arts, and later the Lewis Nathaniel Shields Art Club.

The report comes from Munich of the death, in his eighty-seventh year, of Ludwig Voltz, the well-known painter of horses and hunting scenes, and also an illustrator.

Finance

THE EQUITABLE FIRE.

The burning of the Equitable Life building, in the heart of the Wall Street district, on Tuesday morning of last week, and the burying under its ruins of securities owned by many hundreds of different people, and estimated in value all the way from five hundred million to a billion dollars, was an incident which throws an instructive sidelight on finance from the mere fact that it caused so little financial commotion. When Wall Street first learned what had happened, there were several more or less sensational possibilities which tentatively appealed to its imagination. The stock market might be panic-stricken over the chance that all these securities had been destroyed. It might fall into fright, regardless of that possibility, over the question of what would happen to firms or individuals who had contracted to deliver, on Tuesday or Wednesday, securities to which their owners could get no access for at least a week. Or it might fall victim to misgiving and doubt over what an unreasonably frightened "outside public" and an unscrupulous Stock Exchange "bear party" would do.

As a matter of fact, the market did not indulge in fright at all. It reasoned immediately, first that securities in a modern fireproof vault were put there because they could not, in that vault, be destroyed by fire; secondly, that the Stock Exchange, or, if necessary, the courts, would see to it that no unreasonable enforcement of contracts for delivery was applied; thirdly, that even if the outside public did fall into fright, it was considerably less able to throw its securities on the market, with the vaults of the Equitable sealed, than it would have been before the fire.

The Stock Exchange governing committee had to take action first, in the matter of deliveries by brokers whose securities were locked up under the Equitable ruins. By the rules of the Exchange, a sale of stocks or bonds made one day on the floor must be completed on the next day by delivery of the actual securities to the buyer. What the committee did last week was interesting in that it fixed a new precedent for the New York Stock Exchange, and perhaps for any other exchange. The ruling the first day suspended all of the day's deliveries except by mutual consent; the second day it suspended deliveries "by all parties directly or indirectly affected by the Equitable fire." In itself such arbitrary action is not unusual. At the height of the panic of 1873, the governing committee closed the Stock Exchange for ten days, and similar action was taken by the Pittsburgh Stock Exchange in 1907. In many Western cities, during the panic of four years ago, the Legislatures declared special holidays to prevent enforcement of contracts, and that was also the action taken during the San Francisco fire of April, 1906, when the problem of buried securities was much what it was in New York last week. Again, the London Stock Exchange governors, at that institution's fortnightly settlement following our Northern Pacific corner of May 9, 1901, suspended the "buying in" of Northern Pacific stock against default in delivery, and fixed an arbitrary "carry-over" price.

In its circumstances the San Francisco episode provides an interesting analogy. The destructive earthquake occurred on April 18, at five o'clock in the morning. Four hours later the San Francisco Clearing House held a meeting and decided to close the banks that day. By two o'clock in the afternoon, the fire was sweeping through the whole banking district, without check.

When the Clearing House next met in a private residence on April 23—five days after the earthquake—the declaration of legal holidays from day to day had already begun; that being the only means whereby banks could get their affairs into shape to pay depositors and meet their other obligations, and, furthermore, the only manner in which the business houses and individuals—all of whose securities and money were locked up in the vaults under the ruined city—could postpone maturing debts. The San Francisco Stock Exchange had closed; only the United States Mint resumed operations.

On April 25, a week after the fire, business began to revive. By that time the banks had established temporary offices in residences, and, in order to relieve the needs of people who were without ready money, a temporary bank, known as the Clearing-House Bank, was established in the office of the Mint. The respective banks made deposits with the Clearing-House Bank by means of Eastern transfers through the Mint. Beginning May 1, advances were made to depositors by means of warrants payable at the Clearing-House Bank to the debit of the respective banks, these payments being limited to $500 to any one customer. Two days later, on May 3, the banks opened credit accounts; and on May 7 it was arranged to have a daily clearing of special checks, and the limit of $500 was removed in regard to payrolls, freight, taxes, etc.

From that time to May 19 banks did a large business in the so-called special accounts, and before the 19th, when at last a Clearing-House settlement was made of all old checks deposited up to the evening of April 17, virtually all restrictions had been removed, and customers were furnished with whatever facilities were needed. On May 21 a Clearing-House settlement was made of all checks deposited or received during the period when embargo existed on banking transactions, and on May 23, five weeks after the fire, the Clearing House formally opened for business. But the special holidays did not end until June 2, after continuing forty-five successive days.

A question of particular interest, bearing on last week's New York episode, is this: When were the great safe-deposit vaults of San Francisco opened, and what was the condition of their contents, after the white heat of a blazing city had for two whole days surrounded them? People who were on the spot at the time recalled, last week, that the vaults were opened ten days or so after the conflagration had entirely ceased, and that the contents of every modern fireproof vault in the business district of San Francisco were found to be uninjured.

AMERICANS: An Impression
By Alexander Francis

THE BOOK OF BURIED TREASURE
By RALPH D. PAINE

This absorbing book, the outgrowth of travel and research, tells the facts regarding great treasure hoards known to have been lost or buried, their whereabouts, and the pirates or others who lost or hid them. It tells also of the results of present-day treasure-seeking. Entertaining as fiction—and true. *Crown 8vo. Copious illustrations. $2.50 net; postpaid, $2.72.*

GOOD CHEER
The Romance of Food and Feasting
By F. W. HACKWOOD
Author of "Inns, Ales and Drinking Customs of Old England," etc.

A diverting book presenting its subject from the historic and picturesque sides. Roman banquets, royal feasting, baronial profusion, cooks and epicures, the aesthetics of dining, diet, etc., etc., are among the subjects treated. *Demy 8vo. Color frontispiece and 24 illustrations. $2.50 net; postpaid, $2.72.*

Adventure, Travel, Essays, Fiction

Sixty Years

Life and Adventure in the Far East

By JOHN DILL ROSS

"A biography of adventure in love, trade, finance, fights and diplomacy in the Far East," especially around the Malay Archipelago. The story of a young business man, thinly veiled with the form of fiction; a plucky, adventurous, open-hearted, open-handed hero, who wins his way, through rough and tumble encounters with the East, to recognition as a man of trust and capacity. 2 *volumes*. $7.00 *net*.

The Surgeon's Log

Being Impressions of the Far East

By J. JOHNSTON ABRAHAM

The day-by-day story of an amateur ship's doctor on a large, well-found trading schooner which makes almost every port of interest from Port Said to the Philippines. The scope and liveliness of the "Doctor's" adventures can best be gathered from one of his chapter headings. This is what happened at Macasser in Celebes.

Illustrated. $2.50 *net*.

Palestine Depicted and Described

A Record of Gleanings in the Holy Land

By G. E. FRANKLIN, F.R.C.S.

Richly illustrated with 376 photographs by the author. $3.00 *net*.

The French Ideal: Pascal, Fenelon and Other Essays

By Madame DUCLAUX

Madame Duclaux, wife of the celebrated Director of the Pasteur Institute in Paris, has already won distinction in letters over two other signatures, A. Mary F. Robinson and Madame Darmestetter. Well known as a writer of both prose and verse in her adopted language, French, and for her unusual power of expression in English, she is the ideal interpreter of the great French writers of the past generation for English speaking readers. The four essays are on Pascal, Fenelon, Buffon, and Lamartine. $2.50 *net*.

A new writer of fiction—Charles E. Lee

The publication from time to time of delicately humorous sketches of the peasantry of Cornwall has set people of literary discernment to wondering about the author, Mr. Charles E. Lee. Mr. Lee went to Cornwall twenty years ago in search of health, and has lived in strict retirement composing music and writing intimate sketches of the people about him. Many of the qualities which make Barrie studies so delightful are found in these studies of a kindlier and more humorous people.

Our Little Town

And Other Cornish Tales and Sketches

A bundle of succinct and inimitable sketches of Porthjulyan, a little fishing and coastguard settlement. The description of the unofficial Parliament and the quiet hostility between the fishermen and the "guv'ment" folk is keen and entertaining in a high degree. $1.25 *Net*.

Dorinda's Birthday

(Ready Shortly)

An idyll of first love in a Cornish fishing village. Dorinda goes to a fair, runs innocently and unintentionally into danger, and lays the foundation for a charming light comedy, fresh and quaint in its setting and exquisite in its presentation of youth and romance. $1.25 *net*.

The Widow Woman

Mr. Lee's first book published several years ago, but so inconspicuously that it has been slow in finding its public. A humorous comedy of rural courtship which has run serially in the *Revue Bleue* of Paris, and which deserves to be widely known and read in this country. $1.25 *net*.

JohnBrown: ABiography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown"

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part the country."

Third Edition,

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.

American Permian Vertebrates

By SAMUEL W. WILLISTON

This work comprises a series of monographic studies, with briefer notes and descriptions of new or little-known amphibians and reptiles from the Permian deposits of Texas and New Mexico. The material upon which these studies are based was for the most part collected during recent years by field parties from the University of Chicago. The book is offered as a contribution to knowledge on the subject of ancient reptiles and amphibians, with such summaries and definitions based chiefly on American forms as our present knowledge permits. The work is illustrated by the author.

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE
Ten Cents a line net for thirteen times
(minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to

New Macmillan Books on Social Subjects

"ADMIRABLY CLEAR, COMPREHENSIVE, AND WELL-BALANCED"

Social Pathology
By SAMUEL GEORGE SMITH, Ph.D., LL.D.

"A concise treatment of the entire field of practical social work—the many-sided relations of the problems of poverty, crime, incapacity, and other causes of the varied types of social failure. Its author has had a long experience in close touch with the actual conditions met by the Associated Charities and in similar institutions here and abroad." *Cloth*, $2.00 *net*

"Mr. Smith," says the *New York Tribune*, "thoroughly equipped by wide, practical experience and even wider reading, is a sane optimist. . . . A constant felicity of terse statement marks this work, and makes its reading as easy as it is soundly and systematically informing."

"It is a mine of useful information." "Singularly commonsensible . . . . a valuable work."

Social Adjustment
By SCOTT NEARING, *Wharton School, Univ. of Penn.*

"As things are to-day, the greatest social service one can render is to show the possibility of effective remedies. . . . This Professor Nearing does, and he has therefore produced a book of incalculable value."—*Boston Evening Transcript.* *Cloth*, $1.50 *net; by mail* $1.61

Making Both Ends Meet
By Mrs. SUE AINSLIE CLARK and EDITH WYATT

"It can be recommended especially to every one who is interested in the grave problems involved in the new and untoward conditions of women's work."—*New York Sun.* *Cloth*, $1.50 *net; by mail* $1.62.

Social Reform and the Constitution
By FRANK J. GOODNOW, LL.D.
Columbia University

"The book shows wide and scholarly knowledge and that massing of clear-cut and logical thought on the subjects considered which mark the writings of Dr. Goodnow. The work is well worth not only reading but study."—*Boston Evening Transcript.* *Cloth*, $1.50 *net; by mail* $1.62.

The Law of the Employment of Labor
By L. D. CLARK
Of the U. S. Bureau of Commerce and Labor

"One of the handiest and most opportune books for wage-earners and employers that has been issued in many years."—*The Labor World.* *Cloth*, $1.60 *net; by mail* $1.72

Increasing Human Efficiency in Business
By WALTER DILL SCOTT

A contribution to the psychology of business which aims to aid its reader in making the most efficient use of his powers and those of his assistants. *Cloth*, $1.25 *net; by mail* $1.36

Social Forces in American History
By A. M. SIMONS

"At every page one pauses, wondering: Why did I not know this before? It is a book for every student of social, political, and economic conditions, for every reader whose mind thrills to the impact of new knowledge, for all men and women who desire to know the true history of their native country."—*Chicago Evening Post.* *Cloth*, $1.50 *net; by mail* $1.62

Socialism and the Ethics of Jesus
By HENRY C. VEDDER

A sympathetic study of the principles on which modern socialism is based, and a comparison of the ethics of socialism and the ethics of Jesus. *Cloth*, $1.50 *net, by mail*, $1.62

Life's Basis and Life's Ideal
By RUDOLF EUCKEN

There are few idealists who will not gain support from the inspiration and originality of this, the greatest work yet written by the famous Jena philosopher. *Cloth*, $2.50 *net, by mail*, $2.65.

The Modern Woman's Rights Movement
By Dr. KAETHE SCHIRMACHER

You cannot comprehend either the extent or the reasons for the world-wide restlessness of women unless you read some such survey as this which is being read all over Germany. Translated by Dr. C. C. Eckhardt of Colorado from the second German edition, with notes for American readers.
Cloth, $1.50 *net; by mail* $1.62

The New Democracy
By WALTER E. WEYL

If you are interested at all in the social status and political prospects you will find that this is the most striking expression of your growing sentiments which you have ever met. It is extremely able and interesting. *Ready very shortly.*

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. New York

The Nation

NEW YORK, THURSDAY, JANUARY 25, 1912.

The Week

The introduction of a bill cutting down by something like 50 per cent. the duties in the iron and steel schedule is a good stroke on the part of the Democrats of the House. It pushes again to the front the broad question of tariff reform, and puts the Republicans on the defensive. The immense development of the steel industry, its concentration largely in the hands of one gigantic corporation, the statements made at various times by some of its foremost representatives as to the ability of this country to produce at lower cost than any other, and the great volume of exports which bears out these assertions —all these things combine to give to the proposal for reducing duties in this line an exceptionally strong position. If the reduction goes through Congress and is approved by the President, the Democrats will have to their credit the actual achievement of a substantial measure of tariff reform; if it is blocked by the Republicans, they will have a good issue to go before the people with. Incidentally, Mr. Underwood has given an effective answer to the accusation that he is for tariff reduction in other things, but a standpatter when it comes to Birmingham's interests or his own.

In such a matter as the Wilson-Harvey affair, everything turns on the exact facts of what took place. Col. Watterson's statement is admirable in point of expression, but leaves much to be desired in point of accurate information. He makes much of Gov. Wilson's manner in the course of the conversation, which impressed him as "autocratic, if not tyrannous," and he tells us that Col. Harvey was "apparently overcome by Gov. Wilson's austerity"; but he also says that "nothing of a discourteous kind—even of an unfriendly kind—passed during an interview of more than an hour." Furthermore, it appears from Col. Watterson's statement that whatever Gov. Wilson said as to "whether the support of *Harper's Weekly* was doing him an injury" was said in reply to a "direct question" from Col. Harvey. Now, at what stage of the interview was this question asked? Was Gov. Wilson's answer to it the subject of any further talk at the time? Was there any correspondence afterward between Wilson and Harvey? Upon the answer to these questions depends the whole character of the incident. "I have from Col. Harvey and Gov. Wilson," says Col. Watterson, "statements according to the memory of each touching what did actually happen and was spoken on the occasion named. These do not materially differ. They coincide with my own recollection." Let us have these statements, and let the public judge whether what Wilson said was simply the frank utterance of a truth in reply to a friend's candid request for information, or, as so many hasten to assert, a deliberate act of selfishness or ingratitude.

Among the acts thus far of the Constitutional Convention, now preparing a new basic law for the State of Ohio, are the extension of its committee organization beyond the point desired by its president, the Rev. Herbert S. Bigelow, the ruling out of lobbyists from the floor and smoking rooms, and certain provisions intended to check gag rule. The numerous committees now include those to consider the legislative and executive branches of government, the bill of rights, and county, town, and military affairs, as well as the more radical matters of woman suffrage, the initiative and referendum, and labor legislation. Lobbyists, whose exclusion from the smoking rooms is the work of a Socialist delegate, we understand, must register and reveal their backers, as well as remain without the doors. Moreover, the time-honored device of moving the previous question will be more difficult of execution than in the past, as it will require the demand of ten instead of five delegates, and the actual stopping of the debate can be brought about only by the wish of two-thirds of a quorum instead of a majority.

Senator Root, in his address before the New York State Bar Association on Friday of last week, displayed his characteristic precision of thought and effectiveness of expression. It is true, as he stated, that two distinct factors are to be distinguished in the tendency to criticise our courts: the one relating to questions of efficient procedure, the other to the attitude of the courts towards matters that have in our time become burning questions. We cannot go to the whole length of agreeing with him in the assertion that the defects coming under the first head are to be charged solely to the bar, as distinguished from the bench; though unquestionably it is upon the bar, above all, that the duty devolves of bringing about a better condition. Laws bearing upon court procedure are in crying need of amendment, and lawyers—in and out of Legislatures—must put their shoulders to the wheel if this is to be done; but even as the law stands, much depends on both the temper and the ability of individual judges. As to the other class of grievances against the courts, Mr. Root says some things which it is eminently desirable that impulsive reformers should lay to heart. Impatience with decisions of courts based on an honest interpretation of constitutional provisions has, in many quarters, gone to mischievous lengths; and Mr. Root does not exaggerate when he declares that to indulge this disposition means nothing less than to place in peril our system of government.

The four candidates for Senator Simmons's seat, which becomes vacant next year, have entered into an agreement to keep the expenses of the contest as low as possible. While these terms may be lacking in exactness, they are in all probability quite sufficient to preclude any such expenditures as have disgraced recent Senatorial canvasses in more than one State. It is not necessarily a question of corrupt use of money. The argument as applied to a primary, or what is virtually a primary, as in this North Carolina contest, is rather the inability of a candidate without great resources to meet the legitimate cost of the struggle. In the absence of a law limiting the amount that may be spent, a gentlemen's agreement is a very proper procedure. Senator Simmons is a candidate for reëlection, and opposing him are Gov. Kitchin, ex-Gov. Aycock, and Chief Justice Clark.

With the official acceptance of the Court-House site in New York a truly notable struggle for an important public object comes to a happy close. The occasion should not be permitted to go by without a word of congratulation, for it teaches a lesson whose application is manifold and constant. And, what is perhaps most encouraging of all, the lesson is one that has been brought out in several widely different directions within the past twelvemonth. It is that in a course deemed important to the public weal, it is always worth while to make a fight, however heavy the odds may seem against it. There was a time when it seemed the manifest destiny of City Hall Park to be sacrificed, for good and all, to the same spirit that had long ago caused it to be impaired and disfigured by the Post Office building and the Tweed Court House. But no sooner was a determined stand made against this danger than it turned out that the forces of civic pride and civic foresight were capable of being rallied against it in a way that surprised even those most interested in the cause. They have now not only repulsed the threatened invasion, but opened the way for the complete restoration of the park, and for a future development of public buildings and grounds at the heart of the city.

Replying to expressions of fear from Southern farmers that negro tenants will become discouraged with their occupation because of the low price of cotton, a Southern newspaper points out that the present situation is not unprecedented. For many years prior to 1909 such tenants got along on the proceeds of their cotton crops, and they did so without the advantage of owning their horses and mules, as many of them do now. Nor did they "ride around in rubber-tired buggies, as many of them do now," or have large bank accounts, "but they kept on ploughing." The chances are, in the opinion of this observer, that the negro tenants are taking the existing depression about as calmly as are those for whom they have worked. A pertinent question in this connection is, Where can the negro go if he deserts the farm? Wages are higher by the day in employment upon construction work, but "there is an even balance about the farm-life that appeals to the negro of good sense and thrift and enterprise." If all this speaks well for the negro, a word of commendation for both races is found in the statement that the relationship between the negro farm-hand and the farmer has been improving.

The completion of the over-sea railway to Key West is admittedly "one of the most remarkable achievements in railway construction in the world." Built on keys and on coral rocks, this great viaduct is literally a road across the sea. By it twenty hours are saved between New York and Cuba, and Key West, 156 miles from the city of Miami and 55 miles out in the ocean, is riveted to the mainland. It is a notable step forward in the peaceful American advance into the Caribbean, and may make Key West an important transfer station for some of the liners that are planned to use the Panama Canal. For his faith in this extraordinary enterprise, his courage to carry it out, and his ability to raise the means, Mr. Flagler deserves the acclaim he has received.

The reception accorded to Synge's best-known play in the redeemed city once more invites the attention of the world to the hollowness of the Philadelphia legend. In Philadelphia, street-railway strikes are exceptionally violent. In Philadelphia, the new gospel of efficiency first saw the light. In Philadelphia, the baseball champions of the world seem to have taken up their permanent abode. And now the Irish poet's "Playboy," traversing this western world to a crescendo of riot and assault, attains its climax of egg-throwing in Philadelphia. That the tradition of Philadelphia's soporific atmosphere should persist in face of such repeated and startling demonstrations of vitality and progressiveness, simply shows that it is much harder to kill a legend than the originator of the legend. The most sophisticated of Babylons might be proud of the way in which the decency of the stage has been vindicated in Philadelphia by means of a warrant of arrest against the Irish Players sworn out by a saloonkeeper.

Wordsworth long ago contended that literature could not afford to be snobbish in the choice of its subject-matter. In his desire to redeem the commonplace he found as great poetic possibilities in a washtub as in a conch shell. And since his time the danger of neglecting the humble actual conditions of life has disappeared forever. With Zola, Gorki, Tolstoy, and Ibsen hammering out the destinies of the poor, the literature of the nineteenth century closed in a democratic pæan. The twentieth century, however, promises much greater gains in this direction. Elated apparently by the interest which writers have shown for them, the humble have taken to setting forth their own conditions. A seamstress presents the simple terms of her life in France and receives a prize. A switchman tells what his duties were, and all the periodicals offer him their columns. Now come "The Diary of a Book-Agent" and the autobiography of a travelling salesman, "Fifty Years on the Road." This we doubt not is carrying the movement farther than Wordsworth ever intended it to go. With his belief in the high calling of the writer, he was glad to have poor Michael or a Highland girl speak out, but he preferred to do their writing for them. Before the century is over it may be expected that even stones and running brooks will find some way of doing their own preaching.

A practical solution for a problem that the daily press has to meet every day and has not yet succeeded in solving, is suggested in President Butler's remarks on the character of college presidents:

> All college presidents are liars *ex officio*. I remember, some years ago, when my dear friend Dr. Canfield became chancellor of the University of Nebraska, he was called a liar by a local newspaper within thirty days. He was walking with President Eliot of Harvard one Sunday afternoon, while we were all together attending an educational meeting, and Mr. Eliot said to Mr. Canfield: "Well, Canfield, I see that you are a liar." "Yes," said Canfield, "I am," and added, "I suppose, Mr. Eliot, they have often called you a liar?" "Oh!" said Mr. Eliot, "worse than that; they have proved it."

Hence it is as plain as daylight that hereafter, in sending a reporter to the office of the *Outlook*, or setting a man to write a story about the Contributing Editor of the *Outlook*, one should get a college president for the job and avoid all possible differences of opinion.

At the banquet of the Booksellers' League held in New York on Wednesday of last week it was admitted that the

book business needed stricter ethics. Readers who are looking for good books are growing tired, it appears, of being misled, and booksellers resent being made the dupes of the deception. No less startling was the picture drawn by the president, Mr. B. W. Huebsch, of the general reading public:

> Only a handful of people ever read books worth while. There is, of course, quite a demand for trash, but the fact remains that the masses read absolutely nothing; there is an alarmingly wide chasm, I might almost say a vacuum, between the high-brow, who considers reading either as a trade or as a form of intellectual wrestling, and the low-brow, who is merely seeking for gross thrills. It is to be hoped that culture will soon be democratized through some less conventional system of education, giving rise to a new type that might be called the middle-brow, who will consider books as a source of intellectual enjoyment.

What a relief it would be to hear of a forthcoming story: "This is slop, and is recommended to the serious-minded at those times only when they are too tired to think or feel."

Young Mr. Shuster has not left his gift of plain speech behind him at Teheran. In an interview given to the Vienna newspapers, he minces no words about the part Great Britain has chosen to play. Persia, Mr. Shuster declares, is ruled from the Russian and British legations, where the signs of a reawakened national life were anxiously scanned and expeditiously stamped upon. The profit goes all to Russia; for it is within the Czar's sphere of influence that nearly all of desirable Persia, including the capital, is situated. Great Britain is presumably content with her station on the Persian Gulf and a free southern route into India. But of what avail is it to have brought Russia's influence several hundred miles nearer to that jealously guarded trade route? In the *Contemporary Review*, that veteran and well-informed student of international affairs, E. J. Dillon, declares that Persia was mortgaged long ago to the two Powers, and that only the inevitable is now taking place. What has really happened is that Persia's unexpectedly setting out to pay off the mortgage and rebuild her house so alarmed the covetous mortgagees that they did not hesitate at highway robbery to keep the redemption money from being paid.

The Socialist showing in the supplementary elections for the Reichstag has been productive of a double surprise. After the outright capture of sixty-six seats in the first series of contests it seemed that the reballotings would bring the Socialist strength up to the maximum of their preëlection expectations, or 120 seats. But the first day's results in the secondary elections were disappointing: the Socialists gained only seven out of seventy-five seats contested, and their indicated representation in the Reichstag sank to 85 or 90. This forecast in turn was upset by a remarkable succession of victories in the second day's reballotings, which brought the Socialist strength up to ninety-nine, and with thirty-five seats still to be fought for, fixes their probable number in the next Reichstag at 110. There seems to be little doubt that Herr Bebel's followers will constitute the strongest single party in the Diet, and with all other parties of the Left will be able to outvote the Conservative-Centrist coalition to which the Government has looked for its majorities during the last two years.

On the subject of the recent Moroccan negotiations between France and Germany, there is an extremely frank and persuasive statement in last week's *Outlook*, by the German Ambassador at Washington, Count von Bernstorff. The German Ambassador declares that "no one who knew the conditions in Morocco as they really were, and not as one perhaps wished them to be, could entertain the slightest doubt that a French protectorate must in course of time be established." It follows that "for the German Government there was only one way open to protect German commercial interests in Morocco, viz., by securing France's protection of these interests." No difficulties would have arisen between Paris and Berlin had it not been for the French colonial fanatics, who "could not await the ripening of the Moroccan fruit." There followed the French expedition to Fez, and Germany's move at Agadir. One query is suggested by Count von Bernstorff's statement. He declares that there could be no doubt as to the "price" Germany would ask, namely, increased guarantees in Morocco and compensation in the form of colonial territory. As to the first demand there can, of course, be no question. But if, as the German Ambassador admits, a French protectorate in Morocco was logical and inevitable, why should "compensation in the form of colonial territory" be accruing to Germany?

The French Government now faces the task of organizing its protectorate machinery in Morocco. The precise forms in which the French domination will be expressed are of no great importance. There is little variation to the protectorate scheme of government. The native ruler remains as nominal head of the Government, with European "advisers" to keep him in the narrow path. The finances and the army pass under the foreign control, and in the case of the latter we usually find the building up of a native military force under European officers. But in the case of Morocco, it is recognized that there is the serious work of pacification to go hand in hand with the business of organizing a government. The French troops are at present in control of the maritime province of Shawia, the principal capital, Fez, and the frontier zone between Algeria and Morocco. Elsewhere there may be severe fighting before the French authority is completely established. An army of 100,000 men may not be too large for the work in hand.

The introduction of votes for women on a basis of full equality with men is foreshadowed in the speech from the throne at the reopening of the Swedish Parliament. The Scandinavian countries are to-day in the forefront of the movement for woman's emancipation and seem determined to hold their place. Women are now on an equal footing with men in Finland and, with certain modifications, in Norway. It is natural enough that woman's claims for political recognition should make their way first in those countries where the women, taken as a whole, come nearest to the cultural level occupied by the male electorate. But it is something more than school education that is at work. The social life of Scandinavia knows much less of the traditional restrictions and proprieties that characterize the relations of the sexes the world over. From Scandinavia we have come to expect morbid treatment given by women to the problems affecting woman's welfare, sincerely in the case of an Ellen Key, sensationally in the case of a Karin Michaelis.

ROOSEVELT THE PLOTTER.

Evidence accumulates every day that Mr. Roosevelt is engaged in an intrigue to defeat President Taft at all hazards. The plotting really began from the day of Mr. Taft's inauguration. The audacious man had refused to take orders from his predecessor. He had the impudence to suppose that he was President, not Roosevelt. That was enough. Taft would have to be taught the perils of insubordination. When Roosevelt sailed for Africa, he sent a telegram pledging "loyalty" to Taft, but it was another case of "Art thou in health, my brother?" and then the dagger under the fifth rib. From the beginning until this day, Roosevelt and the Roosevelt circle have devoted themselves to undermining the President. Their course has been one of consistent belittling and backbiting. Some of his measures they have attacked openly; others they have sought to discredit by the meanest insinuations in secret. With less generosity than a red Indian, with unconcealed disloyalty to friendship and to the party, they have gone about by every means in their power—by trick and hint and sneer and scorn—discrediting Mr. Taft so as to make his reelection seem impossible, and so to rob him of the renomination to which under all the rules and proprieties he is entitled. It has been one long exhibition of faithlessness and truculence.

The hope was, of course, to alarm the party managers and to frighten Taft off the field. It was believed that by ceaseless iteration of the assertion that he could not be elected, he would become so discouraged or disgusted as to withdraw from the contest. That scheme, however, fell to the ground. The President announced that nothing but death could keep him from fighting for a second nomination. This dashed the first confident expectation of the conspirators. But they soon concocted another plan, and that is now in full operation. The past week has seen it uncovered. Briefly, an organization was formed and heavily financed to place Roosevelt in the running. Of its intent and methods we may judge by what it has set about doing. The aim was to create, by the lavish use of money and all kinds of artful appeals to the disgruntled and the expectant, the appearance of a "spontaneous" demand for Roosevelt in various parts of the country. There was to be cleverly engineered a self-moved uprising of the party for Roosevelt, which would compel him to yield his personal wish not to be a candidate. And we have duly had the carefully prepared voluntary "demonstrations" in Missouri and Illinois, in Ohio and West Virginia and elsewhere. The bombs which the Roosevelt dark-lantern men had painstakingly planted were exploded according to an agreed programme.

And who are the men, with what motives, that are now working desperately to pull down the President, in order to set up Roosevelt? There are, of course, exceptions among them. A few are of the sort who still cling to their old ideals of Roosevelt. But the majority of those who are supplying the funds and instigating the plot are financiers of the standing of George W. Perkins and Dan Hanna, with some rich men under indictment; while former office-holders and eager candidates are numbered by the hundred. Look up the record of many of the men who are now clamoring for Roosevelt as the greatest citizen of the world, and you will find that they are politicians out of a job, postmasters dismissed for cause, or district-attorneys whom Roosevelt himself was on the point of ousting for drunkenness, and whom President Taft refused to continue in office. And every little fellow who wants to be sheriff or county clerk, every man among the bigger fry who is ambitious to go to the House or Senate, and who feels that under present conditions he has no chance, is prompted to add his voice to the irrepressible and unforced demand of the people that Roosevelt be a candidate once more.

That he will be is as yet by no means certain. It is plain that he does not relish the idea of having to go out and fight for the nomination. And if he thinks that his winning is doubtful, he will surely not rush into the battle. Nor would he desire a nomination that might be followed by defeat. It is, therefore, not at all impossible that, if the tide does not a little later seem to be setting in his direction overwhelmingly, he may dig up and publish a letter written some weeks ago and declaring that he would under no circumstances be a candidate. Such astute manufacturing of evidence in advance, to be used only if the occasion requires, is a manœuvre with which he has made us familiar. Yet it is not these contingencies, one way or the other, that are most attracting the attention of sober-minded men throughout the land, but the nature of the proceeding itself in which Mr. Roosevelt is now engaged. He is working like a mole underground. The most open, manly, and chivalrous of human beings is acting like a fellow in the cellarage. Without reason given or cause assigned, he is pushing on a plot to undo one for whom he has professed the most ardent friendship and a President whom he has certified to his fellow-countrymen in the most glowing words of his vocabulary. This is the thing which is startling all who believe in honorable political methods, and is rapidly heaping upon Mr. Roosevelt a burden of suspicion which even he cannot long endure. There are many different ways in which he would like people to think of him, but he cannot wish them to regard him as a treacherous friend and a midnight plotter.

THE PRESIDENT'S EFFICIENCY MESSAGE.

To the President's sweeping recommendation for the extension of the merit system, contained in his message of last week, a double interest attaches. The scope of the reforms he proposes—which indeed he has indicated on former occasions—is of itself such as to demand the attention of the nation. His proposal contemplates nothing less than the extension to "heads of bureaus in the departments at Washington, and of most of the local offices under the departments," of the same system of appointment, retention, and promotion for merit as now applies to nearly all the positions of lower grade in the Federal service. The President explicitly faces the fact that this change must involve the relinquishment by the Senate of its power of confirmation as to these higher offices and the abandonment of fixed terms of years for their tenure. "So long," he says, "as appointments to these offices must be confirmed by the Senate, and so long as appointments to them must be made every four years, just so long will it be impossible to provide a force of employees with a reasonably permanent tenure who are qualified by reason of education and training to do the best work."

But a distinctive interest is given to the recommendation by the fact that it

occurs as incidental to the question of efficiency and economy, and not primarily as a measure of general administrative or political reform. The message deals in the main with the labors of the Efficiency Commission, which has been successfully looking into details of departmental management and instituting changes which, as the President shows, have resulted, and will result in the future still more, in important savings for the Government. The aspect of the beneficial results of a system of appointment and promotion for merit which is thus brought to the front is one that in these days will find ample recognition. The idea of the heightened efficiency attainable, even in energetically conducted private enterprises, by the adoption of carefully thought-out methods, has recently acquired a prominence never before known. That the merit system, so long derided as a hobby of impractical doctrinaires, should thus be brought into effective relation with a movement which is the quintessence of practicality is striking testimony to its recognized success in actual experience. In the earlier days its advocates rested their case chiefly on its necessity for the purification of politics, and they were eminently right in so doing; but they also stoutly asserted its value from the standpoint of efficiency, and they have been abundantly vindicated.

The President enumerates several ways in which the extension of the merit system to the higher posts in the Government service will conduce to efficiency and economy. All of these are highly important; but one that he does not specifically name is perhaps the most important of all. Invaluable as has been the advance that our present methods embody, as compared with the old spoils system, the civil service has thus far presented an anomaly the removal of which is necessary to its complete vitalization. The subordinate employee sees fitness rewarded by appointment, and fidelity and efficiency rewarded by promotion, but sees this process end precisely at the point where its results might be expected to be most significant. The skill and experience he may have acquired in years of service are ignored by the Government when it comes to the filling of posts. At the head of the bureau, or the post office, or the Custom House, or the Internal Revenue office, is placed a man brought in from the outside and appointed for personal or political reasons. The difference, not only as regards the qualifications of these heads of offices, but also as regards the ambition and energy which may under such circumstances be expected of subordinate officials, is obvious. The adoption of the President's recommendation would mean a really fundamental step in administrative progress.

If that step should be taken, our country would be entering upon no novel experiment, but simply doing that which the Government of every advanced modern country except our own has long practiced. The ground has been thoroughly laid for it; the merit system within its present very large domain has been tried and tested, and at no time has it been found necessary to take a backward step. With such a record, we must not rest content at a half-way stage. What England and Germany do as a matter of course, it ought now to require no tremendous effort to bring our country to do. What remains of the spoils system in the Federal service still has consequences the same in kind, though not in degree, as the whole overshadowing growth had in the old days; and the functions of government have so enlarged, its expenditures have become so enormous, that the interest of the people in procuring the best possible administration is of more consequence than ever before. The advance pointed out by President Taft is bound to come sooner or later; but he has done a great national service by pressing it upon the attention of Congress, and thus speeding the time when it will be effected.

IRISH HOME RULE.

The next session of the British Parliament does not begin until the middle of February, but the opening guns in the Home Rule campaign have already been fired. The question will undoubtedly be as bitterly fought as any issue that has come before Parliament during the present generation, not excepting the contest over the Finance bill of 1909 or the limitation of the powers of the House of Lords last year. Both of these questions, though of the highest importance in themselves, were in a sense the preparation for the coming battle. It had long ago been recognized that Home Rule was impossible if the upper house retained its veto power on legislation. And it was the Lords' ill-advised eagerness to bring their position to a test that was partly responsible for the rejection of the famous budget. As the Unionist party would describe it, Home Rule is the price paid by Mr. Asquith to Mr. Redmond for being allowed to remain in office. The Liberals, on the other hand, would call Home Rule merely one feature of the democratic programme of which the Parliament bill, Old Age Pensions, and Lloyd George's Insurance bill formed other parts. Even the Liberals would not attempt to maintain that without Mr. Redmond's support any portion of their programme could have been made into law. But if every political alliance for mutual advantage is a bargain, the Liberal-Labor-Nationalist alliance in Parliament can afford to stand up under the charge. At any rate, the question has by this time gone far beyond words to realities.

There is one consideration which at first sight would seem to preclude the probability of a violent contest over Home Rule. The question has already been brought before the country, though indirectly. In both general elections of 1910, the Opposition did its best to make Home Rule the paramount issue. It argued, and with undeniable force, that the shackling of the House of Lords meant the break-up of the Union; and for that matter, the Liberals were not greatly concerned to deny the charge. If, then, the country refused to turn Mr. Asquith out of office, the inference would be that the people either approved Home Rule or were indifferent to it. Either supposition would indicate clear sailing for the new bill. But when all is said and done, there were other issues before the electorate in 1910. If Home Rule by itself had been submitted to the people there would probably have been a more emphatic expression of opinion, one way or the other. The Opposition will probably argue that the present Parliament has no mandate on Home Rule. It will be the opposite of what they argued in 1910, but consistency in times of stress is a minor consideration. The Unionists' chief hope is undoubtedly in a referendum on the subject.

At the same time it is not a very strong hope. The present Government, after two general elections within a single year, is content to sit tight. It will

try to pass a Home Rule bill in three consecutive sessions, and thus make it law without the consent of the Lords. And the Unionist attack, from present indications, will be directed not so much against the enactment of any bill as against the enactment of a bill such as Mr. Redmond wants. Protestant Ulster, of course, has been threatening fire and sword if Home Rule comes to pass. Sir Edward Carson still talks of marching from Belfast upon the Dublin Parliament. Political feeling, according to the latest reports, is running high in the north of Ireland. But, on the whole, it may be said that the threat of civil war has failed to impress the country at large. Instead of war, Ulster is now threatening pacific resistance. It will refuse to pay taxes to the Dublin Parliament, and see what the Catholic majority is going to do about it.

But the Ulster Protestants are not content to wait until the Dublin Parliament becomes a fact. The *Spectator* announces a policy which may find expression in the coming debates in Parliament. "We are glad to have absolute warrant for stating," says the *Spectator*, "that if the Government are mad enough to insist on passing, as well as producing, a Home Rule bill, the men of Ulster will demand that the measure shall not operate within their boundaries." It is an extraordinary proposal which calls for the splitting up of Ireland into two political entities, with the Catholic provinces of Munster, Leinster, and Connaught under a Parliament at Dublin, and Ulster retaining its present status as a section of the United Kingdom under the direct authority of the Parliament at Westminster. The reasons cited for the proposal are familiar. The Protestant minority will never consent to be governed by the Catholic majority, and prosperous Ulster will not let itself be plundered by the tax-gatherers from Dublin in favor of the poverty-stricken provinces of the south. The *Spectator* is aware of a weak point in its own argument, and attempts to explain it away. Even "Protestant" Ulster is not really Protestant. In that province, too, the Catholics are in a majority. It is only in Belfast and certain counties that the Protestants are in the ascendency. Hence the bill should provide that any county which refuses to come under the Dublin Parliament shall be at liberty to retain its present status. The *Spectator* admits that the Government cannot accept this demand; but it argues that the claim will force the Government into a position where it must either abandon Home Rule or be prepared to enforce it at the point of the bayonet.

To the outside observer, the *Spectator's* demand is quite as impossible as that journal admits it is. What is not so apparent is that bloodshed is the only alternative. The debates in Parliament will bring forward the question why the Ulstermen, even though they are in a minority, should have so little confidence in their superior political training, their wealth, and their powerful backing in England, as to foresee themselves utterly subdued and pillaged by the Irishmen of the south. Is it conceivable that two-thirds of a nation will proceed to oppress and plunder the remaining third? Is it conceivable that the Imperial Parliament will tolerate any such policy? The fears of the Ulstermen give the impression of being partly hysteria and partly deliberate exaggeration for political effect.

WITHHOLDING PUBLIC RECORDS.

The battle now on in the War Department between Dr. Ainsworth, the Adjutant-General of the army, and Dr. Wood, the Chief of Staff, is, curiously enough, of especial interest to historical students and writers the country over. Not because they care which of these former medical officers runs the army, but because they are hoping that something will happen to remove Gen. Ainsworth from the control of the records of the War Department. With the rise of this remarkable officer most newspaper readers are familiar. Originally an assistant surgeon in the army, he was assigned in 1887 to the Record and Pension Bureau, and there his special genius quickly manifested itself. Here is his achievement as set forth in "Who's Who":

> Devised and introduced the index-record card system, by means of which all military and medical records have been reproduced in such a way as to make the full history of any soldier immediately available. Upwards of 50,000,000 index-record cards have been prepared and placed on file. The adoption of this system has resulted in a permanent saving of over $500,000 per annum.

Now, this brilliant service to the Government has very properly been recognized. The War Department and Congress alike appreciated it, and so Dr. Ainsworth became successively colonel and chief of the Record and Pension Office in 1892, brigadier-general and chief in 1899, and Major-General and Military Secretary of the entire army in 1904, his title being changed to the historic one of Adjutant-General in 1907. For virtually the first time in the history of the service, this important position was given to a man who had never served in command of troops. Congress was, of course, willing, because Dr. Ainsworth's service had been of especial value to it. If a Congressman wished a soldier's record, Ainsworth got it to him in the shortest order. It might have taken weeks before, and sometimes months. But after Dr. Ainsworth took hold, order appeared out of chaos. The same has been true since Gen. Ainsworth has had entire charge of the records of the War Department. Let a Congressman desire any information and as many clerks as can be used on the task will work overtime, and the major-general in charge will wait until midnight at his desk, if necessary, in order to sign the letter. It is not surprising, therefore, that Congress should have gratefully included in the first draft of the pending Hay Army bill a provision that, four years hence on reaching the age-limit, Gen. Ainsworth should retire as a lieutenant-general, a rank reserved prior to the Spanish War for Washington, Scott, Grant, Sherman, Sheridan, and Schofield.

Unfortunately, when a man of ability has devoted his life to a single thing like a card-catalogue system, he is very apt to confuse the means and the end. Gradually, so the historians have found, the all-important thing in Gen. Ainsworth's mind has become the preservation untouched of that record. All the public documents under his charge have become like so many typhoid-fever patients, to be nursed with tenderest care and to be seen only by the nurses and the doctors. To this rule the only exceptions have been Congressmen or their especial friends. Let a mere teacher of history, an insignificant college professor, or a writer of books, seek access to original records, and Dr. Ainsworth knew what to say. Brisk, sharp, and to the point was the never-failing rebuke for such audacity. In only one case known to us was this guardian of the

threshold passed; the historian came armed with a letter from the Commander-in-Chief in the White House, whereupon the sentries fell back.

But the ordinary seeker after information in the archives has no such luck. If the matter about which he inquires has been printed, he is referred to that publication, and if he objects that he is after the originals, and not a transcript which may or may not have been altered, his objection is overruled with the finality of the Supreme Court. The other day a contributor to the *Harvard Graduates' Magazine*, who wished to compile the records of the graduates of Harvard in the army of the United States, was rash enough to think that the records of the War Department were there for precisely this kind of purpose. The Adjutant-General quickly undeceived him, and he writes sadly as follows:

> The Adjutant-General of the War Department will not furnish information contained in the archives in his custody. The following endorsement appears on one of my applications for facts: "Under the rules of this Department the information requested cannot be furnished for historical purposes." I digress to say, I am willing to pay public servants for any work done at my request, and submit an impertinent inquiry: Under what "rules" do pension attorneys with sordid and sinister motives acquire knowledge of this character?

Not so long ago Dr. Dunbar Rowland of the Department of Archives and History in Mississippi attempted to get material from Gen. Ainsworth for the military history of his State. He received the usual refusal, but was not to be put off so easily. Then Gen. Ainsworth used a trump card. "It is simply out of the question," he wrote, "to permit any one not under the control of the Department and not trained in the use of card files to have access to those files. . . . To make an exception in your favor would open the door to a flood of appeals from others who would demand, and rightfully, that similar favors should be shown to them." "You must regard," concluded this autocrat, "the decision as final." Dr. Rowland was impertinent enough to remind Gen. Ainsworth that the State Government had aided him in perfecting the records of the War Department, and declined to accept any decision as final which refused him access to the public records.

But his efforts were in vain, and Gen. Ainsworth's rules are now applied to all historical material in the War Department. For example, no one can get at the reports there of Gen. Robert E. Lee, nor at the papers of Jefferson Davis. And complete historical writing about the latter is impossible at present, until Gen. Ainsworth is overruled. To us it appears as if it should be only necessary to call attention to this grave abuse and to point out that in the Public Records Office in London searchers after historical material, whether from England or from the United States, enjoy the freest access to all records. The records are public property, and to be used as such. Card catalogues are good in their way, but the Department's worship of them has been carried beyond all bounds. Historical students the country over will gladly petition Congress to give Gen. Ainsworth his lieutenant-generalcy, but upon one condition—that he retire at once. Meanwhile, we can only advise those who want historical facts in Gen. Ainsworth's custody to seek them through Congressmen. We are told that this works well.

BUREAUS OF INFORMATION.

Among the many attempts to define the present age, the two most met with are extreme and quite opposed to each other. One waves aside antiquity as a blundering waste of good opportunity, and is all for the progress of the present; the other, with a sigh for the days that are no more, proclaims that man's mind has grown feeble with age. The first view is, of course, blind with conceit; the second recalls Edmund Spenser's "Teares of the Muses," in which he decided, at a time when English poetry was beginning upon a flight never since equalled, that there was little hope for its future. In the array of evidence which both sides have presented we are surprised that no inferences have been drawn from one important institution of our modern civilization—the more so because it might be made to point in either of the two directions. We mean the bureau of information.

Looked at in one way, it should bring great joy to modernists. It seems to indicate that the mind of man has not lost its capacity for storing up a mass of facts. Bacon took all knowledge for his province. But did Bacon have more at his tongue's end than the man who sits in the Grand Central Station and declares without pride or swelling the precise moment at which you can catch the next train for Hartford, New Rochelle, or Peru, Indiana? New trains are continually added, schedules are changed, but the position of informer is easily filled. Or what shall we say of that gentleman at the desk of the National Library in Paris in which there is no public catalogue of books printed before 1880, because this same gentleman can tell you what you are seeking if you come anywhere near the title? Or how shall we explain the floorwalker in the modern department store?

But there is another side to all this. The question is whether the very accessibility of information does not tend to relieve the ordinary man of the need of thinking altogether. It is all very well to plan for leaders who, with every convenience, work out titanic ideas, but if the fact-collecting masses cannot understand them, the superman thus created will be of little avail. At any rate, average man, it should seem from a wide range of instances, is being pampered. Formerly when a citizen heard the fire-bell, he counted the strokes and, consulting his brief guide to locate the neighborhood of the conflagration, tried to reason out whose house or shop it could be. It couldn't be Mr. Jones's shop, because he allowed no smoking on the premises; it couldn't be Mrs. Smith's house, since she had no open fireplaces. The chances were the reasoning would be faulty, but conclusions proceeded from premises, and the process of actual thinking took place. Now the moment a person is interested in a fire he calls up "Central" and finds out all about it. Oh, Central! mother of all bureaus! When the clock stops, there is no more the pretty calculation from the position of the sun that my lord will soon be home, and that it is time to put on the potatoes. Again Central is consulted, and Central always knows the "correct time." All of which may be better for my lord and for the potatoes, but scarcely for his lady's powers of thinking. Withal, the mind is becoming nervous and irritable. In Miss Abigail Athington's memory runs the incomplete stanza:

> Life is like a flower
> Turning toward the sun;
> Ah, if I had power
> To . . .

To what? To . . . she cannot endure

not knowing. Instead of sitting down and trying to determine where she learned that stanza, and so to piece it out for herself, she must write to another bureau—the Queries and Answers columns. And, sure enough, a subscriber from Nipissing, Mich.—the editor having given it up—completes the last verse.

It is no doubt comforting, even inspiring, to reflect that in any large community, or say, in a university town, can be found the answer to every reasonable question—that experts in all conceivable subjects are at your service when handy books of reference and "Central" fail. But it might perhaps be just as well for the mental fibre of the present generation if once in so often a censorship were put over questions, or if to any person were permitted only a given number a month. It would then come over mankind how little it depends upon its own powers of reasoning. Perhaps then the excitable maiden would refrain from inquiring, "At what time does the eight o'clock train for Buffalo start?"

REWRITING THE DECALOGUE.

A careful reading of Sunday sermons as reported in Monday morning newspapers shows that there is increasing interest in the Ten Commandments. Such interest manifests itself principally in the endeavor to revise the Decalogue by bringing its message into closer touch with the questions of the day. Clergymen are naturally the principal factors in the movement, though occasionally a President of the United States or a retired captain of industry takes a hand. The changes proposed are of all kinds, but it may safely be said that none of them runs towards a simplification of the Biblical phraseology. On that point, the language of Exodus leaves little to be desired. There is a fine epigrammatic sting about phrases like "Thou shalt not kill," "Thou shalt not steal," "Six days shalt thou labor," which gives them a place beside some of the very best things by Mr. Chesterton. The modern improvements tend rather towards amplification, addition, and substitution. Frequently a preacher will emphasize the necessity of a Decalogue of eleven, twelve, or even more commandments. Occasionally one of the ten original injunctions and prohibitions will be discarded as out-of-date. Most revisers, however, cling to the old number, contenting themselves when the need arises with substituting one of their own commandments for one enunciated on Sinai.

We have no quarrel with the men who are engaged in translating the words of the old Law into terms of the present day. There have been revised versions of the Bible, and one of them has seen fit to throw over completely the language of the Authorized Version in favor of the language that obtains, let us say, in the current magazines. We are not prepared to say where the line should be drawn in such modern revisions, or whether there should be any line drawn at all. In course of time it may become necessary to alter the Biblical text in accordance with Professor Lounsbury's conception of the evolution of grammar, and write, "Be not afraid, it is me," or "Moses stood and said, whom is on the Lord's side." Usage has the final word. If usage commands, whom will dare to say nay? Not us, for one.

To the extent, therefore, that the Bible is the handiwork of man, it cannot hope to be exempt from the universal law of the day which ordains that we shall give the public what it wants. If the public wants a Decalogue with twelve commandments in it, we presume the public ought to have it. If the public wants its moral law put into simplified spelling, that, too, will come in good time. Much less reason is there, consequently, for refusing the pulpit the right to give the public what it wants in the way of Ten Commandments trained on the specific issues of the moment. In spite of what we have said regarding the admirable simplicity of the language of the Decalogue, there is no denying that that interesting document is altogether too abstract for our own times, is sadly lacking in news value. What the times require is a Decalogue with a "kick" to it.

There is all the less ground for criticising the growing class of Sunday editors of the text of Moses, because the movement is distinctly in accordance with a principle which obtains everywhere in the modern world, and in this country more than elsewhere. This modern principle is that laws are primarily made to be amended, revised, and repealed, and only secondarily to be executed. Among us, if a law is not obeyed, we shrink from enforcing it. We rather pass a second law which also is not obeyed, but which at least gives voice to the people's dissatisfaction with the first one. Thus with the Decalogue. If its ten provisions are violated, add some more, or subtract some, or rewrite some, or change the order. It would be old-fashioned to be content with driving home the Ten Commandments as they stand. We need the touch of actuality, the specific case, the accusing finger. And, unfortunately, whatever inspiration rested upon the author of the Tables of the Law, the Decalogue does not make mention of insurance thieves, beef barons, and locked doors in factory buildings.

By this time, it has been made clear how far our sympathies run with the Decalogue revisers. It is only a word of warning that we would here inject. The thing is in great danger of being overdone. Unauthorized individuals are drawing up all sorts of Decalogues of their own, admirable enough in their way, but by their very multiplicity somewhat deficient as guides to conduct. There are numberless little Mount Sinais in action. We have Decalogues beginning "Thou shalt brush thy teeth twice a day and raise thy bed-room window from the bottom"; or "Thou shalt read faithfully the publications of the Bureau of Municipal Research." It is all very confusing.

FRENCH BOOK NOTES.—HISTORY.

PARIS, January 12.

"Valentine de Milan, Duchesse d'Orléans" (Plon—444 pages, 8vo, 7.50 francs), by Emile Collas, is an attractive book made possible by modern methods of historical study:

> I have made use of published works and of the manuscripts kept in our archives and libraries, printed books, and unpublished documents. I believe I have written conscientiously and impartially, otherwise this book would not be history but legend or romance. . . . I have indicated, I think, the certain or only probable character of the facts which have come before me.

The result is an enlightening "life and times" of a gentle, righteous, refined, and cultivated princess of Italy, who was married in her early youth to a French prince not unlike herself, though capable of princely infidelity. Together they had to struggle against a world very unlike themselves, vainly and in sadness at the time, but for their people's good, as the long run of time has shown.

Valentine Visconti, whose father was

shortly to become Duke of Milan, made her appearance in Paris, Sunday, August 22, 1389, in the coronation cortège of Queen Isabeau, who was to be her fiercest persecutor. The book opens with a minute picture of this royal procession, its personages and costumes, and the people's rejoicings, and of King Charles VI, already half-mad, dodging round street corners to look at it. The fatal dance of the Sauvages, the power of Valentine to soothe the King's fury and the Queen's accusation that Valentine was casting spells over him; the people's passion against her and her enforced exile from Paris; the birth of her son, the poet Charles d'Orléans; her relations with foreign ministers and her private life; the assassination in Paris of her husband, Louis Duke of Orléans, by Jean sans Peur, Duke of Burgundy; her return to Paris, and patient suit before the King to avenge her husband's memory; the capture of the city by Jean sans Peur and her death in new exile; the woes which her defeat brought on France until Joan of Arc, who also triumphed only in death, came to chase the English from France and crush the Burgundian; the coming of Valentine's posterity to the throne of France in the persons of Louis XII and Francis I; the troubling of her and her husband's bones in the great Revolution, and their final dispersion in the new Revolution of 1848—all this furnishes material and local color and plots for any number of historical romances, yet it is history quite authentic. "Every one knows the name of Valentine of Milan; no one, or next to no one, knows her history. . . . It had not been written; I have tried to give it in this volume."

Louis Batiffol, whose successive volumes, documentary and readable, have made him a chief authority on Louis XIII, takes up a side question, "Were Anne of Austria and Mazarin married?" in the *Revue Hebdomadaire* (December 23, 1911). It has a certain actuality from recent discussions of the correspondence between the two; and in France even century-old history is so largely controversy that it is still sometimes insinuated Louis XIV might well be son of the Italian Cardinal and not of the Bourbon King. There was no great impediment in the way of their marrying after the death of Louis XIII, for Mazarin was not a priest; but M. Batiffol brings out all the improbability of it.

Richelieu on his deathbed pointed out Mazarin to the King as the only man able to save the political situation; and the King in turn made his Queen, Anne of Austria, promise not to give up Mazarin after his own death. Louis XIV lived under the two until his twenty-third year, evidently without suspicion, although his love for his mother cannot be doubted. Madame de Motteville, the close companion of Anne of Austria's widowhood, in her Memoirs, which have all the air of sincerity, seems never to have heard of any rumor of the kind; and Cardinal de Retz, who loved neither the Queen nor Mazarin, and was likely to have known, was evidently equally ignorant. It was only when the Fronde with its agitation against the Cardinal's policies began, that the idea was broached as an easy and popular explanation of his power. To make it more credible, it was added that the "secret but not clandestine" marriage had been celebrated by Père Vincent (St. Vincent de Paul)! All this went no further than a *mazarinade* at the time; but sixty years later it fell somehow into the heavy German consciousness of the Princess Palatine, Duchess of Orléans—and she hastened to accredit it before posterity.

The letters between the Queen when regent and the Cardinal (both were between fifty and sixty years of age) were written in a cipher which Mazarin himself complains he cannot always read. By very uncertain transcriptions, a school of higher criticism has everywhere translated their undoubted "amitié," which seems natural enough under the circumstances, into a supposed "amour," which M. Batiffol argues from known facts is altogether improbable. The date and circumstances of the marriage of Louis XIV and Madame de Maintenon have never been known; yet no one (except Mark Twain) has doubted it, for the sufficient reason, among others, of its contemporary acceptance shown, for example, by the severe and knowing Saint-Simon. For Anne of Austria and Cardinal Mazarin there is not a trace of anything of the kind. Cardinal de Retz said of historians of his time:

> I admire the insolence of persons of no condition who imagine they have penetrated the inmost hearts of those who take part in great affairs. I found one day on the study table of Monsieur le Prince (le Grand Condé) two or three works of such servile and venal souls, and he said as he saw me looking at them: "Those wretched writers make of you and me what they would have been in our places!"

"La Mère de Napoléon" (Fontemoing —315 pages 12mo, 3.50 francs), by C. de Tschudi, should be welcome to the many interested in the mother of Napoleon. Madame Mère, as she was called, never put on any of the numerous crowns he distributed among his eager family. At most, she saved the money that came to her with the pathetic foresight of a widow who had brought up her wonderful eight children in straitened circumstances. "*Pourvu que ça dure* (provided it lasts)!" was her saying all through the days of glory, in which—

> The Kings sat down to dinner, the Queens stood up to dance.

She lived until 1836, more than twenty years after it ceased to last, nearly fifteen after her Napoleon died in St. Helena. Another Emperor Napoleon, who came later for eighteen splendid years, had her body taken back to her native Corsica in 1857 and built over it the chapel tomb with the proud inscription in letters of gold on black marble—*Mater Regum*.

Baron Larrey, son of Napoleon's surgeon, has written of her in two volumes and Frédéric Masson has dealt with her in his extraordinary writings on Napoleon's family. This little book of Madame de Tschudi is easy reading and carefully compiled from all that has hitherto been published. It tells her story, domestic, maternal, heroic, with sympathy, even in the Corsican family's vendetta against Josephine (they went further and found worse in Marie Louise). Particularly interesting are the chapters of the life in Corsica, where Doctor Johnson's General Paoli appears agreeably for those who like to "situate" their historical personages in generations of their own acquaintance. The father was a spendthrift, loving wine and women and variety of life like his youngest son, the Jerome Bonaparte who lightly married his Baltimore wife, and as easily left her. It is characteristic that the nearest friend of Napoleon's mother, until death separated them in 1835, was the German princess whom Napoleon imposed on Jerome as a wife. This could hardly have been the foresight of duration, although Catherine of Westphalia alone, among the Bonaparte wives, left posterity able to furnish French Pretenders down to our own day. The next generation may see the American line of Betty Patterson left alone to perpetuate the name.

Madame de Tschudi notes that, although Napoleon's mother consented to sign the legal protest, which was effective in French law, against Jerome's American marriage, she long hesitated to repudiate its validity, which the Pope recognized to the end. She does not seem to have had the same scruples about Josephine's marriage, which Napoleon took care should not be judged by the Pope, but by the local *officialité* of the diocese of Paris. The latter case brings up another unsettled question of history, which even Henri Welschinger does not seem to have appreciated in his work on the "Divorce of Napoleon." It concerns the marriage of Marie Louise, with Neipperg, for which it has always been difficult to assign a date. Their son, the late Prince de Monte Nuovo, whose legitimacy was not questioned from the first, was born a few weeks after Napoleon's death; but Marie Louise's remarriage was long before a matter of common report. Even the House of Austria had to keep up a certain observance of the proprieties. Did they not act on the public sentiment that the Church, that is, the Pope, had never recognized the an-

nulment of Josephine's marriage with Napoleon?

In any case, Napoleon's mother seems to have entered cordially into her son's second matrimonial venture, although she took occasion to warn him that Marie Louise was *nulle* if not worse. Madame Mère shared her son's exile in the island of Elba; and to her he confided his departure to try his fortune over again in France. After Waterloo, the actor Talma, who was the reader of Queen Hortense, saw the last act of the tragedy at Malmaison, where Josephine had lately died. Napoleon and his mother bade farewell for ever. Two tears rolled down her cheeks as she clasped his hand: "Adieu, my son!" Napoleon answered sadly, "Adieu, my mother!" And they kissed for the last time. That was all, for real life has no rhetoric.

"L'Impératrice Joséphine" (Calmann-Lévy—360 pages, 8vo, 7.50 francs), by the Baron de Méneval, is a life taken "from the testimony of her principal historians." The author is a grandson of Napoleon's secretary, whose memoirs he has edited. He tells his story clearly and with fair completeness, from its beginnings in the West Indies to the end while Napoleon was exiled in Elba. The only unpublished material which he seems to have used for this very readable and favorable life of Josephine is a collection of letters of Queen Hortense, which he has in his possession. Perhaps the most striking words are those in which the daughter defends her mother from the point of view of history. She had lived to see the irruption of what would now be called "interviews" into sober history from the dead past. "I have read all the works which have appeared," she writes in 1825; "the conversations have not common sense. How can you repeat what was scarcely heard, so fugitive that tone and features sometimes say more than language . . . It is new and piquant to speak evil of my mother—for myself, I have long been used to it. For that matter, we are great puppets made to play to amuse the passing reader and gain money." In 1834 she writes: "History is already beginning for us—and where are they looking for what concerns us? In libellous pamphlets which have been left unanswered since 1815." The mother of Napoleon in her exile had long since used her common sense and refused to see Madame de Staël: "She will go off and write things which she will say I said to her!"

A pretentious play of 1911, professing to be historical, but only insolent with the passion of historical controversy, has tried unsuccessfully to bring before the Paris public the old stories of Josephine and a Monsieur Charles, supposedly an officer under Napoleon at Milan. Henri Welschinger has remarked in a few caustic words of year-end review that there is no proof of the story nor even of the identity or existence of the man! Our author has taken less account of these controversies than Madame de Tschudi, who finds in Josephine's relations with Barras an excuse for the hostility of the Bonaparte women towards her from the start. His book will ground the reader pleasantly and with a knowledge of authentic testimonies in the history of one whose life he well sums up:

> In spite of reproaches deserved or undeserved, Josephine in the people's memory remains one of the best-loved sovereigns of France. She was the good genius of Napoleon. . . . In spite of the efforts of iconoclasts to mutilate the features of the gracious Creole, Josephine will remain the "good Empress" for those who place at the head of all qualities those which come from the heart—gentleness, kindness, goodness.

S. D.

NEWS FOR BIBLIOPHILES.

There lies on the table before me a slender novel with paper cover in red, white, and blue. It bears the imprint of a Chicago publisher and the date 1908. On the front cover is an illustration of a man and woman kissing with all the abandon of stage kisses. There is also a frontispiece of a similar nature, and the advertisements of Post Card Booklets that occupy the vacant pages are not the most refined company for any self-respecting writer to keep. There is no indication of an author, however, for this volume has evidently found its readers among a class that do not consider matters so impertinent as authorship. The suggestive title (in red letters) is "Love Adventures of a Milkmaid." Poor Mr. Hardy! how he might shudder to recognize his offspring in such guise! For this is none other than "The Romantic Adventures of a Milkmaid," by the author of "Tess of the D'Urbervilles." It was first published, as we learn from Mr. Lane's bibliography of Hardy, in the *Graphic Summer Number* for 1883, and later appeared (January 25, 1884) in the pocket edition of George Munro's Seaside Library. Mr. Lane gives no account of its later history; and he has missed several of the earlier links in the chain. The book was not first issued by Munro in January, 1884; there was an earlier issue of the pocket edition on December 15, 1883. Still earlier was the Seaside issue, No. 1686, not in the pocket edition, dated July 14, 1883. But most interesting of the intermediate versions is what is no doubt the first American issue of the story, in Harper's Franklin Square Library, June 29, 1883, which reproduces the four full-page illustrations (three of them signed by C. S. Reinhart) of the *Graphic*. The American versions of the text are full of printer's errors, each adding some to those of its predecessor, until we reach the pocket edition of Munro, many times reprinted since 1883; one could hardly imagine a text more badly printed, more full of mistakes, more distressing to read, than this, which is in all respects identical with that of the Chicago "Love Adventures."

Harpers have long since discontinued the publication of this story, on request of the author. It seems clear that Mr. Hardy wished to have it suppressed, regarding it as a youthful indiscretion. Like the king in the fairy tale, he has abandoned his child in the woods; but things have gone quite according to the usual formula. The babe has been found by some charcoal-burner; has been brought up in obscure and humble circumstances; has grown into a stalwart and attractive youth, *le bel inconnu*. All that remains is the inevitable discovery of parentage, return to the palace, and investiture with princely regalia.

The tale is not altogether unworthy of its parentage. Being in a comic vein not very congenial to Hardy, the narrative is not to be taken seriously as a transcript from life. But its persistent survival shows that its incidents are such as to hold a reader's interest; and there is great charm about the early chapters, written much in the spirit of a fairy tale. We make the acquaintance of a mysterious melancholy foreigner, a Baron in fact, who plays somewhat the part of fairy prince, with the difference that he is not destined to marry Cinderella. Cinderella is the milkmaid, who is taken to her ball under circumstances almost as romantic as in the fairy tale. She meets her Baron in the midst of the forest, finding her wonderful dress, which is described as a "sort of heavenly cobweb," in the hollow of a tree. Very pretty is the scene in which, having donned this gossamer creation, she is unable to get out of the tree by the rift through which she entered, and the Baron is obliged to free her by tearing away "pieces of the wooden shell which enshrouded Margery and all her loveliness." After the ball, she is obliged to give up her beautiful things in the very place in which she had received them. Kindling a fire of dry sticks, the Baron prepares to burn up the dress. In vain the agonized Margery implores him to spare something of the finery:

> He was as immovable as Rhadamanthus. "No," he said, with a stern gaze of his aristocratic eye. . . . He gave the fire a stir, and lace and ribbons, and the twelve flounces, and the embroidery, and all the rest crackled and disappeared. He then put in her hands the butter-basket she had brought to take on to her grandmother's, and accompanied her to the edge of the wood, where it merged in the undulating country in which her granddame dwelt.

The story has the usual interest of the Wessex setting. Any one doubtful of the authorship of the "Love Adventures" would be soon convinced, not merely by the names of Anglebury and the Swenn, but by the landscapes with their strange large poetry. In the first paragraph we read of a valley shrouded in mist: "Nature had laid a white hand over the creatures ensconced within the vale, as a hand might be laid over a nest of chirping birds." With the next paragraph we arrive in the midst of the dairy scenery that makes so great a charm of "Tess":

> The noises that ascended through the pallid coverlet were perturbed lowings, mingled with human voices in sharps and flats, and the bark of a dog. These, followed by the slamming of a gate, explained as well as eyesight could have done, to any inhabitant of the district, that Dairyman Tucker's under-milker was driving the cows from the meads into the stalls. When a rougher accent joined in the vociferations of man and beast, that same inhabitant would have distinguished that Dairyman Tucker himself had come out to meet

the cows, pail in hand, and white pinafore on: and when, moreover, some women's voices joined in the chorus, that the cows were stalled, and proceedings about to commence.

A comparative hush followed, the atmosphere being so stagnant that the milk could be heard buzzing into the pails, together with the words of the milkmaids and men whenever they spoke above gossiping tones.

No further account need be given of the Romantic Milkmaid. It does not take a Dick Swiveller to discover the merits of this obscure Marchioness. It will be seen that she is a little undergrown sister of Tess, and for that reason to be cherished and secured from utter neglect.

JOSEPH WARREN BEACH.

Correspondence

MR. TAFT'S FITNESS.

TO THE EDITOR OF THE NATION:

SIR: In your editorial of January 11 you ask for a "bill of particulars" of the reasons why Mr. Taft should not be renominated. Have you not furnished this bill yourself? For, in another editorial, on December 7, entitled "The President's Apologia," you say that the question "will turn very largely upon the estimate of his personality, of his fitness for the work of a party leader and a national Executive"; and then, after questioning whether he has "the steady push of the born Executive," whether "his tolerance does not tend to make him slack," and intimating that he is too often compelled to "repair damages" which "a surer insight and a more resolute attitude would have prevented," you refer to the "happy-go-lucky" preparation of "his ill-starred Winona speech." "Dilatoriness and carelessness," you say, "were never more glaringly exhibited or more terribly punished." But "behind this laxness lay a graver fault. Mr. Taft was playing with fire and did not know it." "He never knew that the gun was loaded! But ignorance of this kind is almost fatal in a political leader. If he does not know by instinct or cannot discover by careful inquiry what the people are saying of a capital measure, the inevitable result is that he will make such blunders as Mr. Taft has made, and, too late, wake up to what he has done and seek to retrace his steps."

A President, you say, "should stand forth as an inspiring leader, capable of winning not merely cold approval, but warm devotion, and of raising a shining standard to which an acclaiming multitude will repair." Are you not, in these words, unconsciously describing some one you do not intend? But however that may be, you add: "That Mr. Taft has thus far shown either the eminent sagacity or the consuming energy needed for the task of leadership thus described, not *even his best friends* can assert. And the conviction is becoming slowly established that he will not be able to do so in the future."

Many other items might, indeed, be added to those which you have already supplied. There was the fulsome adulation of Aldrich at Boston; there was the appointment of the blundering and incompetent Ballinger, and the sticking to him after his unfitness had been shown by legal evidence and from his own lips; there was the imposition of the degrading conditions that made the revolt of Pinchot necessary; there was the corrupt use of the Federal patronage to coerce the political action of insurgent Congressmen, as shown by the Norton letter; there was Controller Bay; there was his support of the infamous political gang in his home city, Cincinnati, and the practical recantation of his Akron speech against Boss Cox, a speech which had been made amid a better environment than that now surrounding him. Failure has been written everywhere upon his record—the defeat of his party at the last Congressional election, his repudiation by his own State and by his own city at its recent municipal election; his failure to secure reciprocity, largely due to the effect upon Canadians of his own blundering words, of which you yourself say in your editorial of December 14, "Mr. Taft's unlucky phrase did yeoman service for the anti-reciprocity men." The list of mistakes and failures can be indefinitely extended, but why go on?

But you go further, and you say (January 11): "That the Progressive Republicans had some warrant in 1909 and 1910 for being dissatisfied with President Taft, we do not deny, but this is 1912, and they are bound to point out the exact things in his policy and attitude *to-day* which they condemn. Is it the tariff? His position on that is at least as aggressive as theirs; they cannot make an issue of that. Is it conservation? He is *now* as fully committed to the doctrine as they are," etc.

Now, some of the matters criticised above occurred within the past few months, but if they had not, what think you of a candidate who, under pressure of his desire for renomination at a closely approaching election, reverses the voluntary conduct of his earlier days? Will a mere place upon the mourner's bench at this moment make good the record of a Presidential term?

WM. DUDLEY FOULKE.

Richmond, Ind., January 14.

[Our point was, not that Mr. Taft is not open to criticism, but that his Progressive opponents do not say what present fault they find in him. Would Mr. Roosevelt, for example, endorse our correspondent's "bill"?—ED. THE NATION.]

"TELLS HIS TALE."

TO THE EDITOR OF THE NATION:

SIR: In a letter to the *Nation* of January 11, Prof. J. M. Hart criticises the Oxford Dictionary's explanation of Milton's

> And every shepherd tells his tale.

Let us examine Professor Hart's argument, first, as to its linguistic interpretation of *tells his tale* as a phrase idiom, and, secondly, in the light of the poetic situation.

The use Professor Hart makes of the Oxford Dictionary's quotation from "Cursor Mundi," 7164, to show that *tell his tale* is used in a numerical sense before the nineteenth century, is far from convincing. We are here dealing with an idiomatic phrase. Surely no one wants to dispute that *tell* often meant "count," and *tale*, "sum" or "number." The question is, does the idiomatic combination *tell his tale* ever mean "count his sum"? In the first place, the "Cursor Mundi" passage is not an instance of the phrase *tell his* (or *a*) *tale;* it is another idiom, meaning "count by number"—here, "a thousand that was counted by number." This passive clause when turned into the active voice becomes "that he counted by number," and in no sense "he counted his number"; the pronoun *that*, not the word *number*, is object of *counted*, just as *charges*, not *tale* or *number*, is object of *told* in Browne as quoted. The idiom *count by number* is further illustrated by the Oxford Dictionary quotations; *e. g.*, Ormin 4550, "whase wile tellenn hemm *By tale*"; "Cursor Mundi," 13302 (Cott.), "Tuelue thai war to tell *in tale*."

In the second place, by Professor Hart's own admission, the next two quotations have nothing to do with the idiom *tell his tale* in a numerical sense. His innocent-looking parenthesis in veiled subordination, "where the meaning of *tale* is 'account' rather than 'count,'" at once throws the two illustrations entirely out of court. They show absolutely nothing about the numerical sense, either of the stereotyped phrase *tell his tale*, or of the entirely different phrase which they illustrate, *tell little tale of*. The formal distinction between *teld* and *told* is the least of the differences between the two idioms.

In the third place, the words from the "Complainte of Scotlande"—*to pas the tyme quhil euyn*—are poor evidence for the odd interpretation, "while evening is here," or for the fact that "evening is proverbially the time for laboring men to exchange stories." *Quhil euyn* here means simply "till evening." One need seek no further than Shakespeare for examples: "Macbeth," iii, 1, 43:

> . . . we will keep ourself
> Till supper time alone; *while* then, God be with you!

Schmidt cites other instances. The Century Dictionary quotes further examples from B. Jonson and J. Earle. There are several instances in Lodge's "Rosalynde," in which pastoral language prevails; one of them is nearly identical in phraseology with the passage in "Complainte of Scotlande": "He, after supper, to pass away the night *while* bedtime, began a long discourse," etc. Certainly, this does not mean "while bedtime is here."

Now as to the poetic situation. We are not asked, as Professor Hart says, to conceive "that all the shepherds, immediately on rising, proceed to exchange stories." Surely it is sufficiently well known that Milton's description in "L'Allegro" represents a progress through a day. It begins when the lark startles the dull night; then the dappled dawn arises, the cock gathers his dames about him, the poet walks out against the full blazing sun, the mower has begun his work, the shepherds (having let their flocks out to pasture) gather under the hawthorn to shelter themselves from the now hot sun, Corydon and Thyrsis are at their savory dinner set, afterwards binding up the now dry sheaves, and so on till "to bed they creep." The natural conception here, fully borne out by previous English pastoral poetry, is that the shepherds, having set their flocks a grazing, when the morning is becoming warm, meet in the shade of the hawthorn to pass the time. Indeed, if we must insist on realism, that is just what happens in the Second Shepherds' Play—after counting their sheep, the shepherds meet under

the thorn (conventionally, for it is cold) to compare notes, just as Cuddie and Willie do in Browne. Milton's "hawthorn in the dale" is the identifying mark showing that, having done their morning's work, the shepherds meet in the shade to pass the time "while evening."

The Second Shepherds' Play is indeed illuminating; it shows the world of difference between realistic English shepherd life and the conventions of pastoral poetry. Obviously, "L'Allegro" is nearer the latter in spirit, like "Lycidas." Spenser's "Shepherds' Calendar" throws much light on the subject. In "March," the shepherds meet in the morning (line 3) near a hawthorn to tell tales, remaining until sunset (115). In "April," letting the flocks out to graze, they sit in the shade (31), singing to each other till night (160). In "May," while the flocks are feeding (173), Piers tells a tale which (conventionally) lasts till night (315). In "June," while the birds are in full song (7-8), Colin sits with Hobbinol in the shade (1-2) and "complains" till night (117). In "August," shunning the heat (48), Willie and Perigot hold a singing match which ends at night (197). In "September," the shepherds "talke and tellen" till night (254). In "October," Piers and Cuddie

> . . . cast with what delight to chace
> And weary thys long lingring Phoebus race (3).

It is evident in all this that the shepherds do not wait for evening, "proverbially the time for laboring men to exchange stories." The idea is invariably that the shepherds on rising let their flocks out to graze, and then meet in the shade to amuse themselves till night, by singing, telling tales, etc. Note the time arrangement in the closing lines of "Lycidas." But if the meeting of shepherds for mutual amusement in the morning is inconceivable in this conventional pastoral poetry, and we are to insist on realism in "L'Allegro," what shall we do with *all* the shepherds meeting under one hawthorn in the dale and counting their flocks? Where are the sheep? And what is the method of counting? Finally, Spenser helps us as to the proper meaning of *tells his tale*. In the sense of shepherds telling stories *before* night, this phrase occurs in the "Calendar" four times, and in an equivalent form once more ("February," 239-40).

JOHN S. KENYON.

Butler College, Indianapolis, January 15.

GEN. WOOD AND THE HAY BILL.

TO THE EDITOR OF THE NATION:

SIR: I notice in an editorial in the *Nation* (January 4) certain statements relative to my attitude concerning the legislation commonly known as the Hay bill. The statements made are misleading.

The Quartermaster-General, for the last three years, has stated that he needed more officers to discharge properly the duties incumbent upon his Department; last year an increase of thirty officers was made partly to meet this need. In addition to the permanent officers in the Quartermaster's Department, there are a number of detailed officers whose details create vacancies which are filled by the promotion of other officers, and, consequently, in no way interfere with promotion; nor do they constitute a drain upon the line, for additional officers to take these places are provided; but, in addition to the permanent officers of the Department and the regularly detailed officers, a considerable number of officers of the line are performing duty which is, in many instances, the same as that devolving upon the permanent and detailed officers of the Department. This class of officers (the attached) is a direct draft upon the line, as the places in the line are not filled. My opinion in this matter is that, instead of reducing the number of permanent and detailed officers, as proposed in the consolidation plan, the number should remain as at present, in order that we may be able to reduce the number of attached officers, who come directly from the line and whose places are not filled, thereby further reducing the already greatly depleted force of line officers.

I also objected to that feature of the bill which provides, in effect, that the heads of the corps which it is proposed to consolidate should be retired with the grade of major-general. This seemed unwise, as these officers now have the maximum grade provided by law for their corps, and heads of other corps (Engineers', Ordnance, Medical, Judge-Advocate-General's, Signal), all equally efficient and headed by equally competent officers, are discriminated against, as they will retire as brigadier-generals.

I also feel that the head of this Supply Corps should be a detailed officer, detailed for a period of four years; otherwise, he will be a permanent officer at the head of a department or bureau which will disburse approximately three-quarters of the total expenditures incident to the army. It is easy to see how undesirable the creation of the position under conditions of permanency would be.

LEONARD WOOD.

Washington, January 10.

PRESIDENTIAL ELECTIONS AND BUSINESS.

TO THE EDITOR OF THE NATION:

SIR: The conclusion in your financial article of January 11, that the effect of the Presidential election upon business and the stock market has so varied in different years that no rule can be laid down, has been reached by more than one financial writer. The following figures, however, point to a more positive conclusion.

Before me is a table of the total gross earnings from operation of the railways of the United States for each of the forty years from 1871 to 1910 inclusive, from which has been figured for each year, the percentage of gain or loss in these earnings, compared to the preceding year. These gross earnings frequently have been used by students as an indication of the activity of the business of the country, and I so use them in this letter.

If we add together the percentages of gains for thirty-two years and deduct the total of the percentages of losses for eight years and divide by the total number of years, the average yearly gain for the period is found to be 5.31 per cent. Similarly, averaging the yearly gains and losses for the ten Presidential years only, we find that the average yearly gain for those years is 4.85 per cent., or not significantly different from the general average. If, however, the Presidential years when the result of the election was sure, are separated from those when it was doubtful, and the average of each of the two groups is obtained, the result is very different; for the average gain in earnings of the five sure years is 8.12 per cent. and of the five doubtful years 0.44 per cent., or over eighteen times, as much gain in one group as in the other. The determination of which elections are sure and which doubtful is, of course, a matter as to which judgments may differ. The elections taken as sure in obtaining the above results were 1872, 1880, 1900, 1904, 1908, and those taken as doubtful, 1876, 1884, 1888, 1892, and 1896. Nineteen hundred and eight is perhaps the year about whose classification the most serious question can be raised, but if this year is taken as doubtful, instead of as sure, the average gain of the four sure years would be 12.02 per cent. and the six doubtful years would show an average loss of 0.88 per cent. Another question may be raised whether "sure" is too strong a word, but it will serve its purpose if it is taken to characterize those elections which the men with the best sources of information had reason to feel to be decidedly less doubtful than the others. Still another question is how far railway earnings are, in fact, an index of business activity in the various years.

If, however, we are willing to accept these figures, it seems a fair deduction that the sure Presidential election has very little effect, but that in the Presidential years when the campaign is doubtful, the effect of the election is very marked. Inasmuch as all the sure elections have been won by the Republicans, who, so far as the tariff, money, and other business questions are concerned, have been the conservative party during the past forty years, it may fairly be contended that the sure years were good for business, not merely because they were sure, but because the conservative party was expected to win. If this is true, a Presidential year when the election of a radical candidate was sure, might prove very detrimental to business.

JOHN WELLS MORSS.

Boston, January 18.

MR. PENNELL AND MR. GREAVES.

TO THE EDITOR OF THE NATION:

SIR: There have been sent me numerous copies of a pamphlet issued by a London picture dealer and entitled a "Reply to an Attack." This pamphlet, I imagine, will be issued in New York in connection with a show of pictures which I understand is to open to-morrow. The object of the dealer turned author or compiler is evidently to injure me incidentally, but specially to advertise a much advertised person and his wares.

But, in order to prove me guilty, he makes me responsible—head lines and all—for a cabled interview which I never saw until it was sent me in print, and which contains statements I repudiate.

Secondly, he charges me with writing an article in your columns which I did not write (as you know), did not inspire, and did not read until the *Nation* reached me by post.

Thirdly, he quotes conversations at which he was not present, making me say exactly what he wishes, no matter how ridiculous to

any one but himself—in one case completely proving his point against me—concerning a matter I never discussed. It is in this fashion this terrible indictment has been manufactured against me. It is but another example of British incorruptible honesty and the influence of education and expert knowledge on the lower middle classes.

JOSEPH PENNELL.

London, January 10.

[The article in question, "Whistler and Greaves," signed "N. N.," was printed in the *Nation* of June 8, 1911. It was reprinted in London with our permission. But it was not written by Mr. Pennell, and we had no intimation that it was to be ascribed to him.—ED. THE NATION.]

THE EARLIEST LIFE OF MILTON.

TO THE EDITOR OF THE NATION:

SIR: The review of the "Cambridge History of English Literature," Volume VII, in a recent number of the *Nation* (October 19, 1911), while mentioning important omissions from the bibliography of Milton, itself omits the anonymous so-called "Earliest Life of Milton." No contemporary account of Milton is more important than this. It was discovered in 1889 among the papers of Anthony Wood, to whom it furnished most of the material for his "Life of Milton." It was first edited in the *English Historical Review* for January, 1902, whence it has been reprinted. It is perhaps most accessible in Miss Lockwood's admirable edition, recently issued, of three tracts of Milton, together with three of the earliest accounts of his life.

CHARLES G. OSGOOD.

Princeton University, January 20.

Literature

EARLY MYTHS.

The Golden Bough. Part III: The Dying God. Part IV: Adonis Attis Osiris. By J. G. Frazer. New York: The Macmillan Co. $3.25 each.

The third edition of "The Golden Bough," now in course of publication, bears fresh witness to the author's indefatigable industry. The first edition (1890) consisted of two volumes, the second edition (1900) of three volumes, and the third edition, further enlarged, is to consist of six parts, with the following titles: "The Magic Art and the Evolution of Kings" (two volumes); "Taboo and the Perils of the Soul" (one volume); "The Dying God" (one volume); "Adonis Attis Osiris" (one volume); "The Man of Sorrows"; "Balder the Beautiful"; the last two are now in preparation. The "Lectures on the Early History of the Kingship" (1905) are made up, the author states, of extracts from his earlier works, and the related "Psyche's Task" (1909) is a collection of facts going to show that out of crude savage beliefs and practices there has come good for government and private life. The parts of the new edition follow in a general way the order of topics in the first and second editions. It is unnecessary to speak of Dr. Frazer's amazing erudition, it is known to all the world; his footnotes constitute an extensive bibliography of the subjects he treats. And with all his statistical minuteness he is master of a delightful style—he enlivens his lists of details with well-told incidents, artistically conceived descriptions of scenery, and portrayal of lifelike mythical personages, and occasionally makes excursions into the field of reflection on human life and hopes. His main purpose in his encyclopædic series of volumes is to describe and explain the part played in religious ritual and creeds by the idea of the death of some divine being.

In "The Dying God" he answers the question, Why put a man-god or human representative of deity to a violent death? The motive, he replies, for slaying a man-god is fear lest with the enfeeblement of his body in sickness or old age his sacred spirit should suffer a corresponding decay that might imperil the general course of nature, and with it the existence of his worshippers, who believe the cosmic energies to be mysteriously knit up with those of their human divinity. In support of this view he cites a considerable number of cases, among modern savage and half-civilized peoples, in which kings are or were put to death when their strength failed, and ancient and modern cases of the limitation of the royal tenures of office; and he adds a chapter on the killing of the tree-spirit, a custom that he supposes to be in support of his theory. We are here in a region in which exact information concerning motives of action is lacking; but when the procedures cited by Frazer are examined, it appears that most of them may be satisfactorily explained as having arisen from political caution or from individual ambition. Desire for power is a common human weakness, and to satisfy this desire it sometimes becomes necessary for an aspirant to oust an incumbent of an office. In our own times there are not lacking communities in which revolutions are customary, a successful revolter becoming the head of the government, only in his turn to be ejected by a rival. Savages are not without ambition, and there are examples of changes of governments brought about by chiefs tired of being subordinates; in civilized times succession in the Eastern califate was frequently determined in the same way. But in savage tribes it has been not only individual ambition that has brought about changes in political headship. A chief as a rule held his position by virtue of his capacity for leadership, and might be deposed by the popular voice when he proved to be unworthy. When the kingship was established it was equally necessary that the king should be capable, and it was not unnatural that he should be set aside when he became weak through sickness or from some other cause. Fear of such failure on his part might lead to the establishment of a rule that he should reign for a limited number of years. As to the manner of his taking off, it was quite in accordance with savage custom that he should be put to death by regularly appointed persons or by any aspirant to headship, or should be forced to commit suicide. All this is simply a form of civil government. The old belief in the sacredness of rulers colored the attitude of early tribes towards their kings without essentially modifying their political system—semi-divine kings (and magicians), who control weather and crops, must retire when their strength fails. This general explanation may apply to the procedure of the Shilluk (a people living on the White Nile) whose treatment of their king offers a striking parallel to the killing of the priest of Nemi, the "king of the wood"—in both cases an aspirant lurks about the king's abode to fight and slay him, and the king, if he encounter his enemy, must defend himself in single combat. In this custom, and in others referred to above, there are details that are not intelligible to us—their history goes back to an unrecorded past. But what we know of them seems not to justify Frazer's large generalization—it does not appear that the later conception of the death of a man-god, prominent in some religious rituals, arises from the identification of the king (or the magician) with a god, who dies in the person of his human representative in order that the performance of his functions as preserver of the people may not be imperilled by his physical or mental weakness.

The view that certain rituals go back to early ceremonies celebrating the decay and revival of plant-life has been made familiar by the writings of Mannhardt, Frazer, and others, and is now widely adopted. It is the theory that best accounts for the details of the cults of Adonis and some other deities (and for the cults of "mother-goddesses" also) as these details have come down to us. Such deities usually become preëminent, and when they are identified with heavenly bodies (in later constructions, Osiris, for example, is sometimes the sun, sometimes the moon), this is a natural result of the disposition to connect them with great natural objects or great nature-gods. The characterization of a deity as patron of vegetation does not, however, necessarily involve the hypothesis that he is a development of an old corn-spirit; he may be an independent clan-god who had originally oversight of all things or in the course of time absorbed the functions of the corn-spirit. In the "Adonis Attis Osiris" Frazer describes at length the cults of

these deities, and adds chapters on sacred men and women (he holds to the religious origin of sacred prostitution in Western Asia), Oriental religions in the West, the calendar of the Egyptian farmer, the doctrine of lunar sympathy, and mother-kin and mother-goddesses. Much doubtful or irrelevant matter is contained in the chapters on the burning of various gods and demigods and on "volcanic religion." Elsewhere also in the two volumes under consideration there are citations of authorities that do not prove the points at issue, and deductions not warranted by the facts adduced; examples are the ascription of divinity to Hebrew kings and identification of them with the gods they worshipped ("Adonis Attis Osiris," p. 16 ff), the identification of Egyptian kings with the dead Osiris at the Sed festival (*ibid.*, chapter x), and the hypothesis of the transference of the soul of a slain divinity to his successor ("The Dying God," p. 198 ff). In so large a subject there must be differences of opinion, and a reviewer can only state his own views. But, whatever objections to Dr. Frazer's theories may be felt, there can be no doubt that the large collection of materials in the "Golden Bough," the author's wide sympathy with forms in which men have expressed their attitude towards the supernatural Powers, and his candid spirit entitle him to the gratitude of all students of the history of religion.

CURRENT FICTION.

A Country Lawyer. By Henry A. Shute. Boston: Houghton Mifflin Co.

Take liberal quantities of the "Old Homestead," inject a gun-play episode from Wild West melodrama, with a bad man and a bar and a sheriff and a coroner's jury, add a horse-trade in the style of David Harum, a fight transplanted from "Tom Brown at Rugby" and a barn fire from anywhere, with the panic-stricken horses bent on rushing back into the flames. Then slip in an anti-race-track campaign, adapted from that which has written Ichabod upon the hoardings about the once populous fields at Sheepshead Bay and Saratoga and Belmont Park. Next toss in a bit of New York clubdom and fashion taken from the engaging fiction with which young authors from the Middle West enliven the fifteen-cent magazines; borrow also from the penny dreadfuls their horrid tale of an upright young man trapped in a lonely house by the lure of a lying letter from a dark, wickedly beautiful woman. After that mix in a few court-room scenes and sprinkle with legal terms.

All this done, you have still before you only a part of the astounding collection of odds and ends from a story-reader's memory which make up the scenery and the substance of Mr. Shute's latest book. Now introduce into this medley a hero made in the manner of David Graham Phillips, but modified by a Yale training in athletics, a very young heroine borrowed from the gallery of romance of a bygone generation, a great number of rural "characters," and you have completed the makings of the story.

Behind it all is an idea of the old-fashioned lawyer and a loving memory of an old-fashioned life in New England. Through it runs a moral as plain and often as didactically set forth as those of Maria Edgeworth herself. Most readers will prefer Mr. Shute when he writes about boys.

The Centaur. By Algernon Blackwood. New York: The Macmillan Co.

Not long ago, Mr. Blackwood bestowed much skill in the "word carver's" art upon a perversion of an idea borrowed from "Alice in Wonderland." The book (he called it "The Education of Uncle Paul") was full of beautiful things wrought cunningly out of lovely and quaint fancies. One of them was "the Crack between Yesterday and Tomorrow," through which one slipped between the sixth and seventh stroke of midnight into a timeless land of all lost things. The guide who showed the way thither was a little girl and that strange remote beast, the Cat, kept one company, none being wiser in the mysteries of the unseen. Perhaps the Cat came out of Maeterlinck's "Blue Bird"—but that is a detail. All the beauty of the thing was tainted, because, as you go along with the vision, your child guide turns into something quite different—just as the lovely false ladies in the "Faerie Queen" used to turn to creatures loathsome and venomous. The difference is that here is an artful pretence that the change is not for evil. Yet the little girl has become a soul-mate to an elderly uncle! In his new story, also, Mr. Blackwood may plead the excuse of curious excellence in carving. He has been able to produce quite singular hypnotic effects upon the imagination with his grotesque fancy that strong moods of the great Mother Earth linger fantastically embodied from an elder age of nature and innocence. He almost makes you believe that imprisoned in the flesh of a half-mad Irish war-correspondent and scribbler or in that of a wholly mad wordless Russian peasant may lurk the soul of a centaur; that by dint of cutting the ties that bind them to the silly routine of a piddling generation they may get "back to nature"; and that they actually do put off civilized manhood for a four-footed freedom, with tossing manes and swift hoofs spurning the green turf of gardens of delight in the highest Caucasus. Upon the development of this preposterous fancy the author has lavished immense pains. Obviously, however, the taint of decadency is present here, too. For the man sinks into the slough of his mad vision just as he might into the drink or the drug habit. And the effect upon the reader is very much the same as if he likewise were drugged.

The Third Miss Wenderby. By Mabel Barnes-Grundy. New York: The Baker & Taylor Co.

Many times has been said or sung the story of the *enfant terrible* who develops into the minx and thence into the enslaver of men, women, and children. Here is another biography of this popular, one may say populous, dame, yet the author has succeeded in infusing no small amount of liveliness and freshness into the old subject. Rather original material are Diana's childish experience of religion, her out-of-door exploits with her boy companion whom she finds indispensable, but tramples on; her adventures of escape from the thraldom of boarding-school. It is when she settles down into nursery-governesshood that the track grows more beaten and correspondingly commonplace. Diana's capers sit less becomingly on a woman than on a child. Yet she remains a fairly lovable sort of person and has the sense to throw over the wrong lover and smile upon the right one. Pranks are the author's true field. There she dashes about in unconfined joy. With the approach of the conformities comes a slight sense of harness.

CHINA.

Eighteen Capitals of China. By William Edgar Geil. With 139 illustrations. Philadelphia: J. B. Lippincott Company. $5.

Mr. Geil's third book on China marks some improvement upon its predecessors. He has conceived an excellent idea in visiting and describing, in turn, the capitals of each of the eighteen provinces of China proper, and in no way, perhaps, could a better off-hand impression be obtained of the diversity in climate and conditions to be found in the Empire. The Chinese, like ourselves, are both a northern and a southern race, exhibiting marked divergences in details from a common race type, while their social and intellectual life centres more definitely than ours in their headquarters of administration. The necessity, in the old days, of repairing to them for those literary examinations which entitled the successful aspirant to hopes of office has always been attended by a necessity equally imperative for the passmen to live in close contact with officials in order to procure places among the officeholders. This process has brought about a similar concentration of scholars and men of means, who, generally speaking, are men of the same class. In a country possessing no easy means of communication or travel the

inevitable gravitation of like to like in human society has brought to its various capitals the best products of its culture.

The author of this ornamental volume has developed his plan of depicting each of these seats of power and learning in the same rather scrappy fashion in which he rendered his account of a journey taken four years ago along the Great Wall. With no knowledge of the language and no sufficient background of historical or scientific training, he has been compelled to rely both for facts and conclusions upon the information imparted by foreign residents in the places he visited, or upon such translations of the abundant native literature on them as could be begged or borrowed. The result is a collection of excerpts and jottings, rather superior in interest to the assortment of items he collected about the Great Wall and the Yangtse River, presumably because he met in his later journey more Europeans who could inform him, but still disappointing in its promise of being a material contribution to our knowledge of China past and present. The scrapbook aspect of the volume is emphasized by Chinese proverbs placed at the head of every page, which, whatever their intrinsic merit, like the flowers that bloom in the spring, have nothing to do with the case. Dr. Martin, in a kindly introduction to this volume, compares the author to "the blind Huber of Geneva, who made himself an authority on bees"; but he has had to depend rather upon the minds than the eyes of others, which is a different matter. Moreover, serious students of China in the twentieth century will demur at having their subject relegated to the empirical status of the science of natural history in the eighteenth.

Mr. Geil is at his best in the remoter capitals, about which the outside world as yet knows very little. The two adjoining provinces of Kwang-si and Kwei-chow are to-day not only the least visited of any region of the Empire, but they contain, together with the whole southwestern corner of China proper, many descendants of the aborigines of the country. The account to be obtained of them from this narrative is sketchy in the extreme, but it suggests possibilities of fruitful results from investigations by any trained student who cares to travel and study there in association with the missionaries who are conducting a successful work in elevating a neglected people. Some suggestive similarities are to be found between their customs, as described here in quotations from a Chinese local history, and those of inhabitants of the Great Archipelago, of which Mr. Geil seems to be unaware. Child marriage and the marriage-market, or dance, as shown here, are more or less common in primitive societies, but the following account, quoted from a Chinese author, reveals an identity with an ancient method of dyeing practiced in Java too specific to be accidental:

> For the dress material of the women they pour wax, cut out like flowers, then pour on dye, scratch off the wax, and the flowers become manifested! This scheme is used to make the adornments for their dresses in addition to the cotton embroidery placed on their sleeves. Hence the name Flowery Miao. For the dress of the men they tear down cloth in strips which are spun into rugs. . . . The men wear on their heads black turbans, and the women insert horsehair into their own and make them so bushy that a single head resembles a magpie's nest.

Two features will strike the ordinary reader of this book with surprise; they are the safety and ease of travel on all the main routes in China and the extraordinary variety and beauty of much of its scenery. When we reflect that less than a score of years ago much of the country over which Mr. Geil travelled alone with his servant was unknown and inaccessible to a white man, and that anti-foreign outbreaks were then occurring in every province, the change that has come over the minds of the common Chinese is vividly realized. At present, if one is willing to endure dirt and delays with cheerfulness, there seems to be no place where one may not penetrate, though the ease of approach does not, of course, mean absence of personal hardship in surmounting the difficulties of bad roads, execrable lodgings, and a wonderful vivacity on the part of prying natives and of insects of prey. As to scenery, the Western world, which has long conceived of China as a vast plain behind a muddy coast, will be amazed to learn that in above a million square miles of hills and mountains it presents every aspect of splendid and romantic beauty or abundant culture, from the arid ranges south of Mongolia to the tropical luxuriance of rainy Yunnan. Mr. Geil's account of the country, despite some shortcomings, reflects the mind of a hardy and appreciative observer in warm sympathy with the best there is in a people who are now thoroughly resolved to depart from their ancient ways and regain their prestige in the world. The awakening, he thinks, means first and foremost a determination to secure their land from foreign aggression. The arts and industries of Christendom may be assumed later. "Arsenals," he says, "are in evidence at every great centre; cannon and all other munitions of war are being made within the Empire. This is not the case at one town merely or at two, but at every capital—and we deal here only with capitals, where the pulse of the nation is easily felt. The whole Empire seems to be arming, not in extraordinary haste, but with thoroughness, with doggedness; and with resources wherewith no one European nation can compare. The fact stands; let who will interpret it."

The Last Stuart Queen: Louise, Countess of Albany: Her Life and Letters. By Herbert M. Vaughan, F.S.A. New York: Brentano's. $4 net.

Louise of Stolberg-Gedern, as wife and widow of Charles-Edward Stuart, possessed only a phantom queenship, which brought her little more than jealousy and cruelty while her husband lived. After his death, content with the name of Countess of Albany, she seldom pressed her claims to recognition as a sovereign, but within her household she quietly cherished the signs and honors of royalty. The royal arms appeared upon her seal and upon her plate, her servants addressed her as "Majesty," and Mme. de Staël and others of her friends wrote to her as "chère souveraine." She is less known, however, for her English queenship than as the companion of the Italian poet Alfieri in a happy intimacy of nearly thirty years. Except in the shadowed romance of its beginning, the course of their love ran too smoothly to concern the outside world: it is really only after the death of Alfieri that the Countess becomes a figure of individual interest. In the years from 1804 to 1820 her *salon* in the Casa Alfieri on the Lung' Arno was the social centre of the literary life of Florence. For Sismondi and Foscolo the Countess had a long-continued and affectionate interest, fully returned by the two young writers. Chateaubriand, Lamartine, Morghen, Byron, Moore, Rogers, and Everett were among her foreign visitors. The distinction of her own conversation consisted in its placid common-sense, the result of rich experience and of wide reading. According to Sismondi, she possessed in singular degree the ability to draw forth the powers of her guests.

Mr. Vaughan's biography of the woman in whom so many interests thus centre is a careful piece of work. He has used the best published studies dealing with the Countess, has found many interesting references to her in out-of-the-way sources, and has consulted the several collections of her unpublished letters. He treats in fullest detail the first two periods of her life, slighting, in the proportion of his work, the years when she was "Queen of Florence." Yet it was only then that her life was really social: her long devotion to Alfieri had limited her interests even more strictly than the early pretensions of her husband. It was only then, moreover, that her mind reached its full maturity. The letters of her earlier years are slight and insipid, while her correspondence with Sismondi and Foscolo is well worth reading. Mr. Vaughan translates many of her letters in the body of his work, and prints in

an appendix seven French and Italian letters hitherto unpublished. His judgment of the character of the Countess is discriminating and impartial: quite without idealism, and not unwilling, in certain serious matters, to stoop to hypocrisy to gain her ends, she was yet unselfish and loyal both in her love for Alfieri and in her relations with her many friends. Mr. Vaughan's treatment of Alfieri, on the other hand, is unsatisfactory. Very little is said of Alfieri's poetic activity, yet the Countess was no less concerned than was the poet himself for his immediate success and his enduring fame. In his definition of Alfieri's moral personality Mr. Vaughan is narrow and, in our opinion, unwarrantably severe.

An American Railroad Builder, John Murray Forbes. By Henry Greenleaf Pearson. Boston: Houghton Mifflin Co. $1.25 net.

This concise and attractively written biography deals with an interesting personality already familiar to many through the publication in 1899 of Forbes's "Letters and Recollections." Born in 1813 into a cultured Boston family, whose business associations were with the Oriental trade, he had the advantage of the best educational training then obtainable, and a unique opportunity to develop his powers in commercial matters. At the age of twenty-four he had completed a three years' resident partnership in Canton, China, as a member of the firm of Russell & Co., and was back in Boston as the American representative of the house, with a comfortable fortune, valuable financial associations, and an undiminished store of energy and vitality.

From his manifold activities the biographer selects for primary consideration in this volume the part played by Forbes during the construction era of American railways. Michigan in its enthusiasm over the possibilities of the new form of transportation, had undertaken projects under State ownership far beyond its financial ability, and in 1845 the railways were for sale at attractive bargains to those who had courage to push the projects and sufficient capital and confidence to await results. It was the kind of problem which attracted men of Forbes's type, and his interest was quickly aroused. He assumed the burden of financing the purchase of the Michigan Central, then a dilapidated railway property one hundred and forty-five miles long, extending from Detroit to Kalamazoo, with strap-iron track, in many cases worn out or broken, four passenger "depots," and $68,000 worth of rolling stock, including a twelve-ton locomotive. Forbes became its first president as the only means of procuring the necessary capital. During his nine years' presidency the Michigan Central was completed to Chicago, notwithstanding the bitter competition of the Michigan Southern. Eastern connections were established at Detroit, and the property was put upon a productive basis. In 1855 he withdrew from active association with the road, retaining his directorship, but was quickly called back from retirement in 1857 to use his invaluable financial connections in warding off threatened bankruptcy.

With large vision, he saw the possibilities of the new West, and was one of the early advocates of transcontinental railways. After the Civil War he became associated with the Burlington property, for three years as president, during a period when the allurements of the construction-company device had proved too tempting to a majority of the board of directors, many of them Boston business associates. It was the indignant determination with which Forbes in this instance drove out the rascals, the scrupulousness with which he always refused to place himself in the position of both buyer and seller of railway supplies, the manner in which he insisted upon the fundamental principles of common honesty, which make his figure tower so high above the mass of his associates. Because of these characteristics his efforts to obtain capital for his projects never failed. Moreover, it is remarkable that in the period before the appearance of problems arising out of unreasonable rates and unfair discriminations, he should have recognized so fully the force of public opinion and the public nature of the railway industry.

One chapter is given to his public service, a service of patriotic devotion with no thought of reward in the way of office-holding. It includes four years of intense activity during the Civil War, with a mission to England, and continuous correspondence and publicity work. He belonged to that determined group that would put the war through to the very end, and that protested "against crying 'Peace' when there is no peace." After the war he stood for negro suffrage maintained by military power. He helped in founding the *Nation*, fought vigorously against the greenback policy of the war, opposed ship subsidies, combated the machine element in his party, and withdrew his support when Blaine was nominated. His life was a self-effacing unwearied struggle to maintain his standard of citizenship, and he well deserved Emerson's comment upon him:

> How little this man suspects, with his sympathy for men and his respect for lettered and scientific people, that he is not likely in any company to meet a man superior to himself. And I think this is a good country that can bear such a creature as he is.

Copts and Moslems under British Control: A Collection of Facts and a Résumé of Authoritative Opinions on the Coptic Question. By Kyriakos Mikhail. London: Smith, Elder & Co.

It is so obvious that the English occupation has been to the advantage of Egypt, that we are apt to lump things in a general statement. There is little doubt that the administration of Lord Cromer was successful because of his personal qualities and ability; but no one acquainted with the facts will characterize that of Sir Eldon Gorst in the same way. Many of the results of the earlier régime were sacrificed to a false sentiment during the later. It now remains for Lord Kitchener to repair the damage that has been done and, after putting affairs back where they once were, to make improvements of his own. It is to his "impartiality," vouched for by Sir Edward Grey, that the Egyptian minority is looking with expectation and hope.

The traveller on the Nile sees multitudes of brown men, natives, and they all look alike to him. But they are not alike by any means. There are two religions represented, and in the East "religion" is the synonym of "nationality." These people are to be counted as two in spite of the sects into which they are divided. Except for the fez there is no obvious sign by which the lay eye can instinctively distinguish between a Copt and a Mohammedan. But the two are distinct. The Copt is the lineal descendant of his Egyptian ancestor, and he is in the minority; the Mohammedan is an importation, an alien, and he is in the majority. But they are living side by side, with common needs of education and desiring equality of individual opportunity. For some reason the English have not seen fit to adopt the American plan of secular education divorced from religious instruction, but have attempted to combine the two. The result has been that in almost every case the children of Moslems have been taught from their sacred book, the Koran, while the Christian Copts have been shut out from the benefits that should have come to them in the proportion of their taxation. That they here have a grievance is beyond question, but the remedy which they desire is one that should not be granted to them, and the advantage given to the Moslem in the matter of religious education is one that should be withdrawn.

This is only one of the complaints voiced by the Coptic Congress held in Assiut in Egypt last March, and now set forth in detail in a volume published by the Coptic Agent in London. The other matters relate to entry into the civil service in positions higher than clerkships in cases of proved capacity and merit; political promotion as a reward of ability; the open door in connection with all administrative positions; a

system of minority representation on local councils, patterned after the Belgian; and such a recognition of their religion as shall enable them to observe its rules in regard to the Sunday-Sabbath.

Over against the petition of the Copts was a series of propositions set forth by the Moslem Congress on May 3 following: that the religion of Egypt must be the Mohammedan; that Coptic demands cannot be entertained; that the teaching of Christianity in the Government schools must be abandoned; and that the elementary schools must remain Islamic in spite of Coptic taxation for their support.

This indicates the problems facing the Egyptian administration. It seems strange to an American that they exist in connection with religion and education, and his obvious solution would be the adoption of the American plan of independence between state and creed for the one, and secularization for the other. The day-of-rest problem is more involved in a way, but business considerations enter here, and the practice of banks and public offices generally favor the Coptic position. The question of the civil service and its reform is one in which Americans have had some sad experiences, but seldom any more flagrant than that alleged against the British agent and his underlings, in which "a recent examination for nine posts in the Sanitary Department was cancelled as soon as it was found that nine Copts were at the head of the list." This would be worthy of Tammany at its palmiest!

The contrast between the Coptic "demands" and the Moslem pronunciamento does not need extended remark or detailed comment. What Egypt needs is an impartial hand, not one that shall shower partial favors upon the Moslems, even though they be in the majority.

The Comedy and Tragedy of the Second Empire: Paris Society in the Sixties, including Letters of Napoleon III, M. Pietri, and Comte de la Chapelle, and Portraits of the Period. By Edward Legge. New York: Charles Scribner's Sons. $2 net.

Last year Mr. Legge brought out a book on the Empress Eugénie since 1870. His present volume is a rather tantalizing blend of gossip and history relating chiefly to the last decade of the Second Empire. A similar story of gaiety and extravagance and superficial splendor was told long ago by a Hebrew named Daniel, only his hero's name was not Napoleon III, but Belshazzar. Mr. Legge describes the life of the Imperial court with the zest of a glorified society reporter: and yet the historian cannot afford to overlook the clues he offers to many of the individuals who helped to make the Second Empire what it was.

In general, his book, like several others that have appeared in the past ten years, tends to create a mythical Napoleon III, hardly more lifelike than the earlier misconception. Hugo and Kinglake made Napoleon the Little out a Borgia in 18mo; Legge pictures him as an unselfish, benevolent despot, who might have been a William of Orange had circumstances permitted. He was neither. But it is well that all that is favorable should be emphasized, in order that those who will may judge him intelligently.

Intrinsically, the most important historical material furnished by Mr. Legge refers to the war of 1870. He prints many telegrams that passed between Eugénie and Napoleon during the terrible month of August. If further evidence shall confirm him, posterity will perforce conclude that the Empress played an heroic rôle as regent, and was worthy to be placed beside Maria Theresa. The ministers and courtiers on whom she had a right to rely lost their pluck and their head, but she did not. Besides these documents, Mr. Legge gives others referring to the Emperor's exile, to his attempt to interest Bismarck in a Bonapartist restoration, and to his pain-harricd last days. Did Napoleon rouge at Sedan? Is Dr. Evans's account of the Empress's escape from Paris correct? To these and many other minor questions Mr. Legge has answers. He is not an historian; he writes a slip-shod style; he is, rather, a discursive story-teller, who can both entertain the general reader and supply the discerning historical student with many pertinent suggestions.

Notes

Putnams are bringing out "Woodrow Wilson and New Jersey Made Over," of which Miss Hester E. Hosford is the author.

An authorized translation of the Infanta Eulalia's book, "The Thread of Life," will be issued shortly by Duffield & Co.

Several volumes of fiction will be published in the near future by Little, Brown & Co., among them: "The Saintsbury Affair," a mystery story by Roman Doubleday; "Young Beck," by Judge McDonnell Bodkin; "Lonesome Land," by B. M. Bower, and "The Bandbox," by Louis Joseph Vance.

Jack London's collection of short stories, entitled "A Son of the Sun," is in preparation by Doubleday, Page & Co.

"The Russian People," by Maurice Baring, which has already appeared in England, will be brought out in this country by George H. Doran Co.

"A Knight in Denim" is the title of a new novel by Ramsey Benson, announced by Scribners.

Freytag's "Das Nest der Zaunkönige" has been edited, with introduction and notes, by Prof. E. C. Roedder; it is in the press of D. C. Heath.

New books promised for this month by L. C. Page & Co. include: "Three Wonderlands of the American West," a volume describing the Grand Cañon, Yellowstone Park, and the valley of the Yosemite, by Thomas D. Murphy; "Chile and Her People of To-day," by Nevin O. Winter, and "Rayton: a Backwoods Mystery," by Theodore Goodridge Roberts.

"The Life of George Borrow," compiled from unpublished official documents, his works, correspondence, etc., is announced by John Murray of London; the author is Herbert Jenkins.

Houghton Mifflin Co.'s announcement of new books to be published this spring includes, in fiction: "A Hoosier Chronicle," by Meredith Nicholson; "The Wrong Woman," by Charles D. Stewart; "Christopher," by Richard Pryce; "The Heart of Us," by T. Russell Sullivan; "Lost Farm Camp," by Henry Herbert Knibbs; "The Plain Path," by Frances Newton Symmes Allen; "Alexander's Bridge," by Willa S. Cather; "Tales of a Greek Island," by Julia D. Dragoumis; "Polly of the Hospital Staff," by Emma C. Dowd; "The Luck of Rathcoole," by Jeanie Gould Lincoln, and "High Bradford," by Mary Rogers Bangs.—Outdoor Adventure, and Nature Books: "The Last Cruise of the Saginaw," by George H. Read; "The Jonathan Papers," by Elizabeth Woodbridge; "The Important Timber Trees of the United States," by S. B. Elliott; "Content in a Garden," by Candace Wheeler; "Winter"; "The Spring of the Year," both by Dallas Lore Sharp, and "Two Years Before the Mast," by Richard H. Dana, jr., which contains the new supplementary matter of the recent holiday edition. — Biography: "Lee the American," by Gamaliel Bradford, jr.; "The Life and Work of William Pryor Letchworth," by J. N. Larned; "The Story of Christopher Columbus," by Charles W. Moores; "Walt Whitman," by Bliss Perry; "James Russell Lowell," by Ferris Greenslet, and "Sidney Lanier," by Edward Mims, the last three in the American Men of Letters Series.—Economics: "The Factory," by Jonathan Thayer Lincoln; "Socialism and Character," by Vida D. Scudder; "Freight Classification," by J. F. Strombeck, and "The Home-Made Kindergarten," by Nora Archibald Smith.—Religion: "The Adventure of Life," by Wilfred T. Grenfell; "Kant and Spencer," by Borden Parker Bowne; "Egyptian Conceptions of Immortality," by George A. Reisner, and "The Religion Worth Having," by Thomas N. Carver.—Poetry: "Little Gray Songs from St. Joseph's," by Grace Fallow Norton; "Scum o' the Earth and Other Poems," by Robert Haven Schauffler, and "The White Hills in Poetry," by Eugene L. Musgrove, an anthology of the White Mountains, with introduction by Dr. Samuel M. Crothers. —Miscellaneous: "The History of Plymouth Plantation," by William Bradford, edited by Worthington C. Ford, 2 vols.; "Secession in California, and the Man Who Defeated It," by Elijah R. Kennedy; "Copyright: Its History and Law," by R. R. Bowker; "The Classical Psychologists," edited by Benjamin Rand; "Greek Lands and Letters," by Francis G. and Annie C. E. Allinson, new edition; "The Satchel Guide for 1912," by W. J. Rolfe; "The Promised Land," by Mary Antin; "Essentials of Poetry," by William Allan Neilson; "Nietzsche," by Paul Elmer More; "Miss John Bull," by Yoshio Markino; "Henry Ibsen, the Prophet of the

Present," by Otto Heller; "The Rolling Earth: Outdoor Thoughts and Scenes from the Writings of Walt Whitman," selected by Waldo Browne, with an introduction by John Burroughs, and "Harvard Essays on Classical Subjects," edited by Herbert W. Smyth.

Two first editions of "Paradise Lost" are included in the library of the late Dr. Joseph F. Payne, a portion of which will be sold the end of this month at Sotheby's.

Two Fellows on the Kahn Foundation for the Foreign Travel of American Teachers will be appointed for one year beginning July 1, 1912; the stipend is $3,000, with an additional $300 for the purchase of books, souvenirs, photographs, etc. Applications for appointment should be made on a formal blank, which may be obtained from the secretary of the Foundation, Sub-station 84, New York city, and should be filed by March 1.

The Baltimore Association for the Promotion of the University Education of Women offers a fellowship of $500 for the year 1912-1913, which is available for study at an American or European university. Applications, made on proper forms, should be in the hands of the chairman of the Committee on Award—Dr. Mary Sherwood, The Arundel—before March 30.

British Central Africa, now the Nyasaland Protectorate, is described by a former Governor, Sir Alfred Sharpe, in the *Geographical Journal* for January. He dwells especially on its economic development which has been so great that it is now virtually self-supporting. This is largely due to the cotton plantations, on which has been raised, by a careful and long process of seed selection on the Government agricultural stations, "the highest priced upland cotton in the world." To encourage the native cotton-planting industry there is a free distribution of seed, with a remission of half the hut tax to all natives who pay their tax in cotton. Falls near the capital, Zomba, are used for producing power. There are many excellent roads but the great need is better facilities for the transportation to the seacoast. An account of a trip around the Dead Sea by motor boat is given by J. E. Spafford of Jerusalem, with beautiful photographic illustrations. In the course of it the magnificent gorge of the river Arnon was explored. Its side cliffs "rise perpendicularly about 300 feet and are only about 20 feet apart, here overhanging, there overlapping, or dovetailing into one another."

Youths who have pored over "Treasure Island" or shuddered with delight at the atrocious deeds of Blackbeard and Captain Kidd will find entertainment in "The Book of Buried Treasure," by Ralph D. Paine (Sturgis & Walton). Captain Kidd in particular is dealt with in full. "His name reddened with crimes he never committed and made wildly romantic by tales of treasure he did not bury," he is, declares the author, fairly entitled to sympathy. The record, consisting of the original documents, some presented for the first time, shows that he was indeed "unfairly dealt with by his patrons, misused by his rascally crew, and slandered by credulous posterity." The other chapters, with such alluring titles as The Wondrous Fortune of William Phipps, The Bold Sea Rogue, John Quelch, are equally interesting but less carefully prepared. For example, an account of treasure on Oak Island is given with the same credulity which the author elsewhere gently satirizes. In reality there never was any treasure there—what was considered a cement floor was pronounced by experts at Columbia University to be natural limestone, and the rock on which eager eyes read a direction to fabulous wealth a few feet below proved to be only a piece of water-marked basalt. Mr. Paine's breezy style, however, carries the reader to the final chapter, Practical Hints for Treasure Seekers, which is provided particularly for "parents of small boys who have designs on pirate hoards."

"The Cavalier Poets," by Prof. Carl Holliday (Neale Publishing Company), is a good companionable volume, appropriately dedicated to the daintiest of the modern cavalier singers, Mr. Austin Dobson, and designated for the general reader. To lovers of poetry in that fortunate category, it recommends itself by offering, at the same time, somewhat extended sketches and appreciations of the poets and a choice anthology. In the first half of the book, Professor Holliday portrays with warmth of sympathy and effective touches of color, though not always with the finest discrimination, the characters of Herrick, Quarles, Herbert, Carew, Waller, Suckling, Crashaw, Lovelace, and Cowley. In the second half, he presents the familiar but ever delightful lyrics of a score of the minor choir of the seventeenth century. It is to be regretted that the general reader has so often to content himself, as here, with hasty proof-reading, and a provokingly incomplete and perfunctory list of texts and reference books.

William Valentine Kelley's "Down the Road" (Eaton & Mains) does not get very far. It is meant for those people who do not supinely indulge in the sybaritic luxury of thinking for themselves, but who resolutely entrust their souls to some forthright, authoritative adviser. This venturesome throng should welcome these essays on Nature, Life, Literature, and Religion, for the only subject that is really discussed is morality, or sometimes the more piquant one of immorality. Whether the subject be Walt Whitman, "that most blatant and bombastic of egotists," or "Parsifal," that most blasphemous farrago of nonsensical nebulosity, or Oscar Wilde, that "preposterous megalomaniac, suffering from a tympanitic tumefaction of the organ of self-esteem," the reader is everywhere made to feel that there is "no higher court to which appeal can be taken for a work of art or any other work which reason and morals condemn." These delicately suggested judgments are embalmed in a style notable for fluent inexactness of phrasing and touched with that graceful humor so frequently developed by long years passed in the amenities of theological wrangling.

The latest in Clifton Johnson's American Highways and Byways series (Macmillan) is a volume on "The Great Lakes" region, beginning with the valley of the Genesee and the Erie Canal, and closing with chapters on the Rock River valley of Illinois, and the site of the battle of Tippecanoe, in northern Indiana. The author's mixture of narrative, description, and conversation runs along easily, is generally entertaining, and sometimes amusing, but it does not get the reader very far onward towards a connected conception of the Great Lakes, even from the point of view of the sightseer. There has been a great deal of literature on the subject, but the field is still open to some author who can grasp the significance of this great fresh-water system in its various relations and present it to the reader in fitting form.

In "The Autobiography of an Elderly Woman" (Houghton Mifflin), the latterday grandmother speaks her mind about a number of things, pleasantly, but plainly. By the decisiveness of her utterance, even while she complains of having fallen from authority to ineffectual protest, and by her stout confidence in the advantages of her own present point of view, we should know her for the "spry old lady" she claims to be. And by the same token we can readily believe that under provocation she might prove "sometimes a defiant old lady," as she penitently confesses. Though full of illustrative domestic incidents, each having for its nucleus some baffled elderly desire—for the right to clean her own attic once more to her own satisfaction, for the obsolete prerogative of dandling her grandchildren *ad libitum*—what she has to say scarcely amounts to an autobiography proper. Its intention is discursive and interpretative—not in the least narrative. And yet nothing could be further from the serene impersonality of a "De Senectute." Its lively personal note engages the reader's amused attention. One learns to sympathize with the chagrins of a would-be-active old age pent amid solicitudes and affectionate anxieties. One smiles at the Yankee vein of practical philosophy that tempers natural impatience to indulgent acquiescence and robs surrender of its bitterness.

The Third Annual Report of the State Historian and Archivist of West Virginia, Virgil A. Lewis, is similar to the preceding ones, and, like them, reveals great activity in the new department. Unfortunately, it also shows that this industry is not well directed. The bulk of the report is taken up with a long discourse on the "Soldiery of West Virginia," in which the history of the war heroes is traced over a period of a hundred years. Several contemporary documents are woven into the narrative, but there is no attempt to make public all the material bearing on any phase of the subject. West Virginia history is rich in events; and, with diligent search of archives and family papers, a volume of documents on any one of the numerous episodes here lightly touched upon could have been published which would have enriched our knowledge of a territory that has proved so often the strategic position in our history.

It is not impossible that in his life of the Duchesse de Berry, entitled "A Princess of Adventure" (Scribner), the author, H. Noel Williams, may have imagined he was making a serious contribution to historical literature. There is, outwardly, all the needful scholarly apparatus—a preface with a rich bibliography, a detailed table of contents, copious footnotes, and a full index; but the result, we regret to say, is mostly twaddle. The book is permeated by a flavor of court scandal, doubtful anecdotes, sentimentality, and millinery. Madame de Berry's own "Mémoires," published by Nettement, as well as other au-

thentic sources, have, it is true, been drawn upon liberally, but the whole bears the stamp of sensationalism, pure and simple. One or two random selections may serve as samples. This is what happened immediately after the birth of the Duc de Bordeaux:

Shortly afterwards, the King and the Royal Family arrived upon the scene. "God he praised!" cried Louis XVIII. "You have a son!" And he handed a magnificent cluster of diamonds to the mother. "That is for you, and this is for me," he added, taking the new-born child in his arms. Then, calling for the clove of garlic and the Jurançon wine, he rubbed the boy's lips with the one and moistened them with a few drops of the other. The little prince endured this ordeal without flinching.

And here are the author's reflections on the instalment of the Duchesse de Berry at the Pavillon de Marsan, after her husband's assassination:

These apartments were not entirely strange to the princess. She had slept there on the night of her triumphant entry into Paris in 1816, the eve of her marriage, at Notre Dame. Ah! how happy, how full of joyous anticipation, she had been then! How little did she imagine that in less than four years the prince whom she was to wed on the morrow would he snatched from her by one of the most terrible crimes in the blood-stained annals of French history! And all her surroundings had been in harmony with her feelings; everything had been made ready to welcome the happy bride. The apartments had been upholstered and decorated in the most cheerful of colors; choice flowers in exquisitely-carved silver bowls or porcelain vases had stood on every table; gilded mirrors had reflected her smiles, etc.

We do not think Louise Mühlbach could have improved on this. Although the heroine of his story lived until 1870, the author closes the volume with her final departure from France in June, 1833, when she "passed forever from the fierce glare of publicity into the calm shadows of private life." The publishers have wasted fine press-work and some interesting illustrations on this useless book.

Alfred Zantzinger Reed contributes a valuable study to the literature of American government, especially as it concerns the relation of the State to local subdivisions, in his monograph, "The Territorial Basis of Government Under the State Constitutions" (Columbia University Studies in History, Economics, and Public Law; Vol. XL, No. 3). He takes the local units within which governmental agencies and party organizations operate as the foundation of the State's structure, and studies comprehensively the effect upon them of provisions in American State Constitutions, past and present. "The two especial weaknesses of our State system of political subdivisions," he finds to be "their complexity and the manner in which they discriminate against urban centres." The first evil, the result largely of haphazard Constitution-making, he concludes, is the most difficult to remedy, but the less important. The other, which has grown with the rapid increase in the urban population, is due to the fact that "it is not in human nature for a rural clique, accustomed to deal with urban problems according to their own ideas as to what is best, to face with equanimity the prospect of urban domination." He sees a way out in the direction of a greater degree of home rule, and suggests in conclusion that "the change from a centralized government to a broad system of local charters for rural and urban territory alike would so diminish the importance of the Legislature that the precise composition of this body would, with little friction, settle itself along lines dictated by economic conditions." The author's marshalling of facts and his summary of conclusions should make the volume a valuable work of reference for those who hereafter may set themselves to the difficult task of bringing some degree of order out of the existing chaos.

"The Three Greatest Maxims of the World" (Pilgrim Press) is the title of a volume of sermons, or, as the author prefers to call them, "familiar, practical addresses to students," by the Rev. Albert Josiah Lyman of Brooklyn. It is a dangerous practice for a parish minister to depart from his usual manner of discourse and compose a deliverance for the occasion, when invited to preach before a college audience. The result is usually an academic utterance which is not at all calculated to be a means of grace to an academic gathering composed of undergraduates. Dr. Lyman, however, has avoided the usual pitfalls, and his addresses are simple, straightforward utterances of wholesome and sound moral truth. They are ethical rather than religious, and if their truth is not high, it is vigorous, clear, and fitted to real needs. The style is incisive and succinct, as of a man chiselling words on marble and wasting no strokes.

"Black and White in South East Africa" (Longmans), by Maurice S. Evans, is an exceedingly lucid statement of the arduous and intricate problem which lies before the people of South Africa in dealing with the native races. The author is admirably fitted for his task, having been for thirty-five years a resident in the land and for thirteen years a member of the Natal Legislature. He was also a member of the Natal Native Commission of 1906-7, which visited every part of the province and of Zululand to study the sociological and political conditions. His book throughout shows his deep interest in the native and his sympathy for the white man. He describes the natives in their primitive state as a "wonderfully law-abiding race" with a clear idea of what is right and wrong. Physically, he says, "a really fine Zulu is a magnificent specimen of a man." Their language is melodious and copious, and in some respects "more full and expressive than our tongue as spoken by the common people. Different classes of cattle may be described in Zulu by a single word, which would require several sentences, accompanied by a diagram in English." The author's full account of the present condition of the natives as landholders and hired laborers, after seventy years of close contact with the white man, brings out very clearly their passive power of persistence in holding to their ancestral tribal customs and traditions. It is the great obstacle to be overcome. The elevating effects of missions, education, and wise government are touched on, and much stress is laid upon the changes wrought on the European, many of them exceedingly regrettable, by his intercourse with the African. In one chapter, he treats what he terms the "sub-problem" furnished by the Asiatic and colored people, that is, the mixed race or Eurafrican.

The reconsideration of the whole scheme of native government is earnestly advocated, the segregation of the races being the keynote of the policy recommended. This could be accomplished by giving the natives large allotments of reserved land and by not permitting them to share in the government of the whites. The tribal system, "a potent factor in the past in conserving much that was good in character and life" and that is essential to the native's progress and advancement, should be strictly adhered to, his rights being cared for at the seat of government by a council for native affairs. To diminish the host of black servants who enable the white man to live a life of sloth, ease, and pleasure, he would endeavor to impress upon him the true dignity of labor. And in this connection it is interesting to note that an organization has been formed in the Transvaal, with the object of encouraging white labor. Mr. Evans has evidently made a careful study of the negro problem as it exists in this country. "I would," he says in one of his concluding paragraphs, "that some of those patriotic and far-seeing citizens of the Southern United States, who feel overwhelmed by the questions raised through the admixture of races in their own country, could visit us and study our problem in its present phase in the light of their own tragic experience." He also commends heartily the wise suggestion of Sir Matthew Nathan, a former Governor of Natal, that an international commission should be appointed to investigate the relations of black and white in the various countries in which they come in contact. But the outlook would be still brighter, he thinks, if the work of the "most influential and possibly the wisest of the negro race in the United States," Booker Washington, could be imitated in Southern Africa.

Prof. Frank Frost Abbott of Princeton University is the author of an attractive little volume on "The Common People of Ancient Rome" (Scribner). In character and purpose the chapters of this book are similar to the author's essays and sketches published a year or two ago, under the title of "Society and Politics in Ancient Rome." The opening chapter details the various channels of influence by which the Latin language spread gradually through so large a portion of the Mediterranean world and laid the foundation for the Romance languages of later centuries. Professor Abbott objects to the usual view that the victory of the Latin speech over the language of the physically victorious Germanic peoples was simply a case of the survival of the fittest, and chooses rather to find the reason in "the sentimental respect which the Germans and their leaders had for the Empire and for all its institutions." But was this sentimental respect anything but recognition of superior fitness in those elements of the Roman civilization which called it forth? The two chapters next in succession deal with the Latin of the Common People and the Poetry of the Common People, both in a scholarly manner and yet intelligible to the reader who has not himself mastered Latin. The linguistic and literary portion of the volume ends with an inconclusive attempt to account for Petronius, or, otherwise, to trace the origin of the realistic romance among the Romans. Of the remaining chapters the most in-

teresting are an account of Diocletian's attempt to reduce the cost of living by fixing a table of maximum prices, in the year 301 A. D., and a chapter on Corporations and Trades-Guilds. The chapter on private benefactions is rather extreme in its unqualified statement that "under the old régime [before the influence of Christianity] charity was unknown." There were human hearts among the Romans, and where human hearts are there charity is never wholly wanting.

Science

The Sun. By Charles G. Abbot. New York: D. Appleton & Co. $2.50 net.

The eminent Padre Secchi, more than a third of a century ago, was the first to devote an entire treatise to the sun. His book was followed by the popular works of Proctor, Young, and Ball. Now we have Pringsheim's scholarly "Vorlesungen," and the present work by Abbot, which relates acceptably the Smithsonian researches and all the recent discoveries at the Yerkes and Mount Wilson Observatories, with many novel explanatory hypotheses and an array of facts that may prove of interest to geologist and botanist, meteorologist and engineer. While Young's book was wholly satisfactory twenty years ago, the unparalleled advance in solar research, even since his lamented death, has quite revolutionized this department of astronomy; and instead of using so much of Young's material, we think Mr. Abbot would have done better to write a wholly new book *ab initio*. However, his book is far from deficient in excellencies; and acknowledged master as he is in his own line, he has no reason to fear stating with the utmost fairness all hypotheses, whether his own or another's.

Mr. Abbot keeps constantly in mind the utilitarian methods of Langley, his great predecessor, in prosecuting lines of inquiry that have, or may be expected to have, practical bearing on matters mundane. Is the solar radiation uniform or variable? What losses does it suffer in the earth's atmosphere? Are there changes of transparency in the sun's outer layers sufficient to alter appreciably the earth's supply of radiation? How much solar radiation does the earth reflect unused to space? How does the earth's temperature depend on solar radiation and on the transparency of the air? If there should be variations of solar radiation, how great changes of temperature of different stations on the surface of the earth ought to follow, and how long would such responses be delayed? In short, are solar studies applicable to weather prediction? What methods, if any, can be economically used to store and employ the sun's energy for power or heating? What influences do changes in the intensity or color of the light falling on different plants produce on their growth and fruitage? May advantageous variations of plants be promoted by the control of their radiation supply? What can be done with solar rays for the promotion of health? What, after all, is the sun, and how can we best explain the principal solar phenomena? The author perceives, as every keen student of solar physics must, the present impossibility of answering satisfactorily all these lines of inquiry; but his book is an excellent exposition of what is known and what is surmised about things solar. His reply to the last of these questions, while not settling it in every one's mind, is nevertheless by far the best English statement of modern scientific views concerning the sun's constitution. Preferring as a basis Secchi's theory as formulated a third of a century ago, Abbot presents Young's well-known and oft-quoted views, followed by the later modifications of Halm and Schmidt and Julius, accepting also as sufficient the Helmholtzian hypothesis of maintenance of solar heat by simple contraction, and very judiciously regarding the evidence as to radio-active processes as undetermined and inconclusive. Much is made of the recent eclipse observations of Mitchell, and the Mount Wilson discoveries of a magnetic field in sunspots are emphasized. The important influence of our own atmosphere on the heat received from the sun; fluctuations of solar radiation, a subject in which Mr. Abbot is *facile princeps;* solar influence on plant life; and the sun as merely the nearest one of the stars, in connection with the broad question of stellar evolution, are among the topics adequately treated.

Save a few trite adaptations from Young, the illustrations are excellently chosen, and the photographic reproductions serve to bring out the points intended with all requisite lucidity. One of the best chapters deals with the utilization of solar energy; yet years upon years of sedulous research of the acutest minds, from Nasmyth to Vogel, leave the practical solution of this greatest of problems apparently as remote as ever; and, after all, one is tempted to agree with the author that it is rather in the investigation of its curious features that research on the sun has progressed the furthest. Another decade may perhaps change all this.

"Butterfly and Moth Book," by Ellen Robertson-Miller, is in Scribner's spring list.

From England comes the report of the death of Dr. Sophia Jex-Blake, who will be remembered for her strong stand in behalf of the medical education of women. After studying medicine under Dr. Lucy Sewall in Boston, Mass., in 1866, she matriculated in the medical faculty of the University of Edinburgh, and when refused a degree she brought action against the University. She was granted the M.D. by the University of Berne in 1877. She founded a school of medicine for women in London and one in Edinburgh. Her writings include: "American Schools and Colleges," "Medical Women," and "Care of Infants."

Drama

Maurice Maeterlinck. By Montrose J. Moses. New York: Duffield & Co. $1.25 net.

Mr. Moses's "Study" deals briefly with the "Man" and the "Poet," handles the dramatic fully and systematically, and dismisses the "Philosopher" with a brief and cautious epitome. The book is unindexed, but contains useful bibliographies.

Respect for Mr. Moses's admirable diligence in research must not prevent us from speaking plainly on the point of his qualifications for the part of critic. The question is not so much one of truth or error (Mr. Moses, like other men of wide reading and much docility, is often right), as of a vagueness and looseness of apprehension which makes his error harmless and his truth ineffectual. There are formulæ in his book which, taken alone, might denote thought, but which are commonly followed by something so irrelevant or so contradictory as to belie the supposition that the first thought has been actually grasped. In criticism Mr. Moses can hardly view an idea in emphatic detachment or in significant relation. Ideas are for him things not to be used, but to be invoiced; his explanations recall the answers in college examination papers based on the undigested notes of a half-understood lecture.

We confine ourselves to one illustration of this inconsequence and slipperiness of mind. The following passage is found on page 306:

> Maeterlinck's sweetness and light have never obscured his force; they have opened a way, as his dramas did in the theatre, for the unknown to become accessible to man's inward scrutiny. The sage exists only where the soul is aflame with the golden glow of truth, and this golden glow abides only at the heart of all virtue. For, as he says, "the more clear ideas we possess, the more do we learn to respect those that as yet are still vague."

The first sentence assures us that Maeterlinck possesses force, and, in support or illustration of that thesis, alleges that his work opens paths into the unseen. We are, then, told, apropos of nothing in the context, that wisdom is inseparable from fervor (surely, a most questionable dictum), and that fervor depends on virtue. These two propositions are expressly deduced from the apparently quite irrelevant affirmation that our respect for vague ideas grows

with our acquisition of clear ones. The seeker for other examples is referred to pages 16-17.

The two following sentences (pages 196-197), which are consecutive, suggest one phase of the author's style: "Here he has a keen exemplification of quotidian happenings in the midst of eternal verities." "'La Mort de Tintagiles' is a typical picture of Maeterlinck's proneness to set the lyrical amidst black rivers of fright." The competence of the proof-revision may be illustrated by these examples: "Rautenderlein" (profanely suggestive of "raw tenderloin"), "school that *halcd* Poe," "*sickled over* with the pale *castc* of thought" (the italics are ours).

Mr. Moses cannot provide matter for the thoughtful, because he does not think; he does not write clear English, and so has not produced a useful, popular handbook. If he would renounce his present ideals of thought and style, and confine himself to plain facts and plain English, he could do work that would entitle him to commendation.

"Sumurûn," the pantomimic play, which was one of the earliest successes of Max Reinhardt, and which took Berlin and then London by storm, has now reached New York, where it seems likely to repeat its earlier triumphs. Winthrop Ames is entitled to the credit of its importation, and has produced it, with the original company, music, and effects, in the Casino Theatre. If it is not, when regarded as a work of romantic imagination, altogether so wonderful as it was represented to be in certain rhapsodical preliminary notices, it is a real novelty of indisputable artistic and dramatic value. But its chief importance is as an object-lesson in the potency of skilled gesture and trained facial expression, and in the true meaning of stage management. As a play, it possesses no transcendent merit. In its outlines it is simply a lurid Oriental melodrama, made out of incidents largely borrowed from the "Arabian Nights," and not always so clear in action as—in the absence of words—it ought to be. A wretched hunchback, enamoured of a lovely dancer, who despises him, sells her to a fierce old Sheik, in order to separate her from the Sheik's son, who also is pursuing her. The hunchback then swallows poison. Meanwhile the Sheik's favorite, Sumurûn, favors the young cloth-merchant, Nur-al-Din, and contrives to smuggle him into the harem while her master is amusing himself with the dancer in an upper room. Presently the old Sheik, awakening from sleep, discovers his son, who has followed secretly, and promptly cuts his throat. The dying youth uses his last breath to tell of the treachery below, and the old Sheik, with gigantic strength, lowering him with one hand down the spiral staircase, while holding a scimitar in the other, descends to wreak vengeance on the lover of Sumurûn. He has Nur-al-Din at his mercy, when the resuscitated hunchback—whose supposed corpse has been subjected to all kinds of grotesquely horrible vicissitudes—plunges a dagger into his back, and so brings happiness to the lovers.

All this, of course, is melodrama of common quality, but in representation it becomes fanciful, animated, grotesque, and thrilling romance. The story is told with a smoothness, rapidity, and wealth of illuminative gesture and expression, that never permit the interest of the spectator to flag, and keep his attention so fully occupied that he has no time for that sober reflection which is most fatal to illusion. And the characterization, owing to the vividness and appropriateness of the gesture and to the illuminative play of facial expression, is not only vital, but in one or two instances extraordinarily vital. The performance, in short, is particularly strong in those very respects in which most representations by the modern school of actors are apt to be weak. It is remarkable also for the incessant life of the scene, the sustained coöperation of all the players, the artistic simplicity, fitness, and decorative quality of the scenery, and the striking effects created without any sense of costly spectacular effort. The power of enlightened stage management is exemplified in the most convincing way, and it is in this fact, and in the general excellence of the acting, not at all in the dramatic quality of the piece itself, that the true significance of the exhibition is to be found. Several of the individual performances are exceedingly good. Preëminent among them is that of the dancer—whose evil charm is the cause of the final catastrophe—by Leopoldine Konstantin. A more eloquent embodiment of feminine guile, wayward passion, and imperious temper could not easily be imagined. Paul Conradi's Sheik is a most imposing and menacing figure, and Emil Lind, as the hunchback, contributes a notable study of jealous despair and rage. All the other actors are capable. A word of special recognition is due also to the incidental music of Victor Hollaender, which is thoroughly Oriental in character, and harmonized most effectively with the action of the scene. There are few living stage managers who could not profit by the lessons to be learned from this artistic production.

Charles Frohman has purchased the English-speaking rights of "Primrose," the latest comedy of Messrs. de Caillavet and de Flers, which has had a prolonged success at the Comédie Française. There is a possibility that the piece may be seen in New York this season. He has also accepted the scenario of a new play which Henry Bernstein will write for Ethel Barrymore. The heroine is the wife of an English diplomat who is compromised by the discovery of important French military documents which have been stolen by attachés of the British embassy.

According to London report, Sir A. W. Pinero's new comedy, "The 'Mind-the-Paint' Girl" is a sort of companion picture to "Trelawney of the Wells." The latter was a study of Bohemian and theatrical life in the early Victorian days and the new piece is said to be a similar study, dealing with present-day conditions and composed of course in the author's lighter vein.

Sir Herbert Tree recently visited Paris to see the representation of "Le Bourgeois Gentilhomme" at the Odéon. He is thinking of playing M. Jourdain himself in an English adaptation to be made by Somerset Maugham.

Edmund Day, actor and playwright, died in New York on Monday, at the age of forty-five. He had played with Booth and Barrett and with Alexander Salvini. Besides certain "playlets," he wrote "The Round-Up," "The Sheriff," and "The Widow's Might."

Music

G. Schirmer has just published the vocal score of Wolf-Ferrari's opera, "The Jewels of the Madonna."

The latest novelty given at the Metropolitan is the merry one-act comedy by Leo Blech, "Under Seal." Probably never was an opera staged so inexpensively. The whole opera takes place in the sitting-room of the young widow, Gertrude, who has matrimonial designs on the Burgomaster, and the scene is a typically German one, comfortable but formal, with stiff furniture, the inevitable tiled stove, and a decorative scheme of family silhouettes hung in a group. However, the setting, except a carved wardrobe, counts for little in this amusing little opera, and the story also is simple, but, taken as a whole, with some charming musical bits, it whiles away an hour most agreeably.

There are two love stories in the plot, that of the Burgomaster and the pretty widow, and that of the Burgomaster's daughter and the son of his worst enemy. The young man's mother is living; she is the victim of debt and, consequently, of the official attention of Lampe, the Court messenger, who is determined to sell out all her belongings. She clings to a family heirloom, a fine carved wardrobe, which the widow Gertrude agrees to keep as her own, to save it from Lampe. This wardrobe is the scene of much fun. When Lampe has sealed it, after making sure that it does not belong to Frau Gertrude, the law forbids its being opened, but the law is not obeyed, with the result of many droll incidents. Goritz, who acts the part of Lampe, is the centre of interest. A more amusing picture of an important German official could not well be imagined, and he is ably assisted in his fun-making by Mme. Gadski, Mme. Mattfeld, Miss Alten, Jadlowker, and Weil. The most charming musical bit of the whole opera is the lively duet of courtship between the Burgomaster and the widow. The quartet of the lovers and the two widows is an admirable bit of workmanship, and, like many other episodes in the opera, it shows Blech to have thorough command of the technique of composition. He has written five other operas—"Cherubina," "Alaja," "Alpenkönig und Menschenfeind," "Aschenbrödel," and "Das War Ich." At present he is one of the conductors of the Royal Opera in Berlin, where he shares the work with Dr. Muck and Richard Strauss.

Josef Stransky was the first to conduct the opera "Versiegelt" anywhere. When he conducted it for the first time in Hamburg it was after weeks of rehearsal, for, as he says, it "must go as if fired out of a gun." The details may be difficult, but the final result is delightful.

The first performance of the Chicago Opera Company at the Metropolitan Opera House will be given Tuesday evening, February 13. It will be "Carmen," with Mary Garden in the title rôle. Success has attended Mr. Dippel's performances; in Chicago it was found necessary to give two extra performances a week. On Tuesday night of last week in Chicago, Wolf-Ferrari's latest work, "I Gioielli della Madonna" ("The Jewels of the Madonna") had its American première and achieved a triumph. The distinguished composer was present, and Carolina White, Amadeo Bassl, and Mario Sammarco, together with Cleofonte Campanini, who conducted, received ovations. The company will open its Eastern engagement in Philadelphia, Monday evening, February 12.

Richard Strauss's latest opera, "Der Rosenkavalier," has already had more than fifty performances in Dresden. Humperdinck's "Königskinder," though a year old, has not yet been heard there, but is now in preparation. The season is to wind up with a Strauss week.

Felix Weingartner has completed a violin concerto which Fritz Kreisler will be the first to play, as he was the first to play the Elgar concerto. Weingartner is also said to be at work on a new one-act opera and on making a new version of Weber's "Oberon."

The death is reported from Vienna of Hermann Winkelmann, the operatic tenor, at the age of sixty-six. After his great success as Siegfried, Wagner assigned to him the title rôle in "Parsifal" at the Baireuth festival in 1880, and he soon became noted in this part.

Art

The Art of the Romans. By H. B. Walters. New York: The Macmillan Co. $5 net.

Into a subject which has lately been the occasion of much erudite mystification, Mr. Walters introduces a refreshing element of common sense. We have been told to see an original invention in the custom of continuous narration—an inevitable expedient whenever there is much to tell on any long field which it is not convenient to subdivide. In the incapacity of the Roman sculptors to think out a clear and workmanlike relief we have been invited to find the germ of a new illusionism. In the ineptitude of Constantinian sculpture we have been assured there lies a new æsthetic of atmospheric envelopment. All these theories Mr. Walters faithfully records without accepting. A former historian of Greek art, his attitude towards Roman art is rather cold. This makes his book less interesting reading than, say, Mrs. Strong's "Roman Sculpture," but this coldness will be shared, we think, by all who approach the subject from the point of view of artistic quality.

It is customary to reserve Roman architecture and portraiture from such strictures. Even here it seems to us that Mr. Walters's tenderness is not quite justified. He fails to note the constant disproportion between material and design which makes Roman architecture nearly always unduly heavy. In portraiture Mr. Walters exaggerates the typical character of Greek portrait art. From the Egyptian painted heads, which are in a true Hellenistic tradition, we must assume that the earlier Greeks excelled the Romans here as elsewhere. Among the Roman busts, astonishingly real as they are, not half a dozen can bear comparison with fine Renaissance portrait heads. In short, the art of the Romans is that of a people which, with abundant ambition and unlimited wealth, fundamentally had no taste. Their case is not so unlike our own here in America, and our hope lies in a broader and more intelligent eclecticism than was theirs.

Mr. Walters might well have dwelt more appreciatively upon the beauty of Augustan naturalistic ornament. Here Mrs. Strong is a more sympathetic guide. The question remains open whether this lovely development, so fruitful centuries later in the Italian Renaissance, is, after all, not merely the afterglow of Alexandrianism. The subject is worthy of more investigation than it has received. The present book covers the field, including the minor arts, with especial chapters on Roman art in Gaul and Britain. For the sake of completeness some attention might have been given to Roman art in Africa and the Levant. In the latter region, however, our author accepts Strzygowski's theory of an unbroken Hellenic development. And, indeed, on the basis of our present knowledge, Athens and Cyrene may be regarded as the Eastern outposts of specifically Roman art.

Though there is plenty of special literature in the Roman field, comprehensive manuals are few and inadequate. So Mr. Walters's judicious survey, with its many illustrations, should appeal strongly both to the student and to the general reader.

Walter Crane's collected addresses in "William Morris to Whistler" (Macmillan) preaches the dignity of applied art and criticises the capitalistic régime as hopelessly inimical to the best interests of art. Mr. Crane's attitude towards the arts and crafts movement in England and America, however, is hopeful, and he is inclined to make the best of a crooked world as it is. The book, which is prettily decorated with the author's vignettes, cannot be called a weighty one.

"Illuminated Manuscripts" (Putnam), by J. A. Herbert, is a worthy addition to the Connoisseurs' Library. It covers the European field with scholarly accuracy and clearness, is amply provided with illustrations, and, except in a too succinct treatment of French illumination after the thirteenth century, offers little ground for adverse criticism. In connection with the Hours of Turin, the plausible attribution of some of the miniatures to the Van Eycks should have been noticed. In fact, the possible relation of Gothic illumination to lost mural painting deserved a word of discussion, and the growing richness of American public and private collections might have been recognized. But the book is primarily intended for the English reader and corresponds pretty closely to his opportunities and limitations. Being especially strong on the English side and on the early periods generally, it nicely supplements the current manuals.

At the December meeting of the British School in Athens Mr. Wace gave an interesting account of some important discoveries made by Mr. Thompson and himself in connection with the Macedonian Exploration Fund. The districts explored were Orestis and Elemiotis, with the part of Perrhæbia which is still Turkish territory. Near Elassona two prehistoric sites were noted, resembling the Thessalian sites, from one of which vases of the so-called Late Minoan II style are said to have been found. Another prehistoric site was discovered on the banks of the Haliakmon, near Serfije, and in the same district a cemetery belonging to the early iron age. In Orestis were found three Greek sites of the classical period, the names of which are unknown In Northern Perrhæbia the explorers came upon a long Latin inscription of Trajan, dated 101 A. D., of great topographical and historical importance. The results show what a fruitful yield Macedonia will be for excavators of prehistoric, classical Greek or of Roman sites.

Excavations at Ostia, the ancient port of Rome, are continued with much energy. The principal street of the town has now been laid bare for a length of nearly 500 yards. Its width is as much as eight yards, and it is flanked with porticoes and paved throughout, so that the effect is quite imposing. Not far from the gate by which it left the town was found a splendid female winged figure, a combination of the types of Athena and of Victory, which we may suppose decorated the gate itself. An extensive cemetery situated outside the city walls has been partly explored. In the sand beneath the tombs cremation burials of the third century B. C. have been found. Many of the public buildings of the town have been completely cleared and the intervening spaces explored, so that the most important quarter of the city now forms a connected whole. The baths which had been excavated in 1888 have been further examined, and their beautiful mosaic pavements with marino scenes in black on a white ground have been brought to light. Under the palæstra adjoining these baths a large reservoir has been discovered. Moreover the barracks of the *vigiles* have been completely excavated, as well as the quarter behind the theatre, where remains of a Christian church were found, which was probably erected in honor of Quiriacus, the first bishop of Ostia (268-270 A. D.), but at least three centuries after his death. The foundation of the city of Ostia, which is now under exploration, is to be connected with the Ostian questorship in 266 B. C., since no trace of anything earlier has been discovered on the site.

Finance

WHEN NEW YORK LENDS TO EUROPE.

Resumption of gold exports from New York last week, with $2,500,000 in all shipped to Central and South America, was correctly explained as meaning that Europe, which had obligations to settle in those markets, was drawing on New York's gold for the purpose. The same thing happened at this time in 1910, but with this difference—that whereas Europe was then our heavy creditor on balance, and was ordering the southward gold shipments as partial discharge of the debt, we ourselves are now the creditor market, so that Europe virtually has to increase its American indebtedness to command the gold.

Simultaneously with these shipments came news of an impending $125,000,000 loan by the German Government. When that large operation was announced there was still outstanding, from the short loans made by New York to the Berlin banks last month, the sum of $50,000,000. It had been expected that these loans, which were near maturity, would be paid off this month. Instead, the Berlin banks, on learning of what the German Government expected from them, have not only asked for extension of their New York obligations for three months, but have considerably increased the indebtedness. This might fairly enough be described as the indirect financing of the German public loan by American capital.

The incident emphasizes again the contrast between the money plethora here and the European markets' lack; but it goes a little further. To match the existing status, one would have to go back a decade. Our foreign trade balance, at that time, had piled up exactly as it has lately been doing; home industry was halting; we were believed to have $250,000,000 loaned out on Europe's markets. When tight money seized upon Europe, after the Transvaal War and the blockade of the gold-fields had begun in October, 1899, we not only increased those loans, but entered the market for European public securities. Our bankers took $28,000,000 of the British Exchequer's war loan of August, 1900; $100,000,000 of the loan of May, 1901, and $80,000,000 of the loan of April, 1902. We loaned $20,000,000 in 1900 to the German Government, and bought the new bond issues of Continental cities. Wall Street of those enthusiastic days declared that New York had become, or would very soon become, the recognized money centre of the world.

Nobody makes that claim to-day. We have learned since 1900 that, in all such cases, America will soon have need again of whatever capital it may temporarily have placed on the European markets, and a very considerable slice of Europe's own capital besides. The question which remains is, how far the subsequent revival of American industry, on that earlier occasion, was a result of the great stores of capital accumulated at our market's order, and how far it was mere coincidence.

This brings up the general question of our real financial and industrial position. If an observant man were asked to describe the characteristics of the hour in financial and industrial markets, he would undoubtedly point out, first, disappointment that the sudden revival which was somehow to come in sight on the morning after New Year's Day had not materialized; secondly, that all the consuming community seems to be economizing; thirdly, that all the producing community has been putting its house in order; fourthly, that the American market, and every one connected with that market, has been paying off its debts; finally, that, as a result, an impressive credit balance has heaped up in our bank reserves, in our home money market, and on the foreign markets, subject to our draft. Supposing he were next to inquire in Wall Street exactly what this combination of circurstances meant, it would be exceptional if he did not presently run on the following answer, from entirely respectable authorities: The people have lost heart. Times are hard. Business is unprofitable. The Government is to blame. The Trust prosecutions have caused it all. A Presidential election is impending. Dark hours are ahead of us. The United States has seen its best days.

So much for the very probable comment, in the present mood of American finance, on the condition of financial and industrial slack-water which now surrounds us. If, however, some stray observer who had given careful attention to the ups and downs of American financial fortunes in the past were asked for his opinion, he might possibly answer somewhat differently. He might suggest, for instance, that completion of the liquidating process after a great economic crisis is necessary before good times come again, but that the process is painful.

This he might supplement by the remark that New Year's Day is not a landmark in finance; that underlying conditions on January 25 are apt to be much what they were on the 25th of December; that economy by the consuming community means reaccumulation of wealth; that the way for a man or a community to get on a sound economic basis after a period of over-extension is to pay off pressing debt, and not (as in 1909) to pile up more; that America's present position in the money markets of the world shows how far that salutary process has been carried; that the hour before dawn is an hour when it seems as if it would never be light again, and that the most familiar and most stupid trick of misguided human nature is to lay on the shoulders of Government the blame for our own extravagances and blunders. Perhaps an observer thus familiar with the past might conclude with a citation from eminent authority, to the effect that "the man who is a bear on the future of this country will go broke."

To any one, indeed, with the broader view of financial history, the whining and whimpering of the day (in highly respectable financial circles) seems just a bit pathetic. It is heard, let it be observed, in much the same quarters as informed us, in 1901 and 1905 and 1906, that nothing could possibly stop the progress of inflation in the American financial boom. Booms had collapsed before, but this would not. Overspeculation and overexploiting had in the past led directly to financial crisis and prolonged depression; but things were different now. Such achievements nowadays merely guaranteed the perpetual and successful continuance of the inflating process. Financial principles and economic law had been revised.

Perhaps the attitude of numerous financial oracles at the present moment is a logical corollary to their attitude of those years. It is true, such conditions of liquidated markets as to-day's used to be the infallible prelude, at a greater or less distance, to the new revival of finance and industry. They were undeniably so in the dark hours at the opening of 1879 and 1897. But doubtless economic law has been turned upside down, in the sequel to reactions as to booms. Whoever chooses to accept this cheerful theory is at liberty to do so. The only passing comment called for is, that the declaration, five or ten years ago, of the new economic order which would not admit of relapse, panic, liquidation, forced economy, or hard times, has not been so precisely verified by the sequel as to encourage belief in the abolition of precedent as applied to the state of affairs which now exists.

Human Efficiency
A Psychological Study of Modern Problems
By Horatio W. Dresser, Ph.D.
Author of "The Power of Silence," "The Perfect Whole," "Living by the Spirit," etc.
Crown 8vo. $1.50 net.
Starting with the present day scientific psychology, with its emphasis on both mind and body, the author endeavors to apply psychological principles to the question of efficiency at large. He admits the importance of a scientific study of industrial conditions, but points out that the deeper question cannot be answered without making a more thorough study of human nature. Unlike writers who place so much stress on suggestion and sub-consciousness, Dr. Dresser emphasizes the power of will, conscious control, and intellectual co-ordination. The result is that a fresh value is assigned to many principles that have recently been overlooked and the volume as a whole includes various constructive clues which throw light on the social problems of the day.

PRINCIPLES AND PRACTICE OF POULTRY CULTURE

(Country Life Education Series)
8vo, cloth, 611 pages, illustrated, $2.50

A complete discussion of the scientific methods of poultry culture, easily adaptable to a long or a short course or equally valuable as a good general treatise. Every phase of the industry is presented and in the simplest and most practical way. More than five hundred photographs and drawings are used to illustrate the text and show graphically the evolution of methods and systems of poultry keeping, the development of types of poultry houses, common appliances, and the methods of using them, the characteristics of different kinds, classes, breeds, and varieties of poultry, etc. General references include all important books and bulletins on poultry.

LETTERS AND MEMORIALS OF
WendellPhillipsGarrison
Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable eorrespondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and taet which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net, postpaid.

The LAST UNPUBLISHED WORKS of COUNT LEO TOLSTOY

Publication in the United States Authorized by Arrangement with His Heirs

It is said that in his latter years, Tolstoy convinced himself that it was wrong to write fiction, and his duty to devote his whole energy to the expression of social, political, and moral ideas. Nevertheless, there were times when the instincts, the habits and the genius of this master story-teller were too strong for his scruples, and he surrendered himself with unspeakable delight to the telling of tales. Wonderful stories they are, too, founded, some of them, upon a great crisis of his life; others upon his own intimate family experiences; and they are told as only this giant among the novelists of the last century can tell them. But, although written, they were never published, the author resolutely suppressing all temptation to give them to the world. With his death, however, the ban was lifted, and in "HADJI MURAD," the latest novel by the author of "Anna Karénina," "Resurrection," etc., and in the other volumes there is presented to the American public for the first time the fruit of Tolstoy's ripe old age.

HADJI MURAD, a Novel

This remarkable novel centres around an intrepid Tartar chief, one Hadji Murad, a character whom Tolstoy knew personally, and who made a great impression upon him. The grim old warrior is wonderfully portrayed. "Hadji Murad" will occupy an important place in the world's recent fiction as the first novel by Tolstoy to be published since "Resurrection," and the last written by this master hand.

Frontispiece. 12*mo.* $1.20 *net.* *Postpaid* $1.30.

THE FORGED COUPON and Other Stories

The extraordinary results of an action apparently unimportant form the basis of "The Forged Coupon." In Tolstoy's inimitably lifelike manner are shown the logical and inevitable consequences, each attached to the other like a train of cars, of one bad action.

Frontispiece. 12*mo.* $1.25 *net.* *Postpaid* $1.37.

FATHER SERGIUS and Other Stories

Father Sergius is one of those not infrequent figures in monastic tales, a courtier turned monk. How his hunger for perfection drives him from a Guard regiment and a life of ease to a monastery, thence to a hermitage, and finally out into the world, forms one of those grimly realistic stories in which Tolstoy liked to convey his philosophy of life. *Frontispiece.* 12*mo.* $1.25 *net.* *Postpaid* $1.37.

THE MAN WHO WAS DEAD (The Living Corpse) and THE CAUSE OF IT ALL. Two Plays

Around the situation caused by the disappearance of a man who prefers to drop out of sight rather than stand between the love of his wife and his best friend for each other, Tolstoy weaves the beliefs of his later years. This play is a marvellous appeal for faith in the natural man, unspoiled by social prejudices, unconstrained by legal institutions, living, doing, sacrificing out of a wise, generous, discerning soul.

12*mo.* *gilt top.* $1.20 *net.* *Postpaid* $1.30.

THE LIGHT THAT SHINES IN DARKNESS. A Play

Certainly to all students of the life, teachings and character of Tolstoy this drama is one of the most interesting of all his productions. For it is nothing more nor less than a complete exposé of Tolstoy's own difficulties in trying to follow his ideals against the will of his family.

12*mo.* *Gilt top.* $1.20 *net.* *Postpaid* $1.30.

DODD, MEAD AND COMPANY

Fourth Avenue and 30th Street, New York

Important New Publications of The House of Cassell (*Founded 1848*)

These books can be purchased through your local bookseller or will be sent postpaid by the publishers

Canada

The New Garden of Canada

By F. A. TALBOT. A fascinating account of a tour of observation, made with pack-horse and canoe, through the richest undeveloped country in the world. The traveller, the investor, the American interested in Canadian opportunities, will find this book of surpassing general interest and invaluable for its fund of accurate information. The New York Public Library, reports it one of the books in greatest current demand. *Fully illustrated. Net*, $2.50; *postpaid*, $2.65.

Canada To-day and To-morrow

By ARTHUR E. COPPING. A really live account of things Canadian. Mr. Copping visited Quebec, Toronto, Winnipeg, Hudson Bay, Saskatchewan, Manitoba, Alberta, and British Columbia, and his valuable book provides illuminating notes on the climate, farming, sport, the flowers, beasts and birds of these provinces, the Indians, the Esquimaux, the Canadian Mounted Police etc. *With six color plates and 25 other illustrations. Net*, $2.50; *postpaid*, $2.65.

Canada As It Is

By JOHN FOSTER FRASER. With an Introduction by THE RIGHT HON. LORD STRATHCONA, HIGH COMMISSIONER FOR CANADA. The revised edition of Mr. Fraser's well-known book contains, besides the new introduction by Lord Strathcona, many facts relating to the most recent developments in Canadian progress, thus giving the book a renewed timeliness and a new importance. *With 54 illustrations. Net* $1.75; *postpaid*, $1.90.

Egypt

The Truth About Egypt

By "J. ALEXANDER." "In a popular style it covers the events of national importance since Lord Cromer. And even those who may be disposed to say that Lord Cromer's exhaustive 'Modern Egypt' will remain the last word for some time to come, will find entertainment and profit in this more modern, if not so long-studied, a review."—*Boston Transcript. Eight illustrations. Net*, $2.00; *postpaid*, $2.18.

Algeria

The Land of Veiled Women

By JOHN FOSTER FRASER. Mr. Fraser travelled last year through that fascinating section of the world, Algeria, Tunisia and Morocco, the scene of the present warfare, and Biskra and Tangier. His experiences are embodied in a travel book of wonderful charm. *Fully illustrated. Net*, $1.75; *postpaid*, $1.90.

Biskra

The Desert Gateway

By S. H. LEEDER. The wide vogue of "The Garden of Allah" is rapidly making this volume of intimate personal association with the Arab, one of the most called-tor books of the season. "It is the only book of its kind on the region described in 'The Garden of Allah.'" *Amer. Library Assn. Report. Fully illustrated. Net*, $1.75; *postpaid*, $1.90.

The Navy

Warships and Their Story

By R. A. FLETCHER, author of "Steamships and Their Story." This handsome and exhaustive volume traces the evolution of the modern warship. Mr. Fletcher takes us through the varying periods that mark its history; from the days of the oar-propelled boat down to the most modern Dreadnought. "It is a pretty thoroughly comprehensive history of the fighting ship, and undoubtedly one of the books of the year."—*Nautical Gazette. Fully illustrated, large 8vo. Net*, $5.00; *postpaid*, $5.25.

Tolstoy

The Life of Tolstoy

By PAUL BIRUKOFF. Translated by W. TCHERKESOFF. Tolstoy, himself a great friend of the author's, personally selected the letters and other documents which appear in this work. "The writer presents in a thoroughly sympathetic and appreciative manner, an exceptionally clear and vigorous summary of a remarkable character and a remarkable career."—*Boston Transcript. With many reproductions of photographs taken just before Tolstoy's death. Net*, $1.50; *postpaid*, $1.62.

Mendel

Breeding and the Mendelian Theory

By A. D. DARBYSHIRE. The moment has arrived for a cheap and authoritative book embodying the results of the latest investigations in Mendelism and Heredity. That Mr. Darbyshire has succeeded in his book, which is intended for those commercially interested in breeding, is indicated by its recent adoption by numbers of Experimental Stations connected with our universities. *Four color illustrations and many in black-and-white. Net*, $1.75; *Postpaid*, $1.90.

Astronomy

Astromony For All

By BRUNO H. BURGEL. Translated by Stella Bloch. With over 300 illustrations. The rare combination of simplicity of style, and a genuinely new point of view in presenting the subject in the most fascinating, yet authoritative way, have earned this book an enormous sale abroad. This admirable translation will make the acquirement of a knowledge of Astronomy a pleasure for any reader. *Net*, $3.00; *postpaid*, $3.30.

Cassell & Company, Publishers, 43-45 East 19th Street, New York

The Nation

NEW YORK, THURSDAY, FEBRUARY 1, 1912.

The Week

By a nearly two-thirds vote, the House on Monday passed the bill reducing the iron and steel duties. The Democrats voted solidly for the bill, with the exception of the Colorado Representatives, who balked in behalf of the local interests in zinc ore and lead ore. Among the Republican "insurgents" there was a division on the subject; twenty of them, however, voted for the bill. No better strategic step on the tariff issue could have been chosen by the Democrats as their initial move. Among the members of the insurgent faction of the Republicans in the Senate, there must, in the present condition of their campaign against Mr. Taft—not to speak of their own record on tariff reduction—be a very strong disposition to range themselves on the side of this measure, which presents so little ground for objection from any point of view except that of the out-and-out standpatter. There seems, therefore, to be a very good chance of the bill being passed by the Senate; and if this shall be done, the President will be placed in a decidedly undesirable position. The indications clearly are that he will intrench himself squarely behind his oft-asserted position that tariff changes should be made only in pursuance of the results of investigations by the Tariff Board. Possibly, however, he may find a way, with the aid of the recent report of the Bureau of Corporations, to reconcile his conscience with the signing of the bill. Politically, it must be admitted that he will find himself distinctly uncomfortable whichever way he decides.

We think that a somewhat wearied public will experience a certain relief at Col. Watterson's departure for his Florida home, "beyond the reach even of the telegraph." He has been a trifle too much with us in these past few weeks. His repeated interviews and statements, his "time-limit" and his "court of honor," have generated a good deal of heat but have yielded very little light. From his first appearance in the Wilson controversy until the one which he assured us Tuesday morning was his last, he has been as incoherent as clamorous, and self-contradictory at the very moment that he was most positive. Yet his conduct has been of a piece with the character that discerning people long since came to attribute to "Marse Henry." With engaging personal traits and a gift of piquant expression, Col. Watterson has not built up for himself a reputation for either steadiness or political sagacity. He now exclaims of Gov. Wilson: "May God protect Democracy from such a leader." This will do to place alongside his confident prediction in 1892 that if Mr. Cleveland were nominated for the Presidency, his party would simply march "through a slaughter-house to an open grave." One would think that a man with such a ludicrous prophecy to his credit would now refrain from calling upon the country to mark his words, or asking high Heaven to bear witness to his political authority.

In accordance with his policy as outlined in his annual report, and in response to a House resolution, Secretary Stimson has transmitted to Congress his suggestions for the abolition of the "political army posts" and the concentration of the troops in a few economical stations. No less than sixteen posts, and possibly eighteen, should, he says, be abandoned at once, and there is a supplementary list of seven which might go a little later. Among the latter are some of the costliest in the United States—notably, Fort D. A. Russell, Wyoming, upon which has been spent $4,925,486 to make it a brigade post, and incidentally to gratify the constituents of Senator Warren of Wyoming, chairman of the Senate Committee on Military Affairs. This expenditure has hardly been completed. It will take courage, therefore, to abandon such an enterprise as this. Like Fort Logan H. Roots, in Arkansas, Fort William Henry Harrison at Helena, Montana, and Plattsburgh Barracks, New York, Fort D. A. Russell was built with a lavish hand. Our posts are unlike those of any other nation the world over, in that they represent a far larger outlay, proportionately.

Equally important with this desirable reform, in which Secretary Stimson should have the support of Congress, is the announcement that the Philippine garrison is to be cut in half, to only four regiments of infantry and two of cavalry. This will come as a great relief to the army, and speaks volumes for the confidence of the authorities in the complete pacification of the archipelago. There will still remain, of course, the Philippine Scouts, numbering 5,732 men, and the Constabulary of 4,305 men, which is under the control of the civil government. Although officered chiefly by Americans, these are composed of natives; evidently the powers that be have full confidence in the loyalty of these troops. While this step will decrease the cost of administering the archipelago, the simultaneously announced project of putting 12,000 or 15,000 troops into Hawaii as a permanent garrison reflects little credit upon the wisdom of the War Department. Hawaii is portrayed as the most important strategic point we have. As a matter of fact, high military and naval authority has long pointed out that it can only be a source of weakness. Any fleet bound for our Pacific Coast would sail by it and all its garrison, and troops stationed there would be lost for service at home.

The lack of a clearly defined platform for Ohio "progressivism" is apparent in the work of the State Constitutional Convention. The Socialist member from Cleveland would seek progress in a rigid prohibition of injunctions, a ban on the use of the State militia to preserve order in strikes, and by forbidding private police or detectives to give evidence in the courts. President Bigelow himself is virtually ready to sacrifice everything else to get through an absolutely untrammelled initiative and referendum. But he is known as a militant adherent of the single-tax idea, and so from the agricultural element come proposals to put in an ironclad prohibition of the single tax, and to include in the Constitution the present statutory tax-rate limitation. The latter was enacted last spring under vigorous pressure from Gov. Harmon, and is popular among farmers, who have found their

December taxes decreased as compared with former years.

Some of Mr. Bigelow's followers want progress on the liquor question in the shape of a mandatory license clause, so drawn as to deny the power of the Legislature to enact State-wide prohibition, if not local option by counties. On the other hand, Mr. Bigelow's pet measures are absolutely hopeless without the aid of many "dry" votes which cannot be procured if his influence becomes entangled with the attempt to curb the power of the people to restrain the liquor traffic. And here the temperance people have the distinct advantage, as the existing Constitution gives them all the power they want. All in all, the indications are that the Convention must temper its progressiveness with great caution if its work is to stand any chance of adoption by the voters. Ohio is tired of the kind of government served up in the past by its George B. Coxes and John R. McLeans, but that feeling is not concentrated as a moving force behind any of the specific measures relied upon by extremists. Yet in this very fact lies the real opportunity of the Ohio Constitutional Convention. If it has the insight to make a correct analysis of present and prospective evils, and the wisdom to attempt only the possible for the present, while clearing the path of obstructions to future progress, it will make a name for itself.

The indictment of the ex-Director of Public Safety of Philadelphia and three others, including the head of a contracting company, is the direct result of the Catlin Commission's investigation into municipal conditions last autumn. At that time Director Clay challenged the authority of the Commission and refused to answer its summons, whereupon the Bullitt Committee proceeded to pile up a mass of uncontradicted testimony tending to show such irregularities as the alteration of specifications in contracts after they had been let to a favored firm, by which substitutions of inferior material were possible. The charges upon which the indictment has been drawn recite, further, such allegations as the showing to the contracting company of plans and specifications in advance of the regular advertising for bids, and the falsification of the city records. The accused company seems to have obtained about all of the public-building contracts under the Reyburn Administration, and a total of $200,000 is alleged to have been misappropriated in connection with its performance of them. The accused declare that they have "a perfectly good defence," but they are saving it for the trial.

For a genuine political novelty, commend us to the Primary bill which the voters of South Dakota are to pass upon in November. The independent column is to be put first upon the party ballot, but this is conservatism itself in comparison with the attempt to divide every party into an official majority and minority, which shall be recognized as such and represented by county majority and minority "proposal committeemen." These committeemen are to propose majority and minority "group principles and candidates" for the following primary. A decided innovation is the arrangement for official party endorsement of candidates for appointive positions, either State or Federal. Such endorsement is to be determined by open vote of the State Central Committee. Correlative of party endorsement is party recall, which is attained by having candidates make a written promise to resign office upon condemnation by a two-thirds vote of the Central Committee after trial of charges upon oath. There is also to be a postmaster primary, with a similar provision for resignation.

HAMILTON, Ga., January 24.—Developments following the lynching here on Monday night of four negroes, one of them a mulatto girl, for the alleged murder of Norman Hadley, indicate that the mob certainly put at least two innocent persons to death and probably three, and there is no convincing evidence that the fourth negro had anything to do with killing Hadley.

Such is Judge Lynch's usual accuracy! Moreover, if the telegraphic accounts are to be trusted, the cause of the murder was the undesired attentions of Norman Hadley, a white man, to a negro girl. "The developments," it is reported, "have caused great indignation, and a determined effort will be made to ferret out the members of the mob." Well, it is to be hoped that something will be accomplished by way of example, for once; what has happened at Coatesville is not encouraging, however. But this Georgia horror ought to open people's eyes to the hollowness of the old excuse for lynching. In not one-third of these mob-murders to-day is criminal assault alleged as the cause.

Reading of the proceedings in the trial of the meat-packers, one asks again whether the American business man, including the Big Business Man, is an ass or a clever devil. The duty on hides is now an academic question. They were made free during the tariff revision operations of two years ago. But few have forgotten the bitter struggle that preceded the act and the cries of anguish that were raised against this murderous assault on a great American industry. Where was that great industry? The Western beef-packers' accounts, as now revealed in court, show again and again that, on cattle shipments ranging between $75,000 and $100,000, the value of the hides amounted sometimes to one hundred dollars, sometimes to two hundred dollars, but seldom rose to any significant sum. Evidently, then, animal hides have no commercial value to the packers, and we ask again, what interest was threatened by the cutting down of the duty on that commodity? We are accustomed to have Wall Street go panic-stricken in anticipation of events which, when they do come, are received with perfect equanimity. Did the beef barons suffer from the same form of aberration? Or is something the matter with their bookkeeping system, as the Government contends?

The introduction in the Senate at Albany of the new game law for this State gives hope of better things. The confusing old law has been changed into a practical act of the permissive type by the Conservation Commission, while special knowledge in the codifiers who assisted in the work has led to the inclusion of a number of wise provisions. Thus, deer-taking has been limited to bucks and the beginning of the season retarded, as experience has proved that when the leaves are fallen and bucks alone can be shot, there is a marked reduction of fatal accidents. The work of the State fish hatcheries is to be helped by warfare on harmful species, whose catching will be aided by a system of permits. Quail are to be protected by an absolutely close season, save on

Long Island, and shore-birds by a shortening of the present open season. Encouraged by the success of the present State game farm in supplying pheasants and eggs, the Commission asks for $75,000 to establish six other such farms. It is also the Commission's belief that by the issuance of a fishing license at $1 and the proper management of the State's 40,000 acres of shellfish beds, an additional revenue may be obtained which will make its entire work, including forest protection, more than self-supporting.

It now appears that the transfer of Mr. J. Pierpont Morgan's art collection from the South Kensington Museum to New York is but the natural culmination of the activity that brought the works together. It need arouse no surprise either in the country which loses the treasures or in that which gains them. Nevertheless, expected as the event has long been, it does not lose any of its significance. London is experiencing something like a shock at the actual removal of long-cherished works of genius, and New York will have a suitable thrill of satisfaction, patriotic and artistic, in receiving them. Not the least striking feature of the affair is its connection with such non-artistic things as taxes. It is the abolition of the tariff duties on works of art on this side, coupled with the menace of death duties on the other, that seems to have determined the moment for the enrichment of our art treasures.

Robert Browning having had his say about grammarians, it is not amiss to see what a great grammarian thinks of Robert Browning. Something recently set Professor Gildersleeve of Johns Hopkins and the *Journal of American Philology* to rereading, after many years, "The Ring and the Book," moved thereto, says Professor Gildersleeve, "by a recent perusal of the Old Yellow Book, which, to be frank, has for any one familiar with handling original documents more real life in it than all the figures and fancies and philosophies that the genius of Browning has conjured out of it." As a grammarian, Dr. Gildersleeve has little patience with Browning, and has now and then been tempted to carry out the suggestion of an eminent scholar, "once a thrall of Browning," who wrote, "You might have something stronger to say about his abuses of English syntax." Professor Gildersleeve finally yields to the temptation and writes as follows:

> To me the English language, which I worship, however ignorantly, is a sacred thing; and he who does despite to the body of it, who deliberately twists its sinews and dislocates its joints, is a cruel monster, no matter what his genius; and such a monster of genius is Browning. I am not discussing his style, his inversions, his tiresome alliterations, his parentheses or what the Chicago ladies call in baseball parlance his curves. Nor do I find fault with the suppression of the relative. That is a return to the glorious liberty of the sons of the days of Elizabeth. But Browning's infinitives are to the gramatical soul so many mopping and mowing fiends; and it is this antigrammatical perverseness that makes it hard for me to follow up his other perverseness. There are hard writers, there are obscure writers. Some of the greatest writers are hard writers and we must submit to their conditions. But obscure writers deserve—

all that Professor Gildersleeve now proceeds to say. Thus an old topic is made refreshing by a new point of view.

London is reported to be holding up its hands in astonishment over the spectacle of New York gone "duke-mad." New York society, blandly remarks one newspaper, is not used to dukes, and its excitement seems strange to democratic Britons, to whom the very word has become a term of opprobrium. We are not concerned to defend New York "society," but it is the simple truth that its unfamiliarity with dukes has not prevented matrimonial alliances between them and some of its members. But there is a real problem in this matter of our attitude towards representatives of royalty. If we do not appear excited over them we are in danger of being denounced as boorish; and if we treat them like Presidential candidates, we are false to our traditions, in a word, duke-mad. Madness of this sort, fortunately for our self-respect, is not confined to America. We have no dukes to send abroad, but a wheat-king is just as good, if we are to judge by the reception that James A. Patten got in Manchester, not so many years ago. Our leading pugilist might have thought the people mad wherever he went in England. Indeed, we should not be surprised to find that the most detailed accounts of the activities of the Duke of Connaught among us were printed in the most duke-hating journals of his own nation—newspapers that would doubtless make their own the famous classification of society given by a Labor M.P.: "From a dustman down to a duke."

The wholesale lynching in Ecuador of political revolutionists seeking to embroil their country in fresh turmoil is hardly an imitation of American customs which we could term flattery. But if it represents an earnest desire to put an end to political conspiracies and to give the country relief from another needless revolution, the motives of the lynchers can be respected if not their methods. It is certainly high time that Central and South America took this matter of internal peace into their own hands. They cannot fail to have read Secretary Knox's recent plea that the Administration might be authorized to administer all the custom houses on the Caribbean in order to end internal disorders. It would be wise for the Latin-American republics to remove all excuse for what would be a most dangerous undertaking for us and for them.

Mr. W. Morgan Shuster's latest restatement of the case against the Russian Government in the matter of Persia lost nothing of its effect because the speaker is reported to have made no attempt at declamation or invective. The men who listened to Mr. Shuster's explanations at the London dinner Monday night came mostly from the Radical wing of the Liberal party. But that fact does not deprive their attitude in opposition to Sir Edward Grey's policy in Persia of significance as an index of what a considerable portion of the English people feel in the matter. It should be remembered that open criticism of the country's foreign policy, to the extent it is now being carried on, is a new thing in English politics. Consequently it would be from Radical quarters that the innovation would come. While it would be rash to say that Sir Edward Grey's official position has been endangered, it is safe to predict that future Ministers under a Liberal Government will have to take into account the growing feeling both against secret diplomacy as revealed in the recent Morocco crisis and against avowedly selfish diplomacy such as Sir Edward Grey has pursued in Persia for the sake of retaining Russian friendship in European affairs.

THE AWKWARD DETAILS.

Thus far the nomination of Mr. Roosevelt, over the bleeding corpse of President Taft, has been regarded by his boomers only as a glorious idea. The general plan seems alluring and magnificent. There is to be a mighty spontaneous movement, the Great Lakes calling to the Gulf and all the Rocky Mountains clapping their hands. At the right moment the idol of the nation is to signify his consent and then there will be nothing left but acclamation in the Convention and delirious joy among the people. It looks as easy as it is grand. Unfortunately, however, all such splendid conceptions have to be worked out with a lot of details that may be irksome but are necessary. An enthusiast once took an aspiring project to Lord Salisbury, acknowledging that he had not yet given any study to the unimportant details. But Salisbury coldly observed: "In these matters, details are everything." We may be very sure that they are in politics.

It may be instructive to consider a few of the awkward details through which the Roosevelt march to glory will have to make its way. Some of them are moral obstacles. There is the Third Term precedent, together with Mr. Roosevelt's specific declaration that he respected it and would under no circumstances seek or accept another nomination for the Presidency. There is, too, the difficulty of gross disloyalty to a friend who has never been unfaithful to him. A good deal of logic-chopping and hair-splitting will also be forced upon the champions of the transparently honest man. They will have to explain that for him to say "never," is to mean "as soon as possible." They will need to argue that a spontaneous and irresistible uprising of a great people is the same thing as a carefully worked up and secretly financed excitement. Impatient Rooseveltites may, indeed, think to brush away moral details like these as of no account at all, though we think they will find them formidable before they finish. But there is another order of obstacles, of an intensely practical kind, with which they will have to reckon, and which we desire here to indicate.

A National Convention is a thing of rules and precedents. It is not a lot of cowboys got together to yell, but a gathering of delegates who must proceed under a fixed order, work through officers and committees, and pass from one step to the next with due regularity. And before they nominate a President they must adopt a platform. That is as invariable as it is sensible. Convictions must be expressed before candidates are chosen. Now, what is the Platform Committee at Chicago next June bound to report? Is it not certain that it will give the Administration of President Taft very high praise? The Republican party could not do anything else without stultifying itself. It elected Mr. Taft President, it pledged itself to the nation that he would carry out its declared policies, and it would now be not only unprecedented but absurd for it to fail to enumerate with laudation the public services of Mr. Taft. Can any man even imagine a Republican platform this year which did not remind the people what the President has done—praise his arbitration treaties, endorse his fearless enforcement of the Anti-Trust law, applaud his devotion to civil-service reform, his wise selection of judges, and so on? Any other course is inconceivable.

Now, let the mind be applied for a moment to the way in which this detail —doubtless, a wretched one, from the point of view of a transcendental Rooseveltian—will work out in practice. The platform is sure to be highly laudatory of Taft, and then the Convention is expected to turn round and throw itself into the arms of the man who has been stabbing Taft in the back! Is there any way of doing that gracefully? On the Rooseveltian supposition, the platform would have to be punctuated at the moment with denials and deadly annotations. It would be something like the following:

> We record our warm approval of the high-minded and patriotic Administration of President Taft—and we are going to pitch him out of the window as soon as the Roosevelt stampede begins.
>
> We invite special attention to the noble work for the peace of the world wrought by a Republican President in negotiating treaties of universal arbitration—and we propose to nominate the man who denounced them as reeking with hypocrisy.
>
> We are fully resolved to uphold the hands of President Taft in enforcing the law against Trusts—and then we shall ask the country to vote for a candidate who has declared that course to be nonsensical.
>
> We cordially and proudly approve William Howard Taft—and now the party will please note the ease with which Theodore Roosevelt will knock the stuffing out of him.

This is not purely fanciful. Dancing on a rope over Niagara, or swallowing swords, would be child's play compared with what the Republican Convention will have to do if it sets out to praise the President and then do him to death. The original Roosevelt idea was, of course, that Taft would take himself out of the way. When the commander-in-chief indicated his will, how could the mere "lieutenant" withstand him? But the impudent and obstinate President is going to fight, and that creates a condition of affairs which bristles with difficulties. In a word, the grandiose notion of nominating Roosevelt without sitting down to count the cost thereof bids fair to be wrecked on miserable and overlooked details.

OUR CRIMINAL MACHINERY.

The execution of the murderer Wolter at Sing Sing on Monday coincided with the publication of Police Commissioner Waldo's annual report, and his strictures on the administration of the criminal law in this city. Wolter's crime was one of the most atrocious and abhorrent conceivable. By an unusual manifestation of energy and expedition in connection with the trial, together with quick and effective work on the part of the police, the conviction of the author of this horrible crime followed close upon the deed, the interval being little more than a month. But in spite of this, and of the total absence of mitigating circumstances, the carrying out of the sentence has come only at the end of twenty-two months of delay. Such a condition of things as this exemplifies is scandalous. We may explain it, but we cannot reconcile it with the requirements of common sense or the simplest dictates of public policy. Whatever the cause, it must be removable; and no more pressing duty rests upon public-spirited members of the bar than that of bringing about a reform under which such demoralizing absurdities shall be impossible. That the reform can be brought about requires no proof; but if any proof were needed, it would be completely supplied by the simple fact that in communities living under the same system of law as ourselves, and not a whit less jealous of the rights and liberties of the individual, no such preposterous phenomenon is witnessed. The thing is unknown in England.

Some of the statistical and other statements contained in Commissioner Waldo's report are calculated to impress sober-minded men with the seriousness of this whole question. The large number of murders in our American communities, and the small proportion of them in which the murderer is brought to justice, are, in a general way, matters of common knowledge; but most persons will nevertheless experience a shock of surprise when confronted with the actual figures for New York. In the year 1911 there were 148 murders in this city and only 13 convictions. It is somewhat worse than that for the three preceding years; but the average annual number of murders for those years is seen to have been 117, while the average number of convictions was only 25. Mr. Waldo gives the figures for London for these same three years, 1908-10, and they are in striking contrast. The average annual number of murders in the metropolitan police district of London, with its population of 7,000,000, was only 20 against our 117; and for these 20 murders 15 persons either were convicted or committed suicide before police action. If the same proportion had existed in this city, instead of 30 persons who either were convicted or committed suicide, there would have been 88 who thus expiated their crime; and on the other hand if London had had murders in the same proportion to its population that New York had in those three years, the annual number of these crimes in the British capital would have been 164 instead of 20.

It is but fair to point out that, as Commissioner Waldo indicates in his report, we have in this city a markedly smaller proportion of policemen to the population than has either London or Paris; and this is a phase of the subject which merits serious consideration. But we feel sure that, whatever other causes may be adduced for the explanation of the unenviable prominence of our country, or of New York, in the statistics of homicide, one most important factor in the case is the want of vigor, and especially of expedition, in our judicial procedure in relation to crime. For the multitudes who live on or near the edge of criminality, the difference in moral effect between the spectacle of a stern and prompt execution of the law and the laxity and delay and needless and meaningless technicality that so often characterize the administration of it in this country is utterly incalculable. Nor is the effect of this upon the commission of the most heinous crimes to be measured simply by proceedings relating to those crimes. Such instances as those cited by Mr. Waldo of misplaced leniency in regard to other offences are of potent influence upon the tendency to commit murder as well; for nothing is better known than that murder, in a large proportion of cases, is but the culmination of lesser criminality on the part of the offender.

And there is a wider aspect of the whole matter which, in these days, must be regarded as of vital importance. The bracing up of the processes of justice, the removal of any reasonable reproach that attaches to them, is peculiarly needful at a time when the judiciary is exposed to so much attack. We are evidently only at the beginning of a period of onslaughts on our judicial system. These come from all sorts of sources, and rest on all sorts of foundation, genuine or spurious. But the ordinary citizen will not exercise careful discrimination. His attitude will be determined not by a nice balancing of specific considerations, but by the general impression produced on him. When some sensational writer tells him that the courts are rotten, that "the interests" are getting control of them, that we must have a general cleaning-up of the judiciary if the country is to be saved, he will not stop to analyze the causes of his readiness to listen to this sort of talk. He will not stop to reflect, for instance, that Wolter was not a rich man and that no "interests" had any concern with him; he will not think about the Wolter case explicitly at all. But during the past twenty months, his mind will frequently have dwelt on the unaccountable delay of justice in this case, and in others of somewhat the same character; and it will all have been set down automatically to the discredit of the courts. Their defence against reckless and unscrupulous charges is weakened by every circumstance which, whether tending to sustain those charges or not, breaks down the instinct of respect for them as efficient agencies of justice; and it should be the earnest endeavor of every friend of the courts to strengthen them against this source of danger.

AN ENGLISH PLEA FOR BOUNTIES.

In the *Oxford and Cambridge Review*, Mr. Hillaire Belloc proposes, for the encouragement of wheat-growing in England, a definite bounty system. His scheme is absolutely simple; the basis on which the determination of the bounty is to rest is perfectly well ascertained. And the argument he makes for it is as straight as a string. No Imperial preference, no "fair trade," no appeal for the need of tariff taxes as a means of compelling concessions from foreign countries, no protectionist notion of pulling yourself up by the bootstraps. Mr. Belloc finds in the history of British wheat-growing proof that the uncertainty of a paying price was so impressed upon the farmer during the period of low prices in "the late seventies and the eighties" that he has ceased to look upon that occupation as a standard use for his capital, and cannot be induced to take it up, even when it does pay, for fear of a repetition of those disastrous experiences. The proposal, therefore, is to insure him against that uncertainty by a Government guarantee of a minimum price. This is the payment of a bounty to bring up the amount he gets for his wheat to 33s. 6d. per quarter—about $1.03 per bushel—whenever the market price of wheat in England falls below that figure. When the price was at or above this mark—and it is considerably above it at the present time—there would be no bounty; when the commercial price was below it, the farmer would still receive a satisfactory return upon his investment. And with this certainty guaranteed, Mr. Belloc is confident that the wheat production would become "double, and more than double," what it now is, "with no appreciable call for extra capital."

Two great merits are claimed by Mr. Belloc for this scheme. One is that "the whole amount sacrificed in the experiment would be ascertainable and would go to the avowed object of the experiment." The other is that instead of the cost of carrying out this public policy being levied on consumers of wheat as such, it would fall upon the nation as a whole and form simply an item in the annual budget. In both of these contentions he is quite right. Since the bulk of England's wheat supply would come from abroad, and since this foreign supply would be subject to no tariff tax,

the price of wheat to the English people would not be raised; only when that price was low, an appropriation would be made from the national exchequer to see the farmer through. And tho amount of this appropriation would, from the nature of the case, be subject to a fairly rigorous limitation; for even at the price of 33s. 6d. per quarter, the amount of wheat that could be raised within the United Kingdom could not pass a certain pretty moderate limit. Just what the cost might be is a question he disposes of too lightly; but, if his proposal should ever reach the status of a practical political question, it will be interesting to see whether the honesty and directness of the method will make it acceptable to the British public. The amount involved is, comparatively speaking, so moderate, and the object proposed is one that has so much appeal to English predilections, that it may possibly find favor; but in general the strength of protectionist systems has depended pretty largely on the fact that their cost has been enveloped in mystery.

How completely this is the case in our own country we know. The three hundred million dollars, or thereabouts, which are paid in at our custom houses in the shape of duties on imports afford no measure whatever of the cost of the protectionist "experiment." They are not even related to it in the sense of forming part of that cost, from which the rest might be guessed. The true cost of protection is to be sought in the enhanced prices of the goods produced under cover of it, and sold to the American consumer at rates above those for which he could obtain them from abroad, if his Government permitted him that liberty. What this difference is, nobody knows; but in a large proportion of cases it is a percentage somewhat like that indicated by the tariff rate on the commodity in question; and that increased price is paid on the entire American product, the volume of which the amount of importation does not indicate. If the American citizen were called upon to hand over the whole amount in the form of government bounties to the manufacturers, the protectionist system could not endure for six months. A couple of billions a year, say, to be provided for in the annual budget, would be too much for the ordinary American's complacency. There may be, along with the standard protectionist fallacies, some sound arguments in favor of encouraging infant industries, insuring diversity of employments, and the rest of it; but they could not stand for a moment against the whirlwind of protest which a two-billion dollar appropriation would call forth.

As to Mr. Belloc's proposal, we fear it will be broken on the rocks upon which so many other attempts of the kind in England have made shipwreck. A plausible case may be made out for a particular step in that direction, so long as we ignore its general bearings; but there's the rub. It would cost but a trifle, says Mr. Belloc, and see how much it would accomplish. Well, even as to the cost, he commits some serious errors. The most the bounties would have come to, at any time in the past five years, would, he says, have been £2,000,000; but, curiously enough, he reckons the bounty on the actual wheat crop, and not on that doubled crop which it is the very object of his scheme to bring about. And he is far too easily assured that wheat will never get back to anywhere near the prices that prevailed in the eighties. It is precisely against that kind of contingency that the farmer will wish to be secured; and in that event, and with his doubled or trebled crop, the bounties might well go up to forty or fifty million dollars. But that is not all, nor the worst; there are other classes—perhaps not so worthy of attention, but still men and Englishmen—that will assuredly wish to be taken care of, when they see the farmer so considerately provided for. It may not be patriotic, or perhaps even logical, but it is extremely natural, and must be reckoned with. Many another interest might point to capital unused, which a trifling appropriation from the public treasury would be sufficient to set going; and there would be no stopping-place in the process. In consideration of all the vicious meddling with economic forces from which the free-trade policy has kept England exempt for three-score years, it will take a tremendously strong case for a particular exception to convince Englishmen that they would be justified in departing from its fundamental principle.

THE GERMAN ELECTIONS.

The Socialists, with their numbers more than doubled, are now the strongest party in the Reichstag. They have wrested from the Catholic Centre the leadership which that party has held for a generation. An analysis of the Socialist victories shows that they were won at the expense of every other party. To this extent the final outcome of the elections completely reverses the implications of the first ballotings of three weeks ago, when it seemed that the moderate parties were in danger of annihilation, and that the German nation was henceforth to fall apart into two irreconcilable divisions of Conservatives and revolutionists. To-day this is far from being the case. Of the fifty-seven seats won by the Socialists, fifteen came from the Conservatives, twenty came from the smaller factions in alliance with the Conservatives, ten came from the Centre, and ten from the National Liberals and Progressives. The loss of ten seats by the Centre is more significant than the mere number would indicate, because the Centre is a religious organization and is by nearly every one regarded as immune against the vicissitudes of mere lay politics. Thus it appears that more than four-fifths of the Socialist gains were made at the expense of the conservative and reactionary elements with which the Government has thrown in its fortunes. The swing away from obscurantism is illustrated in the fate of the Anti-Semite faction, which was thirty strong in 1907, and is now reported to have been virtually wiped out.

That the trend is not so much towards the revolutionary tenets of the Socialist party as away from the reactionary policies of the Conservative-Centrist alliance, is seen by a further analysis of the showing made by the Liberal and Progressive parties. These taken together have suffered, as we have said, a loss of eleven seats; they were 106 in 1907 and are 95 now. Such a decrease would not be formidable under any circumstances. It was to be expected this year when we consider that the German people, long restive under a régime of high prices and large government expenditures, would naturally turn to the Socialists as the official party of protest. The Socialist club, swung by an angry electorate, would naturally crack

heads in all directions. But, actually, the club was swung with a great deal of discretion. Of the seats gained from the National Liberals and Radicals, the former lost eight, the latter only two. In other words, the National Liberals, because of their frequent coöperation with the conservative elements hitherto constituting the majority, have come in for a much severer punishment than the Radicals, who have refused to enter into flirtations with the parties of the Governmental *bloc*. Even now there is already talk of patching up a Government majority out of Conservatives, Centrists, and National Liberals. It is the Radicals alone who, among non-Socialist parties, have fought valiantly for a democratization of German public life, for the establishment of a responsible Ministry, and for the revision of the iniquitous suffrage system in Prussia.

To the Emperor William, the present situation must be peculiarly galling. His battle-cries against Socialism have been answered by the election of a Socialist from his own Imperial constituency in Potsdam, and the defeat of the Socialist candidate in the "palace" district of Berlin by only seven votes. There is some irresponsible talk of a dissolution and a new election. But it is hard to see what profit that would bring. The only promising way of beating down the Socialist strength would be to bring on a foreign war and force a "khaki" election. But that would be a bit of Machiavellian statesmanship of which not even William II's enemies believe him capable. What the Emperor must consider is the change in temper that has come over the German nation in the last four years. In 1907, Von Bülow went to the country on the colonial question, and, by forcing the issue of patriotism, succeeded in cutting the Socialist strength in two. This year, too, there seemed to be a fair opportunity for the chauvinist argument. Germany had come out of the Moroccan controversy with little credit, because, as the general belief went, of English interference. Anti-English feeling has run high. The big-navy men have been ringing the changes on Germany's mission and her old place in the sun. Apparently here was reason enough for expecting a sharp popular rally to the side of the Government. But the German elector seems to have kept a cool head. Loyalty to the fatherland in time of real need was one thing —Herr Bebel has declared that in a war with France he would shoulder his musket for the frontier—and the reactionary record of the Conservative-Centre alliance was another. The narrow Agrarian policy which holds the frontiers closed against foreign foodstuffs in spite of soaring prices, the Conservative opposition to electoral reform and the institution of true representative government —these issues had bitten in too deep to be washed away in a wave of anti-English resentment.

It is precisely against the recurrence of such crises as agitated Europe last year that the presence of 110 Socialists in the Reichstag should work effectively. Their services to the cause of international peace constitute a record which the world recognizes and in which the Socialists take increasing pride. Though the Kaiser's Government succeed in building up a working majority out of anti-Socialist elements, it is impossible to believe that the Imperialist fire-eaters will have things their own way. The Socialists and Radicals, by standing together, can compel moderation in the matter of naval armaments. They can force a foreign policy determined by the desires of the German people and not by the views of the militarists and bureaucrats. This, in turn, involves the establishment of parliamentary machinery for making effective the will of the majority. The institution of a responsible Ministry is one of the questions that are bound to come up in the present Reichstag. On that issue, it is difficult to imagine the National Liberals refusing to join hands with the other parties of the Left and thus forming a solid majority in favor of true representative government.

THE SITUATION IN CHINA.

The imminence of startling changes continues to be announced with daily regularity from Peking and Shanghai, yet the condition of affairs in China remains very much what it was a month ago. Even if one could separate the fact from the amazing tangle of rumor and guesswork concerning the rapid shiftings of Manchu policy, it would still be rash to base any forecast of the future on what the morning's news brings forth. The same would be true of any attempt at interpreting the daily actions of the individual leaders on either side. The one fact that does stand out is that a temporary deadlock between Imperialists and revolutionists has been reached, and for reasons that are not at all mysterious. Both sides are now taking stock of their resources and weighing the chances of a renewed appeal to arms. The republicans have gone as far as the original outburst of revolutionary ardor can carry them. This does not mean that the revolutionary spirit has spent itself, but that if the war is to be carried on, the republican leaders must henceforth busy themselves with the matter-of-fact problems of finance and organization. A swift revolution can work itself out spontaneously, but a protracted civil war brings up difficult questions of practical statesmanship.

At Peking, it is apparent that the Manchus have recovered from panic. The seriousness of the situation is recognized, but in spite of rumors of abdication and flight, the Throne seems to be surrounded by influences tending strongly against unconditional surrender to the republicans. The Imperial clan believes that there is a fighting chance, and, putting the financial question aside, such a chance really does exist. The northern provinces have not risen against the monarchy, and the Imperialist forces in those provinces have hitherto remained loyal, notwithstanding the recurrence of local outbreaks of mutiny. The very fact that the republicans have consented to discuss terms and agreed to one armistice after another must have given encouragement to the Government. The military weakness of the Manchus has probably been exaggerated. They are, of course, overwhelmingly outnumbered by the Chinese, but they constitute a fighting clan amidst an unwarlike population, and, with the aid of tribesmen from Mongolia, which has remained loyal to the Throne, should be able to give a good account of themselves. But the Imperialists, like the revolutionists, are in need of money. With a full treasury at Peking, it is very likely that the Imperialist armies would have been set in motion before this.

It is thus possible to describe the present lull in the war, with its accompanying negotiations, intrigues, and jockeyings, as conditioned in large measure by such simple causes as inadequate finances, the winter season, and the need

of time for recuperation in both camps. Things are much what they were a month ago, with this exception, however, that the influence of the foreign Powers is beginning to enter more intimately into the problem. Here again, we have much rumor and comparatively little specific fact to deal with. But there seems to be no ground for questioning the general correctness of the assumption that the sympathies of Japan and Russia are with the present dynasty, whereas British and American opinion inclines towards the revolutionists. The reasons are not hard to find. Both Japan and Russia have profited territorially by the feebleness of the Peking Government, and might expect to go on doing so. A patriotic republican régime at Peking might not only put a stop to the territorial spoliation of China, but might endeavor to exact an accounting for past transactions. It is quite true that, with China plunged in civil war, there might be some rich pickings for the outsider, but civil war cannot go on forever. If one horse or the other must be backed, Japan and Russia would undoubtely prefer the present Government to continue. Even abstract reasons may enter into the question. Thus the spectacle of a Chinese republic would not be pleasing to autocratic Russia, and might be regarded as an internal menace by Japan.

If British and American sympathies are enlisted on the side of the revolutionists, it is also because of a mingling of practical and sentimental reasons. As nations with a trade interest rather than a territorial interest in China, the two Powers would naturally favor a movement aiming at the modernization of the Empire on lines of European political and economic development. A more specific cause is the predominance of British interests in Southern China, where the revolutionary movement is strongest. Self-protection demands a friendly bearing towards the revolutionists, and, besides, the republican cause is a good risk to back. It is a game in which there is little to lose and a good deal to gain. Added to this, there is the natural inclination on the part of Anglo-Saxon sentiment in favor of free political institutions.

A MODERN SPANISH MYSTIC.

Ticknor, in his "History of Spanish Literature," speaks of ascetics and mystics as "the natural produce of the soil of Spain." Perhaps it might be more accurate to say that they were the natural produce of a period of Spanish history. The sixteenth century was indeed marked by a notable advent of mystical writers, of whom Santa Teresa, Luís de Granada, Juan de Avila, Fray Luís de León, and San Juan de la Cruz are the best known. The seventeenth century had also one great mystic, Miguel de Molinos, and the influence of mysticism was still apparent in the plays of Lope de Vega and of Calderón, and upon the convases of Murillo; but, with the passing of the seventeenth century, mysticism seems to have waned in the peninsula.

It is, therefore, with no little interest that the student of Spanish letters must have followed the mystical tendency in the writings of Miguel de Unamuno, which, dimly foreshadowed in his early novel, "Paz en la Guerra," later appeared as the source of inspiration of much of his memorable commentary on the "Life of Don Quijote and Sancho," and which, more clearly expressed in some of his essays, has received its most intimate expression in his recent volumes of poetry, "Poesías" and "Rosario de Sonetos Líricos." This ever-increasing strain of mysticism will cause his readers to look forward with some eagerness to its culminating exposition in the form of a prose treatise on "The Love of God," on which the rector of the University of Salamanca has been at work for several years.

Paul Rousselot, in his well-known work on "The Spanish Mystics," says of them that they "proceed from catholicism and never depart therefrom. So they have nothing that smacks of heresy; their religion of love is not destined to conceal suspicious innovations, and there is perhaps no other example of a religious mysticism that has remained so absolutely faithful to catholicism, while being so general and so widely diffused." This is true of all the great Spanish mystics of the sixteenth century. Even Fray Luís de León, who once held the chair of sacred literature in the old University of Salamanca, and who was, perhaps, the most heterodox of them all, bowed meekly to the authority of the church, and accepted his long chastisement at the hands of the Inquisition with due humility. The chief Spanish mystic of the seventeenth century, too, Miguel de Molinos, was only found to be heretical after his enemies had made repeated efforts to bring about his downfall. Pope Innocent XI read his writings with great pleasure and discovered in them no heresy.

One of the characteristics likewise of the outbreak of mysticism in France of some years ago is its ultra-catholicism. One has only to recall certain passages of Verlaine, of Barbey d'Aurévilly, of Villiers de l'Isle-Adam, of Hello, and the last years of Huysmans, to find abundant proof of this. "The Catholic Church has the Truth," says Ernest Hello. "The Catholic Church dominates all centuries. It speaks of eternity with a certain familiarity."

The mysticism of the present Rector of Salamanca, however, is of no such bland assurance. His ears are closed to the voice of authority; but they are strained to catch the "still small voice" of truth, and in the fierceness of his spiritual struggle to apprehend this voice and to convey its message to the world, his utterance appears at times unorthodox, to say the least. His sonnets, entitled "The Prayer of the Atheist" and "My Heretical God," in his latest volume of verse, bear witness to this fact.

These titles also indicate a paradoxical turn of mind, which is apparent in the headings of other poems in the same collection, as, for example, "The Life of Death" and "The Blood of the Spirit." His frequent use of paradox throughout his writings has been attributed by some unfriendly critics to a desire for eccentricity, though no one ventures to deny that he uses this rhetorical device with power; and on more than one occasion he has taken it upon himself to rebuke his detractors and to defend his own sincerity:

> They will say, and I can hear them, that I only seek and search for ingenious paradoxes, that I may seem original, but I merely say to them that if they do not see or feel all the passion and fire of my soul and the profound longings and ardent zeal that I have put into these commentaries on the life of my master, Don Quijote, and of his squire, Sancho, and that I have put into other works of mine, if they cannot see or feel this, I repeat, I pity them from the bottom of my heart, and I hold them to be vile slaves of common sense, materialistic minds, in darkness reciting in chorus the old couplets of Calainos.

Both in his foundness for paradox and in his desperate "attempt to apprehend the absolute," Unamuno reminds one of the eminent modern Portuguese poet, Anthero de Quental. In the poetry of the latter, however, the dominant note is discouragement and bitterness. Some one has defined a pessimist as a "mystic gone wrong." Such is Anthero de Quental. The doubt of Quental, like that of the poet of "The City of Dreadful Night," leads to inaction and despair. That of Unamuno, on the other hand, is the doubt that grapples with vast, elusive problems with a sturdy optimism, obtaining from the very struggle a creative faith. "His imagination was filled with glorious follies," says Unamuno in speaking of Don Qui-

jote, "and he believed to be truth what was only beauty, and he believed it with a living faith, with a faith that engenders works, with a faith that brought to pass what his foliy had disclosed to him, and by the mere belief in it he made it truth."

His is the doubt that only those with faith can know, the doubt that only those can feel whose love of the truth is so austere that they cannot accept it on another's testimony. "For only those who doubt, truly believe," says Unamuno, "and those who do not doubt, do not truly believe. True faith is maintained by doubt; with doubts that are its sustenance is it nurtured and acquired from moment unto moment." Like Jacob, he has wrestled with the Lord to learn His name, and like Jacob he has been wounded in the struggle, but also blessed. Nowhere is this struggle so well portrayed as in his "Salmos," the most noble expression of a doubting faith in Spanish literature:

Oh, phantom of my sad tormented breast;
Reflection from my brain on the remote
Far rim of space beyond the farthest stars;
My deathless I;
Realization of timeworn desire;
Dream of my anguished heart;
Father, Son of my soul;
Oh, Thou, whom while affirming we deny,
Denying, yet affirm,
Art thou in Truth?

The mysticism of Miguel de Unamuno has much in common with that of the great English poets, of whose works he is an ardent reader. There is nothing in it that recalls the recent French perverted mysticism, that affected mysticism which caused Baudelaire, "amidst the imaginations and frenzied dreams that sprang from a continual orgy of opium, hashish, and alcohol," to subscribe to the following rule of life: "To say every morning my prayer to God, that fount of strength and justice, to my father, to Mariette and to Poe, as intercessors: to pray them to endow me with sufficient strength to accomplish all my duties." The mysticism of Unamuno is free from artificiality or sham

To this modern Spanish mystic the spiritual life is the only real life. That of the phenomenal world, so accentuated to-day, is only vain and fleeting, an illusion of the senses. "And how did you come, oh marvellous knight," he exclaims, in his commentary on Don Quijote, "to the depth of wisdom, which consists in regarding as invisible and fantastic the things of this world, and so, by virtue of thus regarding them, in not being disturbed thereby?" A certain amount of asceticism always characterizes such a temperament. When the writer first met Señor de Unamuno he received an invitation to dine with him, but a date some days in advance was indicated, as the Rector had not yet finished his "period of fasting." He abominates that "fatal power of the belly," as he terms it, "that obscures the memory and dims the faith, enchaining us to the fleeting moment."

Though Don Miguel de Unamuno may well be termed a mystic, he is no mere dreamer. The force of his logic has been recognized throughout Spain, and his opinions are respected by men of widely divergent views. One Spanish critic, in speaking of his volume of "Tres Ensayos," asserts that it is "the first work of a thinker that has appeared in Spain since the publication of the works of Don Juan Valera." "The Rector of Salamanca is one of the most robust and enlightened minds of those that ennoble contemporary Spain," says another. Not only is the mind of Unamuno logical, but it is filled with ideas, which he has always had the courage to express "in season and out of season," and it is a rare sign of the strength of his personality that, though often opposing the accepted ideas of the Catholic Church and of the *alta aristocracia*, he has yet been able to retain his position at the head of such a stronghold of orthodoxy as is the University of Salamanca.

Unamuno has been called to speak, or, as he himself puts it, "to preach" in many cities of Spain and even of South America, upon various occasions of importance, and by his wonderful power of expression and his peculiar point of view he has always won the sympathy of his audience. On a recent stay in Salamanca the writer attended a sort of revival of the old floral games, at which Unamuno was the chief speaker. A handsome queen and court of honor had been chosen from among the fairest of Salamanca ladies, and well-groomed young men read harmless poetical effusions with great tenderness. Upon the coming of the Rector all was trepidation and excitement; and when he had finished a most powerful address upon the real needs of the youth of Spain, and upon the deplorable lack of that mental and moral training that makes for true poets and noble women, the audience welcomed his avoidance of the expected platitudes and greeted his criticisms with enthusiasm.

As a writer, Miguel de Unamuno is no less remarkable than as a thinker. His vocabulary is unusually rich and varied, and he is exacting in his choice of words. The philological training that brought him to his chair of Greek in the University of Salamanca has made him familiar with the original meaning of words, which he sometimes uses in a way to surprise the casual reader, who may be ignorant of their antecedents. He does not scruple to coin new words, if he needs them. His prose is subtly musical. Read, for example, the following lines from "Paisajes":

There rise, at the margin of the river, rows of slender popiars, languid and erect, infusing in him who contemplates them the sensation of supreme simplicity that this humble tree evokes. For the poor poplar of the river-banks is a tree that seems to incarnate in the landscape the spirit of those *primitives* who painted glory with the tints of the dawn; it is a tree that has something of sweet liturgical rigidity about it.

There is no other modern Spanish writer whose prose is at times so lyrical, except perhaps Pío Baroja in his "Vidas Sombrías."

The verse of Unamuno is, as one critic has put it, "surprising and disconcerting to all who have no ear," but to one who knows, it has a "singular rhythm, evocative of the old Hebrew chants." This is true of the "Salmos," which will be the most enduring of Unamuno's poetical work. His theory of art is expressed in a short poem of six stanzas, the title of which is significant, "Denso, denso," and he has realized in most of his verse his aspiration to make it "sinewy, without fat, with solid flesh, compact." One must not conclude, however, that he is hostile to all light and graceful rhythm; witness this brief selection from a poem dedicated to his wife:

Soft and gentle eyes of mine,
Streams that shine
Ever brimming o'er with peace,
As I drink in your calm glance
That enchants,
To my soul is borne release.
. . . . . .
Oh! my stars of morning bright,
Springs of light,
Whence the peace that I foresee;
Through you may God on me gleam
And redeem,
And through you come nigh to me!

His poems of childhood often remind one by their singing rhythm, as well as by their quaint humor and pathos, of the verse of Eugene Field.

The appearance of Señor de Unamuno is striking. Like his Basque progenitors, he is taller than the men of purely Spanish blood. He is of a sinewy frame, with great power of endurance. His hair and pointed beard, once black, are iron-gray. His eyes, deep-set under heavy brows, are keen yet kindly. His friends are many, from the street urchins of Salamanca, who know that the Rector always has a friendly interest in them and their games, to the King of Spain, who has been heard to speak of him as "my friend Unamuno." They embrace all classes, even those who might be expected to shun him on account of the freedom of his views. An Augustinian monk is one of his closest friends. The students of Salamanca naturally worship "Don Miguel," as they call their president, for an indifference to public opinion and a fearless advocacy of one's own views always appeal to manly youth.

His days have been passed, for the most part, in almost patriarchal sim-

plicity in the society of his devoted wife and children, amidst the "golden stones" of Salamanca, his adopted home. In a recent letter he speaks of his life as follows:

> Like my Basque country, I have no history, or rather it is all purely internal. Since my birth in Bilbao on the 29th of September, 1864, of a Basque family, nothing has happened to me that can interest a reader. . . . As to my internal life of storms and longings, of constant metaphysical and religious crises, it is scattered through my writings.

CANADIAN BOOKS OF 1911.

OTTAWA, January 25.

Perhaps the most noticeable feature of the year's output of books published in or about Canada is the number devoted to a description of the country as it is to-day. These books, generally written by transatlantic visitors, and based more or less on first impressions, are bound to be somewhat superficial. Yet it would be unjust to place too much emphasis on this characteristic, as the authors are in most cases men of judgment and experience, able by education and training to see things in their proper perspective. Their books are books of the hour, designed to inform those who have not had the opportunity of visiting Canada of the elements that enter into the country's remarkable efforts towards industrial and commercial expansion. They are directed particularly to English readers, and to the growing classes of English readers who are interested in the Dominion as a prospective home or a field of profitable investment. They are not books that will live; and it is quite probably true that their authors did not expect them to do more than answer their immediate purpose. In doing that, they become, however, an important factor in the ambitious schemes of Canadian public men. If they serve no other purpose, they are at least likely to swell the streams of men and money flowing into the Dominion, for, with few exceptions, they confirm all that had been said as to the material resources of the country, and praise unreservedly the broad, statesmanlike policy of the Government for their development.

Arthur E. Copping's "Canada To-day and To-morrow" (Cassell) may be taken as a type of these books of contemporary Canadian history. His optimism is never in doubt. It breaks out in the opening paragraph:

> For those who mark the current of events, Canada's great destiny is written plain. Canada in a few decades must possess more people and more realized wealth than Great Britain. Whether the centre of Imperial control will then cross the Atlantic is a point on which prophecies differ. Memories enshrined in Westminster Abbey will tend to conserve the ancient seat of government. Yet there is weight in the surmise that the logic of numbers will ultimately prevail.

Having foreshadowed the great destiny of the country, Mr. Copping devotes the rest of his book to a discussion of the foundation on which he believes it to be based: mineral and agricultural wealth, lumber and fisheries, unrivalled water-power, transportation facilities, natural and acquired, and a broad, far-sighted, and comprehensive national policy designed to procure the right kind of settlers and unlimited capital. In a second book, "The Golden Land" (Musson), Mr. Copping deals more specifically with the British immigrant, the conditions he must expect to face on the Canadian prairies, and the qualities that make for success.

R. E. Vernède, in "The Fair Dominion" (Briggs), covers in sketchy fashion the country and its varied characteristics. He is not profound, but, on the other hand, he is not prosy, and he has at least succeeded in giving an unusually graphic and sympathetic picture of village life in French Canada. One phrase, drawn from his experience of French-Canadian rural life, and its contrast to the bustling, money-making atmosphere of English-speaking Canada (one might add, English-speaking America), is worth remembering: "To make money circulate is a virtue, no doubt; but courtesy and simplicity and prudence are also virtues that not the greatest country that is yet to come will find itself able to dispense with."

In "Canada's West and Farther West" (Musson), Frank Carrel describes in journalistic English, with a somewhat appalling wealth of facts and figures, the incidents of a month's journey from Quebec to Victoria, with side trips down the Okanogan and Yoho Valleys in British Columbia.

F. A. Talbot, in "The New Garden of Canada" (Cassell), touches upon a virtually unknown field. Travelling on horseback through the Yellowhead Pass, he spent some time studying the economic and scenic value of the interior of New Caledonia, or Northern British Columbia, and his account of what he found there makes decidedly interesting reading. The far western province supplies the scene of another new book, J. T. Bealby's "Fruit Ranching in British Columbia" (Black), an authoritative account of one of the most promising industries of Western Canada. A work of much wider interest is W. P. Rutter's "Wheat-Growing in Canada, the United States, and the Argentine" (Black). Submitted as a thesis for the degree of master of commerce at Manchester University, Mr. Rutter's book brings together a valuable mass of data on the climatic and other conditions affecting the yield and marketing of wheat in these three countries.

Frank Yeigh, in "Through the Heart of Canada" (McClurg), offers a readable account of the country from the picturesque rather than the utilitarian standpoint. W. L. Griffith's "The Dominion of Canada" (Little, Brown; reviewed in the *Nation*, August 17, 1911), is an attempt, and on the whole a satisfactory attempt, to bring within the compass of a single volume a popular description of the country, its history, and present development; the social conditions of the people, the Parliamentary and economic systems of the country, its physical features and natural resources. F. A. Talbot, in "The Making of a Great Canadian Railway" (Musson), tells the story of the planning and construction of the second Canadian transcontinental railway, the Grand Trunk Pacific. J. T. Bealby's "Canada" (Black) is a popular account of the Dominion for younger readers, made more attractive by a series of excellent colored illustrations by T. Mower Martin and other Canadian and English artists.

The books hitherto mentioned have been devoted principally to Western Canada. The year's list, however, contains several volumes belonging more particularly to the eastern end of the country. Such a book is F. G. Aflalo's "A Fisherman's Summer in Canada" (Scribner), devoted to the author's unsuccessful attempts to land a Cape Breton tuna, and to other sporting experiences in the Maritime Provinces. Horace G. Hutchinson's "A Saga of the Sunbeam" (Longmans) is an entertaining narrative of the latest voyage of Lord Brassey's famous yacht, from the Moray Firth by way of Iceland to Newfoundland, Quebec, and Montreal. W. G. Gosling's "Labrador: Its Discovery, Exploration, and Development" (Lane) is an exhaustive, but somewhat ill-digested account of that much-discussed region. A more welcome contribution to Labrador literature is Dr. C. W. Townsend's admirable condensation of Cartwright's Journal, "Captain Cartwright and His Labrador Journal" (Dana Estes), with an introduction by Dr. Grenfell. An even more valuable reprint is the Champlain Society's edition of Hearne's "Journey from Hudson's Bay to the Northern Ocean," with introduction and notes by J. B. Tyrrell, the explorer of the Barren Grounds.

The Canadian section, or rather the British North American section, of Lucas's "Historical Geography of the British Colonies," has this year been rounded out by the publication of J. D. Rogers's "Newfoundland" (Clarendon Press; reviewed October 26, 1911). Mr. Rogers ingeniously explains the appearance of this supplementary volume, the substance of which it was originally intended to incorporate in the volumes devoted to Canada. When the series was pro-

jected, he says, it seemed likely that before its completion, Newfoundland would have been absorbed into the Dominion. But Newfoundland still remains *sui generis*—hence this book.

Turning once more to Western Canada, we find two books, equally instructive and entertaining, added to the quite respectable literature of the Canadian Rocky Mountains. One is Mary T. S. Schaffer's "Old Indian Trails of the Canadian Rockies" (Putnam; reviewed September 28, 1911); and the other Prof. A. P. Coleman's "The Canadian Rockies" (Frowde). Another book of the same class, but dealing with a more northerly region, is C. Sheldon's "Wilderness of the Upper Yukon" (Scribner; reviewed December 7, 1911). Thompson Seton's "Arctic Prairies" (Scribner) describes in characteristic fashion the journey of this artist-naturalist through the Barren Lands north of Great Slave Lake, and what he found there for his pen and pencil. W. S. Herrington's "Evolution of the Prairie Provinces" (Briggs) traces briefly the history of the discovery and development of the Canadian Northwest; while John McDougall adds another volume to his reminiscences of frontier life in the same vast country, in his "On Western Trails in the Early Seventies" (Briggs).

Several important books of Canadian biography appeared in 1911, notably the work on "The Scotsman in Canada" (Musson), by Dr. W. W. Campbell and Dr. George Bryce, the former dealing with Eastern Canada and the latter with Western Canada. One must read these two substantial volumes to realize fully the extent to which men of Scottish birth or descent have been connected with every large Canadian movement, whether of exploration, war, politics, education, or trade. A less ambitious volume in the same subject is John M. Gibbon's "Scots in Canada" (Musson). Madame Albani's "Forty Years of Song" (Copp Clark) contains the reminiscences of this greatest of Canadian singers. The "Diary of Mrs. John Graves Simcoe" (Briggs), edited by John Ross Robertson, throws an exceedingly interesting light on the social and political life of Upper Canada in the days of Gov. Simcoe.

Two books devoted to the lives of the faithful missionaries of the Catholic Church are Katherine Hughes's "Father Lacombe" (Briggs), and T. J. Campbell's "Pioneer Priests of North America" (America Press; reviewed January 18, 1912). The former tells the story of the splendid life-work of a man universally beloved in Western Canada, where he still labors, in his eighty-fifth year. Father Campbell's two volumes describe the work of the Jesuit missionaries of New France among the Hurons and Algonquins, and form a continuation of his earlier volume on the Iroquois mission.

Several chapters of Sir William Butler's "Autobiography" (Constable; reviewed August 31, 1911) are devoted to his life in Canada, and particularly to his journeys through the Western country many years ago, when railways and wheat-fields were not yet dreamed of. Beckles Willson's "Nova Scotia" (Stokes) is a popular history of the old province down by the sea. As a piece of splendid book-making, and an interesting memorial of the Tercentenary Celebrations at Quebec, the "King's Book of Quebec," edited by the Dominion Archivist, Dr. Arthur G. Doughty, is worthy of more than the passing mention that can be given to it here. L. J. B.

NEWS FOR BIBLIOPHILES.

In the *Nation* of last week I gave some account of a little-known story of Hardy's and its strange underground history in America. "The Romantic Adventures of a Milkmaid" is not the only story abandoned by the great novelist. It was by accident that I came upon a little tale to which no reference is made in Mr. Lane's bibliography, a tale actually lost to the public so far as I can learn. It likewise appeared in the Seaside Library (No. 1155), but was apparently not issued in the pocket edition. It is entitled "What the Shepherd Saw." The Seaside issue, dated December 19, 1881, includes five other tales, all, like this one, suitable to the Christmas season. Among the authors, the only name distinguished in the annals of polite literature is Thomas Hardy. It is scarcely to be supposed that Hardy's tale was here printed from MS. or with authority. Four of the other tales are taken from the Christmas number of the *Graphic* for 1881.

This Christmas story is particularly interesting for its setting. The four scenes of which it consists are all laid in winter moonlight, and they are shown us through the eyes of the sheepboy of Lambing Corner. We are reminded of the shepherd's hut in "Far from the Madding Crowd," and its background of starlit sky and dim pasture-land. But more interesting than the hut itself is an ancient monument that is made to play a prominent part in the story:

> To the south, there rose one conspicuous object above the uniform moonlit plateau, and only one. It was a Druidical trilithon, consisting of three oblong stones in the form of a doorway, two on end and one across as a lintel. Each stone had been worn, scratched, washed, nibbled, split, and otherwise attacked by ten thousand different weathers; but now the blocks looked shapely and little the worse for wear, so beautifully were they silvered over by the light of the moon. The ruin was locally called the Devil's Door.

Against this background is enacted the tragic drama: and upon this stone the trembling sheep-boy is compelled to swear a solemn and terrible oath. Even in a Christmas tale Hardy cannot forego his predilection for the sombre and discouraging aspects of life. As usual with him, the catastrophe is the result of an accident, a misunderstanding; and the malignancy of fate pursues not merely the criminal but the innocent witness of the crime. Characteristic, too, is Hardy's poetical use of the Druid monument to suggest a contrast between the fleeting lives of men and the hoary ages that stretch before and after. The reader will recall how the stormy career of Tess came to an end upon her capture among the ancient stones of Salisbury Plain. The main intention of "Two on a Tower" was to set the transitory lives of these two lovers against a background of the eternal stars. This large poetic conception is not incompatible, in any of these cases, with great simplicity of style. Like the story of the milkmaid, "What the Shepherd Saw" sometimes suggests in manner the charm and naïveté of the folktale. The tale impresses me as, on the whole, quite within the class of those included in the "Group of Noble Dames," and as worthy of being recovered for the lovers of Hardy.

JOSEPH WARREN BEACH.

Correspondence

THE FLOOD OF LEGISLATION.

TO THE EDITOR OF THE NATION:

SIR: Until within a few years it seems to have been taken for granted by everybody that Legislatures and Congress must meet every year and enact laws. The result of this belief is seen in the vast number of statutes enacted every year in the various States and by Congress. Recently, however, there has been a great awakening of the people to the immense amount of statute law which this system has produced, much of which is unnecessary and a good deal of which is positively mischievous, and attention again and again has been called to the matter, not only by laymen, but also by lawyers, who are popularly supposed to fatten upon this craze for legislation. No less a body than the American Bar Association has animadverted upon this growing evil and has put the seal of its condemnation upon it.

In old days, when the people were governed by Kings, it was of the utmost importance that Parliaments (the assembly where the representatives of the people met and gave voice to the wishes of the people) should be frequently convened, and our ancestors did well for their day and generation when they insisted that Parliaments should be summoned frequently. But now, when the people govern through their representatives, the condition is reversed, and the frequent assembling of the people's representatives and the multitude of laws passed by them have become unmitigated evils. This state of things is due, of course, in part to the choice of bad representatives.

It is proverbial that that which is everybody's business is nobody's business, and this great, if homely, truth undoubtedly explains and accounts in great part for the evil which we are discussing. The generality of men do not take interest enough in public affairs to select proper representatives, and this to a large extent accounts not only for the many bad and worse than useless laws we have, but also for the great multitude of merely inexpedient or needless laws. By reason of the apathy of the voters the control of public affairs falls into the hands of the politicians who make it their business. Few voters would choose, for directing their own private business or making rules and regulations for the conduct of their private affairs, the men whom they

elect to public office, for the management of the most important public business intimately affecting the welfare and happiness of every citizen of the Commonwealth.

But this is by no means all. Not only do we send to the Legislature to represent us men of whom we know next to nothing, but we send them without any instructions beyond the general instruction that they are to enact laws—not specific laws, not well-thought-out and needful laws, but just laws of some kind or other, no matter what, so that there be laws enacted. For what other purpose are Legislatures convened? There is one and only one legitimate thing which a legislator can do, and that, obviously, is to legislate. The result is that in the long lapse of years the legitimate field of legislation has become choked with vegetation. Every inch of it is planted until there is no longer room to insert the tiniest seed. What is the result? The result inevitably is and must continue to be that illegitimate fields of legislation will be cultivated.

Clearly, there is but one way to put a stop to the enactment of unnecessary laws, and that is obviously not to elect your Legislature until it becomes necessary to pass some needed law and then to send your representatives to do that and that only. It should seem that nothing could be simpler. And now for the practical working of the scheme.

In the writer's State the law provides for the holding of town meetings every year in the spring (city elections are held at divers times, but this could easily be arranged). Why not provide by law, or by a change in the Constitution, that at these spring meetings this question should annually be submitted to the voters: Shall the Legislature meet this year? If this question should be answered in the negative by a majority of the voters in the State, it would end the matter for that year. If the question were answered in the affirmative, then, of course, the ordinary proceedings would go forward for the regular elections of representatives which are held in the autumn. Owing to the novelty of the proceeding and to the force of habit and the inevitable opposition of the politicians, it might be expected that at first the old order of things would obtain; but as the people came to consider the advantages which would come to their business by being relieved of the annual uncertainty and turmoil occasioned by the convening of the Legislature, it may be expected that they would, after a time, try to see how long they could do without this annual irritant, and would end by discovering that the occasions for the assembling of a Legislature would be few and far between, since we already have laws enough and to spare.

The plan suggested would have other and far-reaching beneficial results. As a remedy for bad laws and as a consequence of the dissatisfaction with present methods, of late there has come to be a demand more or less insistent for new methods of legislating. We hear a great deal about the initiative and the referendum. These, however, are schemes of questionable merit and doubtful expediency. It seems to be generally admitted that the people cannot successfully legislate *en masse*. The people often know what they want, and doubtless there are times when the majority are right. When men's minds are really stirred and actively at work, and time enough is given to prevent acting from mere impulse, there is a great deal of truth in the maxim *vox populi vox dei*. But it does not follow from this that the people *en masse* are best fitted to formulate in terms of law the will to which they seek to give expression. This would seem to be better done by a few who truly represent their constituents. If the Legislature were no longer to meet every year as a matter of course, but only when it was specially summoned, it would only be called for special and definite purposes, and would be expected to enact only special and definite laws concerning the subject-matters which led to its being summoned, and thus the objects sought by the initiative and referendum would be effected in the best and most legitimate way. The circumstances which would lead the citizens to summon the Legislature would direct and shape the legislation needed.

In another way, the plan would work well. Since the Legislature would be called together only when there seemed to be a real need for legislation, it would only be called when the people were really interested, and this very interest of the people would lead them to see to it that only men in whom they had confidence were sent to the Legislature. The direct result of this would be a higher type of legislators.

The question will be asked, of course, how the affairs of government would be administered in the intervals between the assembling of the Legislature. The answer is, in the same way that they are administered in the States where the Legislature meets only once in two years. The executive and administrative officers would be elected as before. Provision would be made that the annual appropriations and assessment of taxes should be carried on from year to year automatically. The only difficulty would be that increased appropriations could not be made until a new Legislature should be summoned, but, in the minds of many persons, this result would not be regarded as an unmixed evil.

And, finally, a great, if not a fatal, blow would be struck at the professional politician and lobbyist, whose occupation, depending as it does on annual Legislatures, would be gone.

Nor is the proposition above outlined so revolutionary as would at first sight seem to be the case. In many States at the present time the Legislature meets only once in two years, and there is nothing in the scheme proposed herein which would prevent the assembling of the Legislature biennially, or, indeed, annually, as now, if it seemed desirable. But, if it is desirable to have only biennial sessions, why not triennial or quinquennial? Why not do away with all fixed times of convening the Legislature, and let the people call the legislators together when they see fit. Whether such a system could be extended to the sessions of Congress, is a matter of much doubt and difficulty; but, if it could be so extended, we should see a consummation devoutly to be wished.

JAM SATIS.

THE COLLEGE PROFESSOR.

TO THE EDITOR OF THE NATION:

SIR: It is doubtful whether any teacher will reply to Mr. Benedict's communication in your issue of January 18; though manifestly unjust, it will be ignored by them. But it may not be amiss for one of the same student body as Mr. Benedict to take exception to certain of his statements.

No one will deny that teachers are poorly paid, but your correspondent apparently thinks that this reflects upon the character and ability of men engaged in teaching. Is it not rather almost the one sign of idealism in a very materialistic land and age? He objects to the time and energy devoted to research leading to no very practical result. Is not such devotion good to behold in the few, in contrast with the utilitarianism of the many? He quotes Kipling against selfishness. Did not Kipling write the line "Each for the joy of the working"? He has many hard things to say of teachers—few are "of the higher intellectual types," those who are successful are "selfish," most have "little brilliancy" and "uninspiring personalities," the majority are "unfit to pursue any other character of work." In teaching, as in any profession, there must be some men not particularly brilliant, nor of especially inspiring personality, but I venture to say that the average here is at least as high as in medicine or law; and for one brilliantly successful business man there are hundreds of struggling clerks. I may say that for five years it has been my privilege to associate with various members of a university faculty, and I have found all singularly unselfish and anxious to aid and encourage, and able to inspire those who come under their care.

In "The American Commonwealth," Vol. II, p. 720, Mr. Bryce writes (after speaking of the small salaries of college professors):

> Under these conditions it may be found surprising that so many able men are to be found on the teaching staff of not a few colleges as well as universities. . . .The reason is to be found partly in the fondness for science and learning which has grown apace in America, and which makes men of intellectual tastes prefer a life of letters with poverty to success in business or at the bar.

Though I would avoid personalities, it is but just to note that the man perhaps most prominently put forward for the Presidency of the United States received the greatest part of his early training in the graduate school which Mr. Benedict has had most opportunity to observe. "Of thorns men do not gather figs, neither of a bramble bush gather they grapes."

SAMUEL C. CHEW, JR.

Baltimore, Md., January 20.

TO THE EDITOR OF THE NATION:

SIR: The "Undergraduate View" of the profession of teaching, presented in your issue of January 18, must no doubt receive its most important correction, if at all, from those outside that profession. But concerning one of its elements, the conception of scholarly research as opposed to altruism, testimony may be accepted from a high authority on ethics; and the opportunity may be welcomed of recalling to mind the following memorable passage from the chapter on Self-Sacrifice in Prof. George Herbert Palmer's work on "The Nature of Goodness":

Perhaps the most admirable case of self-sacrifice is that in which no single person appears who is profited by our loss. The scholar, the artist, the scientific man dedicate themselves to the interests of undifferentiated humanity. They serve their undecipherable race, not knowing who will obtain gains through their toils. In their sublime benefactions they study the wants of no individual person, not even of themselves. Yet, turn to a man of this type and try to call his attention to the privations he endures, and what will be his answer? "I have no coat? I have no dinner? I have little money? People do not honor me as they honor others? Yes, I believe I lack these trifles. But think what I possess! This great subject; or rather, it possesses me. And it shall have of me whatever it requires." In such service of the absolute is found the highest expression of self-sacrifice, of social service, of self-realization. R. M. A.

MUNICIPAL REFERENCE LIBRARIES.

To the Editor of The Nation:

Sir: In commenting editorially on the plan to establish a civics or municipal reference library in the city of Chicago, the *Nation* of December 28 gave publicity of the right sort to a subject that should be brought more forcibly to the attention of enterprising citizens than has heretofore been the case.

Such a library, as the *Nation* suggests, is the municipal counterpart of the legislative reference library now found in nearly one-half of our State capitals. It aims primarily to supply to city officials in their various capacities the most scientific and authoritative treatises on all phases of municipal administration, whether involving executive, legislative, or judicial functions, or the establishment of a garbage reduction plant which shall bring in revenue by producing a marketable by-product of the reduction process. To this library should come any officer or employee of the city, confident that there he will find the published experience of others who have earlier faced and solved the problems that now confront him.

Municipal administrative problems of all types have for some time been receiving almost as close attention in legislative reference libraries as have the problems of State management, on the principle that the successful administration of a part is essential to the success of the whole, and that State officers are the servants of all the citizens. In some cases this has been done under legal authorization, as in California, in others by the broad interpretation of general powers and duties, as in New York. Progressive city libraries have also undertaken this work in many instances without applying the name "municipal reference" to it. Further, at least two of our State universities are acquiring good working libraries, and will render public service in connection with their municipal research bureaus. Public institutions of this kind, administered from a purely non-partisan, non-political, and strictly scientific point of view, make unnecessary any similar privately-managed bureau, such as is found in some of our municipalities.

In adopting this plan Chicago will be following Baltimore, Milwaukee, and St. Louis, but will no doubt attempt the work on a somewhat larger scale than any of them, and will be preceding—if the plan matures immediately—Cleveland, Pittsburgh, and New York in furnishing another example of the principal tendency in modern library extension, a tendency towards specialized service rendered for the public good.

In saying that Chicago is planning an adaptation of the "Wisconsin Legislative Bureau" the *Nation* permits the impression, now widespread, that the idea of a legislative reference bureau originated at Madison. That bureau has won for itself many deserved honors, and can well spare to its sister bureau at Albany the correct distinction of having inaugurated this work ten years before it was undertaken in Wisconsin. John Boynton Kaiser.

Urbana, Ill., January 24.

"NAKED-AS-A-JAY."

To the Editor of The Nation:

Sir: The expression of "Naked-as-a-jay" for négligé, which your reviewer of "Mis' Beauty" (*Nation*, January 11) doubts to be a genuine negro folk etymology, is a true one. I have myself heard it in Baltimore on a trolley car.

Can you pardon another of the same type?

Mr. Washington: I's powerful glad to see you, Mr. Jones. You's still on terra cotta, I see.

Mr. Jones: Yes, Mister Washington, I's still on terra cotta.

This, quite as difficult to believe, was overheard by the writer standing on the steps of MacCoy Hall, Johns Hopkins University.

Oscar Woodward Zeigler.

All Faith Rectory, St. Mary's Co., Md., January 22.

ST. BERNARD AND NATURE.

To the Editor of The Nation:

Sir: In a prominent academic Quarterly a recent reviewer of Henry Osborn Taylor's book, "The Mediæval Mind," quotes the author's phrase: "St. Bernard, whose meditations shut his eyes to mountains, lakes, and woods," and comments thus:

> This does scant justice to him who anticipated a famous sentiment of Shakespeare and Wordsworth, in the following words (Epist. 106): "Experto crede: aliquid amplius invenies in silvis quam in libris; ligna et lapides docebunt te quod a magistris audire non possis."

This is not the first time these words have been innocently used to prove the love of nature in the masterful and mystic ascetic who dictated them. They are alluring: "Thou wilt find something more in forests than in books; trees and rocks will teach thee. . . ." If we choose to regard merely their apparent meaning apart from the context, and apart, one may add, from the mind and temper of Bernard, they may seem to voice sentiments not unlike those of the exiled Duke or even the Lake Poet.

But first, as to the context. Bernard's letter was written to persuade a friend to embrace the monastic life. Its arguments speak the language of Scriptural allegory further amplified in Bernard's allegorizing style. The saint has been making the point that his friend should follow Christ, rather than read about Him in the prefigurings of the Prophets:

> For now He is come out from His hiding-place among the prophets, . . . now from the dark and shadowy mountain, as a bridegroom from his chamber, He has leapt forth into the Gospel's open ground.

The "trees" and "rocks" had scarcely more concrete existence in the saint's mind than the above palpable figures. One should not take a single sentence out of its allegorical context, and accept it literally because the literal meaning happens to suit more modern sentiments, which had no place in Bernard's ascetic mind.

Moreover, it is easy to show that St. Bernard had no eye for nature, or, indeed, for anything delightful to the senses. One can find the evidence in the second chapter of Abbé Vacandard's excellent "Vie de Saint Bernard." The abbé gives in a note the passage quoted by the reviewer of Mr. Taylor's book, and then another from the old Latin "Vita," in which the saint says to his companions that he gained his best understanding of Scripture by prayer and meditation *in silvis et in agris*, where, he added with a smile, he had no masters except the oaks and beeches. This is just what he was conveying in the letter to his friend, that his friend also should reach Christ by prayer and meditation, rather than by listening to masters or reading many books.

The error in which the reviewer seems to have fallen illustrates the perils besetting the interpreters of what is written in another age by men with mental habits differing from our own; for their words often do not mean what we should mean using the same phrases. J. H.

Literature

THE SPANISH-AMERICAN WAR.

The Relations of the United States and Spain: The Spanish-American War. By French Ensor Chadwick. 2 vols. With maps. Charles Scribner's Sons. $7 net.

Rear-Admiral Chadwick completes his great work on Spanish-American relations with two volumes on the war. The same clarity with which he followed the diplomatic coils of a century prevails in the narrower field. Based mostly on official records, which are profusely quoted, and containing as well the valuable residuum of the newspaper accounts, it keeps the means of control ever present without impairing the readable quality of the narrative. Admiral Chadwick is impartial and objective, yet always interesting. His pages are generally written with such force and dignity that the recurring solecism laid (for lay) is doubly unfortunate. Such slips should not escape the proof-readers. On the whole, this book makes the widest appeal and is of enduring value. It will long preserve the memory of the gallant author who was himself a great part of the events he so modestly and judiciously describes.

No exhaustive review of this great work is possible, but a few general considerations may be raised. The military problem involved in the war is

this: How could and did an immensely rich republic, with only a rudimentary army and half a navy, respond to the emergency of an oversea war? The demonstration is something less than satisfactory because the foe was Spain, save for courage, pitifully weak in all the requirements of warfare. The military analysis of the war implies a constant comparison between the army and navy. Hence we should hasten to show that the parallel is fair and in neither instance invidious. Both services, but the army more, worked under appalling disadvantages. To difficult tasks of fleet action, bombardment, and blockade, the navy sent heterogeneous squadrons under commanders who had never conducted squadron manœuvres under modern conditions. But the navy had the advantage of a strong centralized control at Washington, of highly trained officers, and of well disciplined crews practiced in the indispensable exercise of target shooting. The army, on the contrary, suffered under divided control at Washington, with a grossly incompetent Secretary of War; the training of the officers had been at best limited to regimental routine; only a fraction of the enlisted men knew the duties of a soldier. Under these conditions it is highly creditable to the army that in courage and enterprise among the line officers and men an absolute parity existed with the navy. The navy indulged constantly such gallant follies as shelling trenches from torpedo craft, and the army loved such useless perils as those of El Caney. If in Winslow's grappling the cables under the guns of Cienfuegos and Hobson's sinking the Merrimac the navy scored the most conspicuous feats of personal gallantry, the army merely lacked similar opportunities. And, equally, neither service is quite free from reproach. Against Commodore Schley's amazing and inexplicable delay in proceeding from Cienfuegos to the blockade of Santiago, we must set the deplorable "round robin" to Washington calling for a retreat from Santiago. Regular army officers may disclaim complete responsibility for this unhappy document by insisting that it arose in the overheated imagination of an erratic officer of volunteers.

The difference between the two services was that, while the navy had abundance of brains in high command, the army had not. To follow up this theme would be both indiscreet and superfluous. We need only note the contrast between the haphazard, undirected attack on Santiago on land and the extraordinary blockade Sampson was simultaneously conducting. The unfortunate Shafter not merely had no plans, but also, while ignoring Sampson's correct plan of seizing the coast defences at the mouth of the harbor, embarrassed the navy by inconsiderate demands, and the War Department by unreasonable alarms. Gen. Shafter was more a victim than an offender; but his case cannot be too emphatically cited as an instance of the danger of high command awarded for political and personal cause. Although he rejected Sampson's sensible scheme for the joint reduction of San Juan, Gen. Miles conducted a correct miniature campaign in Porto Rico, and did something to show that the art of strategics was not wholly disused in America. Gen. Greene accomplished at Manila a function chiefly diplomatic with tact and energy. But in the main the war was a striking demonstration that no effective army existed among us, though there were excellent regiments, and that it was impossible to improvise within a few months a force having the coherence and discipline of a real army. Moreover, the war showed that the morale and efficiency of the generals had been sapped by the wrong kind of experience in post or behind desk. In this regard we were no better off in 1898 than we had been in 1861. Probably the need would gradually have produced the supply; but, meanwhile, had we been operating against a third-class Power of the slightest military capacity, we should have met with initial disaster. The check of Italy in Tripoli is a slight indication of the certain humiliation that awaited us had we faced troops capable of assuming an intelligent aggressive. This unpalatable fact cannot be brought home too strongly, since nearly all the vices of organization, appointment, and promotion that crippled the army of 1898 are still intrenched to-day, and the nation and Congress and even certain high army officers seem quite comfortable in the conviction that, after all, the army somehow muddles through. Sometimes badly led armies do, but at fearful cost, as the British in South Africa; and sometimes they do not, as the French in 1870. In quitting this subject we wish to say that the fault for what was and what is amiss with the army lies almost wholly with Congress and the people. We have nothing but respect and admiration for those officers who bravely and uncomplainingly served, though hampered as to supplies, reasonable security and dignity, and right opportunity for higher military education. The credit for what was well done in the late war goes to the officers of the line; the discredit for what was ill done we must all share. At least it was shown that years of peace had done nothing to sap the courage of our regimental officers and privates. Whatever our blundering on the offensive, the answer was emphatically given to the European scoff that, become a mongrel people, we were no longer capable of the courage and loyalty that make armies formidable.

With grave deficiencies of material, the navy did admirably the work lying before it. Dewey's swift annihilation of the Spanish fleet in Subig Bay, Admiral Chadwick shows, is as unduly depreciated now as it was over-exalted then. Sampson's blockade off Santiago will become classic in naval annals, and the running fight with Cervera was, even with the Brooklyn's famous loop, which has been discussed beyond its importance, nearly letter-perfect. In the light of what we now know, the scouting in the North Atlantic and the bombardment of San Juan were ill-advised and wasteful. Against these errors may be set the Oregon's remarkable run from the Pacific, and a number of minor brilliant engagements, some characterized by too great hardihood. Even more than by its specific accomplishment, the navy shone through its intellectual initiative. Much of the best information service ashore was done by naval officers of Lieut. Blue's type. Sampson's plan for enfilading the shore defences of Havana from the sea, and thus hastening a conclusion, was probably feasible. It was Sampson who vainly poured into Shafter's sick ears the real strategy of the Santiago campaign—first to reduce the sea batteries. Yet the information service of the navy utterly failed at the most critical times. The torpedo-boat Porter, detailed to detect Cervera in the Caribbean, learned of his presence there three and a half days after the news was common knowledge in New York. It was four days after Cervera entered the port of Santiago that explicit orders to blockade him reached Schley at Cienfuegos, and though the distance is only three hundred and fifteen nautical miles, it was nearly six days more before Schley actually began the blockade. We wish to put no unkind or sinister interpretation upon these facts, but they suggest a combination of bad luck, bad judgment, and lack of enterprise that in the presence of a formidable foe would have been disastrous. Since then wireless telegraphy has revolutionized naval scouting, but it remains one of the most important branches of the service, and it still is the most neglected in our navy. In fact, the naval lessons of the war with Spain have been studiously neglected, and instead of learning what was then and still should be the real strength of our navy, we have been heedlessly dragged into the prevailing costly fashion of building dreadnoughts at the expense of a well-balanced defensive fleet.

From the purely military standpoint Sampson is unquestionably the single great figure of the war. Subject to all manner of mischance and even abuse, unfairly thwarted both of the enjoyment and of the tangible rewards of his remarkable success, his place among the great admirals is already secure. He was the pioneer admiral of the era of smokeless powder and long-range guns as Togo is the pioneer admiral of the

era of wireless telegraphy. Yet the personal hero of the war is no American, but Cervera, and with him his captains. With imperturbable dignity and sagacity he set himself against the *pundonor* that required the wanton sacrifice of the Spanish navy, and when he saw that folly reigned, he consented to be its victim with magnanimous alacrity. In debate and in submission he was perfectly disinterested, completely tactful, wholly magnanimous. And his commanders seem to have been worthy of such a chief. The records of their councils show them accomplished officers and strategists. Had their Government given them coal and ammunition for practice, a very different account would have been rendered of this naval forlorn hope. Admiral Chadwick's pages are nowhere finer than when he is revealing the mind of Sampson, whose flag captain he was, and the heart of Cervera.

Upon the diplomatic sequel of the war, which is fully related by our author, we do not wish to dwell. There is some humiliation in passing from these memories of the two admirals to President McKinley's handling of the peace negotiations. His charge to the Paris commissioners was a classic instance of the McKinleyan dialectic. It asserted, in substance, that while the United States had acted and continued to act from the highest and most disinterested motives, it held itself free to take any course that its interest might dictate. From that ambiguous word the rest naturally followed. The actual demand for the Philippine Islands rested upon a widespread sense that they were very valuable. It was this sentiment that President McKinley voiced without prejudice of his altruistic standards. But in fairness it should be added that there was a general muddled sense that we had incurred some sort of a moral responsibility in the premises. In vain Judge Gray of the Peace Commission cabled to Washington the hard sense and sound morals of the matter: "Attacked Manila as part of legitimate war against Spain. If we had captured Cadiz and Carlists had helped us, would not owe duty to stay by them at conclusion of the war. On contrary, interest and duty would require us to abandon both Manila and Cadiz." These words still constitute a meritorious document in ethical analysis; the country at the moment desired morals not much, and analysis not at all.

Of this last rather sordid stage of the century-long contention between the United States and Spain, Admiral Chadwick, believing the outcome to be providential, is the chronicler rather than the judge. And, in fact, the crises of the war and its immediate antecedents fell not under the jurisdiction of policy of any sort, but under the sway of popular passion. And this is true of both nations. It was public opinion inflamed by the yellow press that made President McKinley omit the last efforts to preserve peace. It was the cheering of Western crowds that made the mildest of men the initiator of over-sea empire. It was public opinion that required the futile voyage of Cervera's fleet and its ultimate sacrifice. There is no more pathetic reading than the dispatches of the commanders at Santiago and Manila, caught between the prospect of hopeless combat and the certainty of unmerited disgrace at home. It was in deference to public opinion that the Spanish Ministry offered Cervera ships that were not afloat and supplies that did not exist. When one reads this grotesque correspondence and recalls the general dealings of Spain with her unsupported champions, the cynical conviction imposes itself that, while we sometimes treated her less than handsomely, her whole record as regards us entitled her to no better treatment than she got. There remains the question whether strong leadership, at the beginning and end of the war, might not have controlled public opinion in America. Since such leadership failed, let us pass to the broader issue, whether in this day of journalism and democracy wars can still be declared for policy and conducted by the rules regardless of press and people. At first blush one is tempted to believe that the old-fashioned statesmanship and generalship are become obsolete, both yielding to the politician and newspaper proprietor. Yet certain conditions of national discipline seem still to permit the untrammelled sway of statesmen and great military leaders. One must not forget Japan. It would be obviously inexpedient to inquire whether her success in conducting from above tremendous military and naval campaigns indicates a more advanced or a more backward civilization than our own. May such digressions testify to the stimulus your reviewer has found in reading Admiral Chadwick's masterly history.

CURRENT FICTION.

A Question of Latitude. By Laura P. Luffman. New York: John Lane Co.

Imagine a sort of Anglicized and expurgated version of "The Virginian," told from the point of view of the cultivated heroine; the scene laid in Australia, the hero a young sheep-drover, the heroine an English girl of aristocratic breeding visiting Australian relatives. The story relates with rather wearisome detail Millicent Mainwaring's painful experiences in the vulgar suburb of Melbourne, where her relatives live, and her gradual reconciliation to her new surroundings. Of course, she has a well-born and highly educated English lover, and, of course, she learns to perceive the superiority of the athletic sheep-drover, who has, however, something in the way he wears evening clothes which suggests the prince in disguise. To show that though a diamond, he is in the rough, the author makes him tell the heroine that she is "beastly selfish." He does not tell her what is quite as true, that she is a hopeless prig; perhaps because he is something of a prig himself. After the marriage, Millicent discovers that he is really a wealthy ranchman, of excellent family and irreproachable English connections. The most interesting people in the story are the Australian relatives, but this is not high praise.

The Quest of the Silver Fleece. By W. E. Burghardt Du Bois. Chicago: A. C. McClurg & Co.

The writer of this book has made himself generally known as, but for Booker T. Washington, the most prominent champion of his race in America. Himself a man of cultivation and achievement, he passionately desires that his fellows may all have an equal opportunity to rise. And while Mr. Washington has adopted the working principle that the education of the negro should proceed, in the main, along industrial lines, Mr. Du Bois resents the implication that any special principle of the sort need be regarded. The chief scene of the present story is the neighborhood of a school for negroes in Alabama, which has been carried on for many years by a Northern woman, in spite of the opposition of the whites of the region. The school is planned like one for Northern white children, without special industrial features, and depends for its support on chance gifts. To this school comes a Northern girl, not by choice, but because she has prepared herself to teach, and this is the only position she can get. Her brother is interested in cotton, and instructs her to study the conditions in the vicinity of the school. She finds that these conditions depend chiefly on the will of a single planter, Col. Cresswell, a Southern gentleman of the old school, who, though relatively impoverished by the war, still owns the whole countryside, and holds his negro tenants in a state of virtual peonage. His son, Harry Cresswell, is a Southern villain, also of the old school, polished in manner, but a drunkard, a liar, and a libertine. No girl among the tenants is safe from him. Among his victims is a beautiful mulatto name Zora, whose mother is a witch and a procuress. Supply an honest young negro to fall in love with her, and you have all the elements of popular melodrama. The Silver Fleece is cotton, and the action involves a great cotton "combine," which enriches the Cresswells without in any way improving the position of their negro dependants. The young man in love with Zora presently leaves the school to go to Washington, and only fails to be made Treasurer of the United States in

the course of a year because he cannot tell a lie. This is hardly a less credible incident than the death-bed repentance of the colonel, and his endowment of the negro school with the greater part of his fortune.

We must suppose that when the author says he has set down nothing the counterpart of which he has not seen or known, he is thinking of his picture of the lamentable estate of the Southern negro laborer to-day. He wished to write a sort of "Uncle Tom's Cabin" to date, and he shows us a black man little better off than the black men of Mrs. Stowe, and a white man little more decent than the race of oppressors she made abhorrent to the world sixty years ago. We rub our eyes at the helplessness and depravity here pictured. Can these things be true in the representative sense Mr. Du Bois attaches to them? There is no doubting the sincerity of his belief that they are so, as witness the petition with which the book closes:

L'ENVOI.

Lend me thine ears, O God the Reader, whose Fathers aforetime sent mine down into the land of Egypt, into this House of Bondage. Lay not these words aside for a moment's phantasy, but lift up thine eyes upon the Horror in this land;—the maiming and the mocking and murdering of my people, and the prisonment of their souls. Let my people go, O Infinite One, lest the world shudder at

THE END.

The Man in the Shadow. By Richard Washburn Child. New York: The Macmillan Co.

It is a pleasure to come across a volume of stories so wholesome and really alive as these. To escape from divorce and the eternal triangle is much; to become acquainted with a group of sensible, brave, and interesting people is far more. If one were asked to recommend to an intelligent foreigner a book of stories which would give him a just impression of American life and ideals, one could scarcely do better than direct him to "The Man in the Shadow." The tales are not sectional or provincial in spirit; they are "all-American." They do not look backward to a past or passing era; they are genuinely, though not aggressively or slangily, of the present. Like Mr. Child's longer story, "Jim Hands," they show us young America at its sound and delightful best. Not, of course, that they all deal with young people; but they are filled with the spirit of youth—the spirit of hopefulness, of faith in humanity, above all, of courage.

At times the stories recall by their merits the work of Mr. Kipling; for instance, "Shark," a tale of the West Indian seas, and "The White Hand," which centres upon the building of a great dam in Dakota. But from the cheap cynicism and sentimentalized brutality which mar some of Mr. Kipling's work they are entirely free. Many of them are intensely dramatic, but none is finer than the simple and restrained little story called "Service." This and the title-piece are perhaps the strongest in the volume. Occasionally in some of the tales the diction is a little overstrained: but at their best they are as sound and fine in workmanship as in substance.

PROFESSOR MACKAIL'S ESSAYS.

Lectures on Poetry. By J. W. Mackail. New York: Longmans, Green & Co. $3 net.

We have followed the career of Mr. Mackail—what lover of letters has not?—with extreme interest from the first publication of his "Epigrams from the Greek Anthology" to this present volume, which marks the close of his tenure for five years of the professorship of poetry at Oxford. He has written much that is graceful and much that is penetrating, if not profound; from the first he has been the accepted representative of what since Pater's day has come to be recognized as the peculiarly Oxford spirit in *belles lettres*. The little history of Latin Literature, which to our taste remains the finest product of his pen, was to have been the work of his master, Professor Sellar, himself a follower of Pater, and it shows the strong infiltration of Pater's manner through that intermediary. Mr. Mackail exhibits all the charms of that influence, but he exhibits also the ever-increasing languor and sterility of a movement that was pointed away from the promise of life. The world has moved since Pater's day; the forced æstheticism of his philosophy begins to exhale heavy odors; there is not life here, but death. Mr. Mackail clings to the old manner, and it is not without significance that his work, particularly in the three volumes of his Oxford professorship, has become gradually less vital, more anæmic (shall we say?), more artificially imitative of thought. "The Springs of Helicon" (1909) was incisive, for the most part sound, and not without sturdiness of ideas. "Lectures on Greek Poetry" (1910) was brilliant in places, but essentially unsound in its assimilation of the classical muse with the mistress of Morris and Swinburne and Rossetti. Of the present volume it would be uncritical to say that it has not many excellent and charming pages, but it would be equally uncritical not to admit that something approaching futility is the final impression.

This may seem rather sweeping condemnation of work which has shown so many eminent distinctions as Mr. Mackail's; it is, indeed, justified only on the principle of *corruptio optimi pessima*. Nor is the present volume lacking in notable sections. The chapter on Virgil and Virgilianism, in its erudite yet human study of the movement to which Virgil's minor poems belong, recalls the measured and weighty charm of the "Latin Literature." The chapter also on Shakespeare's Sonnets is distinguished for its sane treatment of an unduly perplexed subject. One passage from this chapter we may quote as an illustration of Mr. Mackail at his best:

> Of Shakespeare's sonnets at least, in this respect, the best word that has been said, if not the last word that can be said, is in the line and a half of Sophocles prefixed by Francis Palgrave to his edition more than forty years ago:
>
> ὦ θεοί, τίς ἄρα κύπρις ἢ τίς ἵμερος
> τοῦδε ξυνήψατο;
>
> The words, like all Sophocles at his finest, are untranslatable: and like Sophocles at his most characteristic, where he goes to the very heart and centre of life, they have two qualities: first, that they are extraordinarily simple and direct; and secondly, that they settle upon the note of wonder, the endless and fathomless miracle of existence; not explaining, not passing judgment, but seeing the wonder of life with that clear and yet impassioned vision which is the last reward that life has to give.

We see here, no doubt, the blending of classical and romantic literatures, which in its upshot is really a betrayal of the classical. Mr. Mackail makes no distinction between the wonder of revery which is preëminent in the romantic poets, and the reasoned wonder which prevails in the classical poets, and, fundamentally, in Shakespeare. Nevertheless, we understand perfectly well the romantic notion of wonder which Mr. Mackail here has in mind; his own principle of taste is definite in conception and is expressed with restraint and charm. Unfortunately, he does not always express himself with this measure, nor does the main thesis of his book convey a quite definite idea of any sort. He writes on a variety of themes from Arabic poetry to Keats, but throughout he has one intention, to define poetry itself and to show its indefectible power through the ages; and it is just in this central purpose that the fault of his method becomes most conspicuous. At bottom it is the purely emotional and elusive in poetry that attracts him. "Criticism," he asserts, "in its true sense, is simply appreciation"; that is to say it is not fundamentally an exercise of judgment, but an attempt to surrender one's self to the mood of the poet, and to make admiration synonymous with wonder. Thus, "when we criticise 'Endymion,' when we discriminate in it between what is good and what is not good, or what is frankly bad, we run the risk of falling into just the mistake that Keats himself had the genius and the insight to avoid"—a statement, by the way, which is as false to the self-critical genius of Keats as it is to the critical spirit in general. When Mr. Mackail

attempts to combine his taste for the purely emotional and elusive with a logical definition of poetry, the result is too often the mere repetition of the commonplace in language which has the effect of a kind of sentimental obscurantism. For instance, he would combine Taine's sharp conception of poetry with the romantic conception of inspiration; this is the result:

> All poetry is the projection on a visible plane of a vast and exceedingly complex mass of poetical tendencies and potentialities. It is a living organism with powers of absorption, assimilation, reconstitution.

A commonplace has not often been involved in a vaguer combination of scientific and romantic terms. At bottom Mr. Mackail is here not concerned with the simple idea that the character of poetry at any given time is influenced by a mass of complex forces and that this character changes with the times; his real concern is to envelop this commonplace in a misty atmosphere of wonder. In the end, when the procedure is known, its repetition grows tedious and irritating.

There is a ferment of ideas now at work in Paris and Germany. The old romantic philosophy has on the one hand been carried to its logical limits by Bergson and his kind; on the other hand are arrayed those who, in divers ways and often blindly, are seeking a new basis of stability amid the flux. The movement may reach England in ten years and America in twenty. Meanwhile, there are those in our own universities, as well as at Oxford, who are troubled by certain practical implications of the romantic philosopby, yet fear that a break with the romantic tradition of literature will mean a relapse into the dryness of the pseudo- or neo-classic literature of the eighteenth century. In this dilemma they endeavor to isolate the literature of the past century from the whole movement of philosophy and life of which it was a part, and deal with its imaginative elements æsthetically, as characteristic indiscriminately of classical and romantic and all true poetry. To this effort to treat literature *in vacuo*, so to speak, yet with a strong romantic bias, Mr. Mackail's later work belongs, despite his vague definition of poetry as a "living organism" moving with the *élan vital* from stage to stage of progress.

A Retrospect of Forty Years, 1825-1865. By William Allen Butler. New York: Charles Scribner's Sons. $2.50 net.

There can be disappointment even in a charming book. We pick up the memoirs of the man who wrote "Nothing to Wear" in full expectation of seeing reconstructed before our eyes the New York in which Miss Flora M'Flimsey had her being. We find very little specific information upon the city of three-quarters of a century ago, geographic, historic, or social. We must be content with a brief sketch of Broadway in 1834 when the Battery was still the hotel centre and fasbion held forth south of City Hall Park, and with random topographical references of half a generation later, when society had established itself in the region between Washington and Madison Squares. Our disappointment arises from precisely that point of view against which Mr. Butler whimsically protests. He fails to see why, after a busy and successful legal career, a profession of which he was exceedingly fond, his reputation should be made to depend upon a random piece of society verse tossed off in an idle hour. The writer of the present memoirs was a gifted amateur, but his book is almost devoid of the deadly literary prattle in which the amateur abounds.

Outside of his profession, Mr. Butler's interests seem to have centred in the field of broad national politics, and we get from his hand several chapters of readable comment on the rise and progress of the anti-slavery movement, with which he was heartily in accord; readable chapters, but covering ground that is familiar enough. When a boy the author had made the voyage to Europe. He went a second time in 1847, and gives us a brief but spirited account of his travels, done in the clear, terse, unaffected manner that marks the book throughout. He met Lord Macaulay and "listened in breathless silence while he gave a monologue on the Temple and the Rules of the Order." Other great figures of the day are sketched in a happy sentence or two. We speak of this European narrative because it throws the personality of our writer into characteristic relief—an active, somewhat self-contained, but sympathetic man of fine intelligence, unpretending but far from commonplace, witb a pretty gift of quiet humor. As we put the book aside we find that, after all, we have had our picture of ante-bellum days in New York, painted not directly, but impressionistically, through the revelation of an attractive character whom we are tempted to regard as a type of the finest citizenship in the metropolis of fifty years ago. The memoirs, which cover only the first forty years of a life that ran to nearly twice that length (1825-1902), were written in 1899.

The Swedish Settlements on the Delaware. By Amandus Johnson, Ph.D. University of Pennsylvania. 2 vols. $6 net.

With most students of American history, we fancy, acquaintance with the annals of the colony of New Sweden has hitherto gone no further than the chapter which Gregory B. Keen contributed twenty-five years ago to Winsor's "Narrative and Critical History of America," the papers edited by Fernow in Vol. XII of the "Documents Relating to the Colonial History of the State of New York," and, for the period of beginnings in Sweden, Dr. J. F. Jameson's monograph on William Usselinx. To this short, but fairly satisfactory, list are now to be added the two substantial volumes by Dr. Johnson, forming the latest issue in the Americana Germanica series, published by the University of Pennsylvania. For a colony which existed but twenty-six years before it was ingloriously absorbed by the Dutch of New Netherland, 670 pages of text, weighted with footnotes and authorities, besides more than 200 pages of appendices and index, may seem an excessive allotment. Certainly, were any considerable portion of our colonial period to be treated on such a scale, "the world itself could not contain the books that should be written." As a piece of historical research, however, these volumes have to the full the merit of definitiveness. If there are any sources, printed or manuscript, which the author has not examined, they are unknown to the present reviewer; nor is it likely that the task will ever have to be done again.

Dr. Johnson begins with a survey, concise but sufficient, of the political, social, and religious conditions in Sweden from 1611 to 1660; and of the growth of industry and commerce, together with the activities of various trading companies, during the same period. The history of the New Sweden Company falls into three periods. The first, covering the years from 1637 to 1642, saw the establishment of the colony under Peter Minuit, with Dutch aid; the buying out of the Dutch stockholders by the Swedes, and the dispatch of four expeditions to America. In 1642 the company was reorganized, and in the course of the next seven years five more expeditions were sent out, the members of the last of which were fated to endure much suffering at the hands of the Spaniards. Two more expeditions were sent in 1653 and 1654. Then came the Dutch conquest under Stuyvesant, a reorganization of the company in 1654-55, the twelfth and last expedition in 1655-56, and the unsuccessful efforts of Sweden, not remitted until 1673, to recover its lost province.

The chronological course of the narrative is supplemented by interesting accounts of the life of the colonists, their relations with the Indians, the English, and the Dutch, and the attempts to build up a permanent and lucrative trade. Four chapters on the tobacco trade of New Sweden, under the third period of the company, should be specially noted. Appendices give brief biographies of leaders of the enterprise, some of the material of which might better, we think, have found place in the text; lists of officers, soldiers, servants,

and settlers in New Sweden; texts and translations of a number of important documents; and a bibliography. There is an exhaustive index. The numerous illustrations, including reproductions of contemporary maps and documents, are well executed, and the mechanical make-up of the volumes is sumptuous.

War and Other Essays. By William G. Sumner. Edited with Notes by A. G. Keller. New Haven: Yale University Press. $2.25 net.

It could not be said of many great scholars that their brief essays were more characteristic of them than their books. Yet this statement is made in regard to Sumner by Professor Keller, in his introduction to this posthumous collection of essays. The reasons for it are simple. Sumner was, above all else, a teacher, and in the stress and arduous duties of his academic life, he could not find consecutive leisure to give to his longer works the completeness, dash, and finish which mark his lectures and essays. That the essays here gathered together are, in fact, characteristic of the great thinker, is in itself a sufficiently high recommendation, and those who are familiar with his work would hardly ask for more. The present volume includes seventeen of the most brilliant of his briefer contributions, all of which have been previously published in some form. They are prefaced by a clarifying and sympathetic introduction, and supplemented by a complete bibliography of Sumner's writings. A good frontispiece portrays the author as he was in his prime.

The title essay is a clear, incisive, level-headed examination into the rôle which war has played in the development of civilization and the advancement of the human race. A few extracts from this masterpiece, published for the first time in the opening number of the new *Yale Review* last autumn, will not only give a concise statement of the author's views on war, but will serve to illustrate the style of diction in which the essays are written, and the type of thought which distinguishes them all:

> We find, then, that in the past, as a matter of fact, war has played a great part in the irrational nature-process by which things have come to pass. But the nature-processes are frightful. . . . If we are terrified at the nature-processes, there is only one way to escape them; it is the way by which men have always evaded them to some extent; it is by knowledge, by rational methods, and by the arts. . . . Shall any statesman, therefore, ever dare to say that it would be well, at a given moment, to have a war, lest the nation fall into the vices of industrialism and the evils of peace? The answer is plainly: No! War is never a handy remedy, which can be taken up and applied by routine rule. No war which can be avoided is just to the people who have to carry it on, to say nothing of the enemy. . . . There is no state of readiness for war; the notion calls for never-ending sacrifices. . . . A wiser rule would be to make up your mind soberly what you want, peace or war, and then to get ready for what you want; for what we prepare for is what we shall get.

This book offers a fund of enjoyment and enlightenment to any sober-minded and intelligent reader. But there are two classes of persons who will especially profit by its perusal. These are the sociologist and the statesman or constructive politician; for Professor Sumner was both of these. The essay on sociology might well stand as the introductory chapter to any thoughtful treatise on the subject, while "The Family and Social Change," "The Status of Woman," "Witchcraft," "Religion and the Mores," and "The Mores of the Present and Future," are fine types of detailed sociological investigation. The essays on "The Absurd Effort to Make the World Over," "State Interference," "The Forgotten Man," and "Do We Want Industrial Peace?" are keen attacks upon the weak points of socialism, the last-named being of especial interest when read in connection with the essay on war. The wave of imperialism which swept the country in the last years of the nineteenth century inspired the essays on "The Proposed Dual Organization of Mankind," "The Fallacy of Territorial Extension," "The Conquest of the United States by Spain," and "The Predominant Issue." The last of the essays, in point of arrangement, "Our Colleges before the Country," was one of the first in point of composition, and stands by itself, being an attack on the privileged position of the classics in college curricula, written at a time when those studies were much more firmly intrenched in that position than they are now.

Notes

"Intimacies of Court and Society," by the widow of an American diplomat, is announced by Dodd, Mead & Co.

The publication of a limited edition of "The Colonial Homes of Philadelphia and its Neighbourhood," by Harold Donaldson Eberlein and Horace Mather Lippincott, is contemplated by J. B. Lippincott Co.

"The Works of Thomas Deloney," edited with introduction and notes by F. O. Mann, are about to be added to the Oxford English Texts (Frowde).

D. C. Heath & Co. will issue Molière's "Le Médecin malgré lui," edited with notes and vocabulary by Dr. R. L. Hawkins, and Hebbel's "Agnes Bernauer," edited with introduction and notes by Prof. B. M. Evans.

Prof. Oliver Morton Dickerson is publishing, through the Arthur H. Clarke Co. of Cleveland, "American Colonial Government, 1696—1765: a study of the British Board of Trade in its relation to the American Colonies, political, industrial, administrative."

John Spargo's "Applied Socialism" and Gilbert E. Roe's "Our Judicial Oligarchy" are in the list of B. W. Huebsch.

Doubleday, Page & Co. have in the press "Many Celebrities and a Few Others," by William H. Rideing.

The Putnams have in preparation: "In the Amazon Jungle," by Algot Lange; "Outdoor Philosophy," by Stanton D. Kirkham; "Human Efficiency," by Horatio Dresser; "Astrology and Religion Among the Greeks and Romans," by Franz Cumont; "Grammar and Thinking," by Alfred Dwight Sheffield, and "The Religious Experience of St. Paul," by Percy Gardner.

The same house, as American representatives of the Cambridge University Press, announces: "Lyrical Forms in English," edited with introduction and notes by Norman Hepple; "Nathan der Weise," edited by J. G. Robertson; "Stories from Chaucer," retold from "The Canterbury Tales," with introduction and notes by Margaret C. Macaulay; "The Sufficiency and Defects of the English Commission Office," by A. G. Walpole Sayer, and "The Abbot's House at Westminster," by J. Armitage Robinson.

Messrs. Longmans are bringing out "A Peasant Sage of Japan," translated from the Hotokuki by Tadasu Yoshimoto, with an introduction by Dr. J. Estlin Carpenter. The book recounts the long labors for social reform of Sontoku Ninomiya, who died in 1856.

The Scottish Text Society proposes to issue during 1912 "Abbregement of Roland Furious," by James Stewart of Baldinnes, prepared from the manuscript in the Advocates' Library by Thomas Crockett; "John of Ireland"; "Bibliography of Middle Scots Poetry," compiled by William Geddie; an edition of the Makculloch and Gray manuscripts, by George Stevenson, and the third volume of Gregory Smith's "Henryson."

Maeterlinck has created a prize of 16,000 francs, said to be derived chiefly from the money which he received from the Nobel award, to be given every two years to the author of the most remarkable book published in the French language.

With the January number, just issued, the *South Atlantic Quarterly* celebrates its tenth anniversary. The journal was founded "to furnish the young writers of the South a medium for the publication of their work," and thus to forward "the interests of Southern literature and scholarship." But it has kept free from the narrower sectionalism, its columns being open to writers from all parts of the country, and it is to-day one of the few journals in which vital subjects can be treated seriously and without some yielding to the popular clamor for superficial interest. In its present number Dr. Philip Alexander Bruce considers the question, "Was Poe a Druukard?"; Prof. Edward Raymond Turner deals with "The Morocco Crisis of 1911." "William Tecumseh Sherman as College President," by Prof. Walter F. Fleming; "Lee and Psychography," by Gamaliel Bradford, jr.; "William Pitt and His Recent Critics," by Dr. William T. Laprade; "The Autobiography of Richard Wagner," by Prof.

William H. Wannamaker, and "The Appeal to Ancestry in Literature," by Prof. William Wistar Comfort, are other contributions.

Another issue of the erudite and useful, but not exactly inspiring, Wiener Beiträge (Vienna: Wilhelm Braumüller) gives us "James Shirley: Sein Leben und seine Werke," by J. Schipper. This volume, rather thicker than the average of the series, contains a frontispiece reproducing the Bodleian portrait of Shirley, and a German version, by the editor, of "The Royal Master."

Much bright entertainment is offered in Edmund Lester Pearson's "The Librarian at Play" (Small, Maynard), a collection of papers all but two of which have appeared in the Boston *Transcript*. Some of the work is sheer fooling, but not bad fun. The narrator, who appears throughout the series, has a position in the public library of a New England town, and fills his odd moments (which characteristically seem to outnumber his even moments) by ingenious reflection on literature. So he invents an "interest gauge" which, placed in the back of a volume, measures a reader's attention. It creates no surprise when a man who drops in to read his own book breaks the gauge, but that a scholar poring over a German monograph forces the indicator up only a little way is, of course, scandalous. Further heresy appears in the "Desert Island Test," when a marooned man having with him the hundred best books which he himself had selected, now rues his choice:

> Sept. 1, 1907. One of the goats ate the Æneid to-day.
> Sept. 2. The goat is ill, and I have had to give it one of my few pepsin tablets.

Some of the papers give an amusing picture of the relation of the library to the public. The following in the paper "By Telephone," is not wholly incredible:

> "Well, I want to see a picture of Mrs. Browning. We have a portrait here, and my aunt says it is George Eliot, and I know it is Mrs. Browning. Now, if you could just hold up the book—why, how perfectly ridiculous of me! I can't see it over the telephone, can I? Why, how absolutely absurd! I never thought at all! I was going to come to the library for it, only it is so horrid and rainy, and then I remembered that I saw in the paper about your answering questions by telephone, and I thought, why, how nice, I'll just call them up on the 'phone—and now it won't do me any good at all, will it?"
> "I'm afraid not."

Nearly fifty years are spanned in Joseph H. Choate's "American Addresses" (Century), the contents of the volume ranging from the occasion of the Metropolitan Sanitary Fair in 1864 to that of the semi-centennial of the founding of the First Training School for Nurses in 1910. Notable among the addresses thus brought together are that on "The Tweed Ring," delivered in Cooper Institute in 1871 after the downfall of that organization; that at the Harvard Alumni dinner of 1883, when Mr. Choate's tactful remarks smoothed the way for an unexpectedly gracious response from General Butler, to whom the Board of Overseers had refused the LL.D. which it was customary for Harvard to confer upon Massachusetts Governors; "Trial by Jury," given before the American Bar Association in 1898; and "James Coolidge Carter," before the Bar Association of the City of New York in 1906. A preface explains the circumstances of each address. They are marked by the urbanity and the humor that have contributed to their author's high reputation as a public speaker.

"The Writing of News" (Holt), by Charles G. Ross, is a little book, but contains a deal of advice which, if observed by the novice in newspaper work, would hasten his practical education on the reportorial staff. The author, assistant professor of journalism in the University of Missouri, must have been a busy collector of clippings, and his "don'ts" cover well-nigh all the prejudices that have come to be laws among editors and copy-readers. No blue-penciller can fail to recognize, in the list headed "Bromides," such old friends as "sickening thud," "breakneck speed," "hair-breadth escape," "busy marts of trade," "shrouded in mystery," "vouches for the authenticity of," and "serious, but not necessarily fatal"—phrases selected at random from an appalling list of the combinations that cause hardened desk men to grind their teeth. Professor Ross has turned out an effective summary of what a working newspaper man should do, or avoid doing; and he has written with such clearness that the lessons should impress even the youngest classroom student training for a profession which until recent years was the only profession regarded as requiring no special educational equipment.

Although Tom L. Johnson did not begin the dictation of his autobiography until five months before his death, all of "My Story" (Huebsch) except the final chapter, which covers barely a twelvemonth, is his own composition. Part of the book has appeared in *Hampton's*, and it has been completed and edited by Elizabeth J. Hauser. Perhaps because it was dictated, the narrative is very vivid, and in its eagerness to get forward, and its carelessness or unconsciousness of finish, it is representative of the man whose activities and convictions it depicts. Episodes and situations are not always told with sufficient fulness for perfect clearness, and a chapter here and there is marred by a superfluous setting-forth of the writer's hostility to "Privilege." Johnson was not a phrase-maker, and he does not appear at his best in the forum. But these are minor blemishes upon the man's own relation of a decidedly interesting career. If he had merely deserted business for politics, as his fellow-townsman and opponent, Hanna, did, he would have left a very different and far less notable story behind him. It is the change wrought in his whole way of thinking by the almost involuntary reading of one of Henry George's books, and the deliberate perusal of others, that gives his life its significance. That change-and its consequences fill the mass of these pages. One sententious remark is worth quoting: "You can't legislate men or women into being good, but you can remove artificial stimulants to make them bad."

It is a sturdy and aggressive personality that Moorfield Storey and Edward W. Emerson set forth in "Ebenezer Rockwood Hoar: a Memoir" (Houghton Mifflin). To his own generation in Massachusetts Hoar was known as an able lawyer and judge, in whom learning, wit, and brusque manners mingled in what were often bewildering proportions; as an active political leader vigorously opposing the claims of slavery; and as a public-spirited citizen who helped to make his native town of Concord famous. In the larger field of national politics he will be remembered as, for a brief time, Attorney-General in Grant's Cabinet, from which office he was abruptly dismissed for the frankest of political reasons; and as a member of the joint high commission which framed the Treaty of Washington for the settlement of the Alabama claims. The old charge of having conspired with Grant to pack the Supreme Court, so as to procure a reversal of the first legal tender decision, has been sufficiently refuted by Judge Hoar's brother, the late Senator Hoar; and the present biographers have wisely refrained from again examining the question in detail. Perhaps the most valuable parts of the volume, on the whole, are those which trace the course of Massachusetts politics, particularly between 1840 and 1860, when Hoar's activity was most pronounced. It is interesting to note, however, that in contrast to his outspokenness and independence in those earlier years, he remained after the war a stanch Republican, and had little sympathy with independent movements for political reform. Personally, Judge Hoar appears in these pages as a typical Puritan, stern in family relations as in public life; yet with warm affections, devoted to his friends, and among his intimates an agreeable companion. There are some pleasant glimpses of the Concord and Boston literary set in which he moved from the beginning, of the Saturday Club, and of Harvard.

Major J. Orton Kerbey describes his experiences as "An American Consul in Amazonia" (New York: William Edwin Rudge) in a gossipy, after-dinner style. The book contains much useful information as to the topography and commercial possibilities of the Amazon region of Brazil, and very interesting accounts of the social and official life in Para and of the manners and customs of the people. The writer is amazingly frank, even to the extent of reflecting upon his own reputation, and of exposing official secrets relative to the astonishingly lax methods adopted by the Government in its appointment of incompetent and underpaid consuls. On being appointed consul to Para he was asked, "Where is Para?" to which he replied, "I'm blessed if I know." He describes an interview with Mr. (then Secretary) Blaine as follows: "When I intimated that I did not know anything of Para, he replied, 'That's the trouble with all of us. I am sending you out there to learn something about it; . . . and the facts are, we have more plugs than holes to put them in, but I told you I would find a hole for you,' and he kept his word. He put me in a very hot hole." He complains that "a consul is expected to dress becomingly, to make a respectable appearance as an American gentleman, yet it is impossible for him to do so on his salary. After the performance of my regular duties, I succeeded to eke out an existence by contributing to the press." On one occasion the position of vice-consul was vacant, and every American in the place, "from the missionary down or up, was an applicant. I did not make a nomination because I did not find an American I could conscientiously recommend." In referring to the

wealth and commercial possibilities of Amazonia the consul writes:

The forests of rubber trees are said to be practically inexhaustible. There are thousands of miles of this territory which is reached by rivers that are navigable by large ocean vessels. Large ocean steamships ascend the Amazon over 3,000 miles, to the base of the Andes, in Peru, delivering their cargoes almost at the doors of the merchants, and carrying away the valuable products of the valley, viz., rubber and cocoa. . . . Everything necessary to sustain civilized life is imported generally from Europe, while America takes the bulk of the exports. . . . Not an American steamship ascends the Amazon above Para.

The book contains some valuable information for the American manufacturer and exporter. It appears that "a large number of both English and German commercial travellers are in every city along the coast. These remain year after year in the country, becoming familiar with the language of the people, as well as with the trade. There were never less than three to five at my hotel in Para, yet I never saw or heard of a single American business agent during my residence there."

Gilbert Chinard of Brown University has carried through an elaborate and careful investigation in his volume, "L'Exotisme américain dans la littérature française au XVIe siècle" (Hachette). It was suggested to the author by his earlier studies, in the wake of M. Bédier, of Chateaubriand in America, and is obviously influenced by M. Lefranc's "Navigations de Pantagruel." But M. Chinard has another purpose than merely to record the descriptions of cosmographers and travellers; it is to determine the attitude of the sixteenth-century writers towards the inhabitants of the New World. America has, indeed, had a varying reputation, exemplified by the different meanings which different ages have given to the words Huron, Mohock, or Apache. Most students are familiar with Montaigne's descriptions of the natives of America in the essay on "Cannibals," who seem to him as sensible, on the whole, as the inhabitants of Europe, even though "they wear no breeches." But M. Chinard has brought together less known passages from other prose-writers and poets, in which the times "when wild in woods the noble savage ran" unconsciously antedate Rousseau's theories of the natural goodness of man. Of course, in the second half of the sixteenth century, the vogue of the pagan moralists, such as Seneca and Plutarch, as opposed to the religious writers, both Catholics and Huguenots, might well favor the idea that justice could be found among those yet unenlightened by Christianity. M. Chinard has produced a scholarly, even if not exciting, volume. He seems, however, to have passed over Charles Fontaine's "Les Nouvelles et antiques merveilles," 1554. The preface of that work contains interesting and not too wild ideas about Indians. One of the divisions of the volume is "Sommaire du livre des nouvelles isles," which deals with journeys of Columbus to Western lands, and mentions customs and fantastic animals.

Weekly essays on religious subjects by Louis Howland, first published in the Indianapolis *News*, are collected under the title "Day Unto Day" (Bobbs-Merrill). The style is something like that of the late R. H. Hutton, although without Hutton's depth of insight. The author seems to hold himself aloof in some degree from the movements he describes and from the spiritual struggles into which it is his desire to inject a helpful word. He is not passionately anxious to convert anybody, either from evil ways or to his own way of thinking, but he is desirous that the topics of which he writes, which are the large religious subjects of most general interest, may be considered from all points of view, and that his readers may be brought to a moderate opinion. He discusses the various seasons of the Christian year, and such themes as Heresy, Hypocrisy, Moderation, and ex-President Eliot's Religion.

If old historical memoirs must be revamped, a good model of the harmless type is the Hon. Mrs. Maxwell Scott's "Life of Madame de la Rochejaquelein" (Longmans). Devoid of originality, it follows, in liberal quotations, Mme. de la Rochejaquelein's own memoirs, as well as those of the Comtesse de la Bouëre, and the Marquise de Bonchamps. There is no attempt at character-drawing, but neither are there objectionable anecdotes. To those who are not familiar with the story of the Vendeans, and who have not access to the English translation of the memoirs of the Marquise de la Rochejaquelein, fathered by Walter Scott, the volume may be recommended. It contains some good reproductions of quaint portraits and a useful map.

Mrs. Newell Dwight Hillis has written a book concerning "The American Woman and Her Home" (Revell). Its homilies are addressed to the married woman of leisure, and voice, in a tone of exhortation, precisely those promptings of the social conscience to which this class is susceptible. In her commendation Mrs. Hillis never strays far from the domestic ideal or from the Church's methods of social service. She deplores the decline in popularity of "the most wholesome of all exercises—housework," regrets that "certain minor parts of the household art are unjustly falling into desuetude among the well-to-do," since "some use of the needle is sedative to nerves and stimulating to constructive thought," and would recommend the pre-nuptual administration of "a technical education in housekeeping" to obviate the divorce evil. But might not the more heterodox of the sex inquire whether the unanimous harking back to the household task and the foreordained "sphere" would be any more salutary—or, indeed, possible—for women than a universal reversion to the agricultural type would be for men? Sweeping is just as good an occupation for a woman as wood-chopping is for a man, but certainly no better.

"Völkerorganisation und der moderne Staat" (Egon Fleischel & Co., Berlin) is the title of the German edition of ex-Ambassador David J. Hill's work which was published by the Columbia University Press some months ago. The translator, Günther Thomas, has creditably acquitted himself of his task, and the book is welcomed by German readers as a scholarly treatise on questions which the politician, the statesman, the journalist, and even the businessman who is an active factor in the world of his profession or the life of his community, cannot afford to ignore.

Nicholas Paine Gilman, sociologist and economist, died recently at his home in Meadville, Pa., aged sixty-two. He graduated from the Harvard Divinity School in 1871, and was for some years pastor of Unitarian parishes in New England. Since 1895 he had been professor of sociology and ethics in the Meadville Theological School. The following books bear his name: "Profit Sharing Between Employer and Employee," "Laws of Daily Conduct," "Socialism and the American Spirit," "A Dividend to Labor," and "Methods of Industrial Peace."

Emil Jonas, whose death is reported at the age of eighty-seven, had made many translations into German from the Swedish and Danish. He was in the service of the Danish Government, having come from Germany, and was the editor of a German paper in Copenhagen. He wrote plays, books of travel, and fiction.

The death is reported from Salt Lake, Utah, of Hermann Bang, the Danish author and lecturer. He had been in this country two weeks, and had recently made a tour of Russia and Germany.

Science

"A Beginner's Star Book," by Kelvin McKready, is in Putnam's list.

As agents of the Cambridge University Press, Putnams promise "The Theory of Experimental Electricity," by Dampier Whetham.

The loose title of Charles M. Skinner's "Myths and Legends of Flowers, Trees, Fruits and Plants" (Lippincott) gives an idea of the free and easy way in which the author treats his subject. Strictly speaking, trees *are* plants, but that is of little matter when one is in search of the sensational in plant-traditions. Moreover, it is not worth while in preparing such a book to be scientifically precise, especially if one is to give no citations of authorities. It is better to let it be understood at the outset that the compilation is for purposes of diversion, rather than of instruction. And, furthermore, when an author deliberately sets out to amuse himself as well as his readers, ordinary limits may be boldly transgressed. In the present case, one can imagine the author as laughing in his sleeve at his employment of unnecessarily uncommon terms, such as luminative, usances, emblemize—three words in the first page of text. He probably had a good deal of amusement also in restating some of the myths and legends, recasting a few of them in language belonging to yellow journalism. The treatise is in no sense critical or authoritative; it is simply a medley of odds and ends, picked up at random, and seldom joined together. The book cannot be looked upon as a serious attempt to present in good faith the folklore of the vegetable kingdom. Of such attempts, more or less successful, there are a good many, but this is not one of them. Of the entertaining character of this little treatise, in its own way, there is no question.

"The Bacillus of Long Life, a manual of the preparation and souring of milk for dietary purposes, together with an historical account of the use of fermented milks from the earliest times to the present day and their wonderful effect in the prolonging of human existence" (Putnam), by Loudon M. Douglas, has been written in

the interest of the sour-milk propaganda. Metchnikoff had observed that individuals and peoples whose diet consists largely of sour milk attain great age, and he began scientific experiments based on the assumption that the bacillus causing the souring and not the milk itself was responsible for this fact. He argued that the large intestine in mammals, although for the most part functionless, is well developed and contains a great number of bacteria. As a result of these bacteria, various poisons are evolved which are absorbed into the blood and circulate through the body, causing structural changes in important organs. He discovered that the lactic acid bacillus is a "friendly" bacillus, in that under proper conditions it will destroy many of the dangerous bacilli finding lodgment in the body. The lactic bacillus is discovered in many substances in nature, occurring in the sap of the vine and in most fermented liquids, but it is not present in fresh milk. When it acts upon the sugar of milk it changes it into lactic acid, thereby giving the milk a sour flavor. It is useful for several diseases of the gastro-intestinal tract which are due to auto-intoxication, the chief symptoms of which are furred tongue, foul breath, headache, mental depression, sallow skin, nervousness, and anæmia. Some physicians think that it is also helpful in gout and rheumatism, and as a food in malignant diseases of the gastro-intestinal tract. It has, too, been used before operations in order to cleanse this tract. The general principles of preparation of soured milk are, first, to pasteurize and kill all the organisms present, and then, after allowing the milk to cool, to sow in the pure lactic bacillus. The milk should be absolutely fresh and clean, as free as possible from bacteria and from all preservatives, the presence of which would kill the lactic bacillus. It goes without saying that this preparation should be carried out in a clean sterile room. It can hardly be said that up to the present time the sour-milk theory has proved as useful as was hoped. Many physicians who at first employed the bacillus widely have now virtually discarded it. One can scarcely agree with Mr. Douglas that cultures of the Bulgarian bacillus, which is said to be the most active lactic bacillus, should be used by people in health as a probable preventive of disease.

So fixed are the stars in relation to one another that if Confucius or Aratus or Saint Augustine were to view them to-night, there is no constellation but would be perfectly recognizable to them. Asterisms alone are unchanging, while all else on earth is subject to unceasing change. Little wonder, then, that the mystic and poetic mind has woven about individual stars and their groupings a lore of exceeding interest and charm. It is these stories and traditions that are traced back to original sources in "Star Lore of All Ages: A Collection of Myths, Legends, and Facts Concerning the Constellations of the Northern Hemisphere" (Putnam), by William Tyler Olcott. Few practical astronomers have the time and patience, let alone the learning, to compile such a book as this. Arago might have done it, or Schiaparelli; but astronomers to-day are too busy with their spectrum plates and parallaxes and variables to take time for collecting myths and legends. Allen's "Star Names and Their Meanings" has made the work easier, and the writer has drawn upon pretty much every English authority from Lockyer to Maunder. The origin and history of ancient star groups are sketched, and then something above fifty of the northern constellations are taken up in order, from Andromeda, the Chained Lady, to Vulpecula cum Ansere, the Fox with the Goose. Especially well done is the collection of famous masterpieces, reproduced from original sources, from the Avenue of Ram-headed Sphinxes, at Karnak, and the Temple of Castor and Pollux, at Girgenti, to the Dance of the Pleiades, by Elihu Vedder. The strictly astronomical illustrations, on the other hand, are not very well done, the cuts of nebulæ and constellation diagrams being far below the technical standard of the best American works. A supplementary volume dealing with the southern constellations will be well worth the while, in compiling which, as well as in revising the present work, the Arabic, old German, and Italian literatures should not be neglected.

Charles Finney Cox, general manager of all the New York Central lines west of Buffalo, and a scientist of note, died last week after a short illness, aged sixty-six. He was a fellow of the New York Academy of Sciences, its president in 1908-1909. He was also president of the New York Microscopical Society in 1888, a prominent member of the Linnæan and New York Zoölogical Societies, and one of the founders and chief promotors of the Botanical Gardens, of which he was treasurer at the time of his death. Due to his important contributions to microscopical botany and zoölogy, he was elected fellow of the Royal Microscopical Society of London. He was an active philanthropist and interested himself in several branches of charitable service. "Protoplasm and Life" was his chief publication.

Drama and Music

On the Art of the Theatre. By Edward Gordon Craig. Chicago: Browne's Bookstore. $2 net.

In this highly suggestive, able, but occasionally exasperating volume, Mr. Craig sums up, in old and new matter, his various indictments of the modern theatre, prescribes remedies for some of the obvious ills which afflict it, and expatiates upon the tantalizing theories by means of which he hopes that, in the course of a few generations, it will be transformed into an ideal temple of Olympian drama. He differs from many idealists in having a solid foundation for the lower stones, at least, of his castles in the air. He knows the modern theatre thoroughly in all its manifestations, is conversant with the achievements of all the subsidized and independent dramatic experiments in London, St. Petersburg, Paris, Berlin, Munich, and elsewhere, and is as ardent a student of the past as he is a sanguine prophet of the future. It is only when he attempts to base solid results upon fanciful conceptions, that he becomes incoherent and incomprehensible—perhaps, even to himself.

In his premises he is perfectly sound. No man could lay his finger more unerringly upon the chief causes of the decadence of the contemporary theatre. With the authority born of personal experience he points out how the spirit of commercialism has destroyed all honorable artistic ambition, and blocked original enterprise; what an insuperable bar to progress the actor-manager has become; how the initiative of actors has been killed; how the inevitable lack of trained intelligence is completing the ruin that speculative greed began. Nothing could be more true or more lamentable, and he is perfectly right in his contention that the state of the theatre cannot be improved materially until more actors shall be inspired by love of art rather than of notoriety; until the race of trained and competent producers, now nearly extinct, has been replenished, and endowed with the authority absolutely essential to the preservation of that discipline without which good work is impossible. And there can be little doubt that properly equipped stage-managers—perhaps the most essential preliminary to any hopeful scheme of theatrical reform—could be provided by such a dramatic college as he hopes to establish. Twenty such institutions could be obtained for the cost of one subsidized national theatre and would be twenty times more beneficial.

Up to this point he is sane and practical. But his further theories, if adopted and pressed to their logical conclusion, would result, not in the elevation, but in the destruction of the theatre as it is now understood—the theatre that reflects humanity in its different aspects—and would substitute for it something more symbolistic and possibly more artistic, but infinitely narrower in scope. With his scornful denunciations of the merely "realistic" most thoughtful persons will agree cordially, and it is clear that in many kinds of plays, though not in all or even most, symbolic scenery harmonizing with and emphasizing the mood and drift of the stage action might be employed to great advantage. But Mr. Craig, in the highest flights of his fancy, seems to desire, and expect, the total elimination of the speaking actor, leaving the interpretation of the drama to mute figures—preferably mechanical—music, allegorical dancers, and special painted and atmospheric effects. In such a consummation, he argues, all the component parts of drama, as he enumerates them—action, sound, line, color, and rhythm—would be embodied. Actually of course, it would be a sort of pantomimic vision, with musical accompaniment, not true drama at all.

It is a pity that the ability, the imag-

ination, the zeal of Mr. Craig should be enlisted in the service of so dangerous a fallacy. He maintains, in support of his theory, that instruction—he knows, of course, that it is the function of the theatre to instruct and inspire as well as to amuse—is absorbed more readily through the eye than the ear, and that, therefore, the spoken word on the stage is of comparatively minor importance. This must mean that from his ideal theatre the whole literary element—the exchange of thought, declarations of purpose, sentiment and character, wit, satire, equivoque, poetic thought, apt repartee, pointed comment—might be excluded altogether. It is not necessary to discuss a proposition so preposterous. It is true, as he says, that in the perfect work of art, whether in the theatre or out of it, there can be no mistake or uncertainty. Therefore, he argues, the speaking actor is a danger, because he is the victim of emotions conjured up by the workings of his intellect and is likely to act according to those emotions and not those of the fictitious character. Undeniably this is the case with the vast majority of ordinary, imperfectly trained players, who always talk about "feeling" a part, without in the least suspecting that they are only "feeling" and exhibiting themselves. No actor, of course, can free himself absolutely from the influence of his own personality, but no actor achieves greatness until he has learned how to keep his personal feelings and impulses in subjection while counterfeiting those of the assumed part. No healthy body, says Mr. Craig, can be the slave of the mind, whereas this is just what happens in the case of every sane, self-respecting man, and is the condition to which every earnest and ambitious actor ought to aspire. To produce players with this capacity ought to be one of the chief aims of the ideal dramatic college. Mr. Craig is in danger of falling into the heresy that spectacle is the highest mission of the stage, instead of one great cause of its decadence.

Muriel Harvey, daughter of Martin Harvey, is soon to make her first appearance upon the stage, in a speaking part, as the central feminine figure in the new comedy by R. C. Carton, which is to be produced in the London Comedy Theatre. She is said to have remarkable ability.

On the departure of Oscar Asche and Lily Brayton from the London Garrick, Arthur Bourchier will resume operations there with a new modern comedy in four acts named "The Firescreen," by Alfred Sutro. That, in course of time, will be followed by a new comedy from the pen of Monckton Hoffe, the author of "The Little Damozel."

Rudolf Besier is to make the English adaptation of "Büxl," a piece that has caused a great stir in Berlin, for Frederick Harrison of the London Haymarket. It is the work of Arno Holz and Oscar Jaschke. The story opens in the condemned cell of a prison, and finishes in a brilliant Parisian salon, the principal character having been condemned to death on a charge of murder which he has undeniably committed. And yet the play is an amusing comedy! The hero is one of those daring, irresponsible creatures who ignore the ordinary laws that govern society. At the last moment he contrives to escape from his prison, jumps into a motor car awaiting the Crown Prince, and is whirled away to a citadel in the mountains, the chauffeur believing that his royal master sits behind him. Up there all sorts of strange adventures happen to him, not the least of them being his unexpected encounter with the Prince himself. Eventually he makes his way to Paris, there to play the part of social lion.

Alexandre-Charles-Auguste Bisson, the French playwright, died on Saturday of last week, at the age of sixty-three. He was a chevalier of the Legion of Honor and an officer of public instruction. Among his twenty-one plays may be mentioned "Quatre coups de canif," "Un Lycée de jeunes filles," "Le Roi Koko," "Les Surprises du divorce," "Les Trois Anabaptistes," "Le Péril Jaune," "Mariage d'Etoile," and "La Femme X," which last was played by Madame Bernhardt in this country last year. In collaboration with Théodore de Lajarte he wrote some works on music.

"The Aristoxenian Theory of Musical Rhythm," by C. F. Abdy Williams, is one of the Cambridge University Press publications announced by Putnams.

Sir Edward Elgar is about to compose for the Coliseum an Imperial masque, entitled "The Crown of India." The book and lyrics of the masque will be written by Henry Hamilton. The production is promised for the early spring.

Dr. Horatio Parker gave a talk, at the MacDowell Club, last week, on his opera "Mona," soon to be produced at the Metropolitan Opera House. He explained that the action of "Mona" was supposed to take place in the southeastern part of Britain, about one hundred years after the beginning of the Christian era. He described the various persons of the drama and said he had characterized them by particular tonalities. Thus the music for Gwynn is based upon the tonality of B major; for Mona, in her womanly aspect, on E flat major, and in her character of predestined leader of the people on E minor; for the theme of love, on G flat major, which the composer characterized as the "legitimate offspring of the keys of B major and E flat minor," etc. This scheme was not the result of cogitation, but was remarked by the composer after his sketches had been made.

Dr. Parker considered that Wagner had perfected the *leitmotiv* idea, that no one had since advanced it, and said that he had incorporated some fifty or sixty such motives in "Mona." The composer then paid his respects to the modern French musical system, and said that the six-tone scale and augmented triad were perfectly non-committal, tonally, and that they did not stand on one foot, but with both feet in the air.

The story of the opera, text by Brian Hooker, concerns itself with Mona, princess of Britain, predestined by Druidic prophecy to be the leader of a rebellion against Rome. She is loved by Gwynn, a bard and peacemaker, and son of the Roman Governor by a British captive. The action hinges on Mona's repudiation of Gwynn's love in favor of her mission as leader, and ends by her slaying Gwynn through misunderstanding of his true character.

Art

Byzantine Art and Archæology. By O. M. Dalton. Large 8vo, with 457 illustrations. New York: Henry Frowde.

This scholarly work by a young officer of the British Museum is, with the exception of architecture, virtually a complete directory of all matters Byzantine. It is the sort of thing that a leader of a graduate course would wish to place in the hands of his students. Yet Mr. Dalton is keenly alive to the æsthetic implications of his subject. His two chapters on the origins, general characteristics, and geographical distribution of the Byzantine style are far the best studies existent in English, and appeal quite as strongly to the intelligent layman as to the special student. As an introduction to the subject this book is less available than Charles Diehl's excellent "Manuel de l'art byzantin," but it is intended rather as a thesaurus for reference than as a beginner's guide.

Mr. Dalton is an enthusiastic convert to what we may call the East-Christian theory, and here it may be permissible to sketch the recent discussions concerning so-called Byzantine art. Vasari distinguished between an "ancient Grecian manner" (*maniera greca antica*), by which he meant vaguely all classic art, and an "old Grecian manner" (*maniera greca vecchia*), by which he meant Byzantine art. For the "old Grecian manner" he entertained a profound contempt, which until lately all critics of art have inherited. Thus has arisen the orthodox conception of Byzantine art as a sort of deplorable by-product of Constantine's transit to the Bosphorus, as, accordingly, an Eastern debasement of the art of Rome. Infect at its origins, the hieratic art of Byzantium is supposed to have been lethal in its progress westward. Its formalism is represented as everywhere the foe of local life and promise. The formation of national styles in Italy and elsewhere, during the twelfth and thirteenth centuries, is usually dramatized as a conscious struggle of vigorous new life against the stifling influence of invading Orientalism. "Throwing off the Byzantine yoke" has become a stock phrase of criticism.

In this rather absurd distortion of the facts was just a glimmer of theoretical and æsthetic truth. Where the theory failed utterly was in falsifying the feeling of the mediæval artist. Throughout Western Europe the "old Greek man-

ner" was eagerly welcomed. The researches of Wickhoff, Thode, and Frey have shown that never was the Byzantine style more piously studied than at the moment when the Franciscan movement called upon the pioneers of Italian painting to express new emotions. The Byzantine art of the thirteenth century was to Cimabue and Cavallini what a full century later the art of Rome was to Donatello and Ghiberti. Far from being the enemy of local endeavor, the art of Byzantium single-handed kept alive in Western Europe the practice of figure design and, withal, some faint remnant of the glory that was Greece. The art of Rome virtually died in the terrible centuries of the invasions. Fortunately, it left the means of resurrection in surviving monuments and in the hearts of the Italian people. But for upwards of five hundred years, only the art of the Christian East stood between Western Europe and such elaborately infertile barbarism as we see represented in the illuminations of the Celtic manuscripts. Since the merit of Constantinople as the conserver of classic learning and literature has always been conceded by historians, it is truly strange that her art should have been regarded as hostile to civilization. As a matter of fact, nothing is more certain than that all sound craftsmen of the early Middle Ages were as Byzantine as they knew how to be, while the various phases of incompetency exploited by romantic historians as national beginnings are usually so many failures to master the Byzantine models.

That Byzantine art was merely the decadence of the Greco-Roman manner was doubted years ago by Courajod, who pointed out Asiatic analogies for many Byzantine developments. This hint has been brilliantly amplified by Strzygowski. He finds that Byzantine art, rising in regions unpenetrated by the Imperial style of Rome, is a direct descendant of Hellenistic art. But of a Hellenism profoundly modified by Oriental contacts. In the great Greek cities of Asia Minor and Syria we must seek the formative points, and these imply remoter regions, probably Mesopotamian, where the interpenetration of the two artistic tendencies began and was carried far. Christian Egypt shared in the process, but there specific local tendencies dominated. Now it cannot be said that Strzygowski has fully demonstrated all this. He prefers, indeed, fine examples of the guidepost sort, to exhaustive statistical and geographical collations. But it seems reasonably clear that we must seek the decorative and pictorial origins of the Byzantine style in Syria or beyond; the chief architectural beginnings, in Asia Minor, where the central dome was developed.

Constantinople became the main distributing centre of the style only after the Muslim hordes had pillaged the Greek cities of Asia. But Byzantium improved and standardized her Asiatic heritage, especially in architecture and mural design, so that the traditional designation of Byzantine for this entire art is fairly well justified.

How was this style transmitted to Western Europe? Partly through Byzantine artists, who, century by century, were called to foreign courts; more constantly and effectively through the steady stream of precious small objects which flowed westward from Constantinople and Palestine. Miniatured manuscripts were undoubtedly the chief means of diffusion. Hardly in second order come carved ivories. Influential in a lesser degree were pictured textiles, and metal-work, beaten, graven, or enamelled. It was the fine craftsmanship and essential moderation and fitness of this art that made it truly exemplary to all the new nations of Europe.

It would be foolish, however, to deny that this art was over-Orientalized. It showed a most un-Hellenic horror of the void, and was too profuse of its delicate ornament. Its stateliness often depended upon a rather tame and obvious decorum of arrangement. It can be praised unreservedly only in the design and structure of the finest domed churches, and in the magnificent color and decorative appropriateness of the earlier mosaics. By and large, this formalistic art could be acceptable only to persons whose emotional experience was narrow and unindividualized, and whose acceptance of external authority was unquestioning. The moment a Saint Bernard or a Saint Francis preaches romantic and individual ideas of religion, the death warrant of lingering Byzantinism is read. But it vanishes from Western Europe not as an invader that has been repelled, but as a well-loved preceptor esteemed even in superannuation.

It would be interesting to show how the traditional notion of an inertly uniform Byzantine art has yielded to recent investigation. Chiefly through the initiative of French and Russian and German scholars, England and America playing a respectable minor rôle, the chief monuments of Turkey in Europe, Greece, Russia, Asia Minor, Syria, and Palestine are now accessible in excellent reproductions, and we are able to note a considerable variety and even progress within what to Vasari was the uniformity of the "old Greek manner." In the mosque of Kahrié Djami, at Constantinople, and in the ruined churches of Mistra, we see that in the fourteenth and following centuries Byzantine painting was actively renovating its stereotyped compositions. At Mount Athos itself, in the sixteenth century, we find odd and pathetic reflections of the Italian art of the Golden Age. But we should be careful not to overestimate what are, after all, minor differences within a style fundamentally uniform. Throughout, Byzantine art represented a collective veneration based on external authority. And the artist was by precept and precedent denied any direct and fruitful access to nature. This art could and did change its patterns, but the fundamental forms were not susceptible of change or improvement. Fortunately, these were well adapted to the purposes of hieratic decoration and religious narration, and when expressed in mosaic the effect is beyond comparison impressive. For its best mosaics, and the invention of the balanced dome, Byzantine art will always be included in the great styles. Its collective and essentially cosmopolitan quality will indeed give it a distinction in the category.

A few corrections to Mr. Dalton's excellent work will testify to the interest with which we have read it. To say that Cavallini is exempt from Byzantine influence is greatly to exaggerate his independence. Master Conxolus of Subiaco and Andrea Tafi are badly antedated. The extension of Byzantine art into Catalonia and Spain is ignored, partly, perhaps, because the mediation of France, which is not in every case certain, is assumed. Trifling errors are the mislabelling of a cut (St. Peter for St. Urban) on page 274, and the reference to the charming little diptych in the Sterbini collection as a triptych. Professor Frothingham's article on the date of the porphyry sarcophagus of the Empress Helena is overlooked, or appeared too late to be used. These are blemishes of the most negligible sort, and the book is as meritorious for its accuracy as it is for breadth of outlook.

Included in Houghton Mifflin Co.'s list of spring books is "The Engravings of William Blake," by Archibald G. B. Russell.

C. E. Schutze, the cartoonist, issues this season, through Philip Mindil, two books of his drawings—"Red Book" and "Bunny, the Sculptor."

John La Farge's posthumous work, "One Hundred Masterpieces," which includes a series of papers on Michelangelo, Raphael, Rembrandt, Rubens, Velasquez, and others, will be issued by Doubleday, Page & Co. in February.

Rodin's bronze bust, France, which will be erected on the shore of Lake Champlain, in memory of the great Frenchman from whom the lake took its name, has just been completed; it will be presented to this country by a special committee named by the French Government.

The death in his eighty-ninth year is announced from France of Frédéric-Alphonse Muraton, who for half a century had been a regular exhibitor at the Salon. Un Religieux en Méditation and several portraits constitute his best works.

Antoine-Clair Forestier, the sculptor, is dead at the age of forty-six. Many will recall his La Feuille et l'Ouragan, which is now at St. Germain.

The death is reported of A. de Beruete y Moret, the Spanish artist. He also wrote

on art, being the author of "The School of Madrid."

Finance

TWO INCIDENTS.

In the spell of financial inertia with which the new year has opened, the stability of the markets has been tested, this past week, by two events. One was reduction of the Chicago, Milwaukee & St. Paul Railroad's dividend; the other, the invasion of New York with an ultra-radical declaration of political principles by one of the active Presidential candidates. Both incidents fell flat as controlling influences on the Stock Exchange. St. Paul stock declined 2 or 3 points under purely speculative pressure; the rest of the market merely repeated its irregular fluctuations of the preceding fortnight. La Follette's speech was not reflected on the Stock Exchange at all.

The St. Paul's case was peculiar, and its cut in annual dividends from 7 to 5 per cent. not necessarily typical of other railways. When the directors met last Thursday afternoon, this was the situation which confronted them: Back in 1906, first $25,000,000 stock and then $100,000,000 more had been issued to build the Pacific Coast extension. That stock had been sold to shareholders at par, with the hope that increased earning power, from the new mileage, would from the start more than offset the $8,750,000 added to dividend requirements. But work on the Pacific Coast extension had hardly been started when the panic of 1907 occurred. St. Paul had the necessary money in hand to build the road, but the flourishing business conditions which were to make the new lines earn dividends on the $125,000,000 additional stock at the old-time rate no longer existed.

Last year's annual report of the St. Paul was the first to include full operations of the Pacific Coast extension. When the accounts as of June 30, 1911, were balanced, it was found that the dividend of the parent company had not been earned. In acting on that dividend, however, the directors felt warranted in drawing upon the accumulated surplus to make up the unearned dividend.

When, however, the directors met last Thursday to act again on the semi-annual dividend, the hoped-for increase in earnings had not materialized. Net earnings for the five months ended November 30 showed a decreaso of $1,371,000, compared with the year before. Therefore it was the duty of the directors to decide whether to draw again on the surplus or reduce the dividend until the expected increase in earnings should actually arrive. They wisely cut the dividend.

"Presidential campaigns" are usually in abeyance during the first three or four months of an electoral year. There have, however, been exceptions, one of which was the famous Cooper Institute speech of Abraham Lincoln, on February 27, 1860, followed by other speeches in the East. This was the real beginning of Lincoln's national campaign; but the circumstances were peculiar, and have never since been repeated. Senator La Follette's appearance in New York on the platform of Carnegie Hall, last week, was therefore an innovation for a Presidential candidate. That it attracted slight attention generally, and that the market paid no attention whatever to it, was a recognition, so to speak, that the procedure was out of order and that the Presidential campaign had not yet begun.

This indifference of the usually sensitive financial market was in spite of the fact that La Follette's speech was of what used to be called the "fire-eating sort"; in some ways calling to mind the remarkable series of denunciations of anything and everything, in the existing order, indulged in by Mr. Bryan when he canvassed New York city in the autumn of 1900. Mr. La Follette went far beyond general attacks upon corporations; he proclaimed woman suffrage, hinted at complete corruption in national politics, and declared for the recall, on the basis of popular petitions, even of the Supreme Court of the United States.

This last proposal was made in spite of the fact that the Supreme Bench is not elective, and that impeachment powers exist; his reason for that remarkable suggestion (the "writing into the Anti-Trust law" of words not intended by its authors) being asserted in spite of the recent public testimony of the author of the law that the "rule of reason" was precisely what the Congress of 1890 had expected the judiciary to apply. But we shall doubtless hear a deal more of this sort of thing in the curious Presidential campaign before us, with its indefinite possibilities for agitation. The time may come when the nerves of the Stock Exchange will be considerably affected, and it is therefore a matter of some interest to inquire, when such a Presidential conflict usually begins to figure in the market's calculations.

That is a question of record. One's mind runs naturally back to 1896—concerning which most people probably suppose, in retrospect, that political excitement on the Stock Exchange began with New Year's Day and lasted up to the vote of November 3. But that was not so at all. January, 1896, was a month of commotion over the Venezuela disputo and our Government's popular loan; the market rose. February was marked by a vote against free silver coinage in the House of Representatives and by talk of recognizing the Cuban insurgents; prices alternately rose and fell.

March was made up of Cuban controversy; April, by resolutions of Eastern State conventions against free silver coinage. It was May before the Presidential campaign began to cast its shadows ahead of it. That was the month when the free-coinage faction captured a series of State conventions South and West; by June, national politics was the single consideration, though it was still believed that some old-fashioned statesman, such as Richard P. Bland, would be nominated by the Democratic party. On July 10, the campaign was fairly launched, when Bryan made his "cross-of-gold" speech to that convention and was tumultuously named for President on a platform of ultra-radicalism, and when a genuine crash occurred on the Stock Exchange.

The slowness of the Stock Exchange in responding to the political outlook was repeated in 1900. Politics hardly caused discussion on the market until the end of June. In January, Wall Street talked only about the British reverses in the Transvaal; in February about the enactment of the Gold Standard law, which caused a decided rise in the stock market during the following month. In April, the somewhat spectacular cut in the price of its products by Gates's Steel and Wire Company was followed by a "Gates bear movement" which no one ascribed to anything but the steel market. Only at the end of June, when the national conventions began, did Wall Street seriously talk politics.

But if the markets of 1896 and 1900 were thus deliberate in beginning to respond to politics, what did they do when the campaign was at its height? The "political break" of 1896 was severe in July, the month of Bryan's nomination; thereafter conditions steadily improved—perhaps because of belief in McKinley's victory, perhaps because of a fortunate turn in the crop situation and the price of wheat. In 1900, prices began to rise almost as soon as Bryan had been nominated, and by October, politics had almost been forgotten in the signs of returning industrial prosperity.

BOOKS OF THE WEEK.

American Year Book. 1911. D. Appleton.

Becker, F. A., and Becker-Templeburg. Studies of Children for Artists. New, second edition. Bruno Hessling Co. $10.

NEW EDITION

Money and Banking

By W. A. SCOTT

Professor in the University of Wisconsin.

The Financier:—Banking in every phase is carefully explained. Currency is treated in a masterly manner. A complete treasure-house of information to all interested in the study of money and banking.

H. E. Mills, *Vassar College*:—Clear, comprehensive, and conservative. All in all, the best single book to use in connection with a course on Money and Banking.

J. W. Cook, *Amherst College*:—Will easily supersede all other texts. Clean-cut discussion, popular but scientific.

Price, $2.00, postpaid.

Henry Holt & Co. 34 W. 33d St.

THE LIFE STORY OF

J. PIERPONT MORGAN

By CARL HOVEY

Crown 8vo. Illustrated. $2.50 net, postpaid $2.66.

This accurate biography, containing "inside" information never before in print, brings the record of Mr. Morgan's life into the year 1911, and chronicles his early beginnings and immense achievements in the world of business. It presents the commanding personality of a great man of affairs and patron of the arts, and is engrossing to the general reader and informing to the financier.

Astrology and Religion Among the Greeks and Romans

By FRANZ CUMONT, Ph.D., LL.D.
Member of the Académie Royale de Belgique

No. 9 in American Lectures on the History of Religions

Cr. 8vo. $1.50 net ($1.65 by mail)

The author shows the influence which Oriental star-worship exercised on the beliefs of the Greco-Roman world and how it led to a transformation of the old paganism and prepared the coming of Christianity.

Library

The Nation

VOL. XCIV.—NO. 2432 THURSDAY, FEBRUARY 8, 1912 Reg. U. S. Pat. Office. PRICE TEN CENTS

Syndicalism and Labor

By Sir ARTHUR CLAY, Bart.

One volume, 7¼ in. x 5 in. $2.25 net

A valuable book on the beginnings and rise to favor of the "General Strike" as Labor's most deadly weapon, including some account of the French "Syndicats Ouvriers" which initiated it.

The principal so-called "General Strikes" of the past few years in France, Sweden, Italy, and Spain are described and their results noted; while the effect of the new political power sought and obtained by the Unions is forecasted.

A most timely and informing book, written in a temperate and judicial spirit.

The Pilgrims' Way

FROM WINCHESTER TO CANTERBURY

By JULIA CARTWRIGHT (Mrs. Ady)

New and Revised Edition. Illustrated by 8 colored plates, 8 half-tones and a large number of line drawings, all specially made for this volume by A. H. Hallam Murray.

One volume, 8½ in. x 6½ in. $5.00 net

A picturesque description of the ancient road still known as The Pilgrims' Way, along which for nearly four hundred years the pilgrims to the renowned shrine of St. Thomas of Canterbury (Thomas à Becket) traveled from Winchester to Canterbury.

The author knows her ground thoroughly, its history past and present, and takes her readers with her into the heart of the most beautiful and storied part of England.

Mr. Hallam Murray's admirable drawings give an excellent idea of the old house, ancient ruins and the lovely scenery through which the old road zigzags from village to village.

The Ideals of Indian Art

By E. B. HAVELL, C.I.E.

Formerly Principal of the Indian Government School of Art and Keeper of the Calcutta Art Gallery. Author of "Indian Sculpture and Painting," etc.

Illustrated with 33 plates from photographs. One volume, 10 in. x 7 in. $5.00 net

This is a very original and very comprehensive introduction to the study of the main branch of Indian Art, namely Indian sculpture.

The author maintains that the reason Europeans consider Hindu sculptures to be fantastic or preposterous is that the religious beliefs, legends and hopes symbolized in them are not taken into consideration by the European critic. Here the author focusses the principal achievement of Hindu plastic art together with the leading religious ideas of Hindu mythology which that art expressed, so that a clear perception of the relation between the two is possible to the reader.

The plates are admirable examples of the photographic art.

The French Ideal: Pascal, Fenelon and Other Essays

By Madame DUCLAUX

$2.50 net

Madame Duclaux, wife of the celebrated Director of the Pasteur Institute in Paris, has already won distinction in letters over two other signatures, A. Mary F. Robinson and Madame Darmestetter. Well known as a writer of both prose and verse in her adopted language, French, and for her unusual power of expression in English, she is the ideal interpreter of the great French writers of the past generation for English speaking readers. The four essays are on Pascal, Fenelon, Buffon, and Lamartine.

The Cult of Incompetence

By EMILE FAGUET

Translated by Miss Beatrice Barstow.

$1.50 net

This work has attracted widespread attention in France, and exhibits many of the dominant tendencies of the democracy of the present day to discourage the highest talent in all the principal walks of life, and to encourage mediocrity and incompetence, to the ultimate detriment of the nation and national character.

Interesting New Macmillan Books

ON POLITICAL, SOCIAL, AND EDUCATIONAL MATTERS

"The New Democracy" By Walter E. Weyl, Ph.D.

You are entering on a Presidential campaign more tensely interesting than any since that of 1860. Into the exciting situation many forces enter:—the presence of the "plutocracy" in politics, the growing solidarity of the labor vote, the woman suffrage movement, and a social consciousness waking and groping for "a new democracy." If you are interested at all in the political and social situation, you will find that this book clarifies much which is confusing, expresses your feeling and outlines your program of democracy—political, social, and industrial—more definitely and forcibly than you have ever seen it done in print before. *Ready this week. Cloth, 12mo, $2.00 net.*

The Modern Woman's Rights Movement
By K. Schirmacher

Translated from the German by Dr. Carl C. Eckhardt, of Colorado. *Cloth, $1.50; by mail, $1.62.*

Democratic England
By Percy Alden, M.P.

A concise statement of the important social problems which the voter in England faces to-day.

In press. Probably $1.50 net.

Socialism and the Ethics of Jesus
By Henry C. Vedder

An interesting consideration of the points of likeness and difference between the ethics of Jesus and the socialism of to-day.

Cloth, $1.50 net; by mail, $1.62.

Social Aspects of Education
By Professor Irving King

of the State University of Iowa. A book of sources and original discussions of the social, as distinct from psychological, phases of education. *In press.*

Readings on Parties and Elections in the United States
By Chester Lloyd Jones

of the University of Wisconsin. A discussion of the history of parties, of their defects and proposed remedies. *Cloth, $1.60 net; by mail, $1.72.*

Documents on the State-wide Initiative, Referendum and Recall
By Professors Charles A. Beard and Bird E. Schultz

A convenient compendium of current discussion of typical statutes and frequently advocated schemes. *Cloth, $2.00 net; by mail, $2.14.*

Great Educators of Three Centuries
By Frank P. Graves, Ph.D.

Professor of the History of Education in the Ohio State University, Author of "A History of Education." *Cloth, 12mo, $1.10 net.*

Outline of a Course of Study in the Philosophy of Education
By John A. MacVannel, Ph.D.

Professor of the Philosophy of Education, Teachers College, Columbia University.

Cloth, 12mo, ninety cents net.

The Record of a City: A Social Survey of Lowell
By George F. Kenngott. *Illustrated. Decorated cloth, 12mo, probably $3.00 net.*

An explicit account of the industrial changes of twenty years and of present industrial conditions.

NEW VOLUMES OF GENERAL LITERATURE AND POETRY

Tennyson and his Friends
Edited by Hallam Lord Tennyson

The Nation

NEW YORK, THURSDAY, FEBRUARY 8, 1912.

The Week

The President's recommendations relating to Alaska are the outcome of a great deal of thought on his part and on that of the able and efficient Secretary of the Interior, who has made a special study of the conditions existing in that Territory. The establishment of a leasing system for the Alaska coal lands has long been plainly indicated as the proper solution of that problem. It is clearly recommended both by Governmental experience in Australia, New Zealand, and Nova Scotia, and by the analogy of the leasing arrangements under which coal mines in private ownership are worked in this country; and it is difficult to see on what ground failure of Congress to act promptly to this end could be excused. In regard to the creation of a Government-owned railway for opening up these resources, through the acquisition of a road already partially constructed, and through its completion and continuation, there may naturally be some hesitation; but, in the peculiar circumstances of the Alaskan situation, the proposal certainly has much to commend it. Finally, there is, and long has been, crying need for a better form of government than that under which Alaska has been struggling along and the President's renewed recommendation for the institution of a form of commission government should have the immediate and earnest attention of Congress.

Two other recommendations of wide interest are made in the same message; that for the inauguration of an international inquiry into the question of high prices and that for the institution of a comprehensive inquiry into labor conditions in this country. The former will, we have little doubt, be adopted without much discussion. The latter proposes a step of great importance, but one for which the time is evidently ripe. Properly conducted, the investigations of a commission which should look into the vast and complex labor questions that have been growing more and more pressing with the development of our industries and the increasing concentration of industrial power ought to be of great value merely for the information it will elicit; and it is not too much to hope that in some vital respects they would result in beneficent practical recommendations. But everything depends on the character and ability of the investigating commission and on the spirit in which its work is undertaken. That the investigation should be "non-partisan, thorough, patient, and courageous" is the President's characterization of the quality desired; and unless it is to come up to this description, it had better not be undertaken at all.

Two reasons why Gov. Wilson cannot be elected President and ought not to be invite attention. One reason is, according to the rumor, that Grover Cleveland did not like Mr. Wilson and said so in a letter which is believed to be extant. The other reason is, according to George Fred Williams of Massachusetts, that Gov. Wilson admired Grover Cleveland, and treats him in his History as "a somewhat godlike person, and finds nothing to criticise in his entire political career." If Grover Cleveland had admired Woodrow Wilson as much as Wilson admired him, Wilson would have been doubly damned in the eyes of George Fred Williams. And if Woodrow Wilson's opinion of Grover Cleveland were as unfavorable as Mr. Cleveland's opinion of him, Wilson would have been doubly damned, as far as the *Sun* is concerned. The two ends of the same stick are thus brought into masterly application. As to the possible merit involved in Woodrow Wilson's speaking in praise of a man who had no praise for Wilson—that is a question of speculative morals into which it is probable that neither George Fred Williams nor the *Sun* cares to enter.

Four weeks from Tuesday the final vote is to be taken in the Senate on the ratification of the arbitration treaties with Great Britain and France. There seems to be no doubt that the fixing of this date by the Senate means the adoption of the treaties as amended—or, if you please, interpreted—by the Lodge resolution. No one can doubt that the adoption of the treaties will be a great step in the progress of the cause of arbitration as a prevention of war. The steady advance the treaties have made towards acceptance by the Senate is due in very great part to the remarkable manifestations of interest that have come from all parts of the country in the shape of petitions and letters. If there are any Democratic Senators who feel disposed to withhold their assent, out of a desire to prevent the carrying out of a Republican President's plan, they will be making a great mistake; for it is quite plain that the force behind the treaties is not Presidential urging, but the unmistakable pressure of public opinion.

Secretary Stimson's recent assertion in his speech advocating a rebate of Panama tolls on American shipping, that the British Government does virtually the same thing at Suez, is sharply challenged by the *Shipping World* of London. Mr. Stimson stated that the "subsidies" paid to the Peninsular & Oriental Company—the principal line using the Suez Canal—"amount to nearly six-sevenths of the tolls." On this point he is flatly contradicted by the periodical referred to, which affirms (1) that "we do not pay subsidies or bounties at all"; and (2) that "not a shilling is paid to the Peninsular & Oriental Company, or any other line of steamers, out of the National Exchequer, in any shape or form, on account of Suez Canal dues." Of course, British steamers are paid, like ours, for carrying the mail; and if any ships navigating the Suez Canal carry troops, they receive payment for that service, but it is always a case of "value received" by the Government. Even the money which the Government pays out in order to be able to use a twenty-five-knot boat as an ocean scout in time of war, has absolutely no relation to Canal tolls. It is obvious that Secretary Stimson should have more carefully informed himself.

Secretary Meyer's petulant scolding of the Democratic caucus because of its vote against new battleships includes no argument of novelty or value. He speaks, for instance, of the extent of our coast lines and the necessity of defending Hawaii, Cuba, and the Philippines. But adequately to defend these

last would require a tremendous fleet with its base at Manila, one wholly independent of the squadrons intended to defend the Pacific Coast. Nobody save a few wild navy maniacs has as yet seriously suggested this, nor a special fleet to defend Hawaii. As for the rest of our great coast line, did we not have it to defend from 1820 to 1860 and from 1870 to 1890, during which periods we had no fleets to compare with those of England or France or Russia? Moreover, as Mr. Taft has himself pointed out, the opening of the Panama Canal will decrease the need for battleships because of the comparative speed of transferring ships from one ocean to another. As for Alaska, what strategist would think of defending this isolated territory with battleships? What could it be used for? Not as a base surely from which to launch an army against Seattle. But the most absurd contention of all is Mr. Meyer's bombastic declaration that no country can have great over-sea commerce without a fleet. He might satisfy himself by turning to his own Department's records, which show that when our mercantile fleet was at its maximum our navy was wholly insignificant.

If Philadelphia voters had the power of recalling judges, they might be inclined to apply it to Judge Bregy for stating unpalatable truths. In upholding the claim of Contractor McNichol against the city for $523,000, upon the ground that the city was legally bound to pay it, the Judge said:

> The Mayor and the Councilmen are elected by the people, and are supposed to represent them. If they misrepresent their constituents, the remedy, and the only one, is defeat at the polls. If citizens do not interest themselves on election day, they must take the consequences of that neglect. The remedy for faithless, venal, or reckless officials lies in the ballot-box. While individual legislators can be punished for criminal acts, the joint act of a legislative body cannot be set aside by the court, even if it can be clearly shown that the act was one of bad faith and bad public policy.

The sting of the decision lies in the condition that the city is facing as a result of that neglect which the Judge rebukes. So heavy are the obligations left by the machine as a legacy to the Blankenburg Administration that a permanent loan of $10,000,000 is necessary for needed improvements—this in face of the fact that the city's funded debt increased under Mayor Reyburn's four years from $66,000,000 to $109,000,000.

In a signed editorial in the Boston *Herald*, Robert A. Woods, the well-known settlement worker, admits that the relative absence of distress shows that on the whole the employees at Lawrence have been receiving sufficiently high wages to enable them to provide for their wants, and even to lay something aside for emergencies. What more could one possibly demand? But he goes on to point out that this condition obtains under a scale of weekly earnings "which is fairly shocking to the mind of nearly every conservative American." Instead of being able to adopt the standard of living which we know from the voluble assertions of protected manufacturers is one of the great blessings of high tariff rates, these Lawrence operatives are forced to introduce into New England "the lowest scale of European working class existence." Yet we have been told over and over again that protective duties exist only to enable American workingmen to live on the fat of the land.

There may be greater legal validity than at first appears in the argument of the Steel Corporation lawyers that its organization has been so long "acquiesced in" by the Government as properly to be immune from attack. Careless persons may be disposed to say that there can be no vested right in violation of a statute, and that the question of violation is for the courts to pass upon. But that is just the point. The Steel Corporation lawyers are, in effect, pleading a decision of the highest court in bar of action against them. To be sure, they do not name the Supreme Court, but they adduce one whose authority is greater than that of any court. When they say that the Government acquiesced, they mean that the President who for seven years held a *lit de justice* in the White House, deciding what was unlawful and what was not, had given them a handsome certificate of character. After that, it is sheer impudence if not *Majestätsbeleidigung* to bring suit against them.

No better purpose could be found for a public bequest of a million dollars than that contemplated in the will of Mrs. Caroline W. Neustadter, which devotes that sum to the building of homes for the working people of this city. That the exemption from inheritance taxes which the law provides in the case of bequests for charitable objects should apply in this case seems manifest. Of course, that is an entirely different thing from exempting the property in which the fund shall be invested from taxation. The devotion of money to this particular purpose is one of the things most worthy of encouragement as well as commendation. In the hands of the trustees of the fund, assuming that nothing will occur to divert it from this excellent object, will be placed a great opportunity and a great responsibility.

A careful compilation of facts relating to judicial delay in disposing of murder cases in New York State will be found in a letter appearing elsewhere in the *Nation* to-day. Our correspondent makes no comment, but the facts speak for themselves. They are taken from the records, and they show that out of 119 instances of appeal in trials for murder in the first degree, there were no less than 80 in which the time intervening between the conviction and the disposal of the case by the Court of Appeals was one year or more. If to this time we add that spent in bringing the case to trial in the first place, we see how remote the final disposition of the case must have been from the commission of the crime. All this is terribly wasteful and demoralizing. It does away with a large part of the effect that the whole process of prosecution and punishment is designed to produce. A reform is urgently demanded.

Events are forcing President Madero into a policy of repression which opens the way for the charge that his methods are to be in no way different from those of Porfirio Diaz. But the obvious distinction is that, whereas Diaz had forty years and more in which to develop his conceptions of the proper government for Mexico, Madero is just beginning his trial. The principal indictment against Diaz is not that he began to rule autocratically, but that he continued to do so, making no effort to educate the nation against the time when he, Diaz, being but mortal man, must let the reins fall from his hands. Conceding that

Mexico can be ruled only by a strong man, Diaz made no effort to develop an heir-apparent to the throne. For some time to come Madero will have to reckon with the after-effects of the revolution which he himself began. Apparently the Latin-American appetite for guerrilla warfare cannot be easily satisfied after its long fasting in Mexico. Sporadic turbulence and riot are therefore to be expected. Only as time goes on can one say whether Madero's methods are directed towards the best interests of the country or towards selfish ends.

Tuesday morning's dispatches stated that the Unionists are abandoning their announced plan to prevent, by riot and arms, the making of a Home Rule speech in Belfast this week by Winston Churchill. This is a late coming to their senses, but it is welcome. Apparently, their leaders have been unable to resist the storm of ridicule and of protest which has beaten upon them. They did not like being called, with so much reason, "the new Irish rebels." The old phrase, "Parnellism and Crime," was turned against them in the form of "Unionism and Crime." It must be admitted, however, that the militant Ulstermen are not without some excuse. They might allege that they were spurred on by English Unionists. For the latter have been for the past few weeks making great play with the supposed iniquities of the forthcoming Home Rule bill. The new Conservative leader, Mr. Bonar Law, has made a series of rousing speeches, all on this theme; and all the orators of the party have been furbishing up the arguments and appeals and prejudices which they employed with so much effect in 1886 and 1893. Their obvious aim has been to stir up so much popular feeling that the Lords will feel justified in throwing out the Home Rule bill, the Ministry will be weakened, and a general election soon brought on which will restore the Conservatives to power.

In an article reviewing the condition of real-estate business in the United Kingdom, as shown by the transactions of the year 1911, the London *Economist* refers to Ireland as having exhibited, far more distinctly than any other part of the country, an improved state of things. "In Ireland," says the *Economist*, "the magic of property has worked wonders, and the mere fact that the tenants own their lands has produced an enormous increase in agricultural industry and prosperity." This statement is in accord with the observations and narratives of visitors to Ireland for some time past. The land-purchase legislation enacted by Parliament after so many years of agitation has amply vindicated those who so persistently urged that reform of the system of land tenure was the one most vital need of the country. Foremost among the names of those whose influence was exerted in behalf of this wise and salutary policy should be placed that of John Stuart Mill; how much misery and how much political difficulty and danger might have been obviated had his counsels been heeded seventy instead of twenty years ago, it is impossible to compute.

A friend of the late Henry Labouchere writes that he usually had "that slightly forlorn and wistful cast which comes to the man who began by being funny and must at all costs go on whether he feels funny or not." This refers, of course, to Mr. Labouchere's speeches in the House of Commons. It is interesting thus to learn that there are English parallels to an experience which has not been uncommon in this country. More than one promising Congressional career has been blighted by the reputation early acquired of being a humorous speaker. If a man once makes sport for the House, it will thereafter insist that he must always amuse it, or else it will refuse to listen. The classic example, of course, is Proctor Knott, with his famous Duluth speech, which he sought to live down afterwards, but was never able. "Private John" Allen of Mississippi is another instance, though he was able to convey a great deal of useful truth under the guise of laughter. But as a rule, the statesman who is ambitious and who hopes seriously to get the ear of the people, will do well to imitate, though for other reasons, Dr. Holmes's resolve never to be as funny as he can.

The reconciliation between the two branches of the House of Braganza is an interesting proof that monarchs sometimes deign to learn from commoners. Let a Right or Left or Centre taste the bitterness of defeat, and, however divided it may have been in the flush of power, it is as a united Opposition that it faces the new Government, which on its part already begins to show symptoms of internal distress. Royal rivals, however, have never fallen so completely into this beautiful custom. In France, Bourbon and Bonapartist and Orleanist never growl at one another so fiercely as when there is a chance for a restoration of the monarchy, and in Spain a Pretender is happiest when everything points to a republic. But it requires nothing more than a little calm consideration to see that it is better to be a Duke or a Prince, with a reversionary interest in the throne, than an outcast. Mere politicians have always known this instinctively, and have profited by their willingness to make "deals" and to await their turn. How well the Portuguese aspirants for the lost sceptre have grasped the idea is shown by the announcement that the Pretender is to finance the campaign, while the ex-King will furnish the prestige.

Heartburnings over the removal of the capital of India from Calcutta to Delhi had scarcely begun to abate before new woes were resounding over the Durbar Coronation medal. Originally, there were five thousand of these rare prizes, all for military men of distinction. Then it was announced that the number was to be increased by another five thousand for the rank and file. But it was soon found that many medals had gone to ladies, to visitors in various camps, to clerks, and others of like prominence. In some places "the medal was ladled out without the slightest ceremony or order." As a consequence, heads of departments have apparently been passed by, and persons without a shred of official position "practically had the medal thrown at them." In any case, the civilians who have been rewarded by the bestowal of the precious bits of metal have been out of all proportion to those in the army who have been similarly blessed, and bad feeling has resulted. The Calcutta *Englishman*, accordingly, calls for an investigation. But even if it were possible to trace the medals, the attempt to take them away from those who have them and give them to those who want them is a task fraught with peril to any Government. It would be much safer to issue medals to all who apply.

FUTURE OF REPUBLICAN PROGRESSIVES.

Ex-Senator Allen of Nebraska gives it as his opinion that the Presidential election of this year will lead to the break-up of the Republican Progressive movement. The word "progressivo" itself will, he thinks, disappear ere long from the Republican vocabulary. He expects most of the Progressive Republican leaders to be "reabsorbed" by the party, though he ventures no prediction as to what will become of their constituents. The ex-Senator does not say so, but it is highly probable that he is drawing a moral from the experience of the Populist party, of which he was a member. It, too, for a time had its Representatives in the House and a handful of Senators, but in due time it passed away leaving not a rack behind. Some of the Populists went one way and some another—joining the Democrats or the Republicans or the Socialists, as the case might be—but the party as such ceased to exist. Does a similar fate await the Republican Progressives?

It is too early to answer that question confidently, but it is clearly the judgment of competent and impartial observers that the Republican Progressive movement has already passed its climax. The decline evidently set in last year. A great deal of the moral force of the cause was obviously lost when President Taft was urging reciprocity with Canada, and the Progressives, almost to a man, opposed it. For the country believed that this was a betrayal of the most vital principle which from the first lay behind the protests and the organization of the Republican Progressives. They had alleged various grievances against the President and the party management, but the chief one was the Payne-Aldrich tariff, which they asserted was in violation of solemn pledges to the people and was in pursuance of the old control of the party by a selfish clique that cared nothing for the real desires of the nation as a whole. On that issue the fight was made in 1909 and 1910, in both House and Senate, as well as in the press and on the stump. The changes were rung on the charge that the Republican party had been false to its promises, and that only the Progressives could be trusted to give any relief from tariff taxes. But the reciprocity agreement with Canada was as a sword thrust into the vitals of the Progressive movement; and the attitude of its leading representatives, under the test, was so disappointing as to cause multitudes to lose faith in their consistency or sincerity. And as the hope and life of the whole political demonstration depended upon the belief that the men engaged in it would stanchly stand by their convictions, the loss of confidence was instant and marked.

Since that time the course of the most prominent Progressives has not been such as to persuade the country that they have either a very clear policy or a wholly disinterested purpose. They have entered upon a period of political uncertainty and even of intrigue. They have appeared to know neither their own minds nor what leader to follow. Their allegiance to Senator La Follette was but half-hearted from the first, and has since been broken and flickering, with disastrous results. A dispatch from Seattle last week announced that the La Follette organization in the State of Washington had disbanded and that its members would at once form Roosevelt clubs in Seattle and seven other Washington cities. The announcement of Senator Cummins's candidacy was itself a sign of the hopelessness of La Follette's aspirations, and it is not denied that some of the latter's intimate friends were opposed to his recent avowal never, never to withdraw in favor of Roosevelt. Gifford Pinchot's failure to repeat his Chicago endorsement of La Follette's candidacy at the Carnegie Hall meeting in this city, after he had prepared a statement for the local press to that effect, was also not without its significance. In other words, the attitude of that other great Progressive at Oyster Bay had about settled the matter when La Follette himself, by his ill-considered speech on Friday before the Periodical Publishers in Philadelphia, gave his candidacy the *coup de grâce*.

Nothing has hurt the Progressives so much as their apparent readiness to drop La Follette or Cummins and to rush into the arms of Roosevelt, if only that suddenly silent gentleman would bid them come to his bosom. Meanwhile, their backing and filling, while perplexed with doubt, is having a most disturbing effect upon their followers. Many of the latter have serious misgivings about the Colonel being sound in the Progressive faith, especially in the matter of the tariff. They remember how firm a standpatter he was during all his Presidency, and they also recall that the platform of the New York Convention of 1910, which he controlled, sang so low on the subject of tariff abuses as to be well-nigh inaudible. If the Progressives were now to go over to him bodily, it would show that they cared much more to win than to be right or even consistent. And, according to trustworthy reports from the West, all their dilly-dallying is provoking a great deal of dissatisfaction and exasperation on the part of the Progressive rank and file.

In view of the events and tendencies thus hastily outlined, it is not surprising to learn from a foreigner who has for years been making a close study of American politics, that in his judgment the Progressive Republicans have seen their best days as a separate party. He does not, with ex-Senator Allen, count upon their being speedily "reabsorbed." A few of the leaders, he thinks, will soon align themselves again with the regular Republicans. One or two may go over to the Democratic party. Others may remain for a time in an attitude of sullen aloofness. But what of the Republican voters in the insurgent States? It is probable that they will before long seek new political affiliations. Some will go back to their old party; but the majority will be disposed to vote even this year for a Democrat, provided the candidate be one who strongly appeals to them. Large numbers of them would go for Wilson—a fact which, of course, emphasizes the good political strategy of his nomination.

While we think that such a forecast will be found, on the whole, to have much truth in it, and while we consider it probable that the Progressive movement will not long remain distinct and vigorous, we would not be thought to disparage the work it has already done. It represented a powerful and useful protest. It was owing to this that the smooth-running machine in the Senate, particularly, was broken to pieces, and conscientious speaking and voting put on a new footing. It is true, and it is doubtless well, that in this country government by "groups," as in France or Germany, instead of by two leading parties, has not been in favor: that is one reason why the permanence of the

Progressives, as such, was not to be expected. Yet their influence will long remain, and we shall continue to owe them a debt for having so effectively vindicated freedom of action and having held up worthy ideals.

THE PERVERSITY OF BRITISH TRADE.

The trade figures for 1911 continue the tale of disappointment for those who, some years ago, were so industriously building up a case for protection in England. England, they saw plainly, had entered on the down-hill path; she might hold her own for a while, but she had evidently reached the stationary stage, while German trade was forging ahead by leaps and bounds. If Britain was to continue to hold up her head at all, she must join the procession of the protectionist countries whose rejection of the outworn fetich of free trade had paved the way to their national greatness. How protection was going to do this for England, whose position was so essentially different, was never made any too plain, even if it were granted that the protectionist policy was the true explanation of Germany's commercial rise; but it is difficult to get the wayfaring man to look an argument of this kind in the mouth. Free traders were put on the defensive. Unable to prophesy as glibly as did Mr. Chamberlain and his followers, they had to content themselves with pointing out that his prophecies had not yet been fulfilled, and that the figures on which he based them were unfairly chosen, and even if fair would by no means be sufficient to prove his point. For the rest they planted themselves squarely on the ground of fundamental principle, and rallied their countrymen to their standard by an appeal to reason. That the appeal was successful is strong testimony to the hold which the free-trade idea has acquired upon the public mind in England.

Fortunately, however, the actual course of trade has been such as thoroughly to meet the protectionists on their own ground. The very year in which Chamberlain's agitation first came to the front showed an advance in the volume of exports, the prospective decline of which formed the heart of the protectionist jeremiads; and that advance continued steadily and on a remarkable scale until it was checked by the depression following upon the panic of 1907. In 1903, the exports of British products amounted to $1,450,000,000, itself an increase of about $40,000,000 over the preceding year; the next year broke all previous records, and so did the next, and the next, and the next; the value of exports for 1907 was $2,130,000,000, an increase of about 48 per cent. over 1903, although 1903 had itself been almost at high-water mark. The years 1908 and 1909 fell below 1907, but were record years with that exception; with 1910 came a figure breaking all records, and now comes 1911, beating 1910 by $120,000,000. The exports of British products for 1911 reached the enormous total of $2,270,000,000, thus showing an increase of 56 per cent. over the volume of exports of 1903, the year when Mr. Chamberlain's predictions of trade decadence first began to stir up the waters of British politics.

It ought in fairness to be pointed out that this growth must in considerable measure be ascribed to the rise of prices—the lessened purchasing power of money; but for the purpose here in view it is not necessary to attempt to measure the degree in which this factor enters into the phenomenon. For the point of the British protectionist's arguments has lain fully as much in comparisons with Germany as in any assertions about British trade taken by itself. Well, let us look at the German figures. The world has been resounding with exclamations of wonder at the growth of German industry and trade; one can hardly pick up a magazine without hearing of the way in which the Germans are gaining possession of the world through the expansion of their commerce. How, then, do the German figures stand, by way of comparison? We have not the statistics for 1911; but we may take both the British and the German figures for 1903 and 1910. Exports from Germany rose in those seven years from $1,280,000,000 to $1,860,000,000, an increase of 45 per cent.; exports from the United Kingdom advanced from $1,450,000,000 to $2,150,000,000, or 48 per cent. Nor would consideration of adjacent or intermediate years affect the conclusion; there was quite as marked a dip down after the panic of 1907 for Germany as for England. It should be needless to say that to regard the figures of foreign trade as conclusive concerning the prosperity of either country would be absurd; but against those who a few years ago were passing sentence of death on the English free-trade system upon the confident expectation of what these very figures would prove, the showing is a complete answer. In view of the truly wonderful character of German activities in the domains of industry, finance, and commerce, and considering the extraordinary development which England had so much earlier attained, the figures present a state of facts that is truly remarkable.

Apart from the interest that attaches to these facts, especially in view of their bearing on the prospective development of British politics, it is worth while to draw attention to them as a warning against the common tendency to draw large conclusions from a meagre statistical basis. It is astonishing how prone to this weakness are many men whose general mental power ought to be a sufficient defence against it. Much, of course, is due to the wish being father to the thought; we pounce upon a few figures that seem to point our way, and make the most of them. But this is by no means adequate to account for the childishness that is so often exhibited in this particular by men of respectable or even of great ability. Mr. Chamberlain's talk may have been more than half-consciously delusive; but there are plenty of instances in which the man begins by wholly deluding himself. Some of the queerest things ever heard in this line were uttered by one after another of the biggest men in the Republican party at the time when our balance of trade first reached a very large figure, under McKinley's Administration; and nobody is better at dropping into these follies than some of our greatest "captains of industry," when there is a falling off in the figures of any particular thing in which they are interested. Even when statistics are ample, they must be looked upon only as an aid to thinking, and not as a substitute for it.

THE RIGHT TO "HAPPINESS."

Some months ago, a great deal of space was given in the newspapers to the escapade of two young people who entered upon the experiment of defying what many clever young writers are in the habit of designating, in an easy-go-

ing fashion, as the "conventions" of society. Last Sunday the experiment came to an end here in New York in the shape of a double suicide. To elevate this pitiful little tragedy to the rank of a matter of public moment would be to assign to it an importance to which it is in no way entitled; but the general interest that has been attracted to this particular case justifies some attention to certain prevalent modes of thought and habits of expression.

Most particularly, we have in mind the use of the word "convention" to indicate that great body of laws, customs, traditions, and sentiments upon which the institution of marriage rests. There are youngsters barely out of their teens, and knowing young women fresh from college, who evidently think that they are making a great concession to the intellectual weakness of the mass of mankind when they refer to these "conventions" with patronizing indulgence. For this state of mind, based as it is on that unquestioning self-confidence which in some immature persons is so repulsive and in others so pathetic, there is perhaps no remedy, or, if any, only the remedy of time; for the delusion is almost sure to find more reinforcement in the attractive talk of a few brilliant writers who support it than counteraction in the sober words of all the wise men who may point out the lessons of history or the teachings of philosophic thought. But it is a thousand pities that through mere want of thought, or looseness of language, writers who have no idea of giving countenance to the notion that the world is going to be made over to-morrow should fall into a form of speech which implies that the most fundamental fact in human society is nothing more than a passing convention. The mere use of the word in this way cannot fail to exercise, upon thousands of unformed minds, an insidious influence. How far the thing can go is best illustrated, perhaps, when such an expression as "bourgeois convention" falls quite naturally from the pen of a gifted young writer, as if the long result of time, the dear-bought fruit of ages of trial and suffering and groping, were nothing but a petty arrangement among little people who have no vision beyond their cash-accounts.

Behind this view of the sanctions of marriage, as behind similar views in regard to other institutions of civilized society, lies the idea of the individual's "right to happiness." Many marriages are unhappy; many individuals think that by disregarding the bonds of marriage they can find that happiness to which they feel they are by nature entitled. There is nothing strange or surprising in this; the surprising thing is that anybody except the party thus directly concerned should feel that this view of the matter is "superior" or "enlightened." In point of fact, it is very like the superior views of those who keep discovering that the earth is flat, or inventing contrivances for perpetual motion. The views that they propound are not "superior" or "advanced"; on the contrary, they are crude and retrograde. It needs no young prophet to tell us that marriage often results in unhappiness; we all know that, but we know of no way to make everybody happy. The individual has no "right to happiness" other than such right as is consistent with the happiness and well-being of all mankind. What the malcontents would lightly cut away as a mere "convention" is the very sheet-anchor of society. In the vain endeavor to satisfy the unregulated craving of each individual for all the happiness of which he thinks himself capable, they would destroy that which makes it possible for the great mass of mankind to have some tolerable degree of happiness and stability.

Through the whole tribe of easy-going and self-confident reconstructions of life, whether relating to the institution of marriage or to that of property, or what not, there runs one and the same fallacy. Marriage is a failure, private property is a failure, law is a failure—why? Because it has not brought about perfection; because, if you please, there stand to its account many glaring, even monstrous, wrongs and maladjustments. The suppressed premise in all this is that, somehow or other—Heaven only knows how—mankind was in possession of the means of procuring those blessings which it has not managed to acquire, and was balked of their attainment by the instrumentalities by which, in point of fact, it has attained so much of them as has actually been realized. Under the reign of laws, there is injustice; let us then abolish laws, and have that justice which anarchy alone can provide. Under the régime of private property, there are many who are poor and suffering; let us then get rid of private property, and we shall all be sure to be prosperous and contented. In thousands of marriages there is not that concord of souls which is the ideal union; let us then be free to break away from each other whenever we feel so inclined, and nothing can be more certain than that happiness and loyalty and contentment will be the lot of every man and woman. Strange that such childish absurdity should pass muster at all; stranger still that anybody should plume himself on superiority of intellect in accepting it, and imagine that those whom it does not convince are deaf to the voice of reason.

ATHLETICS AND HEALTH.

In his report for 1911, Dr. Charles F. Stokes, Surgeon-General of the navy, makes the rather sweeping statement that, in the opinion of the Bureau, "competitive and spectacular athletics are undesirable in the service." This is particularly true for "midshipmen who are prone to overtrain for, or hazard too much in, a contest." Moreover, while he has football in mind, he is thinking not so much of its hazards under present conditions of play as of its "disabling after-effects"; and he does not criticise it alone. Indeed, his concern is less with actual contests, whether of football, boat-racing, or long-distance running, than with the training that they necessitate. It is the "prolonged rigorous course of physical exercises necessary to excellence in physical sports" that is believed to be dangerous. Under the conditions of service at sea, it is impossible to continue rigorous exercise, and hence one who has been accustomed to it tends to lose stamina, to fall a prey to degenerative changes, and in the end "fails to render as many years of efficient service under service conditions as does his less athletic, but symmetrically developed, classmate."

The figures which Dr. Stokes furnishes in support of his contention are rather suggestive than conclusive. A recent examination of the medical records of 625 former athletes of the classes from 1891 to 1911 shows two deaths "directly attributable to track and crew racing," and one to an injury received in a football game. Of the 604 remaining in the service, over and above

those dead or retired, 198 "have disabilities or abnormal conditions of sufficient moment to be of official record, and to which their record as athletes bears a possible or probable causative relation." This inference is cautious enough, and it is to be noted that statements regarding the physical condition of the 406 non-athletes are wanting. That this, too, is not what it might have been is indicated by these two unqualified declarations:

> An examination of the reports on the physical condition of the four classes at the Academy shows a marked gain in average weight and strength during the first year, a slight loss of average weight, and a decided loss of strength during the subsequent years of training.
>
> As this bears a constant relation to the decrease in compulsory exercise during these years, as shown by the reports, it is evident that the mind is cultivated at the expense of the body in the case of the third, second, and first classes.

Manifestly, a midshipman is at the height of his physical development at the close of his first year in the Academy. It is equally evident that too little training is bad, and that too much is worse. Apparently, the right amount is not easy to hit.

Doctors would not be doctors if they did not disagree, and consequently one feels no surprise at finding that Dr. Stokes's conclusions provoke as much dissent as approval among medical men. Dr. Sargent, for instance, in a symposium upon the subject in the *Medical Times*, attributes the "vast majority" of injuries resulting from athletics to the very cause which the Surgeon-General does not make prominent, namely, football; and not merely to training for the game, but to actual participation in it. Dr. Estes of Lehigh, on the contrary, sees the harm to be in the "ulterior effects of over-exertion," especially by undeveloped boys who have not had sufficient training for the strenuous contests which they enter. This confusion in respect to the facts in the case is paralleled by the uncertainty of deduction drawn from whatever set of data one accepts. Here is Dr. Lambert of the University of Virginia, confessing that he has permitted some men to play who were suffering with derangement of the heart; explaining that he had known none of them to be injured, and that some of them had shown improvement; but unexpectedly adding: "This improvement I do not, however, attribute to football." Similarly reticent is Dr. Anderson of Yale: "My conclusions showed that the athlete is not short-lived, but I do not state that he owed his longevity to athletics." He even allows the possibility that athletics may have harmed these long-lived men.

It is Dr. Anderson also who points out a central source of difficulty in making comparisons between athletes and non-athletes, and hence in determining the relation between athletics and health. Were the athletes whose records he had examined long-lived because they were athletes, or because they were picked men? Was their longevity due to training or to natural stamina? This difficulty is recognized, although far less explicitly, by Dr. Sharpe, himself a former Yale athlete of note. Football, he remarks, "is not unnecessarily dangerous. On the contrary, we feel that if a man is built for it, it will do him good." The implication is that a man may not be built for it. Now, if athletics in general are for those only who are built for them, the negative has gone a great way towards establishing its case, for it will hardly be denied that the practice at most colleges is not so much to find the man who is built for athletics as the man who can be made to stand the strain of the important games. And since in the common mind "athletics" is synonymous with what Dr. Stokes calls "competitive and spectacular athletics," in reference to which Dr. Sharpe's admission is particularly applicable, the burden of proof seems to be upon those who dissent from the Surgeon-General's verdict that such exercise is "undesirable." Dr. Gwathmey of this city sets forth as the ideal that "every man in the institution should be trained moderately, instead of a few men who do not need the training being trained to the limit of their physical powers." Why not have both? There are signs of an awakening in the college world to the fact that athletics were made for man, and not man for athletics. This perception should be materially deepened by every such study of the question as the Surgeon-General's report is causing.

BOOKS ON RECENT ITALIAN HISTORY.

FLORENCE, January 24.

Few periods of Italian history have been more closely studied by native historians than that of the Risorgimento, while to none has less attention been devoted than to that which immediately succeeded the unification of the country. This past year, however, in which the Jubilee of the Italian kingdom has been celebrated, we have had both a rich harvest of books on the first-named epoch and at least one important work on the second.

The most important contribution to Risorgimento history issued this year is undoubtedly Dr. G. E. Curatulo's volume of documents on the action of Victor Emmanuel, Cavour, and Garibaldi in 1860-61 ("Vittorio Emanuele, Garibaldi, Cavour nei fasti della Patria"; Bologna: Zanichelli). Dr. Curatulo has for years been gathering together documents on this period and he is gradually publishing the more valuable parts of his collection. The present volume deals particularly with the preparations for Garibaldi's Sicilian expedition and the attitude of the King and of his great statesman towards it. Cavour, as we know, was not at first enthusiastic at the idea, but while some of the author's documents confirm this view, they do not prove that Cavour was ever actually hostile; he saw diplomatic difficulties, and the very real danger of foreign intervention arising from Garibaldi's splendid piece of audacity, and he was anxious not to involve the King. Of exceptional interest is the correspondence between Victor Emmanuel and Garibaldi; it had long been well known that the gallant soldier-King was more in sympathy than Cavour with the "Hero of the Two Worlds," and that there was a secret understanding between them as to the line of policy which should be followed; but the ten letters which are now published for the first time show us the inner workings of the plot of the monarch and Garibaldi to subvert the old diplomacy and bring about the collapse of the Bourbon kingdom and the union of Italy in the teeth of all the forces of reaction. Dr. Curatulo's volume contains a mass of other valuable material, mostly unpublished. His comments are lucid and useful, but in his unbounded enthusiasm for Garibaldi he is not always fair to Cavour, and he is apt to draw deductions from his material which it does not altogether bear out.

T. Palamenghi-Crispi, whose volume of documents on the part played by his uncle Francesco Crispi in Garibaldi's expedition to Sicily, has already been noticed in these columns, has now published a book on Mazzini ("Giuseppe Mazzini: Epistolario inedito, 1836-1864"; Milan: Treves). The book contains

much important material which will prove valuable to future historians and enables us to study Mazzini's character, aims, and activity in many fields. We realize the importance of his work in the period previous to 1859 when his countless conspiracies and projects and his tireless plotting served to keep alive, or rather to create, the Italian political spirit which made Italian unity possible and inevitable. After 1859 his task was done, and his subsequent activity did no good to the Italian cause and still less to his own reputation. These contradictions make it difficult for us to pass final judgment on Mazzini; and the latter period of his life, and his limitations, are apt to obscure from our sight the immense services which he had previously rendered to his country. As in the author's former work, the best use is not made of the material; the documents are set forth without logical sequence, and the editorial comment is at times insufficient and at others superfluous.

A book of a different type is Senator Giovanni Cadolini's "Memorie del Risorgimento dal 1848 al 1862" (Milan: Cogliati). The author first joined the volunteers in his native town of Cremona when seventeen years old, on the outbreak of the revolutionary war of 1848, and took part in various engagements. After the Italian defeats in the north, he joined Giacomo Medici's force and hurried to Rome, where he served in the memorable defence of the city in 1849. His account of the siege is one of the most interesting parts of the volume, although it tells us little that is new. After the fall of Rome Cadolini went into exile in Piedmont and Sardinia, conspired against the Austrians in Lombardy, and helped to carry on the national propaganda by smuggling prohibited books and newspapers into that country. When the war of 1859 broke out he joined Garibaldi's famous *Cacciatori delle Alpi*, and distinguished himself on many a stricken field. Finally, he followed Medici in the second expedition to Sicily, in support of Garibaldi's original Thousand, fought at Milazzo, on the Volturno, and elsewhere, until the proclamation of Italian unity in 1861.

The most recent period of Italian history is dealt with in a large work published by the Accademia dei Lincei, "Cinquant' anni di Storia italiana" (Milan: Hoepli), by a number of authors. The Lincei may be regarded as the oldest learned academy, having been founded in 1603, and it has always maintained its reputation as an assembly of eminent scholars and men of science. Consequently, when in 1909 Sig. Carcano, then Minister of the Treasury, on the occasion of the jubilee of Italian unity, conceived the idea of a work to be published under the auspices of the Government, setting forth the progress of the kingdom in all its aspects during the last fifty years, it was the Lincei that seemed most suited to carry out the task. The programme of the work proposed was ambitious, but it has been achieved in part, if not altogether. In any case, the work is the most complete and important on the period in question which has yet appeared. The first essay is a summary of Italian political history from 1861 to 1910 by Senator Raffaele De Cesare; the part dealing with the years subsequent to 1870 is the most useful, as it is difficult to find any general and accurate account of that period, and any one who wished to study it has hitherto had to wade through heavy tomes of Parliamentary reports, registers of laws, the *Gazzetta ufficiale*, Government inquiries, and to supplement them with party pamphlets. Sig. De Cesare has not, of course, been able, in the narrow space assigned to him, to give more than a rapid sketch, but he is clear and concise; and although he does not hide his political sympathies, which are not favorable to the very democratic tendencies of Signor Giolitti, he manages to be fair and impartial. Professor Benini gives us an interesting and detailed account of the demographic movement of the population, with much statistical material. Carlo Ferraris describes the development of the railway system.

The account of the progress of the Italian electrical industry, by Senator Colombo, the president of the Italian Edison Company, is of especial importance. The Milan central power station, which was the first in Europe, began to operate in 1883, one year after Edison had set up the first plant of the kind in America. In 1898 there were 2,264 electric power stations in Italy, producing 117,000 horsepower; of these 1,143 derived their energy from water-power. In 1909 the total number of stations had risen to 3,600, producing 820,000 horsepower, of which 610,000 were due to water-power. The projected plants will produce another 250,000 horsepower, and the total water-power available for electricity is estimated at about 3,000,000 horsepower; but by means of reservoirs and other appliances a much higher figure will probably be reached. This use of water-power, in which Italy's mountains are singularly rich, has opened up new prospects of industrial development, all the more valuable in a country lacking in coal, and it is gradually transforming many a mountain village. Other writers describe other aspects of Italy's remarkable industrial development, while Prof. Ghino Valenti gives a long and detailed account of Italian agriculture, which is somewhat pessimistic as to the results of the action of the state, but expresses confidence in the work of the more intelligent landlords and the peasants. Professor Valenti believes that emigration has contributed in no small degree to the progress achieved, but that much remains to be done to give a scientific character to the agricultural industry, especially in the South. On the purely intellectual development of Italy we have Prof. Luigi Pigorini's essay on prehistoric research, and that of Prof. Giuseppe Gatti on archæological discoveries and studies, while Prof. Vincenzo Masi describes the educational system and institutions, both public and private. Jurisprudence, legislative progress, and the formation of the codes are the subject of Prof. Biagio Brugi's paper. Paolo Carcano, who planned the whole work, gives an account of Italian finance. The situation, he writes, if not perfect, is certainly very good, for the income of the state has risen from 480,000,000 lire in 1861, when the population was 22,000,000, to 2,212,000,000 lire in 1910, while the population had only grown to 35,000,000, and there have been considerable surpluses in the budgets of the last few years. A proof of the sound financial condition of the country is to be found in the fact that the campaign in Tripoli is being paid for out of Treasury residues without as yet raising new loans or increasing the taxes.

The third and concluding volume, to be published next year, will contain essays on biology, by Professor Grassi; emigration, by Professor Coletti; banking and foreign trade, by Bonaldo Stringher (the general manager of the Banca d' Italia), etc.

This publication, in spite of many merits, is far from faultless. The essays are unequal in value, and certain important aspects of Italian development, such as literature, historical study, art, music, etc., have, for no apparent reason, been entirely omitted. L. V.

NEWS FOR BIBLIOPHILES.

In the interest of literary origins the real history of Mr. Rudyard Kipling's ballad, "The Rhyme of the Three Captains" (1890) ought to be preserved. It is twenty-one years since the poem appeared, and the fires which evoked it have long since died. The poem may be found in the "Collected Verse of Rudyard Kipling," Doubleday, Page & Co., New York, 1911, on pp. 222-226. Mr. Kipling has prefixed a note as follows (the italics are mine):

> This ballad *appears* to refer to one of the exploits of the notorious Paul Jones, an American *pirate*. *It is founded on fact.*

This note is framed with great calculation. The ballad *appears* to refer to an exploit of Paul Jones, when as a matter of truth it has to deal with a business experience of Mr. Kipling himself and in so far is "founded on fact," but the facts are quite different from what the casual reader would suspect. "The Rhyme of the Three Captains" was originally printed in the *Athenæum* of December 6, 1890, and its genesis is to be found in a controversy of that year between Mr. Kipling and Messrs. Harper & Bros., in which the pages of the *Athenæum* were the medium. In the issue

of October 4, 1890, under the caption, "Literary Gossip," is the following:

A year or so ago Mr. Rudyard Kipling, when passing through New York, called on Messrs. Harper and offered them for reprinting "Soldiers Three" and other pieces of his, now famous. He was speedily shown the door, and told that a firm devoted to the publication of literature of a high class could not trouble itself about such writings as his. This autumn Messrs. Harper have picked out of the magazines some six stories of Mr. Kipling's, without asking his permission or giving him an opportunity of revising them, and have printed them as a volume. They have sent Mr. Kipling a letter containing a bald announcement of the fact and the sum of £10, which has been promptly returned. The only side of literature that Messrs. Harper appear to understand at all is the commercial. When an author is unknown to fame, they, it would seem, content themselves with insulting him; when he is celebrated, they insult and rob him.

To this statement Messrs. Harper & Bros. sent "A Reply" under date of October 14, 1890, which is printed in the *Athenæum* of November 1, 1890, in the course of which they say:

The statements therein made are so at variance with the facts that we feel justified in assuming that they could not have been derived from Mr. Kipling himself.

The editor of the *Athenæum* subjoined to this communication a statement that:

Our information was derived from Mr. Kipling, who told us that the volume was published without his knowledge and much against his wishes.

One week later, in the issue of November 8, 1890, Mr. Kipling published "A Counter Reply" of nearly a column and a half in length in which he submitted the proofs of his complaint. The closing paragraphs are those that interest us. He says (italics mine):

Since Messrs. Harper & Bros. are so anxious to make clear to the English public that they possess a canon of commercial morality, it is hardly necessary to make clear both to public and *pirate* that the purchase of advance sheets of five stories does not confer the right of hastily hawking those five stories (and one other thrown in to make bulk) up and down the States in the shape of an unedited, unrevised, unfinished, disorderly abortion of botch-work.

The real trouble, of course, is not with this or that particular *picaroon* across the water. *The high seas of literature are unprotected, and those who traffic on them must run their chance of being plundered.* If Messrs. Harper & Bros. had not taken my stories, some other long or short firm would have done so. Only, a pretentiously moral *pirate* is rather more irritating than the genuine *Paul Jones*.

On November 22, 1890, the *Athenæum* published a joint letter of Walter Besant, William Black, and Thomas Hardy, dated November 17, 1890, in which is this paragraph:

It is no part of our purpose to express an opinion upon this case. But it seems a clear duty to us, who have experienced honourable treatment from this firm, to enter a protest against the sweeping condemnation passed upon them in the paragraph in question [*i. e.*, the literary note published in the issue of October 4.] This paragraph does not take the form of a communication by a contributor singly responsible for his own opinion, but it carries the whole weight and authority of the greatest literary journal in the country.

A fortnight later, in the *Athenæum* of December 6, 1890, without note or comment, Mr. Kipling published "The Rhyme of the Three Captains." In the light of the correspondence preceding, the ballad has some very illuminating allusions:

. . . At the close of a winter day,
Their anchors down, by London town, the *Three Great Captains lay.*
And one was *Admiral of the North from Solway Firth to Skye,*
And one was *Lord of the Wessex coast* and all the lands thereby,
And one was *Master of the Thames from Limehouse to Blackwall,*
And he was Chaplain of the Fleet—the stoutest of them all.
Their good guns guarded the great grey sides that were thirty foot in the sheer,
When there came a certain *trading-brig* with news of a *privateer.*
Her rigging was rough with the crusted drift that drives in a Northern breeze,
Her sides were clogged with the lazy weed that spawns in the *Eastern seas.*
Light she rode in the rude tide-rip, to left and right she rolled,
And the skipper sat on the scuttle-butt and stared at an *empty* hold.
"I ha' paid Port dues for your Law," quoth he, "and where is the Law ye boast
If I sail unscathed from a *heathen* port to be *robbed on a Christian coast?*"

Who are the "Three Captains"?

And one was Admiral of the North from Solway Firth to Skye,

Surely the allusion is to William Black, the novelist of the North Country.

And one was Lord of the Wessex coast and all the lands thereby,

No other than the author of "Wessex Tales," who has made Wessex a Hardyshire as truly as the English Lake Country has been called Wordsworthshire. And certainly the late Sir Walter Besant, the novelist of London life, and author of a history of London, is aptly called "Master of the Thames." What was the name of the "certain trading brig"? and who was the "privateer"? The controversial correspondence outlined above surely contains the answer.

The keenness of the allusion is significant throughout the rest of the poem:

I had no fear but the seas were clear as far as a sail might fare
Till I met with a *lime-washed Yankee brig* that rode off Finisterre.
There were canvas blinds to his how-gun ports to screen the weight he bore,
And the signals ran for a *merchantman* from *Sandy Hook* to the Nore.
He would not fly the Rovers' flag—the bloody or the black,
But now he floated the *Gridiron* and now he flaunted the Jack.
My foremast would not mend his hoom, my deck-house patch his fore.
He has borrowed them both in the name of trade and sold them on the shore.

. . . . . .

And the Captains Three called courteously from deck to scuttle-butt:
"Good sir, *we ha' dealt with that merchantman* or ever your teeth were cut.
Your words be words of a lawless race, and the Law it standeth thus:
He comes of a race that have never a Law, and he never has hoarded us.
We ha' sold him canvas and rope and spar—we know that his price is fair,
And we know that he weeps for the lack of a Law as he rides off Finisterre."

. . . . . .

The skipper called to the tall taffrail: "And what is that to me?
Did ever you hear of a Yankee brig that rifled a Seventy-three?
Do I loom so large from your quarter-deck that I lift like a ship o' the Line?
He has learned to run from a shotted gun and harry such craft as mine."

The next lines—the reader is asked to mark the fact—bear a remarkable parallel to Mr. Kipling's stinging prose in his letter in the *Athenæum* of November 8:

The skipper hit on a little word, and the word it was not sweet,
For he could see the Captains Three had signalled to the Fleet.
By three and two, in white and blue, the whimpering flags began:—
"We have heard a tale of a — foreign sail, *but he is a merchantman.*"
The skipper peered beneath his palm and swore by the Great Horn Spoon,
" 'Fore Gad, the Chaplain of the Fleet would bless my *picaroon!*"

It is evident that Mr. Kipling really has in mind the "high seas of literature" and not the natural ocean. Note the unusual word "picaroon," identical in both prose and verse, and the reference to Paul Jones in the letter, which gave Mr. Kipling room in after years, when the fires of indignation had died down, to say that "This ballad *appears* to refer to one of the exploits of the notorious *Paul Jones.*" Verily "The Rhyme of the Three Captains" *is* "founded on fact." But the "facts" are far otherwise than the superficial reader would surmise.

But apart from the internal evidence as to the real bearing of the ballad, there is one other significant bit of evidence. In the index to the *Athenæum*, Vol. II, 1890, we read:

Kipling (Mr. Rudyard) and Messrs. Harper Brothers, 452, 547, 585, 627, 701, 776, 816.

Page 776 *contains nothing but "The Rhyme of the Three Captains."* Evidently the editor of the *Athenæum* knew the real application of the poem, for otherwise the connection would be singular.

There remain two or three details to be noticed. I have compared the original text with the version in the volume of "Collected Verse," and some of the changes in the revised version are not without interest. In the original, the word "skipper" is printed throughout with a capital S, a touch of personal significance. Again, two lines have been altered on page 223. The revised couplet reads:

My foremast would not mend his hoom, my deck-house patch his *boats;*
He has whittled the two, this Yank Yahoo, to peddle for shoe-peg oats.

The line "Had I had guns," etc., in the original reads: "If I had guns," etc. In the original version Walter Besant is called "Chaplain of the Fleet, the stoutest of them all," instead of "*Captain . . .* the *bravest,*" etc.; "*crusted* drift is in place of "clotted drift." "The skipper bit on a *little* word" instead of "a deep-sea word." Finally, in the last line of the poem as printed in the volume, Mr. Kipling has disguised, if he has not softened, the allusion. The original reads:

Shall dip their flag to a *pirate's* rag—to show that his trade is fair.

In the revised version the word "pirate's" has been changed to "slaver's," which seems weak, and without relation to the sense of the whole ballad.

JAMES WESTFALL THOMPSON.

Correspondence

THE QUESTION OF SUFFRAGE.

To the Editor of The Nation:

Sir: Nothing is more clear to the observer of current politics than the approaching success that will crown a long period of persistent agitation for the extension of the franchise to women. Rising in the East, on theoretical grounds, the demand was first conceded in the Western States, where the binding force of tradition was lower than elsewhere in the Union. The logical propriety of the concession has made the cause hopeful, reduced positive opposition, and left the movement with only that obstruction to meet that comes from the force of habit and the immobility of institutions. But, once started, as a fact with six States ready to try it, it is likely to complete the conquest of the United States before the first women voters have forgotten their original sensations on casting their first ballots.

It has more than once been pointed out that the opponents of woman suffrage are tongue-tied. The arguments in favor of it are clearly voiced and loudly stated. They evoke no articulate contradiction, yet their speakers often show an irritation because neither conviction nor rebuttal is produced by their efforts. It is worth while for the advocates to consider whether in this silence there may not be room for reflection.

It may be admitted at once that the present drift of politics favors the extension of the franchise to every sentient being who desires it. It is unfair to deprive any rational adult of a share in his own Government. It is unwise to make martyrs of any considerable element of the population. The evils invited by an extension of the franchise are smaller than those entailed by the closure of this social safety valve.

But those things which provoke the silence that refuses to give consent in this case arise from a fear that the suffragists have mistaken the inclination of their sex, and have over-estimated the significance of their reform.

In some future day society may be entirely reorganized, but as it stands now the women who support themselves by "gainful occupation," as the census calls it, are mostly young. Pleasure and spending-money are often their objects. Even when they are self-dependent they rarely rise to positions of independent responsibility, but accept a boss and a wage as servants, clerks, factory hands, or teachers, and look forward to graduation into matrimony. No one ever advanced a theory of political salvation based upon the votes of men of similar age. The women who are mature are mostly married, and pledged to a trade in which their most vigorous years are devoted to the home and the family. Their highest good, as the race sees it, consists in each getting for her own children the largest possible share of life and its fulness. Their work and their responsibility cannot be delegated, and no public activity that shifts their primary interest can be undertaken by them. They rarely associate on a competitive basis with other persons of their own standing and maturity. They are the custodians of the race, but they must forever lack, in our society, that education that comes from friction against one's fellow-men, and that constitutes the best training of mankind for citizenship.

Neither of the great classes of young women who earn, or mature women who serve at home, provides its pro rata of the voices that are raised for the suffrage. After these two classes are subtracted from the female population, there remains a third class, proportionally small, of independent, mature women—the women who are potentially the best citizens. These, to secure suffrage for themselves, advocate it for all their sex, regardless of the burden it will impose or the service it will render. These make most of the noise, and are enabled to do so by the labors of some one else. Some accident of inheritance, or success of present supporter, has removed from them the need to carry a share of the chores of feminine existence. Few can name more than a handful of women who, having themselves earned an independence, are devoting it to the cause. For this handful, it must be conceded that no office is too high and no right too generous.

The value placed upon suffrage by its advocates compels the student of institutions to question the complete capacity of even the leaders of the feminist agitation. After allowing for all the factors of strife and exaggeration essential to a propaganda there remains behind the movement the assumption that the evils of to-day would not exist if women voted. Too often their arguments seem to imply that women are so much more intelligent, honest, and virtuous than the men whom they have trained that the faults of masculine government will be swept away at once. Nothing but a belief in the reality of such reform could justify the virulent speech and lawless conduct of the most militant of the reformers. Yet were all women the civic equals of the small class of independent women, there are grave doubts whether they would outrank the men in any virtues save those which sex has fastened upon them. They are not trained to the honesty that is the backbone of masculine business. Contractual relations and compromise do not enter into their daily routine. In public and in private they are more interested in carrying the point than in doing abstract justice. That the mass of women are now, or are likely in the near future to be, the civic equals of their husbands and brothers, it is impossible to believe. Civic virtue does not come from a clean heart alone. It comes from a first-hand knowledge of the workings of social forces. Mankind cannot be preached into an advance; it can be led there only by tolerant fellowship that can operate as readily in the barber-shop, the cigar-shop, and the saloon as in the church or on the platform.

The sober reflections occasioned by the progress of the suffragette do not inspire to formal argument. It is too late to argue the matter now. But no suffrage worker should convince herself—or himself—that lack of opposition proves the complete acceptance of the contention. The capacity of women is not in question; in an intellectual way they can do anything that men can do. The inclination of most of them will, in our civilization, keep them from being a political motive force. Even were they otherwise inclined, they do not differ enough from the men to change the aspect of government greatly. But whatever their capacity, inclination, or influence, we are in for woman suffrage, and we shall have to see it through. We shall get from it a few notable women of whose services we are now deprived. But we shall inflate the electorate with a body of voters even less socially inclined than our men; and with the women, as with the men, our political salvation will depend on the fact that though most will be indifferent, uninformed, and unwise, they will fall into two equal camps and neutralize themselves. Leadership and growth will continue to depend on the efforts of a handful of self-sacrificing men and women, and the race will blunder along only as rapidly as these can prod it, nag it, and direct it. Frederic L. Paxson.

Madison, Wis., January 16.

RESEARCH AND ALTRUISM.

To the Editor of The Nation:

Sir: The vigorous and well-expressed ideas of your correspondent from Baltimore in "An Undergraduate View" (*Nation*, January 18) deserve careful reading and attention, and will doubtless command them. His moral strictures on the selfishness of the acquisition of knowledge for itself alone (as it may appear to the less learned) may perhaps be briefly dismissed as being for the most part what Kiplingesque undergraduates are wont to call "fat piffle." As a considerable part of every day in the life of an ordinarily intelligent human being is almost perforce spent in the acquisition, deliberately or unconsciously, of some sort of knowledge, human society is not likely to suffer if a small part of its members deliberately choose to disregard what appears to them trivial in favor of that which appears to them to exercise the higher functions of their rational faculties. I seem to detect, indeed, a certain weakening of the principle of altruism in his complaint about "research" as the means by which "success and prominence" are attained. Ought a real altruist to measure his own success by his "prominence"? The vast majority of teachers' positions in this country do not require proved ability in research as a qualification in their would-be incumbents. We are not such fools as all that. The field of real success in the profession of teaching is not by any means closed to the ambitious young altruist sketched by your correspondent, even if he does not feel the zest for research. And even the salaries of school positions of the better sort are quite as large as those attainable in colleges and universities. There is a margin in them for occasional opera tickets for the first gallery. Nor does it appear in general an utterly reprehensible thing that he who chooses a teacher's career must definitely forego the hope of high money rewards. In the face of the present-day tendency to measure all "success and prominence" by returns in hard cash, it is something to have a career offered that recognizes a different ideal.

In the course of my observation as (I must confess it) a now tolerably aged college instructor in classics, I have often been tempted to lament the moderate intellectual ability and the lack of strong personality in many of the young people who intended to follow the profession of teaching. But when I have deliberately sat down

to compare them with others, I have been compelled to admit that they did not fall by any means below the average intelligence and character of the students whom I had seen attain "success and prominence" in other walks of life.

Now a few words about that painful subject of "research." I cannot help the suspicion that the young altruist depicted by your correspondent has an envious and designing eye upon one of the university chairs held by worthy old gentlemen like me, who show no hopeful signs of relinquishing them, even under the dulcet attractions of Mr. Carnegie's benefaction for the speedier creation of vacancies. Let me regretfully assure your altruist that neither altruism nor personality is a satisfactory substitute for knowledge, though they may exist amicably alongside of knowledge, and even conjoined with it. That last clause is meant to contain for him the element of hope. I have always believed it possible—I still believe it possible—for a man to be a ripe, and fine, and even a great scholar and teacher, who has never printed a word. But I can hardly conceive that a man with the ability and the zeal for learning could make any great progress in that field without spying a dozen directions in which his mind would be irresistibly tempted to essay the penetration of the yet unknown. The "research test," so far as there is such a test for positions of "prominence," such as the undergraduate's altruistic soul longs for, is after all in its purpose only a rough-and-ready test of the zeal for learning. And the zeal for teaching, and for "success and prominence," without the zeal for learning, is likely to be a ludicrous failure.

A somewhat extended acquaintance with members of college faculties in this country had tended to confirm rather than weaken my judgment that the ability and personality of the large majority of these gentlemen were such as would have ensured their attainment of equivalent "success and prominence" in whatever other employments they might have chosen. Your correspondent sternly, and no doubt sadly, thinks far otherwise. It is surely hard for us to see ourselves as the sapient undergraduate sees us.

SOLARIO'S PORTRAIT OF BENTIVOGLIO.

To the Editor of The Nation:

Sir: The interest which attaches to the beautiful portrait of Bentivoglio by Solario, lately acquired by the Boston Museum of Fine Arts from England, is further increased by a recent discovery made in Italy. In the collection of paintings belonging to Signore Andrea Monga in Verona is a picture, which, to judge from photographs, is identical with that in Boston except for a few details, such as the window in the background, which is not so high in the Verona picture as in the Boston one and therefore better proportioned. This and other small differences favor the supposition that the picture in Verona is superior to that in Boston. The Andrea Monga Gallery, which comprises six hundred paintings, was formed about a hundred years ago, and has been inaccessible for forty years. After the recent death of the last owner the collection passed into the possession of the city of Verona, but it will probably remain inaccessible for some time, since there is at present no room for its exhibition, and since most of the pictures are in a bad condition and will have to be cleaned. I was fortunate enough to obtain permission from the city authorities to examine this collection, and am therefore in the position to give a provisional opinion as to the importance and the artistic value of the portrait of Bentivoglio in Verona. The surface is overpainted, and covered with thick, dull varnish, which completely covers the original color, so that the picture has the appearance of a copy, perhaps of late date. But this opinion is not shared by Veronese art critics. As regards the question of authenticity, we have to reckon with the possibility that more than one portrait of a famous man like Bentivoglio may well have been ordered from the same painter. And though the painters of the Renaissance as a rule let their assistants make the replicas of their pictures, they occasionally executed them with their own hands.

STATISTICS OF THE LAW'S DELAYS.

To the Editor of The Nation:

Sir: In your issue of February 1 appears an editorial entitled, "Our Criminal Machinery." In it reference is made to the delays in the Wolter case, which you denounce as scandalous. It may perhaps interest your readers to know how long a time, upon an average, is consumed in disposing of appeals in cases of murder in the first degree in this State. The writer presents some figures taken from the volumes of the reports. He began in 1900. The first case is taken from Vol. 160 N. Y. Reports. The figures include the latest murder cases reported in the Advance Parts. The time runs from the date of the judgment of conviction to the date when the case was disposed of by the Court of Appeals. The subsequent period, preceding the execution, is not considered. Six weeks is the usual period.

The periods of delay are given by months. Fractions of months are disregarded; so that the figures approximate only:

Period of delay:	No. of cases.
6 months or less	11
6 to 9 months	12
10 months	11
11 months	5
12 months	13
13 months	7
14 months	6
15 months	6
16 months	5
17 months	3
18 months	5
19 months	3
20 months (including Wolter)	7
21 months	2
22 months	4
23 months	3
24 months	7
25 months (Benham)	1
27 months (Hinksman)	1
28 months (Meyer)	1
29 months (Egnor, Bonier)	2
32 months (Cascone)	1
34 months ((Sexton)	1
38 months (Patrick)	1
47 months (Smith)	1
Total	119

It will thus be perceived that out of 119 appeals only 39 were disposed of within a year. Only 9 appeals out of the 119 required more than two years.

This letter merely presents conditions as they are, without comment, and without any attempt to suggest a remedy. R. C. T.

New York City, February 2.

A DEFINITION OF POETRY

To the Editor of The Nation:

Sir: Readers of poetry are ever seeking a definition of the calling of the poet, and never finding just what they seek. The following definition, by Mr. Frederic Harrison, is the most satisfactory I have ever seen:

The true business of a poet is to enshrine fine thoughts in exquisite melodies ("Autobiographic Memoirs," Vol. II, p. 107).

Alfales Young.

Salt Lake City, Utah, January 24.

America the Beautiful and Other Poems. By Katherine Lee Bates. New York: Thomas Y. Crowell Co. $1.25 net.

The Upper Trail. By C. G. Blanden. Chicago: The Alderbrink Press.

With respect to their attitude towards life the poets have at all times been pretty uniformly divided. They have been deniers or affirmers; they have looked upon it either as a beautiful but specious illusion or else as the one tremendous and significant reality. On the one hand, like Mr. Woods in his sonnet, "Backgrounds," they are searching for the face behind the mask, the revelation that shall rip appearance like a curtain

BURLINGAME PUBLIC

and disclose the apocalyptic vision behind the veil:

"The play, the play's the thing!" Lord Hamlet, no.
The peopled and illimitable night
Hath mightier ghosts than Denmark's, and the light
That limns the upturned face of Romeo
Paints half a world of faces in its glow;
Arden hath untold lovers hid from sight
To Rosalind, and many a willing sprite
Unknown, unsummoned, waits on Prospero.
What else is watching in the dark behind?
Who knows when legions, angel, ghost, or djinn,
Shall break from out the backgrounds vast that bind
Our cramped horizon, and o'errun the scene,
Or God himself crash on us mummers blind,
And play be done, and life, life, life begin!

To such as these what passes before the mere bodily eye seems, as in Miss Roberts's "At Tintagel," hardly less factitious and legendary than "the memory of some old tale twice told":

Here where the grass is wreathed with fairy rings,
There where the crumbling crenellations rise,
I see dim shapes of half-forgotten kings
And queens with starry eyes.

The shouts of strong, exultant men I hear,
The ring of harness on the causeway-stone,
The clash of arms comes faintly to the ear,
And bugle-horns are blown.

What profits it, the ancient tale oft told
Of love or tournament or bloody fight?
If Guinevere's deep hair were royal gold,
Or Yseult's hands were white?

Dead, dead are they, and gone with all their train,
Dead, dead are they, or haply never were;
Perchance the phantoms of the misty brain
Of some old chronicler.

And yet the moan of the remembering sea,
The ancient winds, like pardoners to shrive,
Repeat their names. Ah! no; not they but we,
Have never been alive.

On the other hand, there are the natures thirsty for experience—those who are drunken with the vitality, animation, and movement of existence—who sing like Mr. Low in his "Vigil at Arms":

It was but lately that a child I came
First upon life:—
Loving spring flowers, gentle, without blame,
Knowing not strife:
The world was old ere battles bloomed for me;
Boyhood was dreams, and swooning minstrelsy;
I wandered all alone and wandered free
Where dreams are rife.

But all at once the silver-crested surge
Ceased to be cloud,
And thundered over me; I felt the scourge
And sting, and bowed
Under the brine, until half-dead, I lay
Forespent upon the sand; and from that day,
Triumphant-tongued, the fury of the fray
Calls me aloud.

Let priestly pardoners still shrive the world,
White and aloof;
Mine be the battle-flame, the fear unfurled—
The storming hoof;
Let me be mingled with a maze of blows;
Hard-pressed to live, heart mad, beset with foes,
Or, lance in rest, ride down the lists' enclose
To peril's proof.

Differences of shading there may be; but the ground color, the general tone of poetry, is determined by one or the other of these two moods, the reflective or the active. Is life a mere appearance, a show, a painted cloth before the truth, then were it hardly worth the pains. It were better far, in the words of Lady Alfred Douglas, to fall asleep—

In some great embroidered bed,
With soft pillows for my head.
I am weary, let me sleep. . . .
Petals of sweet roses shed
All around a perfumed heap
White as pearls, and ruby red;
Curtains closely drawn to keep
Wings of darkness o'er me spread. . . .
I am weary, let me sleep
In some great embroidered bed.
Let me dream that I am dead,
Nevermore to wake and weep
In the future that I dread. . . .
For the ways of life are steep. . . .
I am weary, let me sleep.

At all events, it were as well to turn the attention elsewhere, to seek a less ambiguous, if minor, reality in things of one's own creating, in the cultivation of an art or in the construction of a single perfect sonnet, whose difficulties and satisfactions Lord Alfred Douglas celebrates in a sonnet of his own:

To see the moment holds a madrigal,
To find some cloistered place, some hermitage
For free devices, some deliberate cage
Wherein to keep wild thoughts like birds in thrall;
To eat sweet honey and to taste black gall,
To fight with form, to wrestle and to rage,
Till at the last upon the conquered page
The shadows of created Beauty fall.
This is the sonnet, this is all delight
Of every flower that blows in every Spring,
And all desire of every desert place;
This is the joy that fills a cloudy night
When, bursting from her misty following,
A perfect moon wins to an empty space.

On the contrary, if reality is to be judged by the intensity of sensation, if even the start and thrill of pain are evidence of life, then there is nothing so much to be dreaded as the cessation of that consciousness in which alone man exists. It is the horror of such obliteration, the loss of that one chance to know, which Miss Teasdale voices in her lines on "Fear":

I am afraid, oh I am so afraid!
The cold black fear is clutching me tonight
As long ago when they would take the light
And leave the little child who would have prayed,
Frozen and sleepless at the thought of death.
My heart that beats too fast will rest too soon;
I shall not know if it be night or noon—
Yet shall I struggle in the dark for breath?
Will no one fight the Terror for my sake,
The heavy darkness that no dawn will break?
How can they leave me in that dark alone,
Who loved the joy of light and warmth so much,
And thrilled so with the sense of sound and touch—
How can they shut me underneath a stone?

In the face of such a catastrophe there is one way of saving the dignity, or at least the pride, of human nature—to meet it with the self-assertiveness, if not the truculency, of "Prospice," the desperate elation of a sanguine spirit rioting for the last time in the exercise of its powers and draining intoxication from the very lees of life. So Miss Gordon, mindful or not of Browning, in her "Song at the Brink of Death":

Before I leap and lose myself below,
Give me one moment's look beyond the brink.
Volumes of fog, vast piles of rolling mists,
Make war upon each other like the waves.
I hear strong humming as of mighty winds,
And shock and crash, as if a myriad
Of toppling worlds were crushed and ground to dust.
And from their dissolution, whirling, rise
Sharp fumes and strange; and all the tingling air
Seems full of unseen thorns that prick and burn.
My soul is in my hand—I shall not fear.
Now shall I test the temper of that sword
That I have spent my life to weld and whet.
Through ills I dream not of, through agony
And ruin I shall cleave my fiery way.
The heart within me burns like glowing wine,
And as the husk of earth slips from my soul,
The thrill of dawning godhood stirs within.
I swing my sword, and with a cry I leap.

But better yet to think the horror clear away in something of the calm old Platonic fashion, of whose resignation the following sonnet by Miss Kimball is no unworthy modern expression:

Save that there may be one love-garnering breast
Will hold us unforgotten when we die,
From all the paths that most familiar lie
We shall be missed but few brief days at best.
Noteless as noiseless pass we to our rest;
Slip from the ear and tongue as from the eye.
Earth knows no break, no change to signify
Absence or loss; and Time and Nature, lest
In our behalf remonstrant they appear,
Make stealthy haste to blur and cover o'er
The stone's laborious lettering before
The yielding mound that settles year by year
Is levelled, and the place—our last place here—
That knew us once knows us indeed no more.

Such are the two moods of poetry today, as they have ever been; and they affect the poet's vision of the past as of the present. To the ardent temperament of a Mr. Chesterton the pageant of history is but another stimulus, another

possible source of sensuous and emotional excitement. When he describes the political condition in Alfred's day, he does so with a provocativeness, an impressionism, which makes it swim before the exalted senses in a luminous mist of actuality:

For the end of the world was long ago,
When the ends of the world waxed free,
When Rome was sunk in a waste of slaves,
And the sun drowned in the sea.

When Cæsar's sun fell out of the sky,
And whoso hearkened right
Could only hear the plunging
Of the nations in the night.

When the ends of the earth came marching in
To torch and cresset gleam,
And the roads of the world that lead to Rome
Were filled with faces that moved like foam,
Like faces in a dream. . . .

And men brake out of the northern lands,
Enormous lands alone,
Where a spell is laid upon life and lust
And the rain is changed to a silver dust
And the sea to a great green stone. . .

And the cry of the palms and the purple moons,
Or the cry of the frost and foam,
Swept ever around an inmost place,
And the din of distant race on race
Cried and replied round Rome.

Nor is Mr. Nichols less affected by the same patriotic theme. As he sings the dream of Alfred, launching a puny fleet —forerunner of England's sea-power— against the Danes, and hymns the imperial mission of Great Britain, his voice is thick with the fulfilment of prophecy: he is not a dreamer, but a seer:

O windy-retinued, tempest-circleted sea!
By night and day we have watched thee shine and flash,
A mutinous Ophir of magnificent wrath;
And shall we not, in emulous anger, wreck
The black fleets of the poisonous tyrannies
Of this lust-opulent world, and break and crash
Upon the coasts of Wrong, and ruin her booms,
And sap her headlands? Was it not for this
Thine orb was placed within our hands by God,
O windy-retinued, tempest-circleted sea?

Hull-haunted, screw-swirled, traffic-cloven sea!
The tireless caravans of puissance fare
Across thy deserts, laden with the musk
Of wisdom and of culture, and the shawls
Of science, and precious oils, and healing herbs,
And Art's celestial attars—journeying on
Unto their Mecca, human brotherhood.
And we, their sheiks, the Apostles of Advance,
Must guard them when they dare thy perilous wastes,
Hull-haunted, screw-swirled, traffic-cloven sea!

Not so do the distant shapes of history appear to the contemplative imagination looking down the dwindling perspective of the past. Rather they seem like wisps of cloud on the horizon, images of transiency and change. For such minds the thought of Egypt and its vanished civilizations has always had an irresistible, perhaps a slightly uncanny fascination, which is reflected in Miss Bates's verses "To the Nile":

What myriad life through countless centuries
Hath sprung and faded on thy sparkling sands,
—Futile incertitudes and miseries,
Swift, printless feet, caressing vanished hands . . .

Grotesqueries and lethargies that lie
Huddled in pits or islanded in mud,
Clusters of uncouth hippopotami,
Grim crocodiles, the terrors of the flood . . .

Where are thy bestial gods oracular,
Hawk-headed Horus and the Apis Bull,
Ram, Vulture, Ape, divinities at jar
With all we dream of pure and beautiful? . . .

Thy stript, dishonored Pharaohs, vainly hid
In golden chambers mystically wrought
At musky heart of cliff or pyramid,
Impassive majesties, immortal thought,
Where are their caravans, with burdensome
Booty of ivory, cedar, fragrant gum?

Nor are Mr. Blanden's lines to a mummy in the British Museum conceived in a very different spirit, though it is the fatally ironic contrast between the changeless shell and the fugitive essence which is their immediate inspiration:

Daughter of Egypt, and perchance a queen,
How fragrantly she sleeps, and how serene,
Wrapt in the shroud of frankincense and myrrh—
A rose embalmed in essence of the rose.
Not all the roar of London waketh her,
Nor change, nor war disturbs her calm repose. . . .

Yet here doth lie the all of her that Death
Thought not to take. Ages ago her breath
Warmed these dry lips to song, yea, even now
Seems lingering near, so pleasant is her smile,
So placidly she sleeps, so calm her brow.
Oh, since she died how lonesomely the Nile
Hath poured his waters down to Ocean's shore,
As sad tears poured—and Memnon sings no more,
And that which Egypt was is but gigantic lore.

CURRENT FICTION.

Spanish Gold.—The Search Party.—Lalage's Lovers. By George A. Birmingham. New York: George H. Doran Co.

There is a pleasant theory that the literature of the English-speaking race is common property among all its members. Of books which have become classic or "standard" this is true enough. But as for current literature, it is oddly untrue of the very department in which one might look to find it a matter of course. One has only to look over the English reviews to note how few of the American novels of the hour—the pieces of home-made fiction which are being most widely read here —are noticed at all. We may console ourselves with the fact that there are novelists in England who have been writing successfully for years, and of whom we have never heard. This situation is due to a cautiousness which has been drilled into the publisher by long experience. What is sauce to the American goose is not always sauce to the British gander, or the reverse. So sensitive is the novel to variations of temperature on the two sides of the water, that it frequently shifts its title on the way over. And the publisher, who, after all, is a barometer, and not an arbiter of taste, knows that he cannot count upon the popularity on one shore of whatever may have found a cordial hearing on the other. The most that he can do is to watch his market and his commodity, and seize the fit hour when it comes. Hence the occasional phenomenon of a whole group of books by some author of whom we have never heard, thrust in a mass before our astonished gaze, with much trumpeting and acclaim on the part of the delighted sponsor.

Something of the sort happened not long ago in connection with our newfound Arnold Bennett; and the house which exploited many of Mr. Bennett's books now comes forward with another "scoop," as the invoice in question may be fairly called. The writer, George A. Birmingham, is Protestant rector of a little parish on the Irish coast, in the county of Connacht. He has written some half-dozen books, three of which are now issued here by the Doran Company. He has drawn his material freely from the nature and human nature about him: yet, says the publisher (with an accent of wonder), he has offended nobody. As his note is of broad though good-humored satire of the Irish temperament and springs of action, and as he is dealing with the race which has so recently taken offence at the New Irish movement, and which is now seeking to bring to naught certain Irish players on their way through this country, the feat would at first sight seem to be a remarkable one. But it is not really so. The Irish are quite content to be laughed at in the traditional way. The drunken figure with the pipe in its hat and the shillalah in its hand, on the way home from Donnybrook Fair, is a classic and even esteemed effigy, like that of John Bull or Uncle Sam. The risky thing is to take your Irishman seriously, and try to present him as he really is in the graver relations of life. It is then that he complains of misrepresentation.

Mr. Birmingham commits no such error. He returns as light-heartedly, and

to all appearances as whole-heartedly, to the traditions of Lever and Lover, as if the mystical and reverend Celt had never been revived. The authors of "Experiences of an Irish R.M." may have given him courage for this ingenuous procedure, but we suspect that he did not need the gift. And in the Rev. Mr. Melldon, Curate of Ballymoy, he presents a picaresque figure without parallel in the lively chronicles of the ladies Summerville and Ross. The whole situation is a trifle odd from the American point of view. Here, if a parson writes a novel, we expect it to be a sermon more or less in disguise, and if he chooses a parson for his hero, we expect to hear a good deal about his spiritual troubles and triumphs. If the Rev. James Melldon of Ballymoy has any religious experiences, we are not bothered with them. He is as jolly and irresponsible a member of society as if he had never worn what he calls "a dog-collar." His joy is unconfined, and he makes of "Spanish Gold" a thing of delight. He also figures in "The Simpkins Plot," which has not yet been issued here. The absurd adventures which make up the first-named fantasia are paralleled in "The Search Party," where a young physician plays the part of Mr. Melldon, with somewhat inferior zest and spontaneity. "Lalage's Lovers," the most lately-written of the three books, is amusing enough, but its humor lacks the free swing of the other tales. Its title is a misnomer—"Lalage's Pranks" would have come nearer the fact. The scene is laid in Ireland, but might have been in England almost as well. Lalage is a young girl of independent temper who fancies herself a reformer. As a grown-up *enfant terrible* she makes a stir in various high places, and is duly tamed by marriage. She is of the type which would be called "Middle Western" in this country—an amusing or distressing type according as one chances to have a stomach for it. We suspect that Mr. Birmingham's danger is that he may become a professional humorist.

The Bauble. By Richard Barry. New York: Moffat, Yard & Co.

A book which might be dismissed as ridiculous if it were not also a little disgusting. Its faults have nothing in particular to do with its theme, which is the application of the woman suffrage theory to a particular case. Given a woman of twenty-three with a normal husband and baby, and an abnormal desire to possess them utterly and selfishly, and you have material enough for domestic excursions and alarums, wars and rumors of war, without calling in the aid of the suffragette motive. But the heroine of the present story, and all the rest of the alleged persons therein, are absurd dolls who are put through various antics, dull for the most part, but reaching now and then a level of indecency which gives them a certain chance with a certain audience. It is hard to understand why reputable publishers should permit themselves to issue so-called novels of this paltry type.

Christopher. By Richard Pryce. Boston: Houghton Mifflin Co.

This work of an author well-established in England but new to American readers is like the novel of similar title by Romain Rolland, in throwing plot to the winds and prearranging a series of moments in the hero's development for which events are patently created as the necessity arises. It is the progress of the soul for which this English author is concerned ("Christopher," as he repeatedly states, "was destined to have new impressions" at this point or other); and as this soul is highly romantic and in large measure fashions its own external world, why should one compel it to emerge from anything so objective as a plot?

So be it. Mr. Pryce admits the reader, outdoing M. Rolland by a day, to Christopher's life just before birth. A posthumous child, possessed of a charming mother and a notable nurse, of two adoring aunts and two wealthy grandmothers, clearly he is not to undergo that purification by poverty, such as was thought a necessity for the little Christopher of the Rhine town. His very young life is passed in the English colony at Boulogne in the seventies, with the war in the immediate background. Though quiet, the place is full of variety and wonder for the sensitive little boy. All children are poets and philosophers, and Christopher is a rare child; beauty is in his soul. We see him tilting in its behalf with a child's only half-revealed motives—battles of devotion, often to lost causes. Expectancy and trust make life wondrous fair, philosophy unifies the universe. This first half of the book has great charm, and the realness of the child justifies the author's method.

After hesitations Christopher's mother, Mrs. Herrick, remarries to a man of upright character, who had become entangled with a Mrs. St. Jemison of dubious repute; and Christopher goes to boarding school, to Oxford, then travels for two years, and settles in rooms in London, bent on a writer's career. The reader is hurried towards the final test—Christopher's love for the daughter of Mrs. St. Jemison, his angel in white, his Laura:

Benedetto sia il giorno, il mese, e l'anno!

He is still the romantic, the poet, but the author has lost grip on him. Utterances of his childhood, which seemed natural even when precocious, are replaced by love-making which never could be on land or sea or in the romantic's heaven. When the great disillusion comes, and the shallow character of the mother reveals itself in the daughter, pathos is absent, because it is clear that the tragedy is an unembodied theme. Other characters in the story Mr. Pryce has kept well sustained. The philosophizing of Trimmer, the nurse, is rare fun; Mrs. Herrick, senior, the dowager of Herrickswood, has the keen iron nature known so well to the mid-Victorians; Christopher's mother is utterly real, oddly through the sheer faultlessness of her breeding.

ONE ASPECT OF GOETHE.

Goethe and his Woman Friends. By Mary Caroline Crawford. Boston: Little, Brown & Co. $3 net.

"Ihr naht euch wieder, schwankende Gestalten!" Yes, all are here, from the obscure Gretchen of Goethe's boyhood to the somewhat nebulous Ulrike v. Levetzow of his declining years. Not only are the poet's love-affairs analyzed, but also his relations to his mother and sister, to Fräulein v. Klettenberg, to the two Weimar duchesses, and even to Barbara Schulthess of Zurich. For the first time the reader who knows only his English or has not access to a well-stocked Goethe-library, will be able to study Goethe from this side. Yet, after all, the question will obtrude itself: Is such study worth the while? Is it even sound psychology to detach this single fibre of a highly complex organism and scrutinize it under the microscope? Our author's purpose is praiseworthy, she wishes to clear away certain shadows and misrepresentations which have gathered round Goethe's fame. Her sympathy is keen, her industry is unflagging. Besides, she is entitled to the distinction of being the first woman to champion the poet against the field. Yet, to our way of thinking, such a method of defence can never be truly effective. To understand Goethe one must study him in his entirety. He was a myriad-minded, myriad-mooded mortal, vitally interested in everything that makes up humanity. As a great poet his sympathies were quickly stirred, his passion was strong. His will, however, was still stronger. Hand in hand with his loves and friendships go his studies in literature and the drama, in history, art, architecture, music, botany, anatomy, mineralogy, finance. All are inextricably intertwined. To disengage Goethe the lover is impossible. In proof there is "Dichtung und Wahrheit." Professedly, the work is nothing but the autobiography of its author's boyhood and youth. Yet those who have studied it from cover to cover will admit that in their reading they have been forced to try to know a little at least of everything. True, love flits through

the pages, but only in kaleidoscopic mutability.

Besides, we are not persuaded that our author has learned the real Goethe secret, without which one is bound to err. At page 3 we read, in comment upon Goethe's witty little sketch of himself: "And it may as well be added at once that he always valued his paternal heritage [the serious conduct of life] less highly than the gift of writing and the 'philosophy of a cheerful life' which was his mother's dower." No, emphatically no! The poet characterized himself on another occasion as one who had taken life hard. The German is more graphic: "Einer, der sich das Leben hat sauer werden lassen." With the exception possibly of the first wild weeks in Weimar, there was never a time in his long life when he did not—in weariness—break off from so-called pleasure and plunge resolutely into something difficult and of abiding profit. In truth, his extraordinary relation to Karl August, what is it but a continuous story of "des Lebens ernstes Führen"? On this point the memorable poem "Ilmenau" is conclusive.

Further, we doubt whether our author is sufficiently conversant with the *ancien régime* from which Goethe sprang. Yet without a profound knowledge of it one cannot hope to estimate Goethe's general sanity. On the one hand was unscrupulous libertinism, on the other what we should call sentimental gush. Between this Scylla and Charybdis the poet steered a pretty steady middle course. At times unwise, even sinful, his errors were of the healthy sort to which most creeds extend a measure of tolerance. Our advice is: Neither condemn the poet nor seek to justify him, but take him as he was and make the best of him.

Still further, our author seems to find it difficult to keep in mind the shifting in Goethe's social status. For example, at p. 92, she writes: "Inasmuch as he was the son of an important Frankfort citizen his position was almost that of a nobleman, as compared with hers [Frederika's]." This will never do. When in all the history of Germany was there such an *Abstand* between a mere *studiosus juris*, the son of a humdrum retired lawyer, and the daughter of a respectable country parson? As a set-off, we know that Lili's family looked upon Goethe askance as not of their "set," and that Weimar society in the early days was anything but affable to the *bourgeois*.

Of the seventeen chapters, these four have pleased us best: Goethe's Sister Cornelia, The Friend with the Beautiful Soul, Lili, Frau Aja. Of course, such an estimate is purely subjective; each reader will judge for himself. At any rate, we must protest against the heading of the Sesenheim chapter: Goethe and his Beatrice. The picture in "Dichtung und Wahrheit" is truly idyllic, but not a trait in it suggests Dante and Beatrice. The glorified Italian woman led her worshipping lover through the mysteries of Paradise; whereas Frederika, the gentle, ingenuous country maiden, led nobody, least of all Goethe; she merely listened and followed. The chapter on Frau v. Stein is tiresome, though that is scarcely the fault of the author, rather of the subject. The author hits the nail on the head, when she asserts, p. 189, that Frau v. Stein "was not really a woman of great intelligence." One must e'en have the courage of one's convictions. We of the twentieth century can detect in Charlotte's diathesis a tinge of the morbid; her unquestioned spiritual delicacy was a bit hectic. Strange that Goethe should have remained blind to the fact so long, while his mother, far away in Frankfort, detected it almost from the start. In this chapter there is one grave technical blemish. Goethe's letter of June 1, 1789, the letter which provoked the rupture, is given at pp. 207-9. In the original the *du* form is preserved throughout. What warrant, then, for skipping from 'thou' to 'you' and back to 'thou' in the translation? And, p. 209, the phrase: "When he was able to get perspective on the matter," is poor English.

Among minor blemishes we note, p. 184, *konnt*, for *könnt*, a misprint which blurs the sense. For Casterta, p. 268, read Caserta, the name of a well-known Italian town. In four places, pp. 265, 273, 275, 278, the proper name Reiffenstein is printed Rieffenstein. At p. 57, the translation runs: "Every love has its collecteana; and I would sooner that rejected brass tokens were again collected than scattered thoughts." This utterance will assuredly be cryptic to every reader without the original. To begin with, the German language recognizes the word *collectanea*, but not *collectcana*. Then, Goethe wrote, with his customary directness: To every love there belongs *Sammlung* [a shrewd play on the double meaning "collection" and "composure"] and I would rather gather up scattered coins than scattered thoughts. In the note to p. 316, the date January 12, 1801, must be a slip for 1807. Uncorrected, the note implies that Goethe's son August achieved the feat of tossing off seventeen glasses of champagne at a sitting, when barely eleven years old. Add six years and the feat becomes a sad possibility. One unfamiliar with German affairs will be somewhat mystified by the account, p. 254, of the dinner in honor of Frau Aja. Why should the host be referred to as "Prince," "Abbé," and "Primate," and who was he? One needs to be informed that the host was the Prince Archbishop of Mainz, the oldest see in Germany. Whether he was Primate, as the Archbishop of Canterbury is Primate of England, may be questioned. In 1806, Regensburg was to the fore. We regret that the book contains so many illustrations by Kaulbach, for that artist's treatment is irremediably coarse. It merits a reversed Johnsonian epitaph: *Quod tetigit, non ornavit.*

Colonial Currency Reprints, 1682-1751. With an Introduction and Notes by Andrew McFarland Davis. Vols. II-IV. Boston: Prince Society.

With the issue of the fourth volume, this notable series of reprints, comprising more than sixty colonial publications on currency, is completed. As a contribution to economic history it stands unique, the nearest approach to it being the discussion that led to and followed the "Bullion Report" of 1810. The economy of New England, unhampered by institutions of guild and landed restrictions, and the directness and comparative simplicity of its commerce, gave a clearer definition to the efforts to procure a reasonable medium of exchange than could be found elsewhere; and the commercial interests and complications led to a very wide experience in those efforts. In the beginnings of a problem ventures are apt to end in failure, and especially when directed by private interests. Yet the ventures are interesting in themselves, and in spite of disaster are continually recurring under new conditions and in new phases. The currency question is still before us, and in those earlier experiments may be found the essential problems that still wait to be successfully solved.

From this point of view these volumes offer a full picture of the growing need for a medium, the pressure on the individual, the appeal to the State, and the consequent struggle between public and private interests, between debtors and creditors, and between honest payment of debts and the application of a sponge to all or to a part of the obligation. The need arose from expenses incurred in military expeditions having land-hunger for a basis. The debts thus created led to the issue of paper promises to pay, and then the wish to evade payment followed. Once having had a taste of paper issues the simplicity of deferring payment appealed strongly to those who needed relief from debts, and it was an easy transition from the payment of public indebtedness with bills of credit, to issues by private organizations for the relief of the unfortunate in land and commerce.

This is the story that is told in Mr. Davis's volumes, and no aspect of the question escapes consideration. Merchant, farmer, citizen, and magistrate offer their opinions in confusing multiplicity, and some of the writers were of prominence in provincial affairs, capable of speaking with authority. The labor of identifying the writers alone con-

stituted a difficulty, which the editor has solved very successfully. But the chronological arrangement develops the extent and the strength of the discussion, and the liberal extracts from the journals of the time add much to the popular understanding of the merits of the matters at issue. The notes of the editor are bibliographical as well as explanatory, and the student cannot go astray while threading his way through the discussion. The experience was complete, extending from the first inception to the final redemption in specie, and was conducted upon a scale equalled in no other part of the British colonies in the eighteenth century. The volumes are as necessary to the historian as to the economist, and the illustrations offer a convenient aid to the bibliographer.

Truth and Reality: An Introduction to the Theory of Knowledge. By John Elof Boodin. New York: The Macmillan Co. $1.75 net.

It is symptomatic of the weariness with which philosophy is beginning to regard its long-time inclusion within the circle of mere experience that several recent ventures have adopted the name of realism, to which, however, the "pragmatic realism" of the present writer has perhaps the best claim. Pragmatic realism is an endeavor to justify both the right of the subject to measure reality by his meanings and the right of reality to an existence (though not necessarily a meaning) of its own. The situation confronting the writer, who is professor of philosophy at Kansas and a graduate of Harvard, is apparently made up of the radical empiricism of James and the absolute idealism of Royce. As against Royce he denies that reality is necessarily intelligent; and his relation to pragmatism and radical empiricism one might venture to state in terms of his title: for pragmatism truth is the whole of reality, for the writer it is simply one version. Unfortunately, however, in the matter of pragmatism, one must qualify either as a pragmatist or as a "misunderstander"; and in the meantime the writer prefers to effect his combination by making his own definitions both of pragmatism and of realism. From the chapter on What Pragmatism Is and Is Not it should seem that pragmatism is—anything, indeed, that would serve to recommend it. Here he is true to the spirit of the doctrine; but, on the other hand, it seems that what pragmatism is not is precisely coextensive with all that has been claimed for it. Even usefulness is rejected as a logical criterion; and the general effect is to transform a position which we supposed to be somewhat proudly indifferent to external authority into a rather servile deference to fact. Realism suffers somewhat less at the writer's hands, but, in order to forestall Professor Royce, he boldly affirms that the real things are not indifferent to our ideas, though they may be lacking in any meaning of their own. How, then, can they respond to our meanings, so as to serve as material for truth? The writer replies by suggesting a "pre-existent fitness for truth" (p. 121), though rejecting a preëstablished harmony (p. 253). Altogether, it must be said that the relation of the two terms of the problem is left very much in the air. The writer is evidently more interested in setting forth his views than in justifying them, or refuting the opposing views, by closely reasoned argument. Had he come to close quarters with his conceptions, he might have discovered, perhaps, that in a region of rather high criticism he was still operating with an uncritical psychology, in which the facts are assumed to be once for all given independently of the action of ideas.

The book is nevertheless a serious attempt in a direction which calls for some courage; and not altogether a fruitless attempt. Loosely put together, it is still full of suggestive material, especially in the chapters dealing with realism. The style is personal and frank, and pleasing if not always skilful. The undergraduate, for whom it is to be an "introduction," will only open his mouth and wonder—at least after the middle of the book—but the maturer student of philosophy will read it with relish. "Pragmatic realism" has not yet been shown to be a contradiction in terms; let us hope that Professor Boodin may still get them adjusted.

Notes

The Oxford University Press is about to issue a work on copyright, by G. S. Robertson, written in the light of the new Act.

Dr. William Hirsch's "Religion und Civilisation vom Standpunkte des Psychiaters," has been rewritten in English and will be brought out at once by the Truth Seeker Co., New York.

In the list of forthcoming books of McBride, Nast & Co., New York, we note: "Träumerei," by Leona Dalrymple; "The Second Deluge," by Garrett P. Serviss; "Let's Make a Flower Garden," by Hanna Rion; "The Half-Timber House," by Allen W. Jackson, and "Andorra, the Hidden Republic," by Lewis Gaston Leary.

"The Return of Pierre," a novel by Donal Hamilton Haines, is in preparation by Henry Holt & Co.

Dr. James Devon has placed with John Lane Co. his new book, "The Criminal and the Community."

Some Oxford books in preparation by Frowde are: "Townsend's Poems and Masks," edited by E. K. Chambers; "A Manual of the Kashmiri Language," by G. A. Grierson; "Responsible Government in the Dominions," by A. B. Keith; "Tacitus' Histories," translated by W. H. Fyfe, and "Homeri Opera V (Hymnos Cyclum Fragmenta Margiten Batrachomyomachiam Vitas Continens)," edited by T. W. Allen.

The Century Co. is bringing out this month: "The Fighting Doctor," by Helen R. Martin, and Isabel Gordon Curtis's "The Woman from Wolverton," a story of Washington life.

Henry Sienkiewicz has a new book in the press of Little, Brown & Co., "In Desert and Wilderness." It deals with Africa at the time of the insurrection of the Mahdi, and is translated by Max A. Drezmal.

Scribners announce a series of essays, "Why Should We Change Our Form of Government?" by President Butler of Columbia. Other publications to be issued this month by the same house include: August Strindberg's dramas, "The Dream Play," "The Link," and "The Dance of Death," parts i and ii, translated by Edwin Bjorkman; "Fathers of Men," a story of English boarding-school life, by E. W. Hornung; "The Chink in the Armour," by Mrs. Belloc Lowndes; "Consul Assigned," by Mary Raymond Shipman Andrews; "It and Other Stories," by Gouverneur Morris; "Wide Courses," by James B. Connolly; "The Inn of Tranquility," a volume of essays, by John Galsworthy, and "Riding and Driving for Women," by Belle Beach.

Among the books which will be brought out shortly by Longmans, Green & Co. are: "The Life of John Henry Cardinal Newman," based on his private journals and correspondence, by Wilfrid Ward, in two volumes; "George the Third and Charles Fox," the concluding part of "The American Revolution," by Sir George Otto Trevelyan; "Spiritual Progress: A Word of Good Cheer," by Rev. Arthur W. Robinson, with an introduction by the Bishop of London; "Love's Ascent: Considerations of Some Degrees of Spiritual Attainment" by Rev. Jesse Brett, and "The Passion of Christ: A Study in the Narratives, the Circumstances, and Some of the Doctrines Pertaining to the Trial and Death of our Divine Redeemer," by Rev. James S. Stone.

Books to be published by Houghton Mifflin Co. on February 17 include: "The Heart of Us," by T. Russell Sullivan; "The Last Cruise of the Saginaw," by George H. Read; "The Luck of Rathcoole," by Jeanie Gould Lincoln; "The Egyptian Conception of Immortality," by George A. Reisner; "Harvard Essays on Classical Subjects," edited by Herbert W. Smyth, and "Little Gray Songs from St. Joseph's," by Grace Fallow Norton.

To the Dictionary of National Biography, a new supplement will shortly be added by Smith & Elder, under the editorship of Sir Sidney Lee. It will include mention of persons who died between the death of Queen Victoria (January 22, 1901) and the end of 1911.

"The Power of Tolerance," by George Harvey (Harper), is a collection of speeches that have been made in the last half-dozen years, and a narrative that originally appeared in *Harper's Weekly*. They are all readable, and some of them are much more than that. Two of the more pretentious addresses are the first, which gives its name to the collection, and the one entitled "Journalism and the Uni-

versity," which was the 1908 Bromley lecture at Yale. Not the least interesting feature of the volume is the variety of occasions covered by the speeches. A reader wonders what freak of publishing policy is responsible for the use of the title of the initial address as a running title throughout the volume. The top of each right-hand page at least might have contained the title of the particular speech represented upon it, with an obvious gain in accuracy and convenience of reference.

Much is contained in little space in Mrs. H. P. Clark's book on Auction Bridge (Dodd, Mead). The chief points of the game are concisely and clearly expressed, a real advantage to beginners who hesitato to wade through the many pages of text and illustrative hands of the usual work on bridge. The tyro will here find in few words all he needs to know about the game.

Ralph Nevill's "Floreat Etona" (Macmillan) is confessedly an anecdotal story of Eton College, but it is based on sound knowledge of the historical background, and carries its anecdotes as far back as the records go. Those who have in their blood the Eton traditions will no doubt read the book with avidity; to the outsider, it gives a clear picture of life at the most famous of the English public schools, with its changes and its strange preservation of the past. Mr. Nevill writes from the frankly Tory point of view, deploring the rising tide of innovation, yet in the matter of curriculum of studies, which is in reality intimately associated with his conservative ideal, he shows himself something of an opportunist. We commend the book as good reading. The illustrations, largely from private sources, are a distinct addition to the text.

"Trekking the Great Thirst" (Scribner), by Arnold W. Hodson, has interest and value for several reasons. It is the story told in a quite artless way by a police officer of the Bechuanaland Protectorate, of his arduous duties in the hot and thirsty wastes of the Great Kalahari Desert, now the least-known part of South Central Africa. These duties consisted of visits to the villages scattered over the wilderness for the collection of the hut tax, the settlement of disputes, and the maintenance of law and order. Then he also had to explore unknown regions and to report upon their suitability for cultivation or pasturage, to make roads and to designate the location of water pits in the "sea of sand-hills." This necessitated an almost continuous life in the trackless desert, where he was not infrequently in great danger of perishing from thirst. In one large district the natives and their cattle depend almost entirely upon melons for food and drink. On one of his first trips he was obliged to go with ox-wagons 110 miles across sand with no water supply on the way. For special service on the frontier during the Herrero war of 1904-5 he was commended both by the Germans and the British Foreign Office. The country abounds in game, and he gives a list of thirty varieties which he shot, sport being his chief recreation. His narrative is substantially a transcript of his reports to the resident commissioner, and so has much monotonous detail. But it shows a true interest in the natives and exceedingly tactful dealing with them, and contains some valuable information in regard to their customs. His interest in his work was so great and the lure of the Kalahari so strong that more than once on his return to civilization he confesses to a feeling of homesickness for "the wild desert country which had for so long a time been my home." The chapter descriptive of a hunting trip of Lord Selborne, high commissioner of South Africa, made under the guidance of Lieutenant Hodson, was written by Mr. Vaughan-Kirby, sportsman and author, who also contributes an account of a thrilling experience with a lioness. The eighty-five illustrations are largely of game, and there are four sketch-maps of routes across the desert.

There is much to commend in "Cuba and Her People of To-day" (L. C. Page & Co.). The author, Forbes Lindsay, knows the Cubans, their virtues and shortcomings, and seeks to create a better understanding on the part of Americans, who not only have a moral responsibility towards the republic, but are exploiting its people and their industries. He traces the island's history with special reference to its development, and analyzes conditions, both social and economic, as he finds them to-day. No people were more handicapped in their development, he thinks, and "what the Cuban seems to need more than anything else is to develop virility and hard common sense. . . . It is always to be remembered that he was freed from his swaddling clothes but yesterday. He never before had a chance to grow, to stretch his limbs, to think and act for himself."

In Mr. Lindsay's opinion, the economic condition of Cuba is unfavorable to the welfare of its population, because foreigners own 90 per cent. of all the land worth working. Little of the wealth created by foreign capital finds its way into the pockets of the negro or the guajiro (the white peasant squatter), who is, nevertheless, oppressed by taxation, while the professional politician waxes fat and lives in contentment. As a consequence, there is unrest, and Mr. Lindsay suggests a permanent protectorate on the part of the United States as the most effectual method of solving Cuba's difficulties. There are chapters on the tobacco and sugar industries, the agricultural and mineral resources; advice for prospective settlers, and a number of excellent illustrations.

Maurice Evan Hare has edited and the Clarendon Press has issued "The Rowley Poems of Thomas Chatterton." A paragraph from the Introduction will give the exact procedure in forming the text:

> This edition is a reprint of Tyrwhitt's third (1778) edition, which it follows page for page (except the glossary; see note on p. 291). The reference numbers in text and glossary, which are often wrong in 1778, have been corrected; line-numbers have been corrected when wrong, and added to one or two poems which are without them in 1778, and the text has been collated throughout with that of 1777 and corrected from it in many places where the 1778 printer was at fault. These corrections have been made silently; all other corrections and additions are indicated by footnotes enclosed in square brackets.
>
> In the Glossary Mr. Hare has added the definition of a number of words which Tyrwhitt, not knowing Chatterton's use of the dictionaries of Kersey and Bailey, could not explain. Mr. Hare is moderate and sensible in his introductory remarks on Chatterton's act of forgery, finding it possible to treat the boy poet with tenderness without displaying any silly rancor towards Walpole. In his critical remarks he is not always so happy. He quotes, for instance, a stanza from "Ælla":

> See! the whyte moone sheenes onne hie;
> Whyterre ys mie true loves shroude;
> Whyterre yanne the mornynge skie,
> Whyterre yanne the evenynge cloude—

with the comment: "A better example than this of what is called the sublime could not be found." It is unfortunate that those who have wished to set forth the romantic charm of Chatterton (which at his best is indubitable) should so often fall into this kind of extravagance. We observe that in his bibliography Mr. Hare makes no mention (perhaps intentionally) of C. E. Russell's "Thomas Chatterton," Moffat, Yard & Co., 1908.

"Violette Montagu" (as the title page has it), or "Violette M. Montagu" (as the introduction is signed), has found it necessary to unearth "Sophie Dawes, Queen of Chantilly" (Lane). Sophie Dawes, better known as the Baronne de Feuchères, played in her day a scandalous part in the intimate history of the Orleans family. Her name, we believe, has not hitherto figured in English biographical literature, but the author was of the opinion that an authentic life of the "extraordinary woman who, for nearly twenty years, ruled over the mind and conscience of the unworthy descendant of the great Condé," ought to be no longer withheld. And thus she writes, and apparently has no difficulty in publishing, and, for aught we know, may find readers for, a detailed account of the misdeeds of an English adventuress of the lowest type, who became the mistress of the Duc de Bourbon and was tried on the charge of being accessory to his mysterious death, in 1830.

M. Bergson has not yet included in his system a general treatise on æsthetics; but he has at least emulated many philosophers since Hobbes's time in the attempt to reveal to us the essential nature of the ludicrous ("Laughter." The Macmillan Co.) His attempt is more penetrating than most of them, and perhaps more readable and more diverting than any previous book of the sort. But from the error in method characteristic of most of his precursors in the enterprise, M. Bergson has learned nothing; and his little volume has therefore much more of literary charm than of scientific value. The problem is one calling first of all for a wide and impartial induction of instances. Instead of this, we get an ingenious formula, suggested by the author's general philosophy, and then a selection of examples, chiefly from French comedies, in illustration of the formula—to which many of the examples are accommodated only by torturing interpretations. The book is thus an admirable exposition of a single aspect of the comic, and at the same time it is one long series of generalizations that will not bear a moment's comparison with the facts. M. Bergson's very first assertion, for example, is that "the comic does not exist outside the pale of what is strictly human." Has he, then, never seen a dachshund? Or does he think that when we laugh at a pun, we are always laughing at the author of it, and not at the

verbal incongruity itself? His last contention, again, is that laughter is always a means of social correction and has in it a touch of asperity, if not of cruelty—that "sympathy is capable of entering into the impression of the comic" only fleetingly and "from a lapse in attention." Can it be that M. Bergson has never witnessed the admiring and adoring laughter of grown-ups at the delectable blunders of children—one of the great sources of natural laughter-supply of the race? In his translators, C. Brereton and F. Rothwell, the author has again been fortunate; their English is often as happy as M. Bergson's French. Occasionally, however, they miss a French idiom. "Le rire n'aurait donc rien de très bienveillant," for example, should not be rendered "So evidently there is nothing very benevolent in laughter"; it means: "So far, then, there should seem to be nothing very benevolent," etc. Apparently for the sake of stylistic effect, the closing sentence of the book is misleadingly "over-translated." Where the author says that one finds in laughter, as in sea-foam, "pour une petite quantité de matière une certaine dose d'amertume," the translators have written that one "may find that the substance is scanty and the after-taste bitter."

In "God in Evolution" (Longmans), Francis Howe Johnson, who twenty years ago in an essay entitled "What Is Reality?" suggested the application of the pragmatic method to the problems of theology, returns to the attempt to reconcile philosophy, science, and theology by means of pragmatism. Authority in pragmatic theology is based neither on the church nor on the Scriptures, but on human experience. The doctrine of evolution is the solvent by which the facts of experience are interpreted and made clear. Appealing to experience as revealed through evolution, the author examines such doctrines as the omnipotence and benevolence of God. The results are not in harmony with the tenets of any body of Christians. God, according to the new philosophy, is "beset with limitations." He is doubtless doing the best He can, but manifestly His works are not perfect, and it is better to recognize the limitations in Himself than in anything exterior. The losses in the surrender of the traditional views respecting the infinite attributes of God are recognized, but it is contended that there are advantages which more than compensate in the recognition of the "God of things as they are." The usual result of such pleas for harmony is the satisfaction of neither party to the dispute, and it may be that Mr. Johnson will fail to convince, either the scientist as to the religious implications of evolution, or the theologian as to his proposed modifications of religious doctrine. The difficulty with the pragmatist's appeal to the doctrines which work is that in this sad world no doctrines have yet worked sufficiently well to afford a basis of their sufficieney.

Edwin J. Clapp's treatise on "The Port of Hamburg" (Yale University Press) advocates a modernization of our ocean and Great Lakes terminals along the lines followed in Hamburg; and the author is equally convinced that, if river transportation in America is to be revived, it must be modelled on that of the Elbe and the Rhine. His main source of information is Wiedenfeld's standard work on "Die nordwesteuropäischen Welthäfen," but he has carried on independent investigations, and produced a valuable handbook, not too technical for the general reader, on the port facilities and the maritime commerce of Hamburg, with some sidelights on German waterways and railways generally. He highly lauds the dock system of Hamburg, as contrasted with that of London, Liverpool, and Antwerp. Mr. Clapp evidently identifies himself with the enthusiastic advocates of a great trans-oceanic Germany, as he quotes approvingly from Professor Schmoller's speech in 1899, as follows: "We must desire that, at any price, a German land with a German population of twenty to thirty millions shall arise in South Brazil in the course of the next century. It is indifferent whether it becomes an independent state, or whether it comes in close connection with our Empire." The movement of German emigration does not seem to bear out this prognostication.

Sir James MacPherson Lemoine died at his home in Quebec on Monday, aged eighty-seven. In 1897 he was knighted for his literary work, which includes books, in both English and French, mostly on the history of Canada. Among them are "L'Ornithologie du Canada," "Les Pêcheries du Canada," "Maple Leaves" (6 vols.), "The Scot in New France," "The Chronicles of the St. Lawrence," and "Monographies et esquisses."

The death is reported, in his seventy-second year, of Otto Liebmann, who up to last summer, when he resigned, was professor of philosophy at the University of Jena. He was the author of several important works: "Kant und die Epigonen," "Vier Monate vor Paris," the latter a diary kept during the Franco-Prussian War; "Analyse der Wirklichkeit," and "Gedanken und Tatsachen."

Prof. Salomon Lefmann, who died recently at the age of eighty, was professor of Sanskrit at the University of Heidelberg. At least two of his works deserve mention: "Lalita Vistara, übersetzt und erklärt" and "Geschichte des alten Indiens."

Maurice Maeterlinck is fortunate among contemporary men of letters in his apparent immunity from adverse criticism. Either the Belgian writer has been universally accepted, or else those who find in him no appeal choose to be silent. A rare exception is the Abbé Ernest Dimnet, who, in a trenchant paper in the *Nineteenth Century* entitled "Is M. Maeterlinck Critically Estimated?" handles the Belgian philosopher without gloves. We say the philosopher, because with Maeterlinck the poet and dramatist the Abbé has no quarrel. He does protest against the conception of Maeterlinck as a sage and a guide to life. Taking "Le Trésor des humbles" as the Belgian's most successful experiment in the field of speculative thought, our writer is chiefly impressed "by the pleasure M. Maeterlinck takes in stringing words together, and by his indifference to the development of the idea from which he originally started." In "La Sagesse et la destinée" we do find one idea which has been helpful to many discouraged souls, but it is not an original discovery. The notion that Destiny is only a word and that free-will can modify the so-called course of fate was long ago expressed in the French proverb, "Aide-toi, le Ciel t'aidera." The real cause of his popularity lies in "the snobbishness of the crowd—I mean the reading, not the working crowd." The success of his philosophical books is "of exactly the same order as the success of any second-rate novel or drama." His influence does not count with people who count.

By contrast with this vehement bit of depreciation we may mention a short paper by Randolph S. Bourne in the *Atlantic Monthly* entitled "The Mystic Turned Radical." Mr. Bourne finds that by long wandering in the field of semi-conscious sensations, Maeterlinck has attained a clarity of vision which, trained upon the social problems of the day, has made him the leading exponent of the rights of the inner man as against the scientific determinism of the times.

In the same number of the *Atlantic* Harriet Finlay-Johnson describes under the name "Education Dramatized" a scheme of pedagogics which suggests that a better title would have been "Education Anarchised." In the model school under consideration—Miss Johnson frankly places it in Utopia—work begins at no slavishly fixed hour. "Just as soon as we can race there, will be the correct time for us." When the teacher appears and says, "Now, *I'm* ready," the children bring forth specimens of flowers, weeds, leaves, grasses, and shells, and each child tells "exactly in its own way" what it has found and observed for itself. The elder children produce wooden ships of their own manufacture and a geography lesson begins. Objects in the classroom serve as mimic mountains, capes, and islands, and the children are frankly delighted "when they discover that the North end of the room is really the coldest end, because that makes it easy to call it the North Pole." By what system of internal heating and ventilation the teacher succeeds in producing extraordinary climatic differences within a small classroom is not stated. In the same way arithmetic is dramatized by setting the children to dance with each other, after assigning a number to each child and stipulating that the arithmetical sum of every couple must be 10. It is a striking anomaly of revolutionary educational thought of the day that with the progress of democracy and the vast increase in the number of children who must be trained, the methods being evolved should be increasingly complicated, deliberate, and costly. Jules Lemaître has remarked of the elaborate Rousseauan system of education that it is "simply and purely a dream of an education ultra-aristocratic."

Samuel McChord Crothers has a delightful paper in the *Century* on what he calls "The Obviousness of Dickens," from which one feels tempted to quote again and again. Dr. Crothers admits that the humor, the pathos, and the people in Dickens are obvious, but he begs to distinguish between the perception of the obvious, which is no great merit, and the creation of the obvious, which is genius. The writer confesses that like certain Mid-Victorian Lord Chancellors, he has wept over Little Nell. "Doubtless we ought not to have done so. Our excuse is that, at the time, we could not help it. We may make the further plea, common to all

soft-hearted sinners, that if we hadn't wept other people would, so that no great harm was done after all." Obvious? Yes.

The man with the flamboyant necktie whom you saw on the 8:40 train may also be the author of a volume of exquisite lyrics; but you never saw the lyrics and you did see the necktie. In the scale of being the necktie may be the least important part of this good man's life, but it is the only thing about him which attracts attention. . . . We see things and infer persons to correspond. It is not the whole man, but it is all of him that is for us. In all this we are very Dickensy.

So Madame Bovary and Master Builder Solness are acutely analyzed; but the lady in the yellow curl-papers is unforgettable.

In the *World's Work* there is a brief appreciation of Selma Lagerlöf, who divides with August Strindberg first place among Swedish writers, and far out-distances that sombre man of talent in popular affection. Selma Lagerlöf's fairy tales and idylls have become part of the national culture and tradition.

Basil de Selincourt's apologia for Ruskin in the *Contemporary Review* concedes perhaps more than is necessary. The article deals almost entirely with Ruskin's defects of temper. Temper is the severest, the most searching test of a man's principles and Ruskin's "outbursts of denunciatory spleen are indeed deplorable." Nowadays we are apt to lay greater stress on service than on character, and great men are justified by what they did and not by what they were. Is there need for arguing so plaintively that even when Ruskin is vindictive, "his words vibrate with an intense realization of the dignity of the human soul, of the beauty of rectitude"?

Science

THE ANCIENT FEUD.

Science and Religion in Contemporary Philosophy. By Emile Boutroux. Translated by Jonathan Nield. New York: The Macmillan Co. $2 net.

It cannot be said that Mr. Nield's translation is in all respects fortunate. The English style is unattractive and occasionally lacking in lucidity. This, however, is not altogether Mr. Nield's fault. In Professor Boutroux's style one looks in vain for that lucidity and precision which usually characterize modern French writing, and most of the unfortunate qualities of the translation are but reflections from the original.

The book is a scholarly exposition and able criticism of the leading attempts made during the last century to end the conflict between science and religion, together with Professor Boutroux's own view as to the solution of the problem. In the early part of the last century, our author points out, there was a lull in the conflict; a temporary armistice was patched up on the basis of a division of the human functions, after the manner suggested by Schleiermacher. But in the fourth decade of the century the struggle broke out again and has been raging ever since. The account of this struggle, which fills most of the volume, falls into two parts, which expound respectively, "The Naturalistic Tendency" and "The Spiritualistic Tendency." Under the first heading Boutroux deals with Comte, Spencer, Haeckel, and what in the French original he calls "Psychologisme" and "Sociologisme." The expositions of the various doctrines concerned are usually excellent, and the hurried reader who wishes to know the point of view of the authors and schools here dealt with will find Boutroux's book a helpful and trustworthy time-saver.

The central weakness which our author finds in Comte's position is the inveterate incompatibility between the positivistic view and the recognition of man's religious needs. Comte seeks to retain both, but each tends inevitably to destroy the other. If the religious needs which Comte recognizes are to be satisfied, they carry man irresistibly beyond the barriers set up by positivism:

> Faith in the superior reality of an ideal object irreducible to whatever is given, yet capable of being impressed on the given, has produced the very heroes whom Auguste Comte so rightly honors; they are the saints of his calendar because they have not believed in his religion.

Herbert Spencer fares much better at our author's hands. In a sense, his philosophy may be called deeply religious. In fact a consistent working out of this philosophy would result in a much more positively religious view than Spencer ever admitted. "His Absolute is force, power, energy, the infinite, the source of consciousness, the common ground of the *ego* and the *non-ego*, that which transcends intelligence and personality. Having regard to such terms, can it be claimed that this Absolute is entirely unknowable; and if the predicates that Herbert Spencer has fearlessly attributed to it are legitimate, is it certain that these rudiments of knowledge are incapable of progress and development?" "If the Humanity (Grand-Etre) of Auguste Comte is an incomplete and unstable conception, seeing that man is, in essence, a being who goes beyond self, there is still greater reason why we cannot, with Herbert Spencer, place men in the presence of the Being whence all things proceed, and then tell them that they can neither understand nor depend upon this Being in the smallest degree."

The weakness of Comte's position reappears in an exaggerated form in the materialistic "Monism" of Haeckel. On the one hand, indeed, Haeckel's solution of the controversy between science and religion is beautifully simple—religion, namely, is altogether illusory and must eventually disappear before science. But, on the other hand, like Comte, Haeckel recognizes that there are certain perennial human demands, especially those represented by the words Truth, Beauty, Goodness, which are satisfied in part by religion and which science at present does not satisfy. This difficulty Haeckel seeks to avoid by the help of his monistic view of reality—a kind of panpsychic materialism. But as Boutroux points out, Haeckel is precluded from any such solution by his own fundamental view that the scientific method is the only method worthy of pursuit. If this is true, then "Monism" is as impossible as any other metaphysic—for a metaphysic it is, and one that can never be demonstrated by scientific method. And if there are other justifiable methods besides the scientific, then the other and more spiritual philosophies go unscathed by any criticism of Haeckel's. Moreover, it is as impossible to get the religious values which Haeckel recognizes out of his philosophy as it is to get his philosophy out of his science. It is certainly hard to see how materialistic monism can nourish our emotional nature or satisfy the ideal demands which religion serves. And if we are to put into our philosophy things justified by our emotional demands but not by our science, why should we stop with Haeckel's monism?

It is open war that Haeckel offers to religion in the name of science. But there is, in Boutroux's opinion, one foe to religion more dangerous and more virulent than even "Monism." This new foe may be called the "Science of Religion," taking sometimes the garb of psychology, sometimes that of sociology:

> In the religious fact is implied the idea of objects, of forces, of feelings, of states which cannot be reduced to ordinary phenomena, which cannot be explained according to the methods of science. It is in so far as they ignore or reject the scientific explicability of the elements of religion that men are religious; and religion has only been able to exist owing to the non-existence of a science dealing with the natural causes of the religious phenomenon. Contrary, then, to the other sciences, which leave standing the things that they explain, the one just mentioned has this remarkable property of destroying its object in the act of describing it, and of substituting itself for the facts in proportion as it analyses them.

The attempt to reduce religion to psychical phenomena which may be ordered according to regular laws so that they may be regarded as necessary, determined, and conceivably predictable is, in Boutroux's opinion, based upon a mistaken view of the human soul. If religion is really going to be explained by the facts of human consciousness, appeal must be made to consciousness as it is, in its full and complex richness of concrete actuality, not to a collection of manufactured "ideas," "laws," etc., invented by an artificial associationism. And if we view consciousness as it really is, and appeal to it, we shall find in it a fulness of life which is religion, and which is not explicable by any scientific categories. It may, indeed, be

that religious phenomena are only subjective phenomena; but from this it does not follow that they are therefore in no way different from other phenomena or that the claims of religion are illusory. For the modern view of religion makes God immanent rather than transcendent and his relation to us an inner rather than an outer one. And the reason why psychology can find in religious phenomena nothing peculiar may be because it is impossible for psychology to take note of anything that does not fit into her categories. An intelligent electric light could never see a shadow; but shadows would exist none the less.

An interesting treatment of Ritschlianism begins part ii, the "Spiritual Tendency." Boutroux is not blind to the advantages of Ritschl's attempted divorce between religion and theology. If such a complete separation could indeed be brought about, there would seem to be little chance of conflict between science and religion. But, as a fact, Ritschlianism in its original form retains enough objective content to make it very open to the attacks of science; and its ideal of religion without any metaphysic, if actually attained, would make faith nothing but subjectivism without content. And even in this unobtrusive and non-militant form, faith would not be secure against the attacks of science; for since the days of Ritschl science in the form of psychology has begun the invasion of the inner world; and if religion is to remain secure even there, some more adequate defence must be found for her than that offered by Ritschlianism.

Some such defence may be obtained by taking advantage of the analysis of science made by such men as Poincaré, Duhem, etc. Boutroux gives a fair presentation of the position of these men, and accepts it with little qualification. Thus viewed, certain modern defenders of religion tell us, science is herself a kind of faith, and is limited both in her compass and in her depth. Her objects are phenomena rather than reality, and her laws are hypothetical short-hand expressions of experience rather than expositions of the truth about an independent reality. Yet our author warns us against too great optimism even here. Though less dogmatic in her own claims than of old, science is no more ready than formerly to admit the claims of religion. Rather she will insist that if a thing is unknowable for her it is *à fortiori* unknowable for religion and every other discipline. And a solution of the problem on the basis of the limits of science will satisfy neither science nor religion.

Two more spiritualistic attempts at solution are now considered—the "Philosophy of Action" (as Boutroux calls a modification of pragmatism) and the appeal of William James to religious experience. These are taken up in turn and treated with a good deal of appreciation. In our author's opinion, however, neither of them is satisfactory to either science or religion.

Thus we are brought, in a somewhat bewildered state, to the "Conclusion." And the Conclusion does little to abate our bewilderment. In it Boutroux attempts to make clear his own solution of the problem, but unfortunately the skill he displayed in expounding other men's views seems to desert him when he starts to explain his own. Throughout this whole concluding chapter his thought wavers and winds, paragraphs follow each other with little logical connection, and one gets the impression that one is reading the jottings from a notebook rather than a careful presentation of a single line of thought. The gist of the conclusion is that the conflict is not so much between science and religion as between the scientific spirit and the religious spirit; that these two have to do with such different aspects of life and mind as to be almost incommensurable; and that therefore neither can nor should really destroy the other. This conclusion is based in part upon the modern view of the nature and limits of science—a view which, it will be remembered, our author in a previous chapter had affirmed was of little use in the solution of the conflict. This is an inconsistency which he, apparently, fails to notice, or at any rate nowhere attempts to explain. In contradistinction to the impersonal point of view which science maintains toward experience, religion takes the personal and subjective attitude. This is equally real and justifiable, and in the great religions it is broadened by looking at things not from the point of view of a single individual but from that of society as a whole. Further expositions of the meaning and nature of religion waver between identification of it with morality and the insistence in addition upon faith in some sort of supernatural and metaphysical sanction. It is therefore hard to see how our author would meet the dilemma: in so far as religion is unassailable by science, it is only morality; in so far as it is more than morality, it is still open to the attacks of science. Of course, it may be able to resist those attacks; but, be that as it may, Professor Boutroux's proposed treaty of peace would appear to be nothing more than an occasion for a renewal of hostilities.

In short, it does not seem likely that the age-long conflict will be ended by the appearance of this book. Boutroux's solution of it is open to the same double criticism that he makes upon the solutions of most of his predecessors—it will be acceptable neither to science nor to religion. But for all that, the work is a valuable presentation of an important question, earnest, judicial, scholarly, and helpful. And though its value lies chiefly in its criticisms, it will rank as a real contribution to what the author calls the "spiritualistic tendency."

Charles Gilbert Wheeler, the chemist and mining geologist, died last week in Chicago, aged seventy-five. He was born in London, Canada, graduated from Harvard in 1858, studied in foreign universities, and in 1868 was appointed professor of chemistry in the University of Chicago; at the time of his death he was the last survivor of the original faculty of the old university. He invented the Babcock chemical fire-extinguisher in 1869, and was geologist and interpreter—he spoke seven modern languages—on the Commission to examine the route of the Nicaraguan Canal in 1899. Several books in his particular subjects bear his name.

Dr. David Christison, whose death is announced from Edinburgh, was among the first to become interested in scientific archæology in Scotland. Besides numerous papers on the subject, he wrote "Early Fortifications in Scotland" and "The Prehistoric Forts of Scotland."

Drama and Music

EXOTIC PLAYS.

The current theatrical season has brought the American playwright face to face with a formidable Asiatic peril. If this were not a bad time for protective tariffs in general, our dramatists might well appeal to Congress for a heavy import duty on Oriental drama, with which the stage is in danger of being swamped. The beginning of 1912 in New York found no less than four plays of life in the distant and odorous East. "Sumurûn" and "Kismet" are straight out of the Arabian Nights. "The Garden of Allah" is North Africa. "Ben Hur"—this last, it is true, of native manufacture—is Syria and Palestine in Roman times. Add to this "The Arab," produced earlier in the season, the play of native life in Hawaii now running, "Madama Butterfly" at the Metropolitan Opera House, and the Russian dancers pretty nearly everywhere, and it is apparent that the playboys of the Eastern world are having things very much their own way with us at present. A play of Chinese life is announced for immediate production. A Japanese play, "Typhoon," has been given at the German theatre in this city. What other evocations of the East are before us, one can hardly say. The outlook is that very few corners of the Mohammedan, Buddhist, and Polynesian world will be left untouched before the fashion changes.

Some of the causes that have set this wave of Orientalism sweeping over Europe and this country are not difficult to trace. The underlying motive is the

passion for novelty which makes itself felt in the theatre more powerfully than in any other form of art. Europe seems to have grown pretty tired of the romantic drama, the social drama, and the out-and-out sex drama in its fam'liar Occidental form. In this connection it is significant that "Sumurûn," the latest word in spectacular exoticism, should come from the man who was a pioneer in Germany of the intimate social drama, or *Kammerspiele*. In reaction against the painful realism of a few years ago we have the phantasy of the East. In reaction against the toy-theatre we have the elaborate spectacle. Probably, too, the decline of good acting enters into the problem. Scenery and costume-display strive to atone for the essential element in the pleasure of the theatre—impersonation. Above and beyond all this, one wonders how much is to be explained by the course of history in the East during the last few years. The average theatre-goer is not peculiarly interested in the progress of international politics. But the men who cater to the theatre-going public may very well have been attracted by the stir, the turmoil, and the clash of events in Japan, China, India, Persia, Egypt, Morocco, and Tripoli.

In our own case there is still another cause to be taken into account, and that is the widening scope of foreign travel among the well-to-do. People who once went to the Riviera now cross over to Algeria and Tangier, and Biskra is becoming as familiar as Nice and San Remo. Egypt has grown almost commonplace. People nowadays winter in India, Hawaii, and Manila. Frequent round-the-world excursions set out from Atlantic and Pacific ports. Here, then, is a considerable constituency to which the theatre offers an opportunity to revive the recollections and the atmosphere of the East. And there is, of course, the added advantage that the theatre allows the traveller to see, or at least pretends to let him see, the intimacies of that Oriental life of which he has caught only a hasty glance at the externals between two dips into Baedeker. The stage will always be more interesting than life, we presume, and the costumes in "Kismet" and "Sumurûn" are probably more Oriental to the ordinary eye than the crowds at Algiers or in Bombay.

There is a certain irony in the fact that a wave of Eastern invasion should have broken upon us just when patriotic theatrical criticism was celebrating the emancipation of the American theatre from the foreign yoke and the coming of the American dramatist into his own. Theorizing is always a little behind the facts in the theatre, as in every other field. The plays that have made their impress upon the present theatrical season, with a few exceptions, are the specimens of Eastern drama we have enumerated, plus such foreign products, or plays dealing with foreign subjects, as "Bunty," the Irish Players, and "Disraeli"—the last one, by the way, dealing with precisely the spot indicated by Mr. Kipling as the dividing point between Western and Eastern morals.

In this temporary retrogression of the drama of native life, there is no cause for fear or regret. In the field of the drama, as a branch of art, competition is not yet obsolete. There is no reason why we should prefer a third-rate American play by an American writer to a good play from abroad. We cannot help feeling that the young American playwright has gone in too much for the type of the times and the question of the hour. Captains of industry and political bosses have beset us in wearying succession. Trusts and the cost of living are serious problems, but a more serious and interesting problem is life. To the extent that our playwrights are dealing honestly with life they will need no protection against foreign competitors.

"The War God," by Israel Zangwill, is promised by Macmillan for this month. In it Bismarck, but lightly veiled, personifies War, and Tolstoy Peace.

William Watson's "Heralds of the Dawn," which John Lane Co. promises for March, is in four acts and is written mainly in blank verse.

The five or six small volumes of the Tudor Shakespeare (Macmillan) which have reached us give an adequate idea of what this edition when complete will be. From the mere announcement of the work it was all along clear that the general editors, Professors W. A. Neilson and A. H. Thorndike, were concerned to choose competent assistants. Each play has a separate editor, save for "Romeo and Juliet," which the general editors themselves have done, presumably to indicate the method of treatment desired. As much of the best American scholarship is to be employed on the Tudor Shakespeare, one can confidently predict that glaring errors will be lacking, and that all the latest investigations on various phases of the subject will be referred to. To speak safely seems to be the main impulse of the editors, and the edition might properly have been called the Safe and Sane Shakespeare, even though that title implies some lack of inspiration. True, the size of the volume—slightly larger than that of the little Temple Shakespeare—leaves small room for flourishes, even if they were desirable. An introduction of about ten pages goes over the usual matters of Text, Date of Composition, Sources of the Plot, Style, etc. In the examplar put out by the general editors, the last-named topic is finished off in fifteen lines. It occurs to us that even a compact introduction might have done more with the style of "Romeo and Juliet." Each play is followed by very brief notes and a very brief glossary. In appearance the volumes, inside and outside, are most agreeable. We have thus far received, besides the "Romeo and Juliet," "Henry VI," part i, edited by Louise Pound; "Henry IV," part i, edited by Frank Wadleigh Chandler; "As You Like It," edited by Martha Hale Shackford; "Henry V," edited by Lewis F. Mott; "The Merchant of Venice," edited by Harry Morgan Ayres, and "Macbeth," edited by Arthur C. L. Brown. The price is thirty-five cents net the volume.

"Lydia Gilmore," the latest stage work of Henry Arthur Jones, now to be seen in the Lyceum Theatre and described on the programme as a "new and original play," belongs to the class of "pot-boilers." It is, however, superior to the majority of its kind in workmanship and invention. The object of it is two-fold—first, to furnish as many theatrical thrills, old and new, as possible within a given space for the delectation of the crowd, and, secondly, to supply Margaret Anglin, one of our most eloquent emotional actresses, with an abundance of harrowing situations. Unfortunately, in his efforts to pile up the agony, Mr. Jones has partly defeated his own purpose. His first act is a masterly bit of melodrama. The artificial nature of it is apparent only upon reflection. In action it is swift, plausible, and highly effective. The scene is the drawing-room of a country physician, Dr. Gilmore. There has been a dinner party, and one of the guests, James Stracey, a neighbor, is going to London after taking his wife home. Every one is cheerful for the doctor has just given his consent to the betrothal of his sister to an ardent young lover. Only the doctor is distraught because Mrs. Stracey, his secret mistress, has given him an assignation at her house after her husband's departure. Stracey has discovered this, and in saying good night discourses on the beauties of friendship. Presently Gilmore goes out, to see a patient as he says, bidding his wife, Lydia, not to sit up. But the latter has work to do for her little boy, a young scapegrace, who is responsible for the unexpected entrance of Richard Benham, K.C., an old lover of his mother. Benham avows a passion, which Lydia, as wife and mother, declares hopeless. He then retires, and almost immediately Gilmore returns, trembling and horror-stricken, to confess his intrigue with Mrs. Stracey and his murder, after a struggle, of her husband, who had been awaiting him. This is a most striking scene, cleverly imagined and vividly told, and ends the first act with an uncommonly effective climax. The second act, in which Lydia, for her child's sake, volunteers to perjure herself in order to prove an alibi for her husband, if necessary, is also strong and interesting, but after that what is meant to be the strength of the play proves its weakness. Lydia is compelled to tell the truth to Benham—who can disprove the alibi—and the latter, a famous lawyer, suddenly charged with the prosecution of Gilmore, who has been arrested, carefully instructs Lydia how to perjure herself to the best advantage, and pledges himself to aid her in his cross-examination. In the ensuing court scene this plot—which makes criminals of both hero and heroine—is successfully carried out, until an anonymous letter to the judge—a trick unworthy of Mr. Jones—causes Lydia to break down and betray herself in a fit of ungovernable hysteria. To crown all Gilmore commits suicide in order that Lydia and Benham may be united in the end. Rarely has Mr.

Jones's zeal for situation made him guilty of so much extravagance or so much false sentiment. But it is only fair to add that his involved plot is woven with remarkable adroitness, that his situations are theatrically strong and much of his characterization lifelike. His judgment is more at fault than his workmanship. The piece, as a whole, is well acted, especially in the case of Miss Anglin, who plays Lydia with refinement, insight, and infinite variety of emotional expression. Her personal success was indisputable.

The cast for the coming production of "Oliver Twist," by Liebler & Co. has almost been completed. To the Bill Sykes of Lyn Harding, the Nancy of Constance Collier, and the Oliver of Marie Doro can be added the Mrs. Maylie of Susanna Sheldon, the Rose of Olive Wyndham, the Grimwig of Fuller Mellish, the Monke of Eric Blind, the Brownlow of Charles Harbury, and the Bumble of Frank Lyons. It may be doubted whether the revival of the so-called dramatization of his works—against which he used to rail furiously—is the best way of showing reverence for the memory of Dickens; but no doubt "Oliver Twist" will attract crowds. Young playgoers will go to see it in order to gratify their curiosity, and the elders for the sake of a renewal of old memories. Some of the latter have not yet forgotten the hideous and thrilling terrors of J. W. Wallack's Fagin in the condemned cell, or the ferocious savagery of Davenport's Bill Sykes. It is strange how few actors have won enduring fame in the characters of Dickens, considering the number, variety, and vitality of them. The Cap'n Cuttle of Florence and Burton, the Caleb of Owens and Joe Jefferson, the Micawber of G. F. Rowe, the Pinch of E. S. Willard, the Jingle of Irving, still live in the memory as possessing somewhat of the individuality bestowed upon the originals by their creator; but the vast majority of the thousands of Dickens impersonations long ago passed into oblivion.

John Cort has purchased a new three-act play of American life, entitled "Ransomed," by Theodore Burt Sayre and Cleveland Rogers. He will produce it early next season.

Frank Curzon and Marie Tempest will soon take charge of the Prince of Wales's Theatre, in London. They will begin operations with a new play by Anthony Wharton, author of "Irene Wycherly." The new work is said to be of a much more cheerful character. It is called "At the Barn," and is said to contain an excellent part for Miss Tempest. Evidently the lady is of the opinion, or she would have allowed somebody else to produce the piece.

Charles Kenyon, who has established a considerable reputation in the English provinces, has taken a lease of the Little Theatre in London, and will produce there "The Blindness of Virtue," an adaptation by Cosmo Hamilton of his own novel of that name. This is a thesis play, of an "advanced" character, dealing with the education of girls and the responsibilities of mothers.

Cyril Maude is going to revive Capt. Marshall's "The Second in Command" at the Playhouse in London.

Arthur Chudleigh has produced a new play by R. C. Carton at the London Comedy Theatre. It is called "The Bear Leaders." The two principal characters, to be played by Miss Compton and Edmund Gwenn, are supposed to be prominent figures in the world of fashion, who, with the view of eking out a tenuous income, undertake the instruction of youthful members of the aristocracy. In other words, they charge themselves with the task of licking society cubs into shape. Among those confided to their care is a youthful couple, boy and girl, and it is with the development and ultimate fate of the pair that Mr. Carton's story is concerned.

Florence St. John, whose death is announced from London, was a capable and statuesque performer, whose artistic capacity was not in full proportion to the great popularity which she enjoyed for many years upon the English stage. Her maiden name was Florence Grieg, and she was born in Devonshire fifty-seven years ago. She was married early in life and afterward to the well-known actor M. Marius (Duplany). She attracted the attention of H. B. Farnie and Alexander Henderson, who engaged her for London, where she acted and sang with success in "Les Cloches de Corneville," "Madame Favart," and "Olivette." Her prosperity endured for many years. Some of her chief successes were made in "The Great Mogul," "Faust Up to Date," "Carmen Up to Date," "Little Christopher Columbus," "The Grand Duchess," etc. In later years she acted in comedy.

A composition of especial interest will be on the programme of the fourth subscription concert of the Kneisel Quartet at the Hotel Astor on the evening of February 13—the Quintet in B minor for two violins, viola, 'cello, and clarinet, op. 115. It is one of the four chamber works by Brahms in which the clarinet is employed. Leon Le Roy, clarinetist, will assist the Quartet.

At the second subscription concert of the MacDowell chorus in Carnegie Hall on February 12, the entire Philharmonic Orchestra will take part, and the soloists will be Maggie Teyte and George Harris, jr. The programme will comprise short contrasting numbers intended to represent the modern French school. A special feature will be the first American performance of excerpts from Debussy's "Le Martyr de St. Sebastien."

If the present rumors about a season of French opera at the Century Theatre prove to be true, there will be much rejoicing among its lovers, who are many, and who, since the closing of the Manhattan Opera House, have been longing to hear favorite works of the French school more frequently. With such artists as Mary Garden, Maggie Teyte, Maurice Renaud, Charles Dalmores, Hector Dufranne, Gustave Huberdean, and others of lesser note, the venture would doubtless be a success.

The Bishop of London did not allow Handel to produce his oratorios as operas, but the Moody-Manners Opera Company has just obtained permission from the Lord Chamberlain to produce a dramatic version of Mendelssohn's "Elijah," which, accordingly, is to be brought out with splendid scenery and costumes. The reverend Dr. Haweis used to maintain that all oratorios would be much more popular if given as operas.

The London Symphony Orchestra, which is to arrive in New York on April 8 for a series of concerts, under Arthur Nikisch, will in twenty-two days give twenty-two concerts, and travel 5,000 miles, as far West as Denver and North as Toronto and Montreal. The members will travel in a special train-de-luxe, on which not only will they sleep, but also do the necessary rehearsing.

Art

Dr. Hofstede de Groot of The Hague will publish shortly through Macmillan the fourth volume of his "Catalogue Raisonné of the Works of the Most Eminent Dutch Painters of the Seventeenth Century," translated and edited by Edward G. Hawke. It includes the paintings of Jacob von Ruisdael, Meindert Hobbema, Adriaan van der Velde, and Paulus Potter.

Among the books imported by Lemcke & Buechner are "Les Temples immergés de la Nubie; Debod bis Bab Kalabzche," a monograph in German, by G. Roeder, and "Miniaturen aus Handschriften der Königl. Hof und Staatsbibliothek München," issued by Dr. George Leidinger. The latter publication will begin with "Miniaturen des berühmten sogenannten Evangeliariums Kaiser Ottos III."

Many critics have attributed to Leonardo da Vinci a little Madonna in the collection of Mme. Bénois at St. Petersburg. Others have been repelled by the somewhat primitive aspect of this charming work. Sidney Colvin, in the *Burlington Magazine* for January, reproduces from a sheet of drawings by Leonardo in the British Museum no less than three composition studies for the Bénois picture. It is apparently one of the "two Virgin Maries" the beginning of which is noted on an Uffizi drawing dated 1478. The identification of this early Madonna reopens the whole problem of Leonardo's origins. Obviously the discovery tends to confirm the views of the late Eugène Müntz, who ascribed to Leonardo a considerable number of finer pieces of Verrocchian type.

"Sculpture in Spain" (Lane), by Albert F. Calvert, is an extended essay by the accomplished editor of the "Spanish Series," and contains 162 illustrations. The early period is treated topically—a chapter on architectural sculpture, another on tombs, on altarbacks, etc. This involves disconcerting leaps and retrogressions which may confuse the beginner. With the fifteenth century begins a more satisfactory arrangement by schools and artists. The survey ends with the seventeenth century. The book is rather a record than a criticism. Indeed, Mr. Calvert's comment is pretty well confined to running praise of Spanish polychromy and apologies for Spanish naturalism. It is not strange that he should somewhat exaggerate the æsthetic value of this art. His constant reminder that we must assume the standpoint of Spanish sensationalism will remind a thoughtful reader that the eulogy is after all relative and adjusted to Iberian latitudes. Though

less comprehensive and thorough than Paul Lafond's "La Sculpture espagnole," this book may better serve the need of the average reader. On page 74, Annunciation is printed where the corresponding plate shows Assumption is intended. It may be well to note here that the Hispanic Museum in this city contains fine examples of Spanish sculpture of the best periods.

The Egypt Exploration Fund is continuing its excavations at Abydos. Work has been carried on in the great cemeteries, and tombs of all periods have been opened. Among the most noteworthy is a magnificent example of a Roman tomb, which consisted of a vaulted chamber, about twenty feet in length, built of mud bricks and originally almost hidden in the sand. On its floor were found twelve heavy coffins of limestone, each with its cover carefully sealed. Inside each lay the mummy wrapped in linen bandages, the blue and gold of its painted coverings as brilliant as when first laid in the tomb. The fact that another similar tomb was built over it at a slightly later date had saved it from the plunderer. At another place in the cemetery was found the skeleton of a woman buried deep in the sand. She had evidently been buried decked in all her jewelry; on her wrists were bracelets of cowries and beads of cornelian; on her finger was a ring of five fine scarabs, one of which bears the cartouche of Sheshonk, a Shishak, the Egyptian King of the XXII Dynasty who sacked Jerusalem in the time of Rehoboam; under her head was found a mass of ornaments, scarabs, shells, pebbles, copper and iron rings, and various beads; and on the nose was a little silver nose-ring. Not far from this spot was discovered a more ancient burial, probably of the XII Dynasty. It consisted of the skeleton of a woman, with two alabaster vases placed near her head. Round her neck was a long necklace of beads, and at her left hand three scarabs, one a fine amethyst. These excavations have been carried on under the direction of T. E. Peet; on the arrival of the director, M. Naville, the scope of the work will be enlarged, and the clearing of the Osireion, the great underground temple of Mesneptah, will be begun.

John Garstang's excavations at Meros and Kabushia, in the Sudan, are making great progress. Three hundred natives, with a staff of trained Egyptians are employed, and a light railway and aerial cableway have been constructed for the removal of the excavated material. In the Royal City a large number of buildings have been revealed. The Palace near the Temple of Ammon, which has now been cleared, contains more than forty chambers and a large court. On the foundations important reliefs have been found.

Charles Gifford Dyer, a painter, whose death is reported from Munich, had lived abroad for about twenty years. He dwelt formerly in Chicago, where eleven years ago he exhibited a collection of his paintings.

The death is reported from Brussels of Henri Hymans, aged seventy-five. At various times he was connected officially with the Bibliothèque Royale and the Beaux-Arts of Brussels, and with the department of art at Antwerp Academy. Numerous contributions to art periodicals, a book on Rubens, several lives in the "Biographie Nationale," started by the Belgian Academy, "Villes d'art célèbres," the last on Ghent and Tournai, are among his works.

Finance

THE BUSINESS WORLD AS DICKENS DREW IT.

The centenary of Charles Dickens yesterday was of interest to people in the walks of finance for one particular reason—that Dickens included the domain of business and banking in his narratives, with results which were somewhat curious. As a rule novelists who have taken practical finance as the background of their stories made a pretty poor fist of it. Opinion differs as to why this should be—whether because the narrator is treading unfamiliar ground and therefore verging on the grotesque in character and incident, or because the practical affairs of trade do not adapt themselves to story.

There is something in the last-named theory: it has been said that the Stock Exchange lends itself more readily to constructing fiction than does fiction to depicting the Stock Exchange. Certainly there is a dull and sordid atmosphere about most imaginative narratives of finance. Bulstrode of "Middlemarch" was a banker, but he might have been anything else, so far as the story is concerned, and the business world of Mr. Howells's Silas Lapham was narrowly circumscribed. Possibly the late Frank Norris came closest of any one in our day to giving romantic life to the every-day detail of the market. But Norris had a method of his own; he was writing the Novel with a Purpose; he steeped himself in the actualities of the Board of Trade before he set his scene; the machinery was really more important than the characters, and that perhaps is why the Leiters and Pattens of the day can read "The Pit" with a convincing sense of being intimately at home in its descriptive chapters.

This was not Dickens's method. He approached the world of practical finance as an uninformed outsider. What he would have made of his bankers, his promoters, and his merchants, if his humor could have played as naturally about them as it did around his young men in search of a career, his first-floor boarders, his country gentlemen, his lawyers, his strolling actors, his impecunious debtors, his police sergeants, and his still more numerous gentlemen of no visible occupation, can only be conjectured. But the insurmountable obstacle appeared to be that Dickens, like many other people in or out of the literary profession, instinctively looked on City trade and banking, whose intricacies he did not understand, as a realm of mysterious achievement where the inhabitants were not like other human beings. That was why he never sketched a convincing likeness of a business man, as such.

Scrooge and Ralph Nickleby might be waived in argument; for to Dickens (perhaps because of his early experience in an habitually insolvent family) a money-lender was not only necessarily a usurer, but, when pictured in the story, was something like personified usury. In his later and more carefully wrought-out novels, Dickens attempted something better than these crude sketches, but with almost equally indifferent success. In "Dombey & Son" he tried to draw a great City merchant, and in "Little Dorrit" a great promoter. But Mr. Dombey and Mr. Merdle are depicted by the maturer Dickens exactly as Dickens in his Old Bailey reporter days would undoubtedly have depicted them. The extremely wooden figure which he presents as the head of Dombey & Son was thus portrayed, no doubt partly because all City merchants seemed like that to the bohemian eye of Dickens (he was quite as unconvincing with his lay-figure noblemen), but partly also because it was difficult for him to imagine men in any such occupation endowed with the ordinary human feelings and emotions. Those were reserved for the retail trade—the drapers, the ship-chandlers, the instrument-makers, and the undertakers—whose humorous side was visible at a glance.

The feeling of relief with which the novelist leaves Mr. Dombey in his office to go home with Dombey's far more amusing clerk, is unmistakable. Dickens cannot resist a laugh at his own picture, when he makes Mr. Toots's pugilistic friend, the Game Chicken, observe of Mr. Dombey "that he's as stiff a cove as ever he see, but that it is within the resources of Science to double him up with one blow in the waistcoat." No reader of the book ever managed to discover just what it was that caused the failure of Dombey & Son; but neither was any one ever able to discover, in the Merdle episode, what it was that the great promoter was promoting, that the Government Circumlocution Office should have held him in such honor and the school children at the blackboard should have written "Merdle-Millions" for their exercises.

Dickens explains, when the eminent promoter's career is ended, that he was merely "the greatest forger who ever cheated the gallows"—which shows a somewhat rudimentary conception of the methods of high finance. Indeed, the notion of the Merdle of "Little Dorrit," with his shuffling manner, downcast eye, and hand retreating uneasily up his coat sleeve, matching wits with Harriman or Gates or Jay Gould or Daniel Drew or George Hudson or the Stock Exchange, or even interesting a banking house in his propositions, is

just a little whimsical to people who know what successful promoters have to be.

Such reminiscences suggest the query whether English fiction has ever portrayed with real insight the character and life of a practical financier, from the simple business side of it. It is doubtful if the thing has ever been satisfactorily done but once. How Thackeray gained that view of the instincts and feelings of a City financier which made possible, in his "Vanity Fair," the picture of old Sedley, it would be interesting to know. Perhaps he himself had as a boy been tipped by a prosperous merchant of the sort, had met him in the club or the street after the tragedy of bankruptcy, and had been moved by curiosity to trace the intervening incidents. But, after all, it is the downfall of the business man, the change in his place among his colleagues and acquaintances, the pathos of the disintegration of the flourishing financier into the helpless seeker after petty agencies and commissions, which caught the imagination of the novelist. What Sedley or his old acquaintance Osborne did at their City offices, when the ordinary business of the day was started, Thackeray does not tell us. Perhaps he was not himself very sure about it; perhaps his instinct pointed out that it would not have interested the reader.

The Nation

VOL. XCIV.—NO. 2433 THURSDAY, FEBRUARY 15, 1912 Reg. U. S. Pat. Office. PRICE TEN CENTS

AN EXTREMELY VALUABLE AND READABLE WORK, ESPECIALLY IMPORTANT FOR ITS TIMELINESS.

Principles of Economics

By **F. W. TAUSSIG,** *Professor of Economics in Harvard University*

Second edition. In two 8vo. volumes. $4.00 net

From the Banker's point of view:—

"The book certainly is one of the most complete ever written in modern times upon this subject. At this period when every business man, banker and voter is eager to serve all he can to help remedy some of the grave industrial perils threatening to swamp and overcome a powerful, prospering nation, this work will be of the greatest possible assistance in refreshing and awakening the mind to the present economic situation."—*Banker and Investor.*

From the Business Man's point of view:—

"Strict attention is given to that which is now of actual, practical importance. Especially timely are the chapters dealing with monopolies and monopoly values; centralized banking systems; crises and industrial depressions; panics; labor legislation, including workingmen's insurance and damages for industrial accidents; the various railway problems, including public control and public ownership; combination and trusts; socialism and a host of questions having to do with various forms of taxation. To the serious business man who is seeking an authoritative work on all of these subjects, which is not too elementary and still not too abstruse or technical, this book can confidently be recommended."—*New York Journal of Commerce.*

From the General Reader's point of view:—

"We have the mathematical economist, the historical economist, the social reform economist, but too few are the common sense, the sane, progressive, practical, broad-minded economists who write for the intelligent citizen as Professor Taussig has done. . . . It is late and just what the average citizen will be glad to read."—*Daily Courier* (editorial).

From the Earnest Citizen's point of view:—

"Professor Taussig has furnished a tool of value not only to the technical student of economic subjects, but also to the growing number of citizens who are seriously concerned with the wholesome growth of society and social relations along the path of justice."—*Boston Herald.*

"The book supplies a real and widely-felt need."

"Professor Taussig is vital and unconventional in his treatment of his subjects, he draws his illustrations from our present affairs and situations, and he shows himself enlightened, responsive to the spirit of the age, fair and generous to theories or reform proposals which often, carried to extreme lengths, contain a soul of good. He has given us a refreshing, illuminating, comprehensive and eminently profitable work."—*Chicago Record-Herald.*

A New Book by the Author of "Quo Vadis," etc.

In Desert and Wilderness

By HENRYK SIENKIEWICZ

Translated by Max A. Drezmal

To read this remarkable story is like being carried through wild and savage Africa, at the time of the insurrection of "The Mahdi," on a real journey in the company of two kidnapped children and a few Sudanese, Bedouins, and Blacks. The events of the story revolve around a little girl of eight and a brave manly boy of fourteen, who cherishes and protects her.

The author's extraordinary power of observation and faculty of description make the almost impossible events seem real and lifelike. The pages of the book glow with the atmosphere and color of the desert. The chapters devoted to the wilderness teem with adventure after adventure.

424 Pages. Cloth. With photogravure portrait of the author. $1.25 *net.*

LITTLE, BROWN & COMPANY, Publishers, BOSTON

A GUIDE TO READING IN SOCIAL ETHICS AND ALLIED SUBJECTS

A collection of forty-two lists of books and articles selected and described for the use of general readers by teachers in Harvard University.

8vo. Boards. 266 pages. $1.25

Published by HARVARD UNIVERSITY, CAMBRIDGE, MASS.

CHAPTERS FROM MODERN PSYCHOLOGY

By JAMES ROWLAND ANGELL, Head of the Department of Psychology in the University of Chicago. 8*vo. Pp.* viii+308. $1.35 *net; by mail* $1.48.

The material was arranged for presentation to a general college audience, and has, therefore, been freed as far as possible from the technicalities of scientific terminology. The attempt has been made to convey a just and comprehensive impression of the principal features of the psychology of to-day; but much selection among topics has been necessary, and this has been guided by a purpose to avoid the more abstruse aspects of the subject which are somewhat remote from the usual interests of the layman.

WILLIAM JAMES

By EMILE BOUTROUX, Membre de l'Institut. Translated from the second edition by Archibald and Barbara Henderson.

Crown 8*vo.* $1.00 *net.* $1.08 *by mail.*

"No clearer mark of the appreciation which William James has won outside of his own country is needed than this book. . . . That it should have been written by an eminent French philosopher and published in Paris such a short time after James's death was conclusive proof, if any were needed, of the great cosmopolitan influence exerted by the most notable philosopher this country has ever produced."—*Raleigh News and Observer.*

THE LIFE OF JOHN HENRY CARDINAL NEWMAN

Based on His Private Journals and Correspondence

By WILFRID WARD. With 15 Portraits and other Illustrations. In 2 volumes. 8*vo. Pp.* 654+627. $9.00 *net; expressage extra.*

This work is based on the very large correspondence of Cardinal Newman, collected for publication by the late Father Neville, his literary executor. Its interest is both historical and psychological. Historically it forms a sequel to the "Apologia." That work gave the story of Newman's attempt to counteract the incoming tide of rationalistic "liberalism" in religious thought by restoring to the Church of England the Catholic beliefs and traditions which it had so largely lost.

On the psychological side the letters reveal a singularly sensitive and complex mind and nature in one whose spiritual aims were absolutely single and simple. Both on the historical and on the psychological side the biographer has aimed at telling the whole story quite frankly and fully.

CHESS TALES AND CHESS MISCELLANIES

By WILLARD FISKE. With 16 Illustrations.

Crown 8*vo.* $1.50 *net; by mail* $1.65.

Published by **Longmans, Green, & Co.** 443-9 Fourth Ave. New York

NOTEWORTHY NEW PUBLICATIONS

INTIMACIES OF COURT AND SOCIETY

An Unconventional Narrative of Unofficial Days

By the Widow of an American Diplomat

The author of this book, who prefers to remain anonymous, has had very unusual opportunities for observing a side of the life of some European courts about which the public knows little or nothing. "Intimacies of Court and Society" presents, from an American point of view, the inner workings of European courts as they have never been presented by an American writer. *With numerous illustrations.* 8*vo.* $2.50 *net. Postpaid* $2.79.

A HISTORY OF ENGLISH CRITICISM

By George Saintsbury

Professor of Rhetoric and English Literature in the University of Edinburgh

This book is an indispensable complement to any history of English literature. 8*vo.* $2.75 *net. Postpaid* $3.00.

The Last Unpublished Works of LEO TOLSTOY

Publication in the United States Authorized by Arrangement with His Heirs

THESE novels, stories, and plays were written during Tolstoy's ripe old age, but not published, owing to the author's conviction that he ought to devote his whole energy to the promulgation of social, political and moral ideas. Called into being by the instincts, the habits and the genius of this master story-teller, they represent in the highest degree the work of the author of "War and Peace," "Anna Karénina," and "Resurrection." Matchless stories they are, founded some of them upon great crises of his life, others upon his own intimate family experiences, and told as only this giant among the novelists of the last century could tell them.

The Nation

NEW YORK, THURSDAY, FEBRUARY 15, 1912.

The Week

The Administration at Washington is to be congratulated. "Secretary of War Stimson has reached the conclusion that it will be unnecessary and unwise as a matter of policy for the United States to refund tolls to be paid by American vessels passing through the Panama Canal." Whether or not the "reserve" said to be made by the Secretary, along with this conclusion, is set forth with a view to letting the Administration down easy, it is unnecessary to consider too curiously. The "reserve" is to the effect that the United States, despite the treaty provisions for equal tolls to all ships, has "both legal and moral rights" to refund to American vessels the whole or part of such tolls. Well, it is possible that Mr. Stimson sincerely thinks so; but we hazard the conjecture that it is because of his conviction that the world at large will not share this view that he has come to the present conclusion.

The news from Florida and Georgia and Mississippi is that the Federal office-holders are nobly doing their duty in getting the Southern delegates for Taft. This must be very disgusting to the friends of Roosevelt. They may, however, find a cold consolation in the remembrance that, four years ago, Roosevelt himself was in the same way rounding up the Southern postmasters and collectors and marshals. But it is not a case to be dismissed by recriminations or by declaring that one Republican President is no better than another in this business. For years this scrambling for the Southern delegations in Republican National Conventions has been a scandal. States unable to cast a single electoral vote for the party's candidate are yet able to have an important voice, sometimes a determining voice, in saying who that candidate shall be. Nor do plans for doing away with the evil seem to make any headway. The proposal has frequently been made to base representation in the Convention upon the number of Republican votes actually cast. This would, of course, make impossible such charges as Senator Sherman brought against Alger in 1888—namely, that "he has bought up my niggers"—but the party has shown no real disposition to proceed along that line.

When is a Presidential candidate "withdrawn"? If he refuses to withdraw himself, can his friends or even his enemies perform that kindly office for him? These questions are provoked by the telegram which Senator La Follette sent to his Minnesota supporters on Monday. They had previously been informed by Gifford Pinchot that the Wisconsin Senator's candidacy could not any longer be pressed seriously. A doubt must remain how seriously Mr. Pinchot had at any time pressed it; but he had at any rate made many speeches for La Follette, and presided at the meeting in New York which the Senator addressed with more success than he did the Publishers' Association in Philadelphia. Consequently, his announcement that it was all over seemed to carry a sort of official weight if not finality. But now Mr. La Follette declares over his own name that he has not withdrawn and does not intend to do so. He adds meaningly: "No misrepresentation from whatever source can take me out of the contest." This seems to argue that the Senator is moved not only by ambition, or patriotism, but by wounded pride and a feeling of resentment. He has been reported as using privately some very bitter language about his treatment at the hands of Roosevelt, whom he represents as first urging him to stand for the Presidency and then proceeding to stick the brotherless spear in his back.

Gov. Wilson must now be prepared to face, for some time to come, the onset of indignant phalanxes of foreign-born Americans. It reads like a battle-roster out of Homer. One day the Poles came forward in protest. The next it was the Hungarians. The South Italians are gathering their forces. In close succession will come the Bohemians, the Sicilians, the Croatians and Slavonians, the Greeks, the Syrians, the Dalmatians, the Hellespontine Turks, and they that dwell by lower Danube, the Adige, and the Po. We do not know if the Arab and Hindu communities in this city read the *Evening Journal;* if they do, they, too, will hold an indignation meeting against Gov. Wilson. One might imagine that the ill-success of previous attempts to put Mr. Wilson in a hole by digging up the records of the past would have discouraged the present endeavor to sound a clarion note on the poor, dented, time-worn trumpet of race hostility.

Just what has happened in Missouri with reference to the Presidential aspirations of her two favorite sons is as doubtful as what is yet to come. While Senator Reed is blowing the trumpets at Washington for Speaker Clark as the sole survivor of the peace treaty concluded between him and ex-Gov. Folk, disturbing reports arrive from St. Louis to the effect, first, that, like Pope Alexander, the two rivals have divided Missouri between them, and, secondly, that the division is in danger of being disregarded by outsiders like Harmon and Wilson. The belligerent followers of the New Jersey Governor are said to have been making great headway already among the innocent and peaceable Missourians who loved an ex-Governor so well that nothing but the appearance of a Speaker could win them away from the pledge they had too fondly given the first suitor, and there are direful rumors that even the Speaker's loyal adherents have a second choice up their sleeves for use should occasion suggest the desirability of such a resource. This is all very sad, and illuminative of the new day in which politicians, along with the rest of us, are living.

Secretary Knox has chosen a propitious moment for setting out on a missionary trip to the Latin Americans, in the footsteps of Mr. Root. The situation in Mexico supplies this Government with an opportunity for impressing its friendly intentions upon our neighbors to the south. If the suspicions of the Latin-American republics are to be removed, if the basis of a lasting friendship is really to be laid, kindly professions on the part of our State Department must be followed up by good works. Mr. Taft's management of

the Mexican situation last year, after the initial error of the way in which our troops were mobilized in Texas, was admirable. In spite of provocation, in spite of jingo activity on this side of the border, the President held fast to the rule that to the Mexican people must be given a full chance to work out their own destinies.

"Who is John Hays Hammond," asks the New York *World*, "that the Administration should await a personal report from him to determine the correct attitude towards Mexico?" The answer is that Mr. Hammond is the latest striking exemplification of that unhappy choice of advisers which has been one of the tragedies of Mr. Taft's Administration. Rarely has a man of such good intentions as Mr. Taft been so badly served. We need not go back to the time of Ballinger and Pinchot and the others, nor even of Dr. Wiley and Solicitor McCabe, to see how sadly misplaced and abused the President's trustfulness has been. The Hitchcock episode has been accepted as constituting not a case of conspiracy, but of simple hard luck, in so far as Mr. Taft's prestige is concerned. But why borrow difficulties? Is it not enough that among his official subordinates he has had to bear with so much bad advice because of stupidity or treachery or departmental intrigue? Why should Mr. Taft turn for guidance in Mexican affairs to a man whose ability to take an unprejudiced view, and whose tenderness for the rights of small nations occupying territory rich in precious metals, were illustrated in the case of the Transvaal?

Gov. Harmon has been accused of being very guarded, not to say timid, in letting his opinion on political issues be known, but there was no lack of directness or courage in his address to the Ohio Constitutional Convention on Thursday of last week. Speaking to delegates, a majority of whom he knew to be hostile to his views about the initiative and referendum, he nevertheless expressed them with great plainness. He would, as indeed Gov. Wilson and all thinking men would, have the experiment undertaken very cautiously. First let it be tried in cities, and permit its use in the State at large only as a kind of "emergency" measure. In general, Gov. Harmon stood up for the conservative way of dealing with the amendment of the Ohio Constitution. Whatever may be thought of the position taken by him, he cannot be denied praise for boldly speaking out his mind.

Stirred to a high pitch of ecstasy by the Tariff Board's supposed finding that the wool-grower's profit on an ordinary suit of clothing is only 68 cents, and the manufacturer's profit is less than 20 cents, the *American Sheep-Breeder and Wool-Grower* chants the following pæan:

> The first paragraph in Frank Hagenharth's comment on the Tariff Board's report says: "After great travail, accouchement is accomplished, and the child has been christened 'Nevermore.'" He might have added the mother is saved, for, after all the foul and murderous attempts on her life by heartless and cold-blooded politicians, dishonest and cowardly magazine writers and publishers, supported by an unfair and sensational press, the wool industry still breathes to shame her traducers and vindicates her right to live in peace and security under the stars and stripes that wave over a thousand fleece-covered hills and countless busy spindles that grow and weave the wool to clothe ninety millions of the bravest and truest people on God's green earth.

The ninety million of the bravest, etc., will now be happy to contribute their 86 cents towards the nursing of an industry which, after half a century, still finds it impossible to raise wool cheaply, still finds it necessary to use foreign machinery, and, more than all, finds it necessary to make use of new and ever-shifting workpeople who do not come up to American standards either of efficiency or of wages.

One's disgust at the revelations of bribery in the election of 1904 in Delaware is mingled with admiration of the methodical way in which those interested managed it. If corruption must be, by all means let us have it done decently and in order. And so it is with a certain satisfaction that we read of such details as the keeping of a complete record of the "transactions" of the "distribution committee," of the careful sifting of the names on the voters' list, with the purpose of determining as accurately as might be the "floaters," and the nice discrimination that directed the payment of five dollars to negroes and ten dollars to their white compatriots. A particular reason for rejoicing in this elaborate management of vote-buying is the aid it must afford to the Senate sub-committee that is investigating it, and whose members must have a sense of relief as they contrast their task with that of some of their fellow-Senators who are trying to find out what happened in the case in which the bribers kept no records and apparently have no memories.

The death of Père Hyacinthe recalls memories of one of the most critical episodes in the history of the Catholic Church since the Protestant Reformation. In the protest against the decrees of the Vatican council of 1870 promulgating the doctrine of Papal infallibility, which culminated in the Old Catholic movement, Charles Loyson, generally known as Père Hyacinthe, was as much the leading figure in France as was Dr. Döllinger in Germany. The two men presented a striking contrast, the root of their influence in their respective countries being suggestive of the national characteristics of Germany and France. It was in virtue of his immense learning, and especially of the authority that was carried by the objections he urged against the infallibility dogma on historical grounds, that Döllinger's opposition exercised so profound and powerful an influence; while Père Hyacinthe's appeal lay in his eloquence and fervor. In Döllinger's case there was doubtless also much weight in the circumstance that he had established his theological eminence in his early career by writings of the most pronounced ultramontane character. At the time of the Vatican council of 1870, Döllinger was seventy-one years old; many years before that Heine had written of him:

> Lebt denn noch der erzinfame
> Pfaffe Döllingerius,
> Denn das ist doch wohl sein Name,
> Lebt er noch am Isar Fluss?

Loyson, on the other hand, was a liberal and a reformer from the beginning of his career in the church, and naturally entered with the greatest enthusiasm into a movement directed against ultramontane supremacy. Döllinger lived to be ninety-one, and his leadership of the anti-infallibility movement in Germany did not go the length that its ardent champions had hoped for; but Père Hyacinthe drifted further and further away from the Roman Church. The news of his death last Friday at the

age of eighty-four will be the first reminder that most people will have had for many years of his having so long survived the days when he was one of the leading figures in the religious world.

Lister's name will forever be linked with the origin and perfecting of antiseptic surgery, and for that reason alone his place among the benefactors of humanity is secure. In his long life he saw a wonderful development of his first ideas, but all modern surgeons act upon his principle that the great thing in operations is to keep the wound from being infected. Operating under the Listerine spray was long since abandoned for better methods, but progress has been along the lines indicated by him, and surgery is able to win its greatest triumphs by more and more reducing the danger of bacterial infection. In a recent address before the New York Academy of Medicine, Dr. Cabot of Boston unfolded the modern conception of the physician, not as a thaumaturgist, but as a student of Nature's ways who aided Nature to effect cures. He deprecated the talk about a doctor's "saving life," declaring that he himself could not be sure that he had ever, by his own skill pure and simple, saved a human life. But surgeons, he admitted, often save life, and Lord Lister, not only by what he did directly but by what he taught others to do, must be reckoned among the world's life-savers.

Mr. Schwab's declaration that he will sell out of the steel business if the tariff is cut down as proposed in the pending bill does not seem to have filled the country with dismay. Possibly this is due in part to the particular form of his warning; for the phrase he used was "cashing in," not "selling out." "Cashing in" sounds well, somehow; it has a prosperous ring. Another thing that may have detracted somewhat from the effect of Mr. Schwab's declaration is the pretty little revelation he made of his notions of a proper reward for the virtues and achievements of a captain of industry. Senator Stone having remarked that Mr. Carnegie had accumulated an enormous fortune, Mr. Schwab was prompt with the comment: "Not half as much as he deserved." Of course, it must be rather difficult to keep a tariff up to such a rate as to meet the requirements of justice from this standpoint, and the country will probably give it up as a bad job, even at the risk of losing Mr. Schwab's services.

Most of the provisions in the Home Rule bill as outlined by Mr. Churchill at Belfast have already been given to the public. It is on the financial problems involved that we receive more precise information than we have had before. Mr. Churchill estimates that if Ireland's contributions to the Imperial exchequer be balanced with Imperial expenditure in Ireland, the new Government will be entitled to an annual subsidy of ten million dollars. The operations under the Land Act, involving outlays that have run into the hundreds of millions and still demand the expenditure of large sums, will continue to be carried on by Imperial loans. It is upon this point that the Unionists base their charge that the British taxpayer will be called upon to bear the burden of Irish reforms. That, however, is to take a narrow view. If Great Britain and Ireland were two partners in a cold-blooded financial transaction, it might be proper enough to balance dollars against dollars. But on all sides it is recognized that here is an undertaking of profound importance, having for its object the removal of the festering sore of Irish disaffection and the establishment of Ireland as a happy and contented member of the Empire. In the long run the proposed arrangement will justify itself even from the pecuniary standpoint. It would be against all the teachings of history if the establishment of a government in accordance with the desires of the people of Ireland should fail to bring with it an increased vigor of economic life.

To the extent that the religious question enters into Ulster's opposition to Home Rule, it would be well if the spectre of Papal domination might be laid once for all in Ireland by some bold move on the part of the British Government. Undoubtedly the British Nonconformist's fear and distrust of Rome are not extinct. They reveal themselves even in England, where no particular political complications are present to intensify the bitterness of sectarianism. The "Papist" tradition persists. But the existence of that feeling has not interfered with the granting of full equality to Roman Catholics in England, nor has it gone to the extent of raising any outcry against the steady progress of the Catholic Church in that country. At the formal entry of the recently created Cardinal Bourne into the Cathedral of Westminster, distinguished non-Catholics were present. For in England men have realized, as they have done in nearly every country on the Continent, that the domination of Rome in politics is no longer possible. Where politicians for their own ends have succeeded in tying up the Church with their own propaganda, the Church has had to pay a bitter penalty, as in the case of France and of Portugal. The same would be true of Ireland. Any attempt to oppress the Protestants of the North is inconceivable. Protestant distrust is an inherited delusion which a policy of just firmness may banish.

The *Frankfurter Zeitung* estimates that in the recent Reichstag elections there were cast four and one-half million votes for the old Conservative-Centrist alliance, and seven and a half million votes for the parties of the Left. In spite of this enormous difference, the Left has a meagre majority of five votes in a Reichstag of 397 members. There has been no reapportionment of electoral districts in Germany since 1869, when the rule of one Deputy to every 100,000 of the population was adopted. The population has increased more than 60 per cent. since 1869, there has been a tremendous influx of population into the cities, but the Conservatives and Centrists, with their strength in the rural districts, have refused to discuss a reapportionment. The average number of voters to the district in Conservative East Prussia is 121,000, and in Socialist Berlin 345,000. The twelve most populous districts represented in the Reichstag contain 1,950,000 voters. The twelve smallest districts contain only 170,000 voters. In other words, it takes twice as many votes to elect a single Deputy in Berlin as it does to elect twelve Deputies in the backwoods districts. In the face of such gross inequalities, declares the *Frankfurter Zeitung*, Liberals, Radicals, and Socialists ought to join hands for an immediate reform without giving thought to fundamental differences of party principles.

A TEST OF THE NATION.

One hears and reads many complaints of the intolerable burdens of "Presidential year." As the traditional but more or less mythical disturber of business, it is, by hypothesis, anathema to the commercial classes. And many others are found to deplore its preliminary hubbub, its continued clamor, and the absorptions by which it tends to drive out of the public mind other legitimate and even pressing subjects of general interest. This dislike and impatience are not wholly passive. Various proposals are made to end the nuisance. Lengthening the Presidential term to six or eight years is a favorite expedient with some. Making Presidents ineligible for reëlection is the happy-thought solution with others. But the chance of getting either thing done is commonly admitted, even by those urging it, to be very slight; and it all passes as a part of the vague dissatisfaction with our present system, and as only one more form of groaning over the follies and the dangers of "Presidential year."

Well, evils that can't be cured must be endured; and there is no more ineffectual man than he who rails at conditions in public life which he grants cannot be changed. Doubtless an angel descended from Paradise would, if he could have his way, give the United States a better system of choosing Presidents than we now have to put up with. It may be that the fathers and framers, if they were to try again, and had a free hand, would hit upon a more excellent way than the one they gave us. But here we are with the thing as it is upon us, and it is as unmanly as it is idle to whine about it. If we can't get rid of it, all that is left for us is to work with it as well as we can. It is a part of that "manners of liberty" with which, as Jules Lemaître has observed, the modern man may not be wholly in sympathy, but which he is a fool if he does not accept as gracefully as possible.

And if we look at the matter in a more generous and hopeful spirit, we may easily discover compensations and even positive benefits. All the long political manœuvring and turmoil of our Presidential elections ought to be regarded as a means of political education for the people. Who will undertake to provide it in any other way so effectively as in this? There is agitation, to be sure, but agitation means that many minds are attent to form new ideas and to learn something of value. The immenso hurly-burly of a Presidential campaign is not merely sound and fury signifying nothing; it is a call upon the democracy to think and to decide. The thought may often be confused or sadly astray, for a time, and the decisions ill-founded, but there can be no doubt that Presidential year causes thousands of citizens to apply their minds to politics who would not otherwise give it a serious thought. And that is the great thing in political education as in all other—to induce men to exercise their powers of reason. That they will think right in politics, we know of no means of guaranteeing, any more than in æsthetics or religion; but to rouse them to intellectual activity is the first desideratum, and the quadrennial contest for the Presidency unquestionably does that widely in this country.

Instead of bewailing the trouble and uncertainties of Presidential year, we may boldly hail it as a recurring test of the stuff that is in the nation. You will meet querulous people who exclaim at the vast masses of humbug which are flung out by the eruptions of a Presidential campaign. How on earth are ninety millions of all sorts and conditions of men going to discriminate between what is sound and what is specious in the political arguments and appeals directed to them? Well, the critics, of course, think that they themselves can discriminate. How did they acquire the power to do so? Only by hearing and reading and reflecting. But it is the extension of those very processes to the masses that is, to a certain extent at least, involved in all the prolonged and formidable efforts put forth to elect a President. Many voters will, concededly, be deceived or left groping. But the main thing is that an appeal is addressed to their intelligence. They have a state of facts set before them upon which to meditate and from which to draw conclusions leading to action. Is not that a valuable political training? The Presidential election may be conceived of as a kind of national examination. How are the pupils in the school of democracy getting on? Have they learned to rise above prejudice and to seek the general good? Can they distinguish between a charlatan and a real man, between the demagogue and the genuine leader? Teachers in any school would welcome such an opportunity to ascertain in so practical a fashion how deeply the ideas which they had sought to impart had taken root in the minds of their students. Why should not those who in varied ways are laboring to educate the American democracy be equally pleased when the occasion comes to discover whether the scholars are really advancing?

We can easily understand why fastidious minds should shrink from the rude contacts and the rough voices of our great political contests. Why those whose faith in the democratic movement is growing cold should also dread the committing of such great issues to so vast an electorate, we can also understand. But whether we like "Presidential year" or not, here it is upon us; and whether our part in it be large or small, we may confront it, not simply without fear, but with a positive zest, as furnishing proof of our national quality. Let the difficulties and perils be magnified by doubters to the top of their bent; if the fact appear, as we confidently believe it will, that our surging democracy is able to grapple with them and surmount them, the persisting fibre of the country will by so much the more have been triumphantly demonstrated.

QUOTING LINCOLN.

The Colonel had a bully time the other day reading to the reporters extracts from Lincoln's letters and speeches. This is the great advantage of a politician who is also a profound historical student. For anything that he does or refuses to do he can find a precedent in Lincoln or Washington or Louis IX or Thothmes II. And it was with as much appositeness as glee that the Colonel produced a letter going to show that Lincoln, too, declined on one occasion to make an "explanation" which would only enable his enemies to have "a squabble and a fuss." It will be noted, however, that Lincoln wrote to McNeil, "I have made this explanation to you as a friend." From this the natural (if mistaken) inference would be that the Colonel had already made his own "explanation" to his sworn friend in the White House. Surely, D'Artagnan must have let Aramis know what he was about!

It cannot fail, however, to occur to any one who recalls 1864, when it was a question of another Republican President being renominated, that the man who can to-day with most force and point quote Lincoln is not the Colonel but President Taft. For Lincoln also had a bitter and designing enemy in his own household. The Colonel ought really to refresh his memory in regard to Chase's efforts to undermine Lincoln and to wrest the nomination for the Presidency from him. In Chase's case, too, personal hostility to the President sprang partly from appointments to office. Nicolay and Hay record the facts in regard to Lincoln's restoration of Frank Blair to command in the army. This was in 1864, and Lincoln's biographers remark:

> The result was most unfortunate in its effect on the feelings of Mr. Chase. He was stung to the bitterest resentment. . . . From that time he took a continually darkened view, both of the President's character and of his chances for reëlection.

We hear to-day many assertions that President Taft "cannot be reëlected." On this rock the Roosevelt League is built. But Chase was even more sure in 1864 that Lincoln could not be elected. That was one of the reasons which Nicolay and Hay assign for his own "quasi-candidacy," as they call it. For Chase, too, was for a long time able to say that "no man was authorized" to say that he would be a candidate against Lincoln. But in 1864 also the existed (in the Secretary's mind) be "emergency" which might lead him ish- consent to the use of his name i- them sponse to a "spontaneous demand Expert people." While those hopes faded uct of Baltimore Convention of 18- radical nigh, Chase remained firmly f the nor- viction at that time that Li- here forces ination was a "mistake," nd, and that number seems to be inc- ishness (super- wrote, of those "who -ess, the diction- his nomination in ar- Vells himself will

Friends of Presid- s become too dulled Lincoln's biograp- of this subject to be for pausing with- vice in the cause. Lincoln's biographers also speak of Mr. Chase's "wounded self-love," which could "find no balm" in the President's steady march to renomination except in the assertion, which is echoed to-day in Rooseveltian circles, that through "the systematic operation of the Postmaster-General and those holding office under him a preference for the reëlection of Lincoln was created."

Yes, the man really to quote f- ni- Lincoln is Taft. It is to be hope- urse the later President is able to be- icance of and large minded as was the ot so much dealing with an insidio- should have The movement for Mr. hy to a repub- Lincoln long went o- have shown such with the disclaimers - for change at all. with which we are -g trained in the no- familiar. Such talk as there led the S- awakening East always set write at - the principle that it would ing that - a real awakening, but a sort of name - ized activity for which the Euro- public- nations were to furnish the mo- a p- power. Yet the records of the Lir- xt few years may very well show a w- iew democratic movement in Russia, or perhaps even in Germany, urged on by the example of China.

And yet what the scholars know of Oriental history and the rise and fall of Asiatic dynasties might have made the recent trend of events in the Far East more comprehensible, if it were not for the specious journalistic formulas of the Rudyard Kipling type. The fall of the Manchus was so easily accomplished because the Chinese throne, like the ancient Asiatic monarchies, stood apart from the national life and held its place by mere inertia. The peoples of the East have seen dynasties come and go with indifference, have even at times welcomed the foreign conqueror, because the tradition of Oriental monarchy has been to seclude itself from the crowd, to resolve itself simply into a tribute-collecting organ, with little concern for the way in which the masses were governed or were not governed so long as no uprisings against the tax-collector occurred. Opposed to this historical fact was the historical theory upon you by my instigation or with m- countenance. - is the

WHERE CENTRALIZ- -nstitute a de-

H- -e. It was inertia

There are -ory in abeyance. Once two pron- -s aroused to a sense of its new p- the weakness of the throne ter- -ds revealed. Under the old régime -- was the policy at Peking to play off one semi-independent viceroy and province against another. When the provinces joined hands against Peking, the throne was in no position to resist.

It is the loose-jointed, decentralized system that supplies China with one of her principal qualifications for a republican form of government, and especially for the scheme of a federative republic such as the revolutionists are reported to have drawn up. If China had been a highly centralized despotism like Russia, one can see how the abrupt attempt to substitute a self-governing republic might easily come to grief. But every one of the eighteen Chinese provinces has had immemorial training in self-government, to the extent that it has learned to look to Peking for little and to its own provincial capital for nearly everything. That the provincial administrations have been inefficient and corrupt is beside the question. That was the inevitable result of the old Oriental system by which a Viceroy bought his office at Peking and proceeded to recompense himself at the expense of his subjects. The important fact is that the new republican Government will not be compelled to take upon itself at once the immediate concerns of 400,000,000 people. The new régime can concentrate its attention on the task of building up a firm national framework, of reëstablishing peace, and of winning over the disaffected elements to the republic.

At the same time, the inorganic nature of the Chinese political system contains in itself a serious element of danger, from the point of view of China's relations to the Powers. A loose-jointed republic of semi-independent provinces is not the best kind of government to make headway against foreign aggression. Upon the attitude of the Powers the immediate future of China largely depends. In plain words, the Chinese must have a chance to show what they can do. And this does not mean merely that the Powers must re-

all respects, of their deficiencies in the guarding of the public health—these, and many other activities, would, under competent management, soon convince the country of the beneficent nature of the new agency.

In many of the things most vital to the public health, there is, of course, a large range of difference among the different parts of the country. Much of is is inevitable, being due to widely ing conditions; but a considerable it is removable, and its remov- d be incalculably promoted by atic diffusion of knowledge t. For a city merely to be er month, and year after publications that go the land, that it has typhoid as some sis- it, as hardly any- tir itself to mend ere are furnish- accurate data of the trou- dy, the way ry reform. score of d know- e lives leave eter- ion o-

necessity of labor among the chief evils of the present system to learn that the socialistic state is to be conducted without any specific laboring class. The spice of variety in occupation is to become "a proper circumstance in the life of every citizen," and the Great State will put the stamp of its approval rather upon "a certain amateurishness in its service" than upon the trite omniscience gained by long experience in the same kind of work. There shall be no class of men tied down to the soil, year in and year out. Rather, when gentle spring presents her shining face, shall crowds of jolly men, women, and children sally forth from the city, with short hours and good pay, to spray the trees, to pick and sort and pack the fruits, and to "steer cattle and sheep around carefully planned enclosures." Their summer, with the evening amusement in the camp, will be one long picnic of which the Kent hop-pickers from the East End of London can give us only a mere hint. "Machines in the hands of highly skilled men" will minimize toil until "no man will shove where a machine can shove, or carry where a machine can carry."

Has not Mr. Wells, however, slipped a little here? In the highly skilled man in charge of machines have we not lugged in at the barnyard gate that very "trite omniscience" which had just been pitched over the front fence? No, if we cannot all of us have our turn at those machines and contribute here, as well at the spade-handle or the teacher's k, our share of that "certain ama- shness" which the state is to value hly, the equality promised to us elusion and a snare. And this ishness must also go into the nd making of those machines eir running. Mr. Wells sees nough in the most impor- of all—that of the so- ment itself. "Nothing an that the necessary nment must be elab- prevent the devel- caste." Of course, rate organizing th of time re- same indi- arge of it ower of the de-

permanent conspiracy, tacit or expressed, against the normal man."

For the work which is really difficult and disagreeable, Mr. Wells would provide by some form of conscription, which will require each able-bodied person to give a certain period (a year is tentatively suggested) to such tasks in the service of the state. What work is truly unpleasant enough to necessitate this drastic resort, at war with the otherwise untrammelled freedom which we are told to expect, Mr. Wells does not specifically indicate. Possibly that is one of the points in which we are told that the believer in the theory of the Great State will display "a jealous watchfulness of contemporary developments rather than a premature constructiveness." Still, the question gives us pause. With a comfortable minimum of support guaranteed to every one, upon which he may live and do nothing if he shall choose, we are not certain that the kinds of work rough and disagreeable to prospective workers would not loom up to a disconcerting aggregate. Who shall decide for another, in the realm of gladsome socialistic freedom and brotherhood, that a given task is not irksome? And if virtually all work goes into the heap to be taken care of by proscription, the tentative year's conscription of Mr. Wells lengthens out into a very considerable portion of one's active lifetime, and we have nothing but a state slavery in the end.

Evidently, this matter will have to be arbitrated by men whose amateurishness is so pronounced as to raise them above all suspicion of that Expert Knowledge which, as the product of "officialdom," is sure to be in radical conflict with the aspirations of the normal man. Another question here forces itself rudely upon the mind, and that is whether the amateurishness (superficiality, or defectiveness, the dictionary calls it) of Mr. Wells himself will not one of these days become too dulled by constant study of this subject to be any longer of service in the cause. From a socialism cursed by that withering quality which is called Expert Knowledge, "in much the same spirit of qualification," Mr. Wells tells us, "as one speaks of German silver," may all the deities of socialistic progress defend us! But far be it from us to intimate that Mr. Wells has not as yet an abundant supply of that amateurishness from whence cometh our salvation.

A REPUBLIC IN CHINA.

The closing of an unbroken historical epoch whose records stretch back for more than three thousand years is a sufficiently solemn event in itself, without taking account of what the effect will be on the future of China and of the world. That the erection of a Chinese republic will react, in the course of time, on affairs outside of Asia, there can be little doubt. The significance of the revolution in China is not so much that this ancient Empire should have changed from a monarchy to a republic, but that it should have shown such remarkable capacity for change at all. We have been so long trained in the notion of the peoples of Asia as a negligible factor in the historical evolution of the future that it is still difficult to reconcile one's self to the meaning of events in the Far East during the last half-dozen years. Such talk as there was of an awakening East always set out from the principle that it would not be a real awakening, but a sort of galvanized activity for which the European nations were to furnish the motive power. Yet the records of the next few years may very well show a new democratic movement in Russia, or perhaps even in Germany, urged on by the example of China.

And yet what the scholars know of Oriental history and the rise and fall of Asiatic dynasties might have made the recent trend of events in the Far East more comprehensible, if it were not for the specious journalistic formulas of the Rudyard Kipling type. The fall of the Manchus was so easily accomplished because the Chinese throne, like the ancient Asiatic monarchies, stood apart from the national life and held its place by mere inertia. The peoples of the East have seen dynasties come and go with indifference, have even at times welcomed the foreign conqueror, because the tradition of Oriental monarchy has been to seclude itself from the crowd, to resolve itself simply into a tribute-collecting organ, with little concern for the way in which the masses were governed or were not governed so long as no uprisings against the tax-collector occurred. Opposed to this historical fact was the historical theory which in China, at least, has always been recognized, that the monarch is the servant of the people and that misgovernment may in itself constitute a default of the ruler's title. It was inertia that held this theory in abeyance. Once the people is aroused to a sense of its wrongs, the weakness of the throne stands revealed. Under the old régime it was the policy at Peking to play off one semi-independent viceroy and province against another. When the provinces joined hands against Peking, the throne was in no position to resist.

It is the loose-jointed, decentralized system that supplies China with one of her principal qualifications for a republican form of government, and especially for the scheme of a federative republic such as the revolutionists are reported to have drawn up. If China had been a highly centralized despotism like Russia, one can see how the abrupt attempt to substitute a self-governing republic might easily come to grief. But every one of the eighteen Chinese provinces has had immemorial training in self-government, to the extent that it has learned to look to Peking for little and to its own provincial capital for nearly everything. That the provincial administrations have been inefficient and corrupt is beside the question. That was the inevitable result of the old Oriental system by which a Viceroy bought his office at Peking and proceeded to recompense himself at the expense of his subjects. The important fact is that the new republican Government will not be compelled to take upon itself at once the immediate concerns of 400,000,000 people. The new régime can concentrate its attention on the task of building up a firm national framework, of reëstablishing peace, and of winning over the disaffected elements to the republic.

At the same time, the inorganic nature of the Chinese political system contains in itself a serious element of danger, from the point of view of China's relations to the Powers. A loose-jointed republic of semi-independent provinces is not the best kind of government to make headway against foreign aggression. Upon the attitude of the Powers the immediate future of China largely depends. In plain words, the Chinese must have a chance to show what they can do. And this does not mean merely that the Powers must re-

frain from direct plotting against the republic, or from plunging into a furious game of land-grabbing. There must be patient forbearance on the part of the Powers in recognition of the immense problem that confronts the new Government and of the inevitable unrest that attends a period of transition and upbuilding. There will, in all probability, be local disorders; there may be pillage of foreign property; there may be danger to the lives of foreigners. If the Powers hasten to take advantage of such disturbances to harass the new republic, if they set out to cripple the republic's finances by demands for huge indemnities, the Chinese republic may well go the way of Persian independence under the beneficent supervision of Russia and Great Britain.

Any prediction as to what China's transition period will bring forth is perilous. The republic may prosper from the start. It may experience the common interlude of military dictatorships and civil war. It may bring a new monarchy, Chinese in nationality and constitutional in form. But the door seems to have been definitely closed on the past.

INTEREST IN POETRY.

The feeling is abroad that the relish for poetry is fast declining. Few find opportunity to pick up Keats or Wordsworth from one year's end to another. Much the same, however, is the case with classic prose. It, as also great poetry, is supposed to be read in school and college, and for the large majority this early experience with them virtually has to suffice for life. The thing that gives particular alarm to some is that contemporary verse, of which there is a large quantity, finds a very poor market. Whereas trifles in fiction are sought by publishers, writers of verse have almost always to stand the cost of getting it out themselves. To that extent, at any rate, poetry has not become commercialized.

We believe, nevertheless, that the cause of poetry is not quite so hopeless as it is pictured. It is hazardous to say that so fundamental an instinct as that for rhythm is dying out of the human race. Besides, the spectacle of Kipling's popularity is but a short way back, and there are other recent instances of the public rallying about the early promise of a poet, reading him with avidity, and eager for the time when he might be added to the gallery of great artists. Stephen Phillips was one. In "Marpessa" and "Paolo and Francesca" there were lines that gave almost universal delight; the chance of having another Keats among us seemed to many not unlikely. It is safe to predict that when a truly great poet arrives he will be properly acclaimed, even in this twentieth century. Even poets of lesser rank need not despair. They might learn much from Kipling's success. He himself said that he could handle his style; and certainly his message was so strong and taking that it forced itself upon the reading public. There was in his case that adjustment between worker and medium through which even the common idioms of the language—because they are not strained—glow unusually; but that broad lesson was lost upon a host of writers who, with nothing very emphatic to say, still pounded away and were surprised that they were not caught up with general applause. Any one who follows the verse that is coming out must be aware that writers are seldom born to their manner. A neatly turned sonnet appears from time to time, together with a multitude of short "conceits," well enough in their way but sounding not at all inevitable. For the rest, there are, aside from the dwindling imitations of Kipling, vague experiments with that fringe of consciousness and transitory soul-stirrings which to be felt significantly must be conveyed in literary expression that does not falter.

Writers have seemingly forgotten that poetry as well as prose must have style. In the days of Pope that fact was generally known, perhaps too well known, and fine poets ever since have appreciated it. But the reaction which followed upon the eighteenth-century manner has left to-day the false impression that poetry is freed from the necessity of keeping to any very definite form. Wordsworth, by the inconsistency of his theory and practice, may have helped to bring this about, but chiefly the multiplicity of metres which were practiced in the nineteenth century has tended to bewilder young poets and to keep those having something worth saying from hitting upon ways to bring it out clearly. Poetry, we often hear, is free and has countless tongues. Wordsworth wrote of the skylark in one metrical scheme, Shelley in another. Ideas are welcome in any poetical form, provided they make themselves felt; but with so many forms at hand it requires a master's instinct to select aright. Metre is only a part of poetic style, yet a sharp restriction placed upon it just now would undoubtedly foster an instinct for the other elements. Whatever the disadvantages of the heroic couplet, with its often monotonous pulsations, through it at least Pope and his followers got masterly control of their ideas.

A good test of the question whether style is present in verse is its degree of quotableness. How much of what one sees to-day in the periodicals and tenderly planned little volumes of verse lingers in the memory—this in spite of the fact that some of it causes astonishment by its ingenious fancy? Poets may reply that their subjects are not of the sort which people talk about—the sun setting or rising, man's brief moment of life, etc. The answer is that Shakespeare's best-known lines often deal with the most intangible phases of existence. Quotableness means that poetry is fulfilling its function of stirring a man. Present-day verse needs, for one thing, epigrammatic force. While the essay has adopted that means, poetry too often wanders after the exquisite, the elegant manner. There was more than passing significance in the zest with which the public seized upon Kipling's recent line, "The female of the species is more deadly than the male." Whatever its truth, it phrases aptly the relation to which much thought is given these days. For want of like matter, people fill their memory with jingling advertisements.

The discipline which would be wholesome for verse, and which seems necessary before any considerable body of it will make a powerful appeal, cannot, of course, be prescribed. To-day, as formerly, true mastery must come to a writer finally through his own gropings; but no writer is likely to achieve it without the conviction that style is as essential in good poetry as in good prose, even though less evident, and that he must choose the style which shall intensify and not dilute his personality.

GEORGE BERNARD SHAW.

Mr. Henderson's biography of Shaw is a portly volume of five hundred and four pages, lavishly and in part excellently illustrated, freely annotated, amply indexed, trebly prefaced, bristling with facsimiles, supplemented with a family tree, and launched, at last, with the promise of an appendix in a separate volume.* The author's extraordinary industry, his skill in extracting from contemporary literature, both English and foreign, the pithiest comments on a man who possessed in a high degree the Falstaffian property of evoking wit from others, and, above all, his intimacy with Mr. Shaw himself have enabled him to freight his work with merchandise of indisputable value. Mr. Henderson's gift is accumulative rather than selective, and his material interests us a good deal more than his efforts to assay or classify it. He calls his work "a critical biography," but the criticism is confined to the literature—a restriction adverse to symmetry; and, even in this field, his judgments, though often sound and sometimes discriminating, are inferior in interest to his facts and his citations. His style is of that average grade which would find a defense or at least a shelter in the exceptional interest of his material, if he would not remind us of its mediocrity by his efforts to assert its distinction. He is still young enough to learn to smile (or to shudder) with his readers at expressions like "delineated portrayal," "enthused," "frantically complex," "cranky immoralist," "a phenomenally clever dilettante in novelism."

I.

There are telltale brevities and eloquent omissions in Mr. Henderson's work which favor the conclusion that Mr. Shaw, by eccentricity of temper or peculiarity of experience, was shut out from about four-fifths of what constitutes for normal men the real interests of life. We see first the almost certain lack of any genuine home life in childhood and youth; the postponement of marriage to a late period when character had ceased to be plastic; the want of children; the failure to mix in ordinary, to say nothing of fashionable, society; the self-confessed absence of any patriotism for either his native or his adopted country; the apparent poverty of religious emotion; the austere and vegetarian proclivities which debarred him from those animal enjoyments which help so much in making men intelligible to one another. The aloofness of the most extreme of the moderns from the life of his time, though explained perhaps by the suggestion that his modernity consisted of his repudiation of the normal, remains exceedingly remarkable; and it helps to explain another equally remarkable fact in Mr. Shaw as a man of letters—that a man with perhaps the best pair of eyes and ears in England and possessed of a passion, almost a mania, for truth-telling, should have produced works whose deviations from reality might rouse astonishment in a dullard or a child.

The human spirit in other men is legible to us only through symbols, through speech, bearing, action; observation grasps the symbols only, and their meanings must be referred to those powers of interpretation whose range is determined by our internal experience. Mr. Shaw interprets other men in terms of Shaw, and the distance between Shaw and other men perverts his interpretations. The first man waiting for a tram-car on a curbstone, without one-twentieth of Mr. Shaw's alertness of vision or knowledge of history and affairs, is master of an intimacy with life which the author of "Candida" and "Mrs. Warren's Profession" is powerless to acquire or to conceive. Mr. Shaw cannot even understand the favorite objects of his own assault and denunciation. He besieges us with diatribes against convention, but of the fixity and finality of the grip laid by that force upon its votaries, its arch-enemy and censor has not the faintest idea. His conventionalists, Sergius, Morell, Ramsden, Sir Howard Hallam, capitulate after what Mr. Shaw sincerely believes to be a hard struggle, but what every normal reader knows to be an unnaturally and laughably ineffectual resistance. To Mr. Shaw convention is bluff; for most people it divides with matter the honor of being the really solid thing in life. For the characters in these plays society was framed yesterday; its structure is an impromptu, erected on trestles, so to speak, replaceable to-morrow or next day by another and more commodious impromptu. The persistency and the pugnacity of a habit in an individual or of an institution in the social framework lie outside of their boldest conjecture.

II.

It is in characterization proper, however, that the mixture of truth and error in Mr. Shaw is most conspicuous and astonishing. Never, perhaps, was a gift for drawing men so brilliant and remarkable hampered by inhibitions so startling and so extensive. Mr. Shaw's walk and conversation have apparently never brought him into contact with what we Americans ingenuously call "a nice girl": the nearest approach is in Lady Cicely Waynflete, a delicious impossibility, past thirty. He has never encountered a young man whom he and the reader can agree in calling attractive, and he draws young fellows like Valentine and Charteris without the faintest surmise that their place is in the Zoölogical Museum. He cannot draw an attractive wife and mother. If he stumbles upon a character in the educated circles whom we might find likable if we were let alone (Cuthbertson, Morell, Hector), he pulls our sleeve at every other minute to remind us that this person (and his admirers) are intellectually contemptible. The educated characters are for Mr. Shaw only incidentally human: primarily, they are either expositors or exemplifications, for good or evil, of the truth of his social propaganda.

But let Mr. Shaw light upon a character who is fortunate enough to lie within the range of his experience and outside the pale of his theories, and where among living writers shall we look for delineations more faithful, more vivid, more impartial? In the presence of a footman, a waiter, a chauffeur, a portress, he forgets his Schopenhauer and his Nietzsche, and dips his pen into the inkstand of Thackeray or Dickens, to produce the excellent Nicola, the consummate Straker, the irresistible Emmy, and the ineffable William. Scoundrelism of the earthy type, reeking with gross health and redolent of vile prosperity, he paints with a sureness and force that raise Mrs. Warren and Sir George Crofts to the rank of undoubted masterpieces. It is this faculty that vitalizes his Napoleon; and in his Cæsar—a man of quite another mould—he has achieved a figure which as Julius Cæsar is grotesquely impossible, but which as a mere man is among the most lifelike and suggestive delineations on record. On a lower plane he can draw characters of a telling but tricky incisiveness (Vivie, Philip, Burgoyne, Tanner, Lady Britomart) and admirable burlesques (Bohun, Bloomfield-Bonington) in which comedy skirts the boundaries of farce. The matter may be briefly put thus: Mr. Shaw can draw superbly any character which is pervious to his intelligence and at the same time impervious to his personality; the subtlest of men, he succeeds best with those simple characters into which the infusion of his own subtlety is impracticable, and his gift is surest when a wide distance either of social rank (William) or moral plane (Crofts) or time and calling (Cæsar) divides the sitter from the artist.

III.

In the field of pure drama we find the same correlation of superlative merit and incorrigible defects. Against the seriousness of purpose which dignifies even the lightest of the plays we must set the lawlessness of a thesis which rejects the limitations of art, and, like the coach on the field during the game, violates all the decencies by assuming the public direction of acts of which it should be only the secret incentive. An incomparable eye for truth, in both ac-

*George Bernard Shaw. By Archibald Henderson. Cincinnati: Stewart & Kidd. $5 net.

tion and character, is half neutralized by a mental bias which permits not merely the view, but even the vision, of life to be warped by a confined experience and an obtrusive philosophy. Mr. Shaw is not a born story-teller and tolerates plot as a necessary evil. There is no instance of a strong story evenly sustained: we find stories that are merely dilated or diluted situations ("Candida"), stories of great initial promise ravelling out in the sequel ("You Never Can Tell," "Arms and the Man"), stories shredded into mere incidents ("Caesar and Cleopatra"), stories successfully evolved but burlesqued in the telling ("The Devil's Disciple," "Captain Brassbound's Conversion"), stories too scant for their frame and eked out with superfluous characters or double plots ("Mrs. Warren's Profession," "Man and Superman"). On the other hand, Mr. Shaw's treatment of incident is masterly; he is expert in evoking phase after phase from a living, growing, procreative situation. This plasticity is referable to a like trait in the characters, who are persons of quick and various, if not profound, sensibility, as prompt to shift their own moods as to recognize changes in the attitude of others. No one who does not confuse feeling with passion need feel bound to deny its presence in Mr. Shaw. The Hibernian warmth of his temper, which makes his very logic exhilarating, transforms even a theoretically quiet dialogue into an endless play and counterplay of varied emotional reactions. Add to this the creative eye, and the proof of Mr. Shaw's consummate faculty for bringing out the dramatic possibilities of single scenes or situations is complete.

The prime object in drama—the giving of transcendent sharpness of definition to the wedge formed by two converging and powerful alternatives—Mr. Shaw has achieved once consummately in "Candida," again with abated power in "Mrs. Warren's Profession," and again with much less sharpness in the "Doctor's Dilemma"; elsewhere the end is not attained. The technique is rather dainty than robust. To Mr. Shaw as to his archetype, Ibsen, the articulation of details is a matter of higher obligation than the exclusion of a superfluous person or a detachable underplot. Between the hatred of crudity and the equally intense hatred of the obvious remedy for crudity, to wit, artifice, the path of the modern technician is as straitened as the Biblical way conducting (by an omen propitious to authors) to eternal life. Few of Mr. Shaw's stories, under an absolutely inartificial treatment, would occupy the time needed for a play, and, if artifice be disowned, wadding is the alternative. Mr. Shaw's obligations to coincidence are considerable, and his reckless mixture of *genres* in the same work reminds us of the dictum in his eugenics that the greatest freedom of intermarriage is conducive to the vigor of the offspring.

On the score of dialogue, even if we leave humor out of the reckoning and deduct all we please for occasional rant, rhetoric, and prolixity, to what other works in modern drama, English or Continental, can we point for so exquisite a reconcilement of the competing and conflicting claims of literary art and of the spontaneity of nature? Mr. Shaw's language as far outstrips Ibsen's in pliancy, felicity, and grace as it leaves Sheridan and Goldsmith hopelessly in the rear in point of racy movement and unfettered impulse. Its ease is the justification of its craft.

What shall be said in summary of Mr. Shaw's dramatic claims? From a purpose generative of seriousness but hostile to art, from a love of truth finding parallel outlets in impressive realism and flagrant misconception, from inexpertness in plot and mastery of incident and situation, from a technique rather elegant than vigorous, from high but sparingly exercised powers of concentration and climax, from humor that has become a proverb and a commonplace, from dialogue of unsurpassed trenchancy and felicity—only one inference can be drawn. The author must be relegated to the second rank, but his adhesion makes the second rank illustrious.

IV.

Mr. Shaw's attitude towards morality and the chivalric and romantic ideals is distinctive enough to claim a word in the briefest review of the man's work and spirit.

The repudiation of morality, virtue, and duty has proved in Mr. Shaw's case one of the most effectual compensations and consolations for the shortcomings of this earthly life. The totality of these disavowals is nevertheless a ground of reassurance. Condemnation of morality *en bloc* is commonly as harmless as condemnation of food or literature or human nature *en bloc*. Mr. Shaw's censures of virtue exhibit every trait that should quiet the doubts of the anxious conservator of the moral law: the sweep of the assertions, the loudness of the enunciations, the eagerness to repeat, the slowness to define, and the reluctance to specify. Again, his most reckless characters, his most daring situations, are never safe from a relapse into decorum, a backsliding into goodness. The riotous "Philanderer" concludes by marrying off the social rebel and sending levity and lewdness about their business; the bedroom scene in "Arms and the Man" might give lessons in propriety to many stage drawing-rooms; the advanced young woman in "Mrs. Warren's Profession" winds up her professions of liberality by treating her mother in the precise fashion that would have been approved by Miss Elizabeth Bennet and Miss Kate Nickleby; the "Devil's Disciple" serves the devil after the fashion of Sydney Carton; the outrage so energetically defended in "Man and Superman" is swept aside to be replaced by a legal marriage; the freebooter in "Major Barbara" turns philanthropist, and the orgy called "Getting Married" ends in homage to the legalities it has contemned.

If we ask Mr. Shaw to define the immoralities which he sanctions, he replies thus:

> I am myself . . . a liar, a coward, a thief, and a sensualist: and it is my deliberate, cheerful, and entirely self-respecting intention to continue to the end of my life deceiving people, avoiding danger, making my bargains with publishers and managers on principles of supply and demand instead of abstract justice, and indulging all my appetites whenever circumstances commend such actions to my judgment.

As a programme of moral insurrection, nothing could be more startling—in its mildness. Mr. Shaw clearly belongs to that variety of toper who orders cognac and drinks lemonade.

In the last analysis Mr. Shaw's ethics are pretty much in accord with those of his compatriots and contemporaries, and the margin of difference which actually exists is in part the effect of an unusual trust in the soundness of our unbidden and unchidden human nature—a view for which the sharers in that commodity should scarcely take him to task—and in part a very innocent, if somewhat infantine, parade of naughtiness. A like disparity between advertisement and performance occurs in the unmasking of the hollowness of military ideals in "Arms and the Man." One is tempted to ask: Where is the hollowness? In the ideals or in the exposure? The difference between Bluntschli's conduct and that of a reputable English officer is surely too inconsiderable to be worth the trouble of dramatic exploitation, or the effort it must have cost King Edward VII to abstain from smiling throughout an entire performance.

Mr. Shaw's divergence from the public on these points is chiefly nominal and spectacular; in his vituperations of romantic love he is both more serious and more peculiar. He has failed, however, to make out his case. Illusion need not be insincere or valueless. That love deceives itself as to its own depth and duration may be conceded without assenting to what appears to be Mr. Shaw's conviction that love between the sexes consists of two ingredients, appetite and humbug. The lovers say fine things which they do not feel. But negative assertions as to the psychology of other minds are rather insusceptible of proof. Nobody should be in a hurry to say what his neighbor does not feel, especially with respect to matters which his neighbor makes a point of keeping

private. It may be admitted that in all except the lowest or the highest minds there is a strong bent towards histrionic exaggeration—which means, of course, pretence or sham—in the expression of emotions that do us credit. That this edge of falsity in no way disproves their essential genuineness is clear from the fact that it is nowhere more conspicuous than in motherhood; and that our realists and mentors do not escape from its effects is evinced in the circumstance that its ring is distinctly audible in the lyric outbursts in Mr. Shaw's plays in which his favorite characters voice the sentiments of their creator. We are readily persuaded of the unreality of sentiments which we do not share, and, in the case of the higher elements in love, Mr. Shaw attributes to the main passion the spuriousness which belongs to its exaggerations.

V.

It is the fashion to criticise the substance of Mr. Shaw's views as unsound and to charge their mode of utterance with dogmatism and superficiality, with perversity and paradox. If the public's safety or sanity is the object in mind, it is clear that the second of these strictures is an extenuation of the first. The real social danger is the man who is more superficial than he seems: the man in whom the appearance of superficiality equals or exceeds the fact is comparatively harmless. Everything that can put a thoughtful man on his guard—brilliancy, impetuosity, cocksureness, exaggeration, paradox—confronts us without disguise or alleviation in the coruscating paragraphs of Mr. Shaw. If he digs a pit beside the way to the alarm of nervous pedestrians, it is he himself who hangs the red lantern over the excavation. The panic he awakens in the breast of the stolid conservative is a guaranty against a premature conquest of the world on the part of his revolutionary ideas.

Mr. Shaw is superficial only in the sense that his credulity for what he likes is unlimited, and that his verifications are hasty and incomplete; in the sense that his thought is obvious or cheap, easily matched or readily replaceable, superficial he is not. Had Voltaire written: "Man is the only animal which esteems itself rich in proportion to the number and voracity of its parasites," the world would have celebrated his astuteness. Had the sentence: "Life does not cease to be funny when people die any more that it ceases to be serious when people laugh," occurred in George Eliot or George Meredith its profundity would have been hailed with acclamations. In point of knowledge, again, he has no doubt often been surpassed, but few men have got so much work out of their facts; all that Mr. Shaw knows is on duty in the field, and most of it is on the firing line. As to logic, he is rather too much a master of the *game* to be an expert in the *business*. The very deftness of his dialectic has made him almost independent of reason, since conviction is nowhere so little at the mercy of logic as where logic itself is versatile enough to furnish a defence for any thesis.

That Mr. Shaw, then, is not a deliberate, a careful, or a judicial thinker, that he would be an unsure teacher and an unsafe guide, is perfectly true. But the ingredient of soundness or sanity is, or ought to be, sufficiently provided for in other sections of the body politic, unless, indeed, we are to dismiss as intellectually useless the large, cautious, common-sense class from whom Mr. Shaw's critics are recruited. The answer to the charge that Mr. Shaw is not Mr. Hallam or Mr. Lecky or Mr. Bryce or any other weighty and trustworthy mind is that Mr. Hallam and Mr. Lecky and Mr. Bryce are not Mr. Shaw. Are we so burdened with suggestiveness, are we so cumbered with originality, that we can afford to despise these virtues for their failure to ally themselves with intellectual merits of a different or even opposite kind? Has the faculty of novel and illuminative suggestion been so invariably associated with the fullness of the testing and verifying instinct that the world has a right to regard their separation as a grievance? Mr. Shaw is, primarily, an incentive, an irritant, provocative. From time to time the world needs to be startled or stung into a reconsideration of its axioms: cogency enough to command the attention of the thoughtful is indispensable to the assailant; but, this foothold once secured, hardihood, dash, gayety, mockery, tartness, arrogance, whimsicality, bravado, are more to the purpose than more solid traits. The ratio of truth to error in Mr. Shaw's propaganda is not the measure of its value; the substitution of reasoned for mechanical beliefs is quite as beneficial as the substitution of right views for wrong; and the settlement of title would still be invaluable if the verdict gave back the whole estate to the defendant.

VI.

From this curious life and work emerge, very slowly, a little dimly and brokenly, outlines of a rugged and grotesque nobility. The question of sincerity seems to be laid to rest once for all by Mr. Henderson's picture of the man gifted with talents that might have made him the envy of drawing-rooms or the favorite of a thoughtless public devoting the prime of his years to the laborious, unpaid, and unapplauded propagation of a gospel of economic reform. The other evidence is of like character. In an age when asceticism carries no premium, Mr. Shaw has maintained an abstinence that borders on heroism. His humanity has been as unwavering as his truculence: he has been implacable towards cruelty in the economic order and in the field of sport; he has anathematized vivisection with more zeal perhaps than wisdom; and his campaign against war, if not always consistent, has been fearless and vigorous. Mr. Henderson cites the following sentence: "I am of the opinion that my life belongs to the whole community, and as long as I live it is my privilege to do for it whatsoever I can." Expressions of this kind in the conventional mouth mean little more than an astute recognition of their rhetorical and social value. But what could have nerved Mr. Shaw to the utterance of a sentiment so orthodox? Nothing, surely, but its truth.

Correspondence

THE TEACHER.

To the Editor of The Nation:

Sir: The letter of Mr. Bertram Benedict printed in your issue of January 18 raises a query whether all of our solemn, high-sounding talk about the value and importance of education is not an ocean of bosh and buncombe. Can a matter be of such worth and gravity that is committed to the hands of failures? According to Mr. Benedict, college and university teachers are unfit for other work—and I suppose for fully nine-tenths he is right. For the grades below these—one-fifth men and four-fifths women—his dictum would apply still more severely, certainly so as to the males, in my opinion after an experience of some years among them as a brother. The case is still more indisputable as to the females who, according to general belief, are for the most part in the school room only because they could not make fortunate marriages. Can any general effort be fundamental that is managed only by derelicts? Have we been hugging a fool's delusion all these centuries in attaching such weight to this formal training? We have been guilty of just such folly in at least two similar instances. In mediæval days Europe worshipped the astrologists. For nearly two millenniums we all bowed down to the Christian ministry. Is education to be the third of these discarded fancies?

Does this general inferiority of teachers help to explain two of the serious social evils that we lead in among the great nations, lawlessness and divorce? Both of these are due to weakness of will and deficiency in the sense of duty on the part of the individual. Our murder record is appalling, while we are virtually the only nation classed as civilized that indulges in the pastime of lynching. In legal dissolution of the marital tie we head the white countries, coming next to Japan, which up to a short time ago we all looked on as "heathen." If we teachers are generally second rate in ability, isn't it inevitable that pupils will not form habits of self-control, that they will go out into life sub-

ject to unregulated impulses, indifferent to obligation, each with an eye to his own pleasure alone? Aren't these two terrible social maladies traceable to these defects of character? If so, a grievous responsibility weighs upon us to change our opinion of the pedagogical profession, and soberly set ourselves to work to elevate the calling so that persons of prime character and capacity will proudly enter the field as laborers. E. S.

Washington, D. C., February 7.

SAINT BERNARD AND "NATURE."

To the Editor of The Nation:

Sir: Your correspondent "J. H." (*Nation*, February 1), and others if they have not examined the passages, may be interested in the direct use which Wordsworth makes of a sentiment from Bernard of Clairvaux. I quote from the excellent guide to Tintern Abbey by Breakspear and Evans, who observe that "monasteries of the Cistercian Order were usually placed in sequestered valleys, by the side of running water" (p. 48). According to Bernard:

Bonum est nos hic esse, quia homo vivit purius, cadit rarius, surgit velocius, incedit cautius, quiescit securius, moritur felicius, purgatur citius, præmiatur copiosius.

This Wordsworth renders in "Ecclesiastical Sonnets" 2. 3. 1-5:

Here Man more purely lives, less oft doth fall,
More promptly rises, walks with stricter heed,
More safely rests, dies happier, is freed
Earlier from cleansing fires, and gains withal
A brighter crown.

The sonnet is entitled "Cistertian Monastery." In a note, Wordsworth remarks that, according to Dr. Whitaker, the Latin sentence "is usually inscribed in some conspicuous part of the Cistercian houses." From previous references we gather that he alludes to Thomas Dunham Whitaker's "History and Antiquities of the Deanery of Craven"; but, in a cursory examination of a slightly imperfect copy, I have not found the passage. I should be grateful to some student of mediæval literature who would refer me to the exact source in Bernard. The context might determine the force of "here." Mr. Evans apparently takes it to mean "in sequestered valleys," for he quotes:

Bernardus valles, colles Benedictus amabat,
Oppida Franciscus, magnas Ignatius urbes.

As to the general question raised by "J. H." one may fancy there is some danger in supposing that the attitude assumed towards external nature in the Middle Ages was utterly remote from that of the last century, if both may be united in one modern poet. At all events, it will hardly do to forget that the author of "Expostulation and Reply"—which is often misinterpreted by those who have not read the sonnets on "Personal Talk"—was the author of "Ecclesiastical Sonnets" as well, one of the noblest contributions to the devotional literature of England; or that the "Lines Composed a Few Miles Above Tintern Abbey" came from the same imagination as the "Stanzas Suggested in a Steamboat off Saint Bees' Heads."

I am tempted to mention, in closing, the paper delivered by Mr. Havens of Rochester University, at the recent meeting of the Modern Language Association, in which he ably contended that what we call the feeling for nature never has been wanting, in English literature at any rate, from the time of the Old English poem of "The Seafarer" to Wordsworth. I suspect, however, that our present "attitude to nature" is conventional in a bad sense of the word, and that we occasionally need a Bernard, or a Dante, or some of the less familiar parts of Wordsworth, to break up certain stereotyped associations, and otherwise to set us right.

THE CASE OF MACKAIL VS. CRITICISM.

To the Editor of The Nation:

Sir: In a penetrating criticism of J. W. Mackail's "Lectures on Poetry" (*Nation*, February 1), your reviewer, referring to Professor Mackail, writes the following words:

At bottom it is the purely emotional and elusive in poetry that attracts him. "Criticism," he asserts, "in its true sense, is simply appreciation," that is to say it is not fundamentally an exercise of judgment, but an attempt to surrender one's self to the mood of the poet, and to make admiration synonymous with wonder.

There appears to be a certain confusion of thought in this statement, and it is partly due to the fact that Professor Mackail has not sought to translate his intuitions into intellectual formulæ. The difficulty lies in your critic's inability or refusal to distinguish between "the purely emotional and elusive," which is not the appealing element in poetry to Professor Mackail, and that purely spiritual and silent life of poetry which is known as inspiration, and which, being infinite, is only profaned by definition.

Professor Mackail is a poet, and because he is a poet he knows that inspiration is the only element in poetry for which we need care. Like all true poets, he is humble, and knows furthermore that inspiration is not susceptible to an intellectual judgment. We may analyze and value everything save life, but life we must be content to appreciate humbly. Judgment has its value, but it is based on analysis rather than on synthesis. In poetry, it should be left as an attribute of divinity. A poet is quite unconscious of it, and when he becomes a critic he has the authority of his vocation for being an impressionistic critic.

This suggests a compromise which, so far as I know, has not yet been proposed. If the critic of poetry is a poet, let his criticism be impressionistic, for he has a higher standard of values than other men, and it has the advantage of being unconscious and unfailing so long as he is loyal to it. A man who has once known beauty is set apart, and to him the only possible standard of values is silent beauty. I think we may trust him, if he is sincere, to value poetry aright. But to those whom beauty has not troubled, it doubtless appears to be "emotional and elusive."

If the critic of poetry be not a poet, the best we can ask of him is an intellectual judgment based on reasoned rather than intuitive values. In fact, we must pray that he will not attempt to go beyond it. Against our compromise, however, is set once more the fact that only those who have experience are prepared to speak with authority. Because poetry is a rare experience only known in its fulness to poets, it should seem that they should be chosen as the sole proper critics of their fellows. A poet demands fair judgment by his peers.

Can we fairly say that such a judgment is merely æsthetic, or is this not tantamount to the denial of an absolute? To speak plainly, such an attitude as this towards poetry and criticism would more properly seem to be conceived *"in vacuo"* than that of Professor Mackail. To the speech of your prosecuting counsel in the case of Mackail vs. Criticism, the poets who form the jury of the defendant's peers, from Sir Philip Sidney to Professor Woodberry unanimously, reply, "Not guilty." The case is discharged.

Edward J. O'Brien.

Boston, February 5.

"TELLS HIS TALE."

To the Editor of The Nation:

Sir: Professor Kenyon dissents (*Nation*, January 25), from my interpretation of "L'Allegro," 67 (*Nation*, January 11). So far as I can sum up his dissent it amounts to this.

In citing the "Cursor Mundi," and Lambeth Homily phrase, "tell a tale," meaning "set account by," as evidence of the numerical use denied by the Oxford Dictionary, I am guilty of a sheer blunder; the phrase shows "absolutely nothing of the numerical sense." Indeed! My critic seems to be unaware of the play between cause and effect, common in all language. In modern English a man takes no *account* of a thing, because he deems it not worth the *counting*. In earlier English he did not tell the tale because he judged the tale not worth the telling. *Tell* and *tale* are parallel in thought-evolution with *count* and *account*.

Next, all Professor Kenyon's examples and conclusions drawn from Spenser's "Shepherd's Calendar" and other pastoral poetry are irrelevant. "L'Allegro" is not in the least a conventional pastoral poem; rather it is a highly realistic poem, sketching—as with the needle of a Rembrandt—the salient incidents of a summer day. Spenser's shepherds meet and talk, for—as conventional beings—they have nothing else to do; but Milton's shepherd is as real as the ploughman, the milkmaid, the mower, and like them he has work to perform; lines 57-68 are descriptive of early morning, sunrise in an English summer; that is, four to five o'clock, if not earlier. Professor Kenyon represents the sun as blazing hot, to justify the shepherds in sheltering themselves under the hawthorn. Does the ploughman whistle, does the milkmaid milk in this blazing noonday sun? Or shall we assume that the clock has been abruptly moved up eight hours between line 65 and line 67? Truly, that would be the pace, not of John Milton, but of the moving-picture show. I must insist upon the point that we are dealing with sunrise, and that the shepherd's duty at sunrise is to go over the tale of his sheep to make sure that all is well. In the matter of story-telling proper, Milton has his say in lines 100-116.

Further, Professor Kenyon's conception of the Towneley play is fundamentally wrong. One can only marvel at such exegesis as this: "After counting their sheep, the shepherds meet *under* the thorn (*con-*

ventionally, for it is cold) to compare notes, *just as Cuddie and Willie do* in Browne." Italics are mine. Now the real action of the play is this. After awaking and letting Mak depart, the shepherds —suspicious of harm—agree to count their several flocks and to meet *at,* not *under,* "the crooked thorn," to compare "counts." And when they meet, the Primus Pastor announces the theft of "a fat wether." Whereas, in Browne, Cuddie and Willie do not meet at the hawthorn, but go thither in company, and when there begin their discourse. In other words, Browne is conventional. But the author of the Towneley play needed a meetingplace for the actions of his characters. And this meeting place, "the crooked thorn," is anything but a conventional imagining; on the contrary, it is an actual landmark in the Wakefield country. See Peacock, *Anglia* XXIV, 519. J. M. Hart.

Cornell University, February 5.

To the Editor of The Nation:

Sir: I remember, before we published the "Tales from the Telling-House," my old friend, the late Mr. R. D. Blackmore, telling me that the title of this collection of stories came to his mind from association with the Telling-Houses on Exmoor, where the shepherds had the flocks collected handy, so that all the variously marked sheep could be separated into small flocks belonging to the different owners. As each sheep was passed the shepherd "told its tale"—*i. e.,* cried out the name of the owner from the mark, and it was placed with his lot. In his Preface to the book he refers to the Telling-House being so called "because people come here to tell their own sheep from their neighbors', when they fetch them home again"; *i. e.,* after running loose and feeding together on the common land of the moor.

Literature

PRINCIPLES OF ECONOMICS.

Principles of Economics. By F. W. Taussig, Henry Lee Professor of Economics in Harvard University. New York: The Macmillan Co. 2 volumes. $4 net.

In these eminently readable volumes, Professor Taussig has covered the leading questions of economic theory and has discussed almost every important phase of the practical economic issues of the present day. Though assuming no previous study of the subject, the book is addressed to readers of mature intelligence, and is accordingly free from that didactic stiffness which is so often regarded as necessary for the accurate inculcation of economic doctrines. It has neither the rigidity of a textbook nor the insistence of the preacher of a particular economic gospel, whether theoretical or practical; but, on the other hand, it has none of the looseness of a "popular" exposition. The subject is unfolded with freedom and breadth, but without any sacrifice either of accuracy or of lucidity. It would be difficult to find, in the eleven hundred pages of Professor Taussig's work, a sentence of which the meaning is not perfectly clear, or an argument of which the logic is faulty.

If one were to go further, and say that there are few conclusions laid down by Professor Taussig from which any considerable number of competent economists would seriously dissent, he would not be going much beyond the truth. To those who have formed the habit of regarding political economy as a welter of conflicting views and unsettled questions, this assertion may seem startling. That it is nevertheless true is to be explained by several considerations. In the first place, the real and substantial conflict of opinion was never so great as it has sometimes been represented, if we but bar out the vagaries of individual writers whose peculiar crotchets have been thrust into unmerited prominence. Secondly, such differences as have existed—and they have undeniably been many and important—have been magnified, perhaps naturally enough, in the ardor of controversy. In the third place, the attrition of honest discussion has, in the past two or three decades, brought about something very like a general consensus on a large part of the matters in controversy. But all these causes together do not suffice fully to explain the fact we have in mind—the fact that, as we have said, few of the conclusions set down in Professor Taussig's book would be strongly objected to by any considerable body of qualified economists; for, over and above these considerations relating to the subject matter, there is another which lies in the character of the book itself.

Professor Taussig's work is singularly free from controversial character; and this result is due partly to the almost impeccable fairness and candor with which every subject is treated, but partly also to another circumstance which has its drawbacks as well as its advantages. In comparison with most treatises on economics, there is an almost startling paucity of discussions of varying views, whether as matters of historical importance, of contemporary significance, or merely as illustrations of modes of thought. The subject is developed with a smooth and even flow, and a reader who had had no previous acquaintance with political economy would not suspect that what is set forth with such calm lucidity has been the subject-matter of fierce dispute, the cause of many a hard-fought battle between supporters of opposing dogmas. Professor Taussig sets forth his own conclusion, which is almost always the conclusion of common sense—that kind of trained common sense which, as has been said, is one of the most uncommon things in the world; and though the judgment may be that which would be demanded by the Trojan, he is careful to point out the considerations that might properly be urged by the Tyrian, whenever he thinks it important that these should be borne in mind as qualifying the result. To definitions, that great stumbling-block of economic theory, is given scant honor—a wise policy, in our judgment—but here again we have a reason for the absence of much controversial matter. And if we add that Professor Taussig emancipates himself, once for all, from the obligation of earmarking any particular opinion or method of treatment as distinctively his own, and very rarely goes into the origin or history of economic doctrines, we have gone far towards indicating the reasons for the comparative absence of highly contentious matter in his book.

One instance may serve in some measure to illustrate these points: Professor Taussig gives to the subject of the single tax a brief but eminently fair and lucid discussion; but the name of Henry George is not so much as mentioned. He distinguishes sharply between the proposal to confiscate the entire rental value of land and the proposal to appropriate for the community the whole or a part of the future "unearned increment" of that value; nor is there ground for the slightest complaint that his judgment on either of these proposals is wanting in definiteness or even in emphasis. To the second proposal he gives a friendly hearing, and declares that the day is gone by when objections of the kind usually advanced against it are felt to be insuperable. "The dogma of an unrestricted right of property, and the belief in the expediency of the exercise of that right without a jot or tittle of abatement, have been shaken beyond repair." As for the proposal of confiscation of existing land values, on the other hand, Professor Taussig's conclusion is that, "unless the whole institution of private property be remade or abolished, the existing rights to land, as they have been allowed to develop through the centuries, must be respected." The great majority of intelligent readers will probably follow Professor Taussig in his argument, and assent to his conclusion; but they will not have the feeling of having been brought face to face with the single-tax doctrine, as aggressively asserted by Henry George and his followers, and of having come to grapples with the specific arguments by which it is buttressed.

In matters belonging more distinctly to the domain of economic theory, there would often, in our judgment, have been great advantage in giving to economic errors more attention and more prominence than Professor Taussig's method of exposition assigns to them. That discussions of fallacies and misconceptions have occupied so large a

space in economic literature is not an accident; neither has it been altogether due to excessive combativeness on the part of individual writers or to their magnifying of the importance of their own pet ideas. These faults have, indeed, been very frequently in evidence; but Professor Taussig goes to the opposite extreme. He acts upon the assumption that when he has given the correct analysis of an economic phenomenon, when he has set forth with accuracy and force an economic doctrine and the reasoning upon which it is based, he has met all the needs of the fair-minded student or reader. But the greatest benefit which a training in economic science confers is the fortifying of the mind against those misconceptions and unsound methods of thinking which experience has shown to have such an insidious and almost unshakable hold upon the majority of mankind; and, while undoubtedly the intelligent following of such a succession of able and clear-cut discussions as constitute the work before us cannot fail to bring about a great deal of benefit of this kind, it is only by actual collision with the false or vicious or hazy notions with which economic discussion abounds that we can, speaking generally, hope to make an impression so deep and abiding as to serve as a safeguard against these pitfalls. In the discussion of the question of population, for example, the presentation given by Professor Taussig cannot be pronounced other than excellent; and yet the reader, though troubled by no obscurities, and annoyed neither by dogmatism nor by vagueness, will, in nine cases out of ten, be quite defenceless against the first glib magazine writer who presents a confident *reductio ad absurdum* of the doctrine of Malthus. It is curious to note here, by the way, that Professor Taussig, true to his general method, makes no mention of Malthus's arithmetical and geometrical progression. The discussion of the "Mercantile" view of the balance of trade is one of the few instances in which he deliberately sets forth a fallacious view at some length; and its absurdity is characterized with appropriate vigor of language. "The astonishing thing," says Professor Taussig, "is that, notwithstanding the simplicity of these truths, and their repeated and widespread exposition, ignorance regarding them should be so common." It *is* astonishing, no doubt; but the same astonishing difficulty is encountered in keeping firmly fixed in the mind of the ordinary man, however intelligent otherwise, almost any of the cardinal doctrines of economics.

It should hardly be necessary to say that in speaking of the comparative absence of serious differences of competent economic opinion, we had in view those matters of broad principle or of analytic insight which form the backbone of an economic treatise; the case is, of course, quite different in regard to practical judgments which turn either on an estimate of the particular conditions of the present time or on views of public policy in which strictly economic considerations enter only as one, though perhaps a dominating, factor. Throughout the work, Professor Taussig keeps in view the actualities of our time and of this country, and in no respect is his book more admirable than in the way in which, in discussing the questions of the day, he maintains a spirit of scrupulous impartiality without the sacrifice of vigor or vitality. He does not attempt to settle *ex cathedra* questions which admit of no such settlement; but he puts the reader into possession of those elements upon which a sound judgment of them must rest. Of this examples are to be found throughout the book; there are two or three instances which seem deserving of special notice. The two very short chapters on railways present, with exemplary lucidity and yet without a particle of tediousness, the considerations bearing on all the chief aspects of railway enterprise and railway regulation; to read these thirty-four pages of interesting and illuminating talk is anything but a hardship, and yet they are sufficient to place the reader, once for all, in a position intelligently to understand one of the most prominent questions of the time. The succeeding chapter, dealing with Public Ownership and Public Control, is even more remarkable as a vivid presentation of the human elements that enter into the question of governmental versus private management, and into the problem of the taking over of existing private enterprises by the Government. On combinations and Trusts, there is, of course, abundant material to weigh in the balance. We are inclined to think that Professor Taussig underrates the effect of anti-Trust legislation in this country in curbing the development of monopoly; but, on the other hand, he gives no countenance to the manifest-destiny view of advocates of the Trust régime. Speaking of the usual argument of these advocates, from "which it is concluded that unchecked competition will inevitably be carried to the point of general disaster and that combination is the sole means of salvation," he says: "The argument has some foundation; but it cannot be carried far." One of the best examples, perhaps, of the spirit in which the questions of the time are considered is furnished by the discussion of trade-unions; whether one agrees with Professor Taussig or not—and even though one may here wish that he had somewhat more sharply defined his own position—one cannot fail to recognize that he has enabled the reader to judge for himself of the weight to which the various factors in the case are entitled. While he has much to say in favor of the "closed shop," with the accompaniment of the "open union," he makes an extremely important reservation; for, whatever net balance of good over evil there may be in the existence of the closed shop over a large portion of the labor field, he points out the potent reasons why "no dispassionate observer, however strong his sympathies with laborers, can look forward to the universal closed shop without grave misgiving."

In no part of the work, perhaps, is the judicial poise of the author more manifest than in the treatment of Socialism. He holds no brief for the existing order of society; and this evident absence of *parti pris*, shown not merely in general avowals, but in unqualified admission of the weakness of some of the objections usually regarded as fatal to all schemes of Socialism, is calculated to give to the objections he does urge an efficacy, in the minds of those half-inclined to Socialism, which they might not otherwise possess. What these objections are, and in what degree the author regards them as conclusive either for the near or the distant future, we cannot undertake here to indicate; but there is one line along which we cannot but feel that much more might well have been said. On what may be called the deeper human side of the question, that which affects the very innermost texture of life, as distinguished from the comparatively outward results with which the economist is primarily concerned, lies its most critical aspect. How fully Professor Taussig is conscious of this is sufficiently shown by this passage:

> So fundamentally different would be a collectivist organization that it would be rash to predict just what dangers could be avoided in it, just what would be inevitable. . . . The sexual relations are made pure and sweet, and safe for society, not only by the marriage tie and the lawfulness of monogamy, but by care and responsibility for the offspring. Without that responsibility, and all the ambition and affection that go with it, the animal instinct bodes vast dangers. The domestic relations which now enshrine it are highly unselfish within the narrow range of the family, but highly selfish as regards the rest of the world. In their essence, they are individualistic; and it is their very individualism and selfishness which cause them to work to social advantage.

But there are other phases of the influence of the individualist régime upon character and life which seem to us to be less adequately recognized than their pervasive importance would warrant.

The book as a whole is a notable addition to the literature of political economy. The ease born of thorough familiarity with every part of the subject, and of long practice in successful teaching of mature students, is apparent in

the style throughout. One feature that is particularly noticeable is the way in which fundamental ideas are kept to the fore through the mere use of specific turns of language, not only in passages that are directly didactic or analytic, but in those that are purely descriptive. Of this many examples might be given; it may suffice to mention the way in which the reader is thus repeatedly confronted with the idea that exchange is as much a part of production as is anything else. And in these descriptive passages one is continually struck with the graphic and lifelike presentation, which makes them fascinating reading. Thus the characterization of the pulsating changes in the tide of modern business is vivid, telling, picturesque, full of excellent figurative language of a kind to impress the phenomenon effectively upon the reader's mind.

A word may be said in conclusion on the once burning question of economic method. The fires of the controversy that raged so violently two or three decades ago between British and German schools, between deductive and historical and inductive methods, have all but died out; Professor Taussig makes no reference to it. Incidentally, in a single sentence occurring in connection with the subject of free trade, he speaks of "the breakdown of the British school of political economy, and the admitted need of a thorough reconstruction of economic theory." There is a sense in which this expression may be justified, and it is such a sense, we cannot but think, that Professor Taussig had in mind; but it is unfortunate that the only explicit reference to the subject should be such as will be sure to convey to most readers what is, in our judgment, and we venture to say in his also, a thoroughly false impression. The structure built up by the British school of political economy was not, to be sure, nearly so perfect, and especially not nearly so complete, as it was at one time believed to be; it stood in need of correction, of supplementing, of adaptation to the new conditions and new interests of a later day. But no better evidence of its fundamental value, and no better evidence of the error of those who fancied that the science could be built up on wholly different foundations, or by a radically different method, can be desired than Professor Taussig's work furnishes. Widely as its subject-matter differs from that of the classical treatises of the first half of the nineteenth century, and many as are the improvements that it embodies, its central principles and its logical methods are still those which the great masters of the British school impressed upon the science. Economics did not reach the stage of finality, as some imagined, sixty or seventy years ago; it has grown and it has altered. But it still grows from the same root, and in its large lines the tree still presents the same structure and the same appearance.

CURRENT FICTION.

The Marriage Portion. By H. A. Mitchell Keays. Boston: Small, Maynard & Co.

"Yes, dear child," says the professor to his daughter, "sex obsession is stamped all over the face of creation, and it is only the American mind that considers it irrelevant to be aware of it, a condition of criticism due to the fact that our literature must all be open to the young girl." This is very, very sad. Mrs. Keays has done her utmost to bring relief to a melancholy situation. True, there has been here and there a novelist who has dared to be a Daniel in these matters. But the author of "The Marriage Portion" has distanced her fellows. One problem at a time has sufficed most writers. Here each character, and there are many, brings contribution to the theme and, bringing very little else, leaves the book a monograph. In the "foremost American university," where the scene is laid, and where a river, the adjacent sea, a stadium, and a "Holy-smoker" dormitory are prominent features, "sex obsession" is the inspiration for the conversation and lives of college society. It occurs to the reviewer, in fact, that this novel may be intended as an opening wedge for the establishment of a college chair whence doctrine may be promulgated that will free "men and women" from the humiliation of being "written of as though they had the emotions of swaddling-clothed infants." Applicants for the professorship should have a smartness at local repartee, a little knowledge of music, including the possibilities in "Scots wha hae" for "frankness and passion" and for the "tenderest and most insistent plea that man ever voiced to woman." Necessary also would be a knack at the personal conducting of marital scenes, and an acquaintance with *lingerie*. Mr. Kipling's feelings are yet to be learned when he shall have read that the accomplished heroine considers "Without Benefit of Clergy" "as artificial as it was a clever exploitation of marionetted emotions."

The Cage. By Harold Begbie. New York: George H. Doran Co.

It is a pity that so many earnest people with sermons to preach or lectures to deliver should cherish the illusion that by disguising themselves as novelists they can attract large audiences. One author wishes to give a series of travel lectures on Spain; another to inform the public about the Portuguese conquests in Africa; another to show that unless we return to the belief in immortality the institution of marriage is doomed: each wreaks his idea upon a novel. The purpose of "The Cage" as the preface warns us, is the one last mentioned. Matrimony is, of course, the cage, from which the heroine wishes to escape. Anne Ainslie is married off by her ambitious mother to a rich good-for-nothing. After five years, she leaves him, but there is no divorce. She falls in love with a friend of her childhood; then her husband writes asking her to return. She decides to see him in person and give him a final refusal; but she finds that he has most inopportunely reformed his habits. In this dilemma, she is persuaded by an old clergyman, who bases his lengthy argument upon her belief in immortality, to return to her unloved husband with a view to his salvation. Thus fortified, she is able even to convert her lover to her point of view. The author is evidently sincere, but he does not know how to tell a story.

Riders of the Purple Sage. By Zane Grey. New York: Harper & Bros.

All that story-tellers about the Western plains have ever dreamed or invented to stir the heart and freeze the blood of those who take their excitement at second hand has been packed into this tale of the Utah border. The author has omitted nothing which mere industry without art could supply. The Mormon terror hangs over the proud fair heiress of wide lands and many cattle desired of the elders of the Church of Latter Day Saints; life is full of stampeding herds, and races against death across the sage. About one hundred lives are dexterously snuffed out before the hero and heroine are safely delivered out of Mormondom and shut up in a wonderful secret valley from the one entrance of which a great rocking stone of the cliff-dwellers has been precipitated upon their pursuers, overwhelming men and horses. The record of mortality is mainly the work of two men, Gentiles in the midst of the enemy, and each of these for his reward carries off a prize of youth and beauty. What would you more?

The Mystery of No. 47. By J. Storer Clouston. New York: Moffat, Yard & Co.

A quiet and genteel family in St. John's Wood is in domestic difficulties. The cook has left, and the housemaid, a charming young lady in service under an assumed name, is engaged to a young scion of the nobility, who does not know her home or occupation. Suddenly word is received that a meddling epicurean bishop, a relative of the husband, is coming to dinner. Madam goes into the kitchen to cook, and the husband in endeavoring to account for her absence falls into ludicrous contradictions. The bishop, growing suspicious of foul play, calls in Scotland Yard, and there follows an amusing caricature of

the current detective story, in which a regular detective, a sensational reporter, and the husband disguised as a sensational novelist foregather in No. 47 and attempt to unravel mysteries which they have themselves created. The fun is fast, and towards the end farcical, but the idea of the satire is original.

MRS. HARRISON'S MEMOIRS.

Recollections Grave and Gay. By Mrs. Burton Harrison. New York: Charles Scribner's Sons. $2.50 net.

This book presents four main pictures —a hint of the old South, a full-length portrait of Richmond in war-time, and lighter sketches of Paris of the declining Emperor and New York of regnant Boss Tweed. Mrs. Harrison's manner is spontaneously emotional, at times a shade too near the superlative; but it will be a stolid reader who can witness this passing of heroic or comical ghosts of past years without an occasional brimming of the eyes.

Miss Constance Cary of Carysbroke, Virginia, was related to the Randolphs and Fairfaxes. What is interesting in the account of her girlhood, aside from impressions of dear and eccentric kin, is the sense of the nearness of Europe. Many of her aunts, cousins, and friends married European gentlefolk. A Cary, before the war, would have been perhaps more at home in London or Paris than in New York. Virginia was an outpost of good European manners in America. The fact has obvious bearings upon the Confederate loyalty of such anti-slavery landowners as the Carys. It controverts also Maurice Low's destructive criticism of the "Cavalier" stock of Virginia. In the light of her origins, Virginia had no appreciable social advantage over, say, Massachusetts, but Virginia went on to produce a very definite feudality and chivalry, a whole code of special social institutions, whereas the original stock of manners in New England merely got confused or blunted. Virginia never was democratized. Cavaliers the aristocratic Virginians of the Civil War were for all practical purposes, quite irrespective of Burke or the Gotha.

Mrs. Harrison's chapters on Richmond in war-time convey vividly the heroic tension of those years. To youth, at least, that strain was glorious. The war had none of the nightmarish remoteness it presented to waiting Northern witnesses. At Richmond cause and effect worked frankly and without tragic delay. Much fighting took place within sound of the city. Not infrequently the gallant partner of the small hours came back before sunset stark on his gun-carriage. There was a tear for him, and other partners. Heartbreaking service in ill-provided hospitals kept one steady. If one had a voice, there were war songs to be sung to marching uncovered regiments. Banners were to be embroidered and presented. Then there were respites given to pure gayety. One invitation to the country contained the postscript, "Bring your own gentlemen." There were as well fascinating foreign attachés and a delightful sense of seeming heroic abroad. Miss Cary's brother, a midshipman on the privateer Nashville, took aboard "a distinguished stranger," to wit, Lord Palmerston, for a confidential chat with Capt. Pegram. The incident, which must rank high even among Palmerston's indiscretions, fortunately was not divulged. At Richmond, courage and gayety only increased as food coarsened and party gowns wore threadbare. Shopping or business North involved an adventurous running of the outposts. Miss Cary once did it effectively, bringing home a new bonnet through annoyance and something approaching peril. Richmond was gradually being strangled. Miss Cary saw President Davis's face pale as he received, in church, the fatal news of Lee's retreat. What the old South felt in this agony of the Confederacy we do not gather from this book, but we do at least learn how proudly the young South carried its *panache* to the end.

There is much that is wise and witty in the sketches of Paris and of New York before the new wealth ruled, but we prefer to leave this charming and informing volume with a picture of Richmond after the surrender. Miss Cary writes to her suitor, Burton Harrison, prisoner of war:

> It is no longer our Richmond, yet sometimes our eyes have a rest and are gladdened by the gray uniforms of the Confederate surgeons left here on parole to attend our sick and wounded soldiers. When one of them goes by, instantly every shutter is flung wide open, every cheek flushes, every eye sparkles a welcome. One of the girls tells me she finds great comfort in singing Dixie with her head buried in a feather pillow. My dear uncle, the most saintly of men, to-day read prayers to his assembled family, and, having in hand an old-time prayer book inadvertently read out the petition for the President of the United States. Edith, his youngest daughter, on our arising from our knees, immediately cried out in reproachful tones, "Oh! papa. You prayed for the President of the United States." "Did I?" said the good old doctor ruefully, "Devil fetch him!" at which we all laughed. Last night, from the sweetness of dreams, I was awakened by a band playing "Annie Laurie" so beautifully it seemed to chime with my happier thoughts. Directly it changed to the majestic strains of the "Star-Spangled Banner," which I had not heard in four years. In one minute I was broad awake and weeping. Oh! that such a noble air should send such a pang to rend me!
>
> To-day Mr. Lincoln, seated in an ambulance, with his son Tad upon his knee, drove down Grace Street, past this house, a mounted escort clattering after.

This autobiography is to others what "Trilby" is to other novels—delightful to read at top speed, and completely disarming to the critic.

Lives of the Hanoverian Queens of England. By Alice Drayton Greenwood. Vol. II. New York: The Macmillan Co. $3.50 net.

There is only one serious fault to be found with the second volume of Miss Greenwood's masterly work, and that is inherent in the subject itself: the interest is in the nature of an anticlimax. The last section deals with Adelaide, Queen of William IV, and is in itself an excellent study, not without judicious glances at the politics of the day. But Adelaide's virtues were of a rather commonplace sort, and she came to the throne when the peculiarly Hanoverian traits of her husband's family were no longer of national importance. The preceding chapters on the unfortunate Caroline are more interesting, and those who desire to obtain a careful and balanced account of the miserable squabbles of Gentleman George and his wife cannot do better than apply themselves to this book. Miss Greenwood makes no attempt to gloss over the vulgarity and eccentricity of Caroline's proceedings, but her analysis of "the delicate investigation" and of the later trial before the Lords leaves the reader pretty strongly convinced, whatever may have been his previous opinion, that Caroline was essentially innocent. And George IV's treatment of the Princess Charlotte forms a fitting, if disgusting, close to the traditional Hanoverian feud between parent and offspring. An echo of the widespread grief at Charlotte's death may be heard in the noble stanzas at the close of "Childe Harold." We may observe here that Miss Greenwood's work, whether from choice or from lack of intimate familiarity with the material, is rather weak on the purely literary side. In this volume, as in the first, she misses many telling illustrations of the Hanoverian régime to be found in the *belles lettres* of the age, whereas her familiarity with the more purely historical sources is irreproachable. The interest of these chapters on Caroline is chiefly personal, but little incidents here and there, superficially trivial, are for any one familiar with the history of the times of considerable importance in showing the character of these petty German princesses who were brought over to England to preside over a proud and aristocratic society. Thus, when Malmesbury was sent over to Brunswick to fetch Caroline to the British court, he found it necessary to address "a firm parental exhortation to the Princess, rebuking her for 'piquing herself on dressing quick.'" This not being sufficient, he applied for help to a certain Madame von der Busche, and reports: "Madame Busche executes her commission well and the Princess comes

out the next day well washed all over." "All the young princesses of Germany," it was said, "had learned English in hopes of becoming Princess of Wales"—not all of them very successfully, however, for Caroline never acquired sufficient English to speak or write it without ludicrous mistakes.

Naturally, the bulk of the present volume (235 pages out of 419), and far the most interesting section, deals with Charlotte Sophia. Miss Greenwood gives an excellent analysis of the Queen's narrow, yet oddly inconsistent character, priggish in morals, yet when personal spite or jealousy entered into the situation, free enough to accept the malicious Lady Jersey, the Prince of Wales's mistress, and force her, as attendant and spy, upon the unwilling Caroline:

> Only a month after the birth of the Princess Charlotte the Queen gave one of her select private parties. The Princess of Wales was unable to be present, and Lady Jersey was invited to meet the Prince and seated at a card-table beside Princess Augusta, when the Prince kept coming up to the table and openly squeezing her hand. . . . The Queen manifestly did not disapprove. . . . It is not wonderful if severe comments were made upon the Queen's "hyprocisy."

This is not recited as a bit of scandalous gossip; it is thoroughly characteristic of a court which in many ways, apart from politics, had a disastrous effect on the higher life of England. Miss Greenwood is in no wise prejudiced against the Hanoverian family and their women. In her preceding volume she gave full, perhaps too great, credit to the political sagacity of George I and II. Of George III she draws, in the present volume, a portrait that is as remarkable for its fairness as for its skilful delineation. She treats Charlotte on the whole with sympathy, and especially at the time of George's madness she presents a view of the relation of the Queen and Parliament which certainly shows sufficient gentleness towards the former and sufficient harshness towards Burke and Fox. Nor, apparently, is she herself fully aware of the profound meaning of the picture she draws of this foreign court, which lay like a dead weight upon the intellectual life of England through the eighteenth century. She merely deals with the facts as an historian. This court in which filial and paternal hatred was handed down from generation to generation like an inherited, malignant disease; in which vice was vulgar and virtue ridiculous; in which tedium was only relieved by petty spite or coarse brutality; which, under Charlotte at least, deliberately surrounded itself by what was commonplace and insignificant, counts more in England's loss of intellectual prestige in the eighteenth century that is commonly believed. Hervey and Walpole, no doubt, drew with a pen deliberately satirical, but the sober and thoroughly judicious pen of the present historian does not alter very much the impression left on the mind by a perusal of the records made by those scandal-mongers.

Dante: Introduction à l'Etude de la Divine Comédie. Par Henri Hauvette. Paris: Hachette et Cie. 12mo, 396 pp. 3 fr. 50c.

The publication of this book is something in the nature of a literary event, for it is the first work of the kind to come from a French pen. While the study of Dante in England, America, and Germany has been pursued with increasing ardor during the last fifty or sixty years, in France, for whatever reason, it has until quite lately been curiously neglected. To such an extent has this been the case that in *Romania*, the well-known French journal for mediæval studies founded by the late Gaston Paris and Paul Meyer, the majority of the articles on Dantesque subjects have been contributed, as M. Counson observes in his "Dante en France," by an Englishman, and printed in English. We hail the appearance of this volume and of M. Cochin's recent translation of the "Vita Nuova" as welcome signs of a revival of that interest in Dante which at one period, as Professor Farinelli has shown in his work on "Dante e la Francia," was a notable feature in French literature.

M. Hauvette's title by no means conveys an adequate idea of the actual contents of his book, which is a good deal more than a mere introduction to the study of the "Divina Commedia" in the ordinary sense of the term. The work is divided into three parts, entitled, respectively, "Le Milieu historique," "L'Homme," and "La Divine Comédie." After an introductory chapter dealing with Rome, the Papacy, and the Empire, and Dante's attitude towards them, together with their bearing on his ideals and principles as expressed in his works, M. Hauvette proceeds to give an account of the "origins" of Florence, based mainly on the researches of Villari and Davidsohn, and of the evolution of the civil discords which played such an important part in the Italy of Dante's day, and in his own life-story. The historical sketch concludes with a brilliantly written chapter on the literary, philosophical, and religious movement of the thirteenth century, an acquaintance with which is indispensable to a right understanding of Dante and his works. In this chapter are included some instructive pages on the heresies of the Middle Ages, in respect of which M. Hauvette acknowledges his indebtedness to the special works of the late Felice Tocco on the subject.

In the second part ("L'Homme"), which comprises the biography of the poet, M. Hauvette discusses the dates of composition of the various works. In connection with the "De Monarchia" he mentions, but does not pass an opinion upon, the highly plausible theory recently enunciated by the veteran Professor Villari, namely, that the first two books of the treatise were finished by Dante before his exile from Florence, and that the third only, not the whole work as is generally maintained, was written on the occasion of Henry VII's descent into Italy. As regards the "Divina Commedia," M. Hauvette accepts the chronology proposed by Prof. E. G. Parodi, the key to which is to be found in an analysis of the evolution of Dante's political ideas. This would place the composition of the "Inferno" (that is, of the "Inferno" as we have it—*an* "Inferno" might well have been begun before Dante's exile, as Boccaccio would have us believe) between 1304 and 1308; that of the "Purgatorio" between the latter year and the first half of 1313; and that of the last *Cantica* between 1313 and 1321, the date of the poet's death—three periods which correspond with three sharply defined epochs in the history of Dante's political fortunes after his exile.

The last part, which deals with the subject proper of the book, consists of a careful résumé of the contents of the "Commedia," accompanied by a sort of running commentary, in which various controverted points, not of exegesis, but in the chronology and construction of the poem, are discussed and illustrated with a fulness of knowledge which testifies to M. Hauvette's wide reading and to his conscientious and sympathetic study of the somewhat formidable mass of literature on the subject. We may note in this connection one important publication which seems to have escaped his attention, namely, the work of Professors Boffito and Melzi d' Eril, on the so-called "Almanach Dantis," which disposes of one of the most weighty arguments against the acceptance of the year 1300 as the assumed date of Dante's vision. There is a statement in the note on page 366 which requires correction. M. Hauvette says that there is no contemporary authority for the supposition that Ugolino tried to keep himself alive in the Torre della Fame by feeding on the bodies of his dead children. In the thirteenth century "Cronica Fiorentina," attributed to Brunetto Latini, which is printed by Professor Villari in the first edition of his "Primi due Secoli della Storia di Firenze," it is distinctly stated in the account of the episode, that after they were all dead, "si trovò che l' uno mangiò de le carni all' altro."

We take leave of this book, which is written throughout with a charm of style which adds greatly to the pleasure of perusal, with feelings of gratitude to-

wards the author for one of the most notable contributions to the study of Dante that has been published in any language. M. Hauvette modestly doubts whether "non fu qui troppo folle." We trust that the assured success of this first incursion into the "campo dantesco" will encourage him to further acts of "follia" in the same direction.

The Life of Bret Harte. By Henry Childs Merwin. Boston: Houghton Mifflin Co. $3 net.

Bret Harte gives a perfectly distinct impression as an artist; as a man he is wholly elusive. With a marked capacity for attracting friends, he as quickly outwore them; he lived in many places and settled in none; he wrote few letters and expressed few opinions; he clearly admitted no duty beyond that of setting words in beautiful order. He has left no real biographical material, and even his few surviving intimates seem unable or unwilling to say what manner of man he really was. To the task of making bricks without straw Mr. Merwin has brought a considerable resourcefulness. He has looked into the odd, mixed origins of his hero and has unearthed an unedifying eighteenth-century relation, a Canadian Jew, who "left behind him at his death no less than fourteen families, all established in the world with a good degree of comfort, and with a sufficient degree of respectability." There was a decline from this standard. Bret Harte's paternal grandfather maintained only two families at once, his father only one, and that in scant comfort. For the wayward streak in Bret Harte there seem to have been suitable biological antecedents.

About his beginnings as literary journalist and editor of the *Overland Monthly* there is plenty of material. To the fastidiousness of the editor and writer such men as Mark Twain and Charles Warren Stoddard loved to testify long after their lost leader had passed out of sight. The best of Bret Harte, or at least the recoverable best, surely was his San Francisco editorship. Promoted East, he neither knew how to be lionized nor how to get along without adulation. There was a moment when he was the foremost literary figure in America. James T. Fields retained him for a single golden year at what still would be a handsome income for a successful novelist. The rumor that he paid his butcher bills from the postage stamps sent with requests for his autograph was so specious that an admirer felt bound to deny it emphatically, "on the authority of the butcher." Yet in half-a-dozen years Bret Harte was glad to beat a retreat to a small consulate, leaving behind a wife and children, whom in his remaining twenty-three years he never again managed to see. These English years were aftermath as regards his writing, and his development into a fairly tractable lion is of minor interest.

Since the clue to this decline is missing and its details of a rather ordinary sort, a biographer and critic is pretty well limited to Bret Harte's first manner. This restriction Mr. Merwin has accepted loyally, and has made the staple of his book an elaborate defence of Bret Harte as a truthful chronicler of early California. Thus arises a considerable treatise on California in the sixties. It is a serious and informing bit of history, but it involves a most inauspicious competition with the work it defends. Nor is the utility of such a defence quite apparent. Obviously, the mining camps did not look to their makers as they did to the detached artist, Bret Harte. That he recorded his own impressions faithfully and without pretification, no person of critical capacity will doubt. The work, despite its dose of Dickens, bears its own evidence of authenticity. Mr. Merwin's elaborate apology either indicates that he has taken the plain man's cavils far too seriously, or that he was hard put to it to make out a book.

It is a duty and a pleasure to add that, aside from this defect of proportion, Mr. Merwin deploys his scanty material with much address, with sufficient humor, and with critical balance. The literary qualities of the prose and verse are admirably analyzed. The something less than complete manliness of the hero is, if unexplained, frankly acknowledged. A very workmanlike monograph of a definitive sort might easily be carved out of this rather misproportioned apologia and biography.

Notes

Dr. David Starr Jordan is bringing out, through Paul Elder & Co., a humorous volume entitled "Eric's Book of Beasts."

A limited edition of Scott, in fifty volumes, is contemplated by Houghton Mifflin Co.; there will be 300 full-page photogravure plates from special photographs made by Charles S. Olcott.

Rand, McNally & Co. will publish on March 1: "Love in a Mask," an edition of the Balzac manuscript, which, after being buried for fifty years, was printed in Paris last spring; "Lady Eleanor: Lawbreaker," a story of Richard Sheridan's time, by Robert Barr, and "Betty Moore's Journal," by Mrs. Mabel D. Carry.

Spring books announced by the Century Company include: "Tante," by Anne Douglas Sedgwick; "The Fighting Doctor," by Helen R. Martin; "The Woman from Wolverton," by Isabel Gordon Curtis; "The Battle of Base-Ball," by C. H. Claudy; "The Old Nest," by Rupert Hughes; "Explorers and Settlers—The Colonists and the Revolution—A New Nation—The Westward Movement—The Civil War—The Progress of a United People," Century Readings in United States History, edited by Charles L. Barstow; "The Yosemite," by John Muir; "The Burgundian," by Marion Polk Angellotti, and "Captain Martha Mary," by Avery Abbott.

Falconer Madan, the author of "The Early Oxford Press," has now completed a new work dealing with all the books that concern Oxford—"Oxford Books"—which will be issued as Vol. II of his earlier work. It is announced by the Oxford University Press.

A biography of the late Henry Labouchere, authorized by his executors, will be undertaken by his nephew, Algar Thorold.

A centenary edition of the works of Robert Browning, printed in large type on fine paper, with a preface to each leading poem by Dr. Frederick G. Kenyon, principal librarian of the British Museum, is announced by Smith & Elder. The edition will be limited to 750 copies, 250 for sale in this country.

The same house has in hand "Morocco in Diplomacy," by E. D. Morel, which traces the relations of that country to the Powers during the last twenty years.

To celebrate the seventieth birthday of Prof. Georg Brandes, the Danish scholar, which occurred recently, his publishers, Messrs. Gyldendal, issue an *édition de luxe* of his "William Shakespeare."

Included in John Lane Co.'s list of spring publications are, in fiction: "Zuleika Dobson," by Max Beerbohm; "Sekhet," by Irene Miller; "Wings of Desire," by M. P. Willcocks; "Manalive," by Gilbert K. Chesterton; "Hector Graeme," by Evelyn Brentwood; "The Unknown Woman," by Anne Warwick; "The Ealing Miracle," by Horace W. C. Newte; "Wayward Feet," by A. R. Goring-Thomas; "The Shadow of Power," by Paul Bertram; "Elsie Lindtner," by Kavin Michaelis; "The Story of a Ploughboy," by James Bryce; "The Snake," by Inglis McLeod; "In Sight of the Peak," by W. M. Ardagh; "The Chimera," by George Vane; "Beggars and Sorners," by Allan McAulay; "Guarded Mounts," by John Oxenham; "In Quest of Gold," by Charles E. Knowles; "The Saint's Progress," translated from the Italian of Ciro Alvi by Mary Gibson; "The Joyous Adventures of Aristide Pujol," by William J. Locke; "No Surrender," by Constance E. Maud, and "The Dewpond," by Charles Marriott.—Biography and history: "Footprints of Famous Americans in Paris," by John Joseph Conway; "Recollections of Guy de Maupassant," by his valet, François, translated by Maurice Reynolds; "The Anarchists," by Ernest A. Vizetelly; "Margaret of France, Duchess of Savoy, 1523-1574," by Winifred Stephens; "A Queen of Shreds and Patches" [Madame Tallien Notre Dame de Thermidor], translated from the French of L. Gastine by J. Lewis May; "The Betts of Wortham in Suffolk," by Katharine Frances Doughty, and "The Foundations of the Nineteenth Century," by Houston Stewart Chamberlain, a translation from the German by John Lees, with an introduction by Lord Redesdale.—Travel: "About Algeria: Algiers, Tlemcen, Biskra, Constantine, Timgad," by Charles Thomas-Stanford; "The Old Gardens of Italy: How to Visit Them," by Mrs. Aubrey Le Blond; "The Magic of Portugal," by A. F. G. Bell.—Poetry: "Emblems of Love," by Lascelles Abercrombie; "The Pagan

Trinity," by Beatrice Irwin; "The Love Poems of the Poet-Laureate," edited by Frederic Chapman; "Egypt, and Other Poems," by Francis Coutts; "The Lonely Dancer, and Other Poems," by Richard Le Gallienne; "The Lamp and the Lute," by Rosamund Marriott Watson, and "Ballads Weird and Wonderful," with twenty-five drawings by Vernon Lee, introduction by R. P. Chope.—Miscellaneous: "The Stories of the Russian Ballet," by Arthur Applin; "Paris à la Carte," by Julian Street; "Ship Bored," the same; "The Criminal and the Community," by Dr. James Devon; "Jungle Folk," Indian natural history sketches, by Douglas Dewar; "Beauty and Ugliness," by Vernon Lee and C. Anstruther; "The Book of Seven Existences," essays by Richard Le Gallienne, and "The Starlit Mire," epigrams by James Bertram and Russell Wilkinson.

With the fifth and sixth volumes, 1838-1841 and 1841-1844, the "Journals of Ralph Waldo Emerson" (Houghton Mifflin) reach high tide. These years include Brook Farm, the *Dial*, Alcott's hapless Community at Fruitlands. Emerson himself in this time published the first and second series of "Essays." At Concord, Thoreau was an inmate of the household; the mystic Jones Very, the poet Ellery Channing, the communist Edward Palmer, and Margaret Fuller were frequent guests. Hawthorne was an occasional evasive companion. Much beset by less desirable visitors representing sundry "isms," Emerson often yearns for the freedom of "being a guest in his own house." For the first time these journals begin to assume a larger historic importance. We have vivid portraits of Garrison, Webster, Alcott, Margaret Fuller, Edward Everett, and others. Nor will a future student of American civilization find superfluous Emerson's enthusiastic analysis of the charm of Fanny Ellsler's dancing. Indeed the topics are more acceptably varied in these than in the earlier volumes. A sardonic humor, exemplified in a scheme for a Society for Propping the Planet, becomes frequent. One readily passes from some racy Concord item, to a case in manners or a venture in æsthetics. The old theological and metaphysical concerns now admit the neighborhood of politics and portraiture. What is most remarkable is the balance of it all, the sense of cosmic unterrified survey. We can do no better perhaps in a restricted space than to point out certain analogies and anticipations linking Emerson with other great thinkers.

Some eight years before Millet moved to Barbizon, Emerson was writing:

> I often see that the attitudes of both men and women engaged in hard labor are more picturesque than any which art or study could contrive, for the Heart is in these first. I say picturesque, because, when I pass these groups, I instantly know whence all the fine pictures I have seen had their origin; I feel the painter in me; these are the traits that make us feel the force and eloquence of form and the sting of color.

A full generation before Amiel had declared landscape to be "a state of mind," Emerson writes:

> We feel that every one of those remarkable effects in landscape, which occasionally catch and delight the eye, as, for example, a long vista in woods, trees on the shore of the lake coming quite down to the water, a long reach in a river, a double or triple row of uplands or mountains seen one over the other, and whatever of the like has affected our fancy, must be the rhetoric of some thought not yet detached for the conscious intellect.

Long before the doctrine that criticism should be creative, Emerson insisted that "analysis can be poetical." A forecast of Samuel Butler's faith that our political salvation lies in following "nice people" is Emerson's declaration that "any form of government is good in which the rulers are gentlemen." There is an eloquent passage on the evils of commerce which would serve as a text for modern progressives of either denomination. We must close with a glimpse of good Dr. Ripley, Emerson's pastor:

> Dr. Ripley prays for rain with great explicitness on Sunday, and on Monday the showers fell. When I spoke of the speed with which his prayers were answered, the good man looked modest.

A hundred years or so ago, a young Englishman travelling or living abroad was accustomed to redact his impressions in the form of letters to his father who, from the opinions and judgments expressed on men and things, was able to form some estimate of his son's educational progress. To-day the same sojourner takes a more self-conscious literary attitude and writes a book. Charles Dawbarn's "France and the French" (Macmillan), which is affectionately inscribed "to my father,". is the precise literary analogue of the innumerable travel-letters of the eighteenth century, most of which, done up in yellowing sheaves, fade forgotten in ancestral chest and escritoire. What has held Mr. Dawbarn for ten years in Paris we do not know, and we are ignorant as to the precise opportunities he has enjoyed for study and observation. These should seem, however, to have been extremely superficial, or else he has taken little advantage of them, for certainly his *aperçus* of French character, French culture, and French civilization, are remarkable neither for originality nor for deep penetration. His book abounds in current commonplaces, in conventional estimates, in trite remarks, and in threadbare comparisons between French and English institutions. In fact, what chiefly impresses the reader in its pages is the psychological phenomenon of the insularity of the average Englishman for whom there exists no universal or world standard. In this he is far behind his national predecessor of earlier centuries, and perhaps, even, of the average American of to-day. At least the latter would be likely to give new life to his broad generalizations with anecdote and the record of piquant facts derived from his own observation. Mr. Dawbarn's pages are singularly free from any trace of the influence which Stendhal has exerted upon the modern literary traveller, and it would be cruel to compare them with the alert and suggestive pages of Pierre de Coulevain's "L'Ile Inconnue," with which, however, the author shows acquaintance. And yet it is the Englishman rather than the Frenchman who has the reputation for travel and sightseeing!

We agree with Walter Jerrold, the author of "The Danube" (Stokes) that "what the Rhine was, the greater, the more beautiful, the grander, and more fascinating Danube should become in these days of improved means of communication." There is no part of the Rhine quite as beautiful as the "Wachau," with its narrow gorge, its crags, vineyards, and old towns, extending from the magnificent monastery of Mölk, fifty miles west of Vienna, past the castle of Dürnstein —the prison of Richard Cœur de Lion—to Krems. And yet these twelve miles of glorious scenery are far surpassed in impressiveness by what the Danube offers in its course through Hungary and along the borders of Servia, Rumania, and Bulgaria. The nearer we approach its mouth, the wider becomes our historical perspective. In other words, in addition to its scenic attractions the Danube is of far greater international interest than the Rhine. Mr. Jerrold describes the river from Ratisbon to the Iron Gate, and brings together a mass of information, from legends, chronicles, and stories of older travellers, which testifies to his industry and intelligence, but does not warm the reader's heart. The author becomes more interesting in his personal glimpses of Hungary, which are at times quite spirited. His knowledge of Hungarian history and literature is, however, very hazy. It would be difficult to say what he means by the assertion that "though much blamed for his share in the compromise, Deák (misspelled Déak) may be regarded as one of the chief agents of the renaissance." He is equally at sea in his estimate of the novelist Jókai, who was so erroneously regarded by foreigners as, in his day, the truest exponent of Hungarian ideas. Mr. Jerrold's spelling of the names of Hungarian celebrities is not always correct, as "Görgy," "Batthány," and "Petófi" show. Less excusably, there are many errors in German geographical names, such as "Würtemburg," "Höchstäd," "Ingoldstadt," etc., and the quotations from German songs and inscriptions bristle with misprints. The illustrations, though pleasing, are not highly artistic.

W. A. Craigie is responsible for the double-section of the "Oxford English Dictionary," SIMPLE-SLEEP (Frowde). A notable feature of this instalment is its group of SK-words, occupying some thirty-five pages, in which neither the native nor the Latin element appears—the Latin *sc-* remaining unchanged and the Anglo-Saxon *sc-* being represented by *sh-* in modern English. Among the blunt monosyllables in the SK-file may be mentioned the Scandinavian *skald, ski, skill, skin, sky;* the Dutch *skate;* the Old French *skein* and *skim;* the Greek *skink* (lizard); and the American Indian *skunk*. Of the boreal invaders *sky* has been particularly prolific in picturesque compounds with a flavor of the most etherial slang, such as *sky-farmer*—"cheats who pretend they were farmers in the isle of sky"; the nautical *skylark* dimly reminiscent of tarry sailors frolicking in the riggings; and *sky-parlour,* the abode where great thread-bare poets are sought in the early dawn of their celebrity. If one should catch a boy on Broadway to-day and demand of him a definition of *sky-scraper,* there would be but one reply; speechless with a vague surmise, he would stand groping from the malicious tail of his eye for the interrogator's carpet-bag, while his index finger travelled heavenward over the puny spires of the old soul-insurance offices towards the genuinely cloud-piercing towers of our new life-insurance buildings. But this disdainful gesture would not be animated by a sense of linguistic history. As early as 1794, a sailor questioned on this same word *sky-scraper* would have pointed to certain light trianguiar sails, otherwise known as *moon-rakers,* set above the royals

to catch soft airs in calm weather. In 1827, however, you might open the *Sporting Magazine* and learn that your favorite jockey was about to ride "one of the crack skyscrapers of the day." On the other hand, if you happened to be a man of some inches in the year 1857, you might yourself be accosted thus, "I say, old sky-scraper, is it cold up there?" If, furthermore, you continued to cling to your old high cycle in 1892, you made yourself obnoxious to the same epithet. And for once at any rate—in Lever's "Charles O'Malley," 1841—a very "tall" story passes for a sky-scraper. Rather curiously, the first recorded use of the word in its current meaning is found in the Boston *Journal*, 1891.

The word *slave*, etymologically identical with *Slav*, and spelled *sclaue* by Chaucer, Lord Berners, and Spenser, is of course of a high antiquity. The most interesting part of its history, however, relates to the United States in the first half of the nineteenth century, when in the heat of political controversy it was forced into novel combinations by the passion of abolitionist reformers. For this phase of its activity the Oxford Dictionary assembles a fairly good collection of illustrations, but relies too much on Bartlett and printed books to be thoroughly trustworthy as a record of "first appearances." For example, the earliest illustration of *slave power* is taken from Bartlett, and dated 1859. This is obviously late. In the Utica *Liberty Press* of June 7, 1849, we find an editorial attack on the *Daily Observer*, which is set down "as a pro-slavery organ, and the Hunker party, of which it is a mouthpiece, the ally of the *slave power*." In the same issue is a racy attack, quoted from the Cayuga *New Era*, upon the "doughface policy" of those who "climb upon the skirts of the *slavery-extentionists* of the South"; this example of *slavery-extensionists* antedates the Dictionary by eleven years. Finally, the combination italicized in the following passage, also from the *Liberty Press*, is not recorded at all: "The North has been atrociously duped and cheated into a practical alliance with the *slavery-propagandists*." The earliest illustration of *slave-mongers* is dated 1861; in Loring Moody's pamphlet "History of the Mexican War," 1848, the word occurs, page 14, in the phrase "Southern slave-mongers." On page 26 of the same appears the similarly contemptuous *slave-breeders*, which is not recorded by the Oxford historians. Another unrecorded form is *slave-breeding*, irefully applied in the *Radical Abolitionist* of June, 1856, to a contemporary newspaper, the *New Yorker Staats-Zeitung*—"a universal cry of indignation arose among the working people of New York against this *slave-breeding* organ." The first and only recorded example of *slave-land*, 1855, is anticipated by Harriet Martineau in her "Retrospect of Western Travel," 1838—"a few negroes who have returned into *slaveland* from a state of freedom" (Vol. I, p. 178). The illustration of *slave-whip* is taken from Whittier, 1838—"where the *slave-whip* ceaseless swings." As an example of abolitionist energy in style we should like to add this from Moody's "Mexican War" (p. 30): "As soon as the Texians had gained the battle of San Jacinto, they demanded to be 'annexed to the United States.' Not in the tone of suppliants; quite the contrary; with the butt of their *slaves-whips*, while their knuckles were dripping with blood, they were found on the steps, thundering at the door for admission to the Union." In general, the leading abolitionist pamphleteers and journalists respect the purity of the language; they write under the shadow of the English and Latin classics. Yet neither Cicero nor Hooker, St. Augustine nor Burke—to whom they resort for both eloquence and argument—is able to prevent them from coining and circulating freely the illegitimate hybrid *slavocracy*, painful to lexicographers. The first example recorded is Bartlett's from the New York *Express*, 1848; and we note another of the same date on page 120 of Moody's "Mexican War"; the next falls from the silver tongue of Wendell Phillips.

"The Truth About Chickamauga" (Houghton Mifflin), by Archibald Gracie, is the first of a work of two volumes, and is concerned almost exclusively with the events of the afternoon of the second day at Chickamauga. Since Mr. Gracie but half-presents his story, elaborate criticism is not yet in place. The title is misleading. The campaign in general, the preliminary manœuvring in August and September of 1863, the battle of the first day, the dramatic advance of Longstreet on the forenoon of the second day, which brought about the rout of the Federal right, these capital points in the tale of Chickamauga are not considered. The book presents really only the truth about "Horseshoe Ridge"; its title claims too much. Challenging the accepted views of the notable stand made on the Federal left on the afternoon of September 20, 1863, our author gives in this book the Federal testimony, reserving for his second volume that of the Confederates. Mr. Gracie weighs with immense labor and detail the evidence in the official reports, from those of Rosecrans at Chattanooga down to the subalterns on the firing-line. His work would be much more effective if condensed and better systematized. In fact, we think few will read the tedious detail excepting the sons and grandsons of the participants who figure. Mr. Gracie is conscientious as well as industrious, and although his case is only half stated, already makes it plain that the struggle has been glaringly misconceived. The facts here so minutely set forth make it proper that a number of costly monuments in Chickamauga Park should be located and inscribed anew. He maintains that some gallant regiments and officers have heretofore been discredited, while soldiers less worthy have enjoyed an undeserved fame. As to the result in general, it cannot be said that the Federals could have held out longer on Horseshoe Ridge, or that they retired in good order. An unwarranted hesitancy on the part of the Confederates alone appears to have saved the Federals from a complete catastrophe, and this, we take it, will be made still more plain in Mr. Gracie's second volume. The book contains many good maps, views, and portraits.

The late John Bell Henneman, as professor of English at the University of the South, and as editor of the *Sewanee Review*, was an important influence for culture and scholarship in the Southern States. He was a man of gracious and unstinted friendliness, and absolutely faithful to a wide range of private and public loyalties. Shakespearean study was his major passion, and his friends who have brought together a memorial volume of his writings have appropriately chosen the title "Shakespearean and Other Papers" (The University Press of Sewanee, Tenn.). Henneman's cautious scholarship appears to advantage in his analysis of the tangled problem of the historical plays. His especial local activities are suggested by papers on James Lane Allen, on Southern literature, and recent historians of the South. The breadth of his interests is hinted at in an essay on the Hungarian novelist, Maurus Jókai. Professor Trent contributes a personal appreciation, and Prof. J. D. Bruce a biographical sketch. As frontispiece there is an excellent photographic portrait of Henneman. To many comrades, for the lines of his friendship reached far, these literary *parerga* of a life ungrudgingly devoted to the routine of teaching and administration will appeal with peculiar and pathetic force.

The Arthur H. Clark Co. of Cleveland has just published, in anticipation of the needs of the State Constitutional Convention, "The Constitutions of Ohio, Amendments, and Proposed Amendments, etc.," edited by Isaac F. Patterson. The work is well done. The editorial matter, which is limited to the lowest possible dimensions, might have been expanded with benefit, but the thirty-nine-page introduction contains sufficient information for an understanding of the documents. At the end is a short chapter composed of contemporary newspaper comment on two of the Constitutions.

The concluding volume of Prof. Francis G. Peabody's Harvard sermons, "Sunday Evenings in the College Chapel" (Houghton Mifflin), is distinguished by the keen insight, the gentle persuasiveness, and the quiet Christian reasonableness, which have marked the four preceding volumes. It contains a gracious tribute to ex-President Eliot which is worthy of quotation:

Severest critic, best of listeners,
Questioning all things with perennial youth,
Quick to detect when faulty logic errs,
Yet quicker to discern each note of truth;
Men call you unimpassioned, cold, and stern,
The last survivor of the Puritan,
They little know the sympathies that burn
For every worthy cause or troubled man.
Straight to its mark your candid counsel flies,
Its shaft of judgment tipped with kind desire,
And those it pierces still unwounded rise,
Chastened but strong, and purified by fire.

Along the coast where we have lived together,
There comes at evening time, in summer weather,
A hush of Nature, when the sighing firs
Cease their complaining, and no land breeze stirs
The drowsy ocean; while the burnished bay
Mirrors the splendors of the dying day.
So, after many and tempestuous years,
And many an angry gale of doubts and fears,
The hostile breezes slacken and then cease;
The harbor lights are lit, of love and peace;
And life's calm evening settles over you
As sunset gathers over Asticou.

In our review of "Truth and Reality" last week the author, John Elof Boodin, was called "a graduate of Harvard." More precisely, he is an A.B. of Brown University, 1895, and received the Ph.D. degree from Harvard in 1899.

Louis Heilprin, who died in this city on Monday night, was born at Miskolez, Hungary, July 2, 1851. His father, Michael Heilprin, who had held an important post in the Hungarian Revolutionary Government under Kossuth, came to America in 1856. He was a profound historical and linguistic scholar, and in America devoted himself to literary and journalistic labors. Michael

Heilprin was one of the editors of the American Cyclopædia in its first edition, and, when this encyclopædia was to be issued in its second edition, the revision of the entire work was entrusted to him. In this labor, Louis Heilprin, though he had barely attained his majority, bore an important part as an assistant to his father. This youthful work was the precursor of that remarkable series of labors which he executed in later years. His revision of the Century Encyclopædia of Names, and of the New International Encyclopædia were examples of conscientious, able, and thoroughgoing work which may safely be said never to have been paralleled by any single worker in that field. Another task, which he executed in conjunction with his brother, the late Prof. Angelo Heilprin, was the preparation of the latest edition of Lippincott's Gazetteer, the preceding and long-antiquated edition serving merely as a basis. This was accomplished in a comparatively short time by two men, as the proofsheets, showing the changes and additions, make plain to the eye. While the work done by Mr. Heilprin was chiefly in this line, his intellectual powers in other directions were, if anything, even more remarkable, though these were known only to a small circle of friends. He was always intensely interested in all matters relating to engineering and transportation, and had a penetrating grasp of such questions as that of rapid transit in New York. At a critical time in the discussion of this question, he sent to one of the leading engineering journals an elaborate article on the subject, which so impressed the editor that he urged Mr. Heilprin to make further contribution to the magazine, never doubting that the article came from the pen of an engineering expert. Mr. Heilprin was an occasional, but highly valued, contributor to the *Nation*. Shortly before the breaking-down of his health last year, he wrote for these columns an extensive and noteworthy review of the Eleventh Edition of the Encyclopædia Britannica. Of the ideal beauty of his character, and the affectionate regard he inspired in all who knew him, this is not the place to speak.

Nathan Coffee, author of a book entitled "Lords of the Soil," which describes old Indian customs, died last week at his home on Long Island, aged fifty-eight. His grandmother was a Narragansett queen, and his father belonged to the Montauk tribe.

Prof. Benjamin Gill, seventy-nine years old, professor of Greek and Latin in Pennsylvania State College, died on Sunday.

Dr. Edward Wilmot Blyden, the negro author and lecturer, died recently at Sierra Leone. He was born at St. Thomas, West Indies, in 1832. After studying theology and becoming a Presbyterian pastor, he was appointed president of Liberia College. Later he was Liberian Secretary of State for the Interior, and Liberian Minister at London. He wrote several works on the negro in Africa.

The death occurred at Edinburgh, a fortnight since, of Dr. Alexander Taylor Innes, aged seventy-eight. Among his writings are "The Law of Creeds in Scotland," "Church and State, a Historical Handbook," "Studies in Scottish History," "John Knox," "Trial of Jesus," and "Scottish Churches and the Crisis of 1907."

Gen. Hippolyte Langlois, grand officer of the Legion of Honor, Senator from the division of Meurthe-et-Moselle, and member of the French Academy, died in Paris on Monday, at the age of seventy-two. He was an authority on military strategy and wrote much on this subject.

Dr. Andrew Martin Fairbairn, principal emeritus of Mansfield College, Oxford, is dead. He was the Lyman Beecher lecturer at Yale University in 1891-92. Dr. Fairbairn was born at Edinburgh in 1838. He had received honorary degrees from a number of universities, including Yale and the Theological Institute at Göttingen. He was a minister of the Evangelical Union Congregational Church, a member of numerous theological boards and commissions, and was the author of several works on religion and its philosophy and history.

Abbé Charles Loyson, Père Hyacinthe, of whom mention is made in another column, died last Friday at Neuilly, France, aged eighty-four. In 1850 he was ordained priest, and officiated in St. Sulpice, Paris. For his heterodoxical preaching he was excommunicated by the Catholic Church in 1869. Opposed to forced celibacy, he married shortly afterwards an American woman, Emilie Jane Butterfield, and visited this country, where he was welcomed as another Luther, but he remained a Catholic, though he rejected the infallibility of the Pope. He returned to Paris, and in 1878 undertook to establish the "Gallican Catholic Church," assuming the title of rector under the auspices of the "Primate of the Church of Scotland." Among his works are "La Société civile dans ses rapports avec le Christianisme," "Mon Testament," and "Christianisme et Islamisme."

Science

Constable & Co. of London will begin the publication next April of *Bedrock*, a quarterly review of scientific thought. The editor, aided by an editorial committee, will be H. B. Grylls.

The place of honor in the *Annales de Géographie* for January is given to the introductory lecture by Prof. W. M. Davis of Harvard in his course in geography, at the Sorbonne. A reference to the fact that he was the first lecturer on science to be chosen by the Minister of Public Instruction, the other courses having been on American history and literature, was followed by an expression of his great satisfaction in being able to "present to young French geographers certain principles of physical geography which, although the results of the investigations of our explorers in the Far West and the Rocky Mountain region, are as applicable to the problems of the Old as to those of the New World." In doing so he would endeavor to establish a more exact and scientific method than now prevails for the description of the various features of the earth's surface.

The *Bibliographic Géographique Annuelle* number of the *Annales de Géographie* covers the geographical literature of 1910. The publications and subjects catalogued number 1165, and the index contains about 3,000 names of authors and travellers. The explanatory notes to the different entries by the editor, Louis Raveneau, and his fifty-two assistants add much to the value and usefulness of the bibliography. Its wide range may be appreciated from the fact that among its contents are two works on agriculture and mining published by the Japanese Department of Agriculture and Commerce.

"Alpine Plants of Europe, Together with Cultural Hints" (Dutton), by Harold Stuart Thompson, F.L.S., is a thoroughly satisfactory handbook. It is comprehensive, covering a sufficiently wide range for the tourist; it is convenient in size and method; and it is accurate. The traveller in the Alps can often find botanies which answer pretty well for any one place, but which are deficient in more general considerations. In this small manual, of less than three hundred pages, are adequate descriptions of the floral carpet from the eastern to the western limits of the higher mountains, accompanied by well-executed figures in color of more than three hundred kinds of flowers. The absence of any analytical key to the species will strike the reader as unfortunate, and he may be at a loss how to proceed. But his hesitation need be only momentary, for a hasty glance at the beautiful illustrations will enable even a beginner to find something exactly or nearly like the specimen under examination. In describing so wide a range of plants, the author has had to omit a good deal of interesting matter, which, in these days, constitutes an important part of botany, namely, that which treats of the relations of plants to insects. But, on the whole, it is, perhaps, well to let the tourist look up that matter for himself. The author devotes a good deal of space to the attractive subject of cultivating Alpine plants in lowland elevations. So far as we have been able to discover, he speaks from his own knowledge, and not at second hand. It will not be his fault if this handbook does not allure many travelers to take a more intelligent interest in the most charming miniature flora in the world.

Joseph Lister, first Baron Lister, who was made famous by his discovery of the antiseptic system of treatment in surgery, died in London on Sunday, eighty-five years of age. His father, Joseph Jackson Lister, was an eminent oculist. The son entered the Quaker schools of Hitchin, in Hertfordshire, and Tottenham, near London, and graduated in 1847 at the University of London, continuing at the College there for the degree of M.B. He became fellow of the Royal College of Surgeons in 1852. After rendering services in treatment of hospital gangrene and pyæmia at the University Hospital he accepted the chair of surgery in Glasgow, and later went to Edinburgh as house surgeon to Dr. Syme, famous at that time for his use of lint instead of water in the dressing of wounds. It was in these years that Lister came to realize his life's work, the invention of antiseptics in surgical operations. By 1850 the use of anæsthetics had made deliberate and complicated operations possible. But a vast percentage of the patients died through suppuration, phagedæna, and other septic poisonings. Lister, on the expiration of his term as house surgeon, prepared an extra-academical course of lectures on surgery, in which the idea of ascepticizing wounds

began to be defined. At this time Lister proposed the prevention of putrefaction, not by the exclusion of air from wounds, which was impossible, but by protection from microbes. Carbolic acid was first tried, on account of its success in deodorizing sewage. But to make it applicable to cut wounds its blending was necessary with some inert body which would combine high antiseptic efficiency with least possible irritation to tissues. Experiments along this line occupied many years. Listerine was one product. Sprays were also used to kill the dust, which Pasteur had shown to be germ-laden, but only to be discarded in 1890, when by experiment Lister determined that the atmosphere could be disregarded, and even all washings of the wound might be dispensed with, with their attendant irritation. Two main objects were always in view, to guard the wound and afterward to protect it. In ligatures he discovered that the threads if perfectly antiseptic might remain in the healed wound without harm; he developed catgut for these as the substance most readily absorbed. In 1869 Lister succeeded his father-in-law, Dr. Syme, in the Edinburgh chair of clinical surgery; in 1877 he changed to a like position in London at King's College. In 1896 he retired from practice. Dr. Lister was president of the Royal Society from 1895 to 1900. In 1883 he was created a baronet, and in 1897 was raised to the peerage as Baron Lister of Lyme Regis. In 1902, among the coronation honors, he was nominated an original member of the new Order of Merit. He received the LL.D. from five universities. For thirty years his name has been honored by surgeons all over the world, and his distinguished work has won the admiration of the lay public for almost as long. There is no heir to his titles, and his wife, Agnes Syme, whom he married in 1856, died in 1893.

The death is reported from Paris of Louis Delaunay-Belleville, a noted engineer, aged sixty-eight. He was formerly honorary president of the Chamber of Commeree of Paris and was the author of one book—"Lois et règlements concernant les appareils à vapeur dans les diverses nations du globe."

Drama

"Heralds of the Dawn," by William Watson, is announced by John Lane Co.

Katherine Jewell Everts, author of "The Speaking Voice," has written a more comprehensive volume on "Vocal Expression" (Harper), which shows an intelligent knowledge of the subject and contains a quantity of good advice. It is particularly sound in its insistence upon the necessity, on the part of the reader or actor, of grasping the full meaning of a prose passage, poem, or play before undertaking to interpret it. Most modern actors—public reciters are much less common now than they were thirty or forty years ago—might study what is said on this subject with much advantage. There is good matter, too, in the various essays on the characteristics and possibilities of cultivated speech, the effects of properly modulated tone, correct emphasis, sympathetic feeling, and so forth, and on the management of the breath, voice development, etc., but it may be doubted whether the most earnest student of elocution can profit much by printed instruction. It is so much easier to describe how a thing ought to be done than to explain how to do it. It is because Miss Everts recognizes this fact, and lays a special emphasis upon the need of analytical study as a preliminary to recitation or impersonation, that her book has positive value. Most of the passages which she has selected for vocal experiment are well suited to the purpose, but some of her prescriptions for budding geniuses are, perhaps, a little fanciful.

"The Flower Shop," a play in three acts, by Marion Craig-Wentworth (Badger), is a cleverly written and well-made piece—although somewhat too oratorical in places—with several effective theatrical situations. But as a manifesto on the relations of the sexes it is, in its final issue, both conventional and indefinite. It is, on this account, more nearly in accordance with human nature and common experience than it is effective as drama. The heroine believes that the only true happiness for a self-respecting woman consists in her complete independence, and she, therefore, resolutely refuses to marry a rich judge, an ideal man, to whom she is passionately devoted, and who worships her, unless he will permit her to keep the flower-shop which she has established as a means of self-support and an object-lesson to other women. He will not agree to this, because it is unnecessary, and would put both her and him in a false position. Meanwhile, she has induced her closest friend, a married woman, to go on the stage, in defiance of her husband's wishes. But the husband, also rich and devoted, says plumply, evidently meaning it, that, if his wife chooses to exhibit herself, he will have nothing more to do with her, and, as she loves him, she backs down and yields to his wishes. This submission only confirms the heroine in her attitude; but she is so desperately in love that, sooner than lose the judge altogether, she offers to become his mistress. The judge, being a gentleman, promptly declines to degrade her, and withdraws, bidding her send for him when she has changed her opinion. Finally she does write to him, but again changes her mind. The judge, however, returns of his own accord, whereupon she voluntarily agrees to give up the shop. But he says he will marry her, shop and all and down comes the happy curtain. Manifestly this is a lame and impotent conclusion for a thesis play, unless the intended moral—of which no sufficient intimation is given in the play—is that love and instinct are stronger than abstract principle.

The Poetry Society of London will produce in March Prof. Gilbert Murray's version of "Hippolytus."

In "The Lady of Dreams," the revised "Princesse Lointaine," Madame Simone will be supported by A. E. Anson as Prince Geoffrey and Julian L'Estrange as Bertram.

The engagement of Ethel Barrymore at the Empire Theatre will be followed by the production of Rudolf Besier's arboreal comedy, "Lady Patricia," in which the part of the heroine will be assumed by Mrs. Fiske. The piece, which has had a successful run in London, has been described already in this journal.

Henry Miller will play the leading part when he produces A. E. Thomas's new play, "The Rainbow," in this city a few weeks hence. The piece, of which the scenes are laid in this city and on the Riviera, requires a large cast.

Alan Campbell's new play, "The Dust of Egypt," which Frank Curzon and Gerald du Maurier produced last week in Wyndham's Theatre, London, relates to the adventures of an Egyptian princess restored to life after centuries of mummification. It is said that he has put this ancient idea to novel use.

Henry Ainley, who has been ill for some time, has recovered and is making a provincial tour in "Old Heidelberg."

It is announced that "Chantecler," in which Miss Maude Adams has now appeared more than two hundred and fifty times in different parts of the country, will be brought back to this city next season, and played in the Empire Theatre, with entirely new scenery. The five hundredth performance will occur in due course, according to the programme long since decreed, in San Francisco. Miss Adams, of course, will continue to wear the feathers of the heroic Gallic cock until the destined sum of her performances has been accomplished. Nothing could be much more illuminative of the present condition of theatrical affairs. When the poet declared that it was not in mortals to command success, he failed to foresee the marvels of modern management.

Sarah Bernhardt, it appears, is to return to us sooner than we expected. It is announced that she has signed a contract to tour the United States again next winter as a vaudeville star. There is something unpleasant in the notion of such a career ending in the halls, although, as a matter of fact, the latter have been looming large as dangerous rivals of the regular theatres for some time. And, after all, there is no particular reason why she should not do here what she has done already in London. It is possible that, in the new conditions, her art may rise superior to its environment, but it is permissible to doubt. Those who are old enough to remember her in the days of her early prime know that she has long ceased to be the perfect artist that she was then. She is a marvellous woman and a wonderful actress still, but years of barn-storming and dollar-hunting have dulled her artistic perceptions and deadened her artistic conscience. She has learned to appeal to the mob and to command ignorant applause by the use of a violence to which in the past she would not have condescended.

Oscar Asche has been compelled to abandon his scheme of building a new theatre in London until his return from Australia at the end of next year. He will then make a revival of "Kismet," which will be followed by the sequel, which Edward Knoblauch is now writing. This will be called "Mecca," and will carry on the adventures of Hajj, the Beggar, of his daughter Marsina, now married to the Caliph, and one or two of their associates. A Chineso dramatist, Kong Meng, resident in Australia, has furnished Mr. Asche with the scenario of a drama of which the action passes in China, and in which all the characters are Chinese. As it stands, the

piece could be played almost entirely in pantomime; and, when completed, the proportion of dialogue to action will be small.

Music

The Story of the Bagpipe. By William H. Grattan Flood. New York: Charles Scribner's Sons. $1.25 net.

The word bagpipe calls up in most minds the vision of a Scotch Highlander playing the national instrument of his country, to the local color of which it is supposed to be as essential as the kilt and the bare knees. As a matter of fact, the bagpipe was for thousands of years a favorite instrument in most parts of the world, and if to-day it seems to belong exclusively to the Scotch and their Irish neighbors, this is simply due to the fact that they alone had the good sense and taste to cling to it when others had become deaf to its unique charm. Mr. Flood, in the opening pages of his "Story of the Bagpipe," reveals its remarkable antiquity. Chinese traditions make it the oldest instrument in the Celestial Empire. The Egyptians employed the bagpipe drone and a player of this instrument is sculptured on a Hittite slab dating back to a thousand years before Christ. Nero played on it, but many archæologists now think that the Roman civilization was due in part to Celtic influences, and Mr. Flood declares there is not a shadow of doubt that the bagpipe was used in Pre-Christian Ireland, whence it was brought not only to Wales and Scotland, but also to Rome. However this may be, it is certain that during the Middle Ages it made its home in every European country. In Austria dancing to the bagpipe was a popular diversion as early as the thirteenth century, and that the instrument was also much in vogue in Germany at the same period is attested by the legend of the Pied Piper of Hamelin, and by other evidence. It became a court instrument played by minnesingers and troubadours in Germany, France, and Spain. From Boccaccio we learn that in 1348 a bagpiper accompanied the fugitives who fled from plague-stricken Florence to the country. In Belgium pipers took part in religious services, and there were masques of pipers; on one occasion, at a feast of the Blessed Virgin, "many wild beasts danced round a cage containing two apes playing on bagpipes." Comic pictures of pigs, bears, and other animals playing this instrument attest its mediæval vogue in divers countries; and the esteem in which it was held is further shown in its being pictured as a component part of the celestial instrument, played by angels. It was supposed, also, to influence the actions of animals. In Sweden, an ecclesiastic dignitary, of the sixteenth century relates that the shepherds employed the bagpipe to induce their flocks to come together and feed with relish.

In France, during the seventeenth century, five different forms of the bagpipe were used, and two of these, the coonemuse and the musette, were much in vogue; in fact, the musette was the fashionable instrument in the days of Louis XIV. Ladies vied with each other as players and as owners of beautifully decorated specimens; in 1649 the Court Band included four musettes, and Mersenne wrote that with a skilful player this instrument did not yield to any other. In the French army, also, the musette (which was modelled on the Irish uilleann) was used up to the opening years of the last century. It was in Ireland, Scotland, and England, nevertheless, that the bagpipe was most in vogue from the earliest days, and it is therefore entirely proper that Mr. Flood devotes most of his chapters (eighteen out of twenty-five) to a detailed account of the ups and downs in its popularity in these isles.

What arrests the attention particularly in this account is the great variety of functions at which the bagpipe was found desirable and helpful. There were town pipers who were maintained at public expense, and who, in spring, went "on the road," as we say. In the autumn, the piper was in demand to lighten the labors of the harvesters; he received a sixpence "for playing to the chippers all the day." At the morris dances he was indispensable, as well as at weddings, funerals, and all social functions, including banquets. With the bagpipe, as Vincenzo Galilei wrote in 1581, the Irish "accompany their dead to the grave, making such mournful sounds . . . as to invite—nay, almost force—the bystanders to weep." "To its sound," the same writer remarks, "this unconquered, fierce, and warlike people march their armies, and encourage each other to deeds of valor." And it was always in the van of the army that these brave pipers marched, regardless of danger.

All these things apply to the Scotch as well as to the Irish, and, to some extent, to the English, who also employed the bagpipe in some of their churches as a substitute for an organ, and particularly in outdoor religious functions and progressions. After the second drone had been added, "the effect of the instrument as an accompaniment to choral singing must have been very fine," as Mr. Flood justly remarks. Be it remembered that this drone of the bagpipe is the beginning of all harmony in music, just as the bagpipe itself is the Darwinian progenitor of the church organ—facts which greatly add to its prestige and its sentimental if not artistic importance. But surely every surviving piper, professional or amateur, should take fresh hope from the various facts stated in the foregoing paragraphs, that his favorite instrument will once again come not only into temporary fashion, but into general vogue.

No doubt, the crude construction of the earlier instruments had much to do with their banishment, first in favor of harps, and subsequently of divers band and orchestral instruments, both in the army and in homes. A seventeenth-century writer speaks of the Highlanders' music as "loud terrene noises, like the bellowing of beasts"; and there are other references to "strident" and "discordant" tones. Probably in many cases the intonation left much to be desired. The historian Burney, in 1775, wrote very favorably about some Irish uilleann pipes he had heard. Their tones reminded him of oboe, clarinet, and German flute, and they were "very well in tune," which had never been the case with any Scotch bagpipes he had heard. Probably, if these improvements in tone and intonation had come sooner, the amateurs and professional musicians would not have turned their backs on this unique instrument. The chapters in which Mr. Flood records its gradual loss of favor make sad reading for those who love it; and yet, although the author himself hardly dares to hope much for the future, he supplies a number of facts which will give heart to more sanguine readers. The recent revival of interest in folk-tunes (which in Ireland and Scotland were largely shaped by the bagpipe) is an important factor. There are still twenty-one pipe bands in the British army, and there is a tendency to restore those which have been abolished. In our own country something has been done in behalf of the bagpipe and its music, and there are now pipe bands in many of the Irish towns, as well as in Australia. The instrument itself is being steadily improved, and one of its latest varieties —the "Brian Boru"—has a complete chromatic scale.

The reviewer, though he has not a drop of British or Celtic blood in his veins, confesses that he is as enthusiastic over the drone-pipe as any Scotchman or Irishman could be, and not merely because of its "archaic" or "barbaric" qualities, but because of its genuine musical qualities and appeal to the emotions. As long ago as the middle of the eighteenth century the Rev. Campbell, rector of Galloon, wrote that the bagpipe "is not an instrument so unpleasant as the players of Italian music represent it." Had it been, the great composers of several countries would not have taken so much interest in it. Not only did some of the leading British masters write for the bagpipe, or imitate its melodic peculiarities on other instruments, but Handel, Lully, Haydn, Spohr, Schubert, Boieldieu, Beethoven, Mendelssohn, Meyerbeer, and others paid their respects to it in

the same ways. Much of Grieg's music owes part of its charm to the drone bass accompanying it—he was of Scotch descent. Opera composers of the future will doubtless not be deaf to the opportunities the bagpipe offers for fascinating audiences with vivid local color and incisive tunes. Its penetrating quality commends it for war—if war must be—above the brass instruments. But it is at funerals, in particular, that it seems destined to prove a potent emotional factor in the future. The most imaginative of English musical critics, the late Vernon Blackburne, wrote some years ago about "the cry of the pipes and the immeasurable sadness of the Scotch tunes. . . . The pedal-note is a long monotone of grief, an enduring moan for the thing that has been." He concludes with this tribute:

> Such music as this, thus played, and on this instrument, once more, in its gloomy and magnificent completeness, shows that in the mourning for the dead Scotland triumphed unto the attainment of the culmination of her musical art.

To the New Library of Music series John Lane Co. adds "Beethoven," by Donald Francis Tovey, and "Mozart," by W. H. Hadow.

"The difference between the earnings of great artists in our time and from sixty to seventy-five years ago, is not so large as some people imagine, notwithstanding the fact that money in those days had about four times the purchasing power it possesses now," writes a correspondent of the *Musical Courier*. There are letters of Malibran in existence which prove that she received as high as £400 for an appearance, and that was before 1835. It is also on record that Franz Liszt took in at a single concert in St. Petersburg 22,500 rubles ($11,000). No instrumentalist since has ever equalled that figure. Paganini's earnings also were enormous. The greatest drawing capacity ever known either among vocalists or instrumentalists was that of Jenny Lind during her famous tour of America in the early fifties under the management of P. T. Barnum. Barnum cleared for himself on that tour $500,000. The receipts of the opening concert at Castle Garden were $37,000—a figure never equalled before or since, nor is it likely that it will ever be equalled again, for the combination of a Jenny Lind and a P. T. Barnum will not so easily be duplicated. Prior to 1830 salaries for singers were low. There exists a letter by Rossini, which testifies to the effect that the prima donna of a good opera company in Italy received for a season of five weeks 400 scudi. The scudi was about equal to a dollar. The first bass and baritone had 300 scudi each, the first tenor 350, and the conductor only 190 scudi. Malibran set a different pace after 1830.

The Minneapolis Symphony Orchestra will play in this city in March, the Philharmonic Society acting as guest. The Orchestra was organized nine years ago, with an annual guarantee fund of $10,000, and has since grown to a complete symphony orchestra of eighty musicians, and is backed by an annual guarantee fund of $65,000. It will give forty concerts this year in Minneapolis, and starts March 8 on a two weeks' trip to the leading Eastern and Western cities. Emil Oberhoffer has been the conductor of the Orchestra since its beginning.

Dr. Muck is not the only former conductor of the Boston Symphony who is coming back to us. George Henschel, the first leader of that organization, will be here, not to conduct, however, but to give the American public once more the pleasure of hearing his unique interpretations of the world's mastersongs.

Excerpts from Wagner's Nibelung operas have been given in concert halls innumerable times, but George Risely purposes to cap the climax by presenting all four of these musical tragedies, without scenery and action, at the next festival in Bristol, England.

Prof. T. C. Okane, whose death at the age of eighty-two is announced from Delaware, O., was the author of many hymns.

Bruno Mugellini, whose death we record, was a teacher at the Liceo Musicale at Bologna, and an excellent pianist. He was also a composer and edited, with I. Philipp, the clavier works of J. S. Bach.

Art

Nineteenth-Century English Ceramic Art. With more than 1,200 examples illustrated in half-tone and line. By J. F. Blacker. Boston: Little, Brown & Co. $3.50 net.

A plausible case for ceramics made in England between 1800 and 1900 is set forth in this attractively printed work, announced as the first of the Nineteenth Century Historical Art Series. Productions of the artistic decline are out of favor with collectors; "hence this book, which is an endeavor to do some justice to the descendants of the eighteenth-century potters." The volume gives more information than criticism—sometimes, indeed, with assistance from trade puffs of other days. Mr. Blacker's "justice," in general, partakes of extreme generosity.

Yet despite this defect of special pleading the book is useful. The data have been gathered laboriously. There is instruction in the story of the vicissitudes of British potteries in the decades when in all industry the machine was supplanting the hand. The lives of enterprising, business-like potters make stimulating reading. The author has selected his illustrations so judiciously—with a few bedizened and beflowered exceptions—as to make even the prejudiced reader wonder whether the nineteenth century was so bad after all. Citations from the illustrated catalogue of the great exhibition of 1851 may confirm words and phrases now held shibboleths of philistinism; the reproduced line drawings of many of the exhibits, at least, are not unpleasing. The pictorial argument is helped by things made under the Ruskin-Morris influence in the eighties and nineties, some of which—*absit* the atrocious term "art pottery" applied to them—are genuinely interesting. The revival of arts and crafts has been felt in the fictile industries; such a pottery as the Sussex Rustic Ware, described by Mr. Blacker, is asymmetrical and suggestive. Throughout the century there were always craftsmen potters endeavoring to do things beyond bourgeois comprehension. Their works remain to avert, in part, the calamity implied in the prediction: "The early productions of the nineteenth century have already entered the realm of antiquity; old china and old pottery are moving on to the Victorian period, which will receive much more attention as the years pass by."

Let warning, nevertheless, be served upon the unsophisticated collector whom Mr. Blacker may lead to believe that these potteries and porcelains, as they become antiques, are sure, like the corresponding eighteenth-century productions, to advance rapidly in value. This they may or they may not do. Collectors' ways are strange, but a presumption stands against the world's permanently valuing an art that is commonplace or ugly. Much nineteenth-century pottery was certainly ugly, most of it commonplace. Take Worcester as a characteristic English ware. Conceding its "superb beauty of forms, colors, and decorations" in its best estate, the discriminating reader might compare with Mr. Blacker's uniformly laudatory text this passage from R. L. Hobson's admirable monograph on "Worcester Porcelain":

> But if these wares, rich and decorative as they often are, fall below the artistic standard of the free and graceful productions of the Wall period, what is to be said of those gaudy and pretentious dress services made to the order of royal and noble personages in the early years of the nineteenth century? Their clumsy shapes, with heavy gadrooned edges, their massive and tasteless gilding, and their coats-of-arms filling the entire middle spaces, are monuments of artistic degradation, and their influence on the decorative art of the time must have been disastrous.

Mr. Blacker's book, in brief, would be better if it now and then emphasized the peril of acquiring masterpieces of mediocrity.

David C. Preyer will shortly add a new volume to L. C. Page & Co.'s series Art Galleries of Europe; it is devoted to "The Art of the Berlin Galleries."

John Lane Co. has the following books among its announcements: "Recollections of a Court Painter," by H. J. Thaddeus; "Recollections of James A. McNeill Whistler," by Thomas Way; "Miniatures," a series of reproductions in photogravure, painted by Charles Turrell, limited edition; "The Studio Year Book of Decorative Art, 1912," and "The Salting Bequest

to the National Gallery, the British Museum, and the Victoria and Albert Museum," by Maurice W. Brockwell.

A duty of two per cent. will be put upon all works of art sold at public auction in France, if a bill now before the French Chamber is carried. This tax will be paid to the artist whose works are sold, or, if he is dead, to his heirs.

"George Inness," a book of reminiscence by his pupil, Elliott Dangerfield, is a beautifully printed quarto. It contains twelve photogravures, of which two are colored, and is published in an edition of 250 copies by Frederic Fairchild Sherman. Mr. Daingerfield's account is largely technical. He empbasizes Inness's early analytical studies, and describes very fully the marvellous short-hand at which the master finally arrived. An abundance of anecdote carries the reader over what otherwise might be dry places. There was a more serious and critical side to Inness, which this memoir merely touches. What we have is an extraordinarily vivid picture of the artist as he appeared day by day in the throes of a creation almost as capricious as it was unfailingly robust. Nothing that has been written about Inness brings out so well this portentous fecundity. For weak pictures his favorite term was "dishwater."

The same exact phrase (says Mr. Daingerfield) fell from his lips when I admired a lovely, tender spring landscape of his own. Bitterly, he said it. The picture was full of soft, gray greens, and delicate tree forms, and in the sky the pale white moon of the morning, when it is far on the wane. Having delivered himself of this criticism of himself, Inness thrust his thumb into a mass of crude chrome yellow and smeared it on the moon. "Stay there now," he said to it, "until I make you look white." Painters will understand what that problem was—the building up, intensifying, strengthening of all the values and colors; but this he did with splendid courage, and the picture came out just as lovely, just as spring-like and refined, but stronger—and the pale moon hid itself in the mellow atmosphere of a spring sky. This somewhat erratic and intense method may have lost the world some good pictures (it is a common saying among artists that Inness has painted out more good pictures than anyone else ever painted), but it was his way.

"Les Néerlandais en Bourgogne (Brussels: G. van Oest, 3 fr. 50c.), par Alphone Germain, is the fruit of frequent visits the author made to Burgundy. With the same conscientious care displayed in his other works ("Le Sentiment de l'Art," "Les Couet," etc.) he has not only gone through the museums and churches containing typical works already classified, but he has searched a number of out-of-the-way places of the Morvan and Macon region, thus bringing together a mass of new and interesting information nowhere else to be found. Few provinces of France can boast an art as remarkable for its power, its vitality, its originality, as can the part of the country here studied. Germain deals with the evolution, the phases, and characteristics of this art from the historical as well as the æsthetic point of view. His enthusiasm over some of his discoveries, though genuine and communicative, never runs away with his critical judgment and some parts, like the pages devoted to the great sculptor, Claus Sluter, bear testimony to his deep thoughtfulness. The illustrations are well chosen and carefully reproduced; some appear here for the first time.

Finance

THE "MONEY TRUST INQUIRY."

Until the beginning of the Congressional dispute which culminated in last week's vote of the House Democratic caucus, a very shadowy idea of what was popularly called the "Money Trust" existed in the general public's mind. Probably some people had imagined that a group of financiers had got control of the country's actual money supply. But the perplexing thing about a Money Trust lay in the general knowledge that when oil or copper or agricultural products are accumulated in a few not disinterested hands, they are so accumulated through use of money. When it comes to cornering money itself, or even forming a Trust in money, the picture must be changed.

Nearly one-half of the country's supply of metal and paper currency is held as reserve in the vaults of its 23,000 banking institutions; the rest is easily accounted for by the enormous total sum in use by private individuals for pocket-money, till-money, and pay-rolls for employees. Mr. La Follette made an attempt to remove all obscurity from the matter, in a speech to the Senate on March 17, 1908, when he declared that a group of one hundred capitalists, whom he named, so far held in their hands control of the largest banks and corporations that they were absolute masters of the money market, and possessed and exercised the power of causing, at their individual whim, booms or panics in the market, and prosperity or adversity in trade.

But every one familiar with business affairs dismissed La Follette's one hundred selected creators of good times and bad times as the dream of an excited brain. Early in the present session of Congress, however, there was presented, by a little-known Northwestern Congressman, a bill "for the appointment of a committee to investigate whether there is or is not a Money Trust," with a dozen questions suggested for that committee to look into—as, for instance, how the principal banks and trust companies are owned; what relation their owners have to the "principal Trusts that control the industries, railroad systems, and large properties"; what the proportion is between loans to speculators and loans to commercial borrowers; how life insurance funds are used; whether the stockholders in the larger banks have been using the deposit funds to manipulate the market; what the deposits of corporations in these banks amount to, and how they are used; and why money on call in Wall Street is quoted lower than commercial discounts.

These and a dozen other questions, some of them rather incoherent, made up the category. Referred to the Rules Committee of the House, they were laid aside and a new resolution substituted, directing inquiry as to how far the control of great banks and great corporations was identical; how far such banks' funds have been used, through subsidiary companies, to manipulate the stock market; how far other enterprises than those whose managers controlled the banks were discriminated against by the banks in question; how far "any individual, firm, or corporation," or a group of them, "can create, avert, or compose panics," through the control of such bank resources.

When the matter had reached this stage, three highly interesting things appeared. One was that a very considerable element in Wall Street, of a perfectly respectable and conservative sort, entertained the conviction that if some such inquiry could be sanely and soberly conducted, it would clear up a very obscure situation and do more good than harm. Another was that the sponsors for the special committee of inquiry, as their public remarks disclosed, were obsessed with the idea that the Money Trust had a hand in everything that was objectionable—that it was, for instance, the Money Trust, and not the over-extended condition of Western banks, which forced the liquidation in wheat during 1910; the Money Trust, and not a 15,500,000-bale crop, which broke the price of cotton in 1911. But the third discovery was, that the conservative part of the Democratic party in the House of Representatives, while acquiescing in the idea of an inquiry, wholly distrusted the leadership contemplated for the proposed special committee, believing that it would end in nothing but futile and disturbing agitation.

This was the issue which was settled by the Democratic caucus on Wednesday of last week, when the question was whether the inquiry should be conducted by a new committee such as that which had been examining with so much futility into the Steel Trust, or should be entrusted to the regular standing committees of the House, notably the Banking and Currency Committee. The contest was vigorous; it ended by the complete unhorsing of the agitators; the inquiry by the regular committees was ordered by a caucus vote of 115 to 66. Last Friday the Banking Committee framed a resolution ordering the inquiry, but discarding the vague and misleading expression "Money Trust," and proposing to investigate "the banking and currency conditions of the country, for the purpose of determining what legislation is needed."

The inquiry, then, is about to begin. What is it likely to amount to, what facts will it establish, how will it affect the markets, if at all? As to

what the scope and purpose of the inquiry will be, all that can now be said is that Wednesday's caucus vote was understood by all parties to mean a sober, intelligent, and statesmanlike investigation, and not, as the Lindbergh resolution seemed to contemplate, a sensational inquisition by a prejudiced committee. The question, what will be disclosed by the testimony, is a matter of large interest. Wall Street knows the general facts as to control of banks; particularly that, in the recent rapid movement for joint control of large local credit institutions, nine large New York banks and half a dozen trust companies, with a combined capital and surplus of say $250,000,000, are classed as under the general domination of one powerful banking interest, and perhaps as many more as under the control of another interest.

But whether this power is used for discriminatory purposes in the money market, the hearings may not find it so easy to establish, for there are two sides to all such questions. The markets are likely to take a quiet and national investigation with due calmness; what they had feared was an attack on credit institutions, in the guise of legislative inquiry. Behind all these considerations stands the further question, what Congress will do or can do in the way of legislation, if it makes discoveries which really impress the public mind. That cannot well be answered, until we see what facts a serious inquiry discloses.

L. P. Jacks'

AMONG THE IDOLMAKERS

Narratives of very unusual quality much in the vein of the author's "Mad Shepherds." Some of the material has appeared in the *Atlantic Monthly*. The *Springfield Republican* said of "Mad Shepherds," "This delicate and charming work is that of a literary artist, who attempts to convey the realities of the soul by showing their operation concretely in individuals." ($1.35 net.*)

J. A. Spenders'

COMMENTS OF BAGSHOT 2d Series

Very human papers, by the editor of *The Westminster Gazette*, treating of Domestic Philosophy, Political Careers, Satan the Statistician, The Eugenist, Religion, History, and less formal matters. *The London Spectator* said of his earlier volume, "While affording the easiest of reading, nevertheless touches deep issues deeply and fine issues finely." ($1.25 net.*)

THE LIFE STORY OF

J. PIERPONT MORGAN

By CARL HOVEY

Crown 8vo. Illustrated. $2.50 net, postpaid $2.66.

This accurate biography, containing "inside" information never before in print, brings the record of Mr. Morgan's life into the year 1911, and chronicles his early beginnings and immense achievements in the world of business. It presents the commanding personality of a great man of affairs and patron of the arts, and is engrossing to the general reader and informing to the financier.

Railways in the United States

Their History, Their Relation to the State and an Analysis of the Legislation in Regard to Their Control

By Simon Sterne, 1839-1901

With Supplementary Notes Continuing the Record to 1911

Cr. 8vo. $1.35 *net.* (*By mail*, $1.50.)

Mr. Sterne was recognized as an authority on the question of railways, and, excepting for the fact that the problem is larger to-day than when first considered by the author, and that its vital interest for the community has been more clearly emphasized, the conditions differ little from those in force at the time his conclusions and recommendations were first brought to the attention of the public.

Recent Importations

Alone in West Africa
By Mary Gaunt
Mary Gaunt sought and found untrodden paths. Beginning with an overland journey along the Gold Coast, she turned inland by canoe up the Volta River and then by paths that none but one white man had traversed, crossed hilly country into the German territory of Toga. Then she visited the sleeping-sickness camp at Mount Kluto, made her way to Lome, and back to Keta. Not yet satisfied, she journeyed through Ashanti, and then to Sunyani, the heart of the rubber forests. The result is a graphic and exciting narrative illustrated from a splendid collection of photographs. *Illustrated.* $3.50 *net.*

Ranching, Sport and Travel
By Thomas Carson
Mustang hunting, bronco busting, shooting scrapes, cattle stealing, sport, natural history, Indian incidents in Arizona and Mexico, form the principal part of this entertaining book. But a chapter on tea planting gives a good idea of processes and of a planter's life; and those on travel, covering many parts of the world, though condensed, include nothing but interesting information. *With 16 illustrations.* $3.00 *net.*

Life in the Legion
By Frederic Martyn
A book that reads like a romance, giving a thrilling and often amusing account of active service in the most famous fighting organization in the world—the French Foreign Legion. $2.00 *net.*

Some Pages of My Life
A VOLUME OF REMINISCENCES. By the Rt. Rev. W. Boyd Carpenter, late Bishop of Ripon. Illustrated. $3.75 *net.*
A fascinating biography of this famous man, who was so delightful a personality, and knew so many leading characters and took part in such notable events.

Lord Broughton's Recollections of a Long Life
6 volumes. $18.00 *net.*
"To the last page these volumes fully sustain the interest. The character of Broughton himself as a gentleman, a patriot, and a statesman, shines brightly to the end. . . . Even here we cannot do anything like justice to books which contain a picture on practically every page. All we can do is to take a few that arise as we turn the leaves, and commend them to our readers as mere random nuggets from one of the richest of gold mines."—*Pall Mall Gazette.*

Charles Dickens in America
By W. Glyde Wilkins. Illustrated. $2.00 *net.*
A complete and very intimate account of Charles Dickens's visit to America, quoting the impressions he made on the Press, and on distinguished men in this country, and the impressions that every one in America made on him.

A Princess of Adventure: Marie Caroline, Duchesse de Barry
By H. Noël Williams. Illustrated. $3.75 *net.*
"Mr. Williams has already a number of fascinating biographies to his credit, but none surpasses this, his latest, which is all the more interesting because some of the events and personages dealt with come within the recollection of yet living people."
—*Philadelphia Public Ledger.*

New Scribner Books

Plays by August Strindberg

Strindberg, the foremost figure in Scandinavian literature to-day, and admittedly one of the greatest of living dramatists, is represented in this volume by three of his best and most characteristic plays—"The Dream Play," a symbolic drama of fairy-like quality; "The Link," a tragedy of modern married life, in one act; and "The Dance of Death," Parts I and II, a sombre, symbolic drama of tremendous power, generally considered to be his masterpiece. *With portrait.* $1.50 *net. Postpaid* $1.65.

A Retrospect of Forty Years by William Allen Butler

A collection of reminiscences of famous men and important events by the distinguished lawyer and writer.

Edited by His Daughter, Harriet Allen Butler

"One of an interesting coterie in the life of his times—social, political, and literary—Mr. Butler writes from an outlook that makes his pages continuously entertaining."—*Boston Transcript. With portraits.* $2.50 *net. Postpaid* $2.85.

Robert E. Lee: Man and Soldier

By Thomas Nelson Page

"A volume which is brilliant in its narrative of Lee's military exploits and the other incidents of his life, while it is inspiring in its reflection of a character in which it can justly be said there was no king but conscience."—*Springfield Republican.*

"The most charming and delightful volume on Robert E. Lee which has seen the light of print. Written in that glow of sympathy and love which is ever fine and true and never gushing."—*Washington Herald.*

With a photogravure portrait and maps. $2.50 *net; postage extra.*

Narratives of Early Pennsylvania, Delaware, and West Jersey, 1630-1708

Edited by Dr. Albert Cook Myers

A new volume in Original Narratives of Early American History Series. This book includes a number of the most important first-hand accounts of the beginnings of the settlements of early Delaware, New Jersey, and Pennsylvania. *Illustrated with maps and facsimiles.* $3.00 *net; postage extra.*

Recollections Grave and Gay

[By Mrs. Burton Harrison

"This autobiography is to others what 'Trilby' is to other novels—delightful to read at top speed, and completely disarming to the critic."

$2.50 *net;* *postpaid* $2.70.

Other Plays

From Ibsen's Workshop
Translated by A. G. Chater. With an Introduction by Wm. Archer.
Includes the drafts of "Rosmersholm," "Hedda Gahler," "The Lady from the Sea," "Little Eyolf," "The Master Builder," "Pillars of Society," "A Doll's House," "Ghosts," and "The Wild Duck."—*Cloth,* $1.25 *net; limp leather* $1.50 *net.*

Montgomery's Leading Facts of English History

The history that has been for years the stand-by of American schools. No other textbook has ever surpassed it in clarity of treatment, completeness and reliability.

It presents in brief compass the most important points in the development of the English nation, and covers all the ground ordinarily covered by a high-school course.

The revision embodies an extensive rewriting of the previous edition. It includes new maps and twenty-five new illustrations, together with a new and superior letterpress throughout. Teachers who desire to make a special study of Constitutional History will be greatly aided by the revised Summary on that subject and by the important Constitutional Documents contained at the back of the book.

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown"

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part the country."

Third Edition,

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.

IMPORTANT NEW MACMILLAN PUBLICATIONS

POLITICAL. SOCIAL. EDUCATIONAL.

Democratic England. By **Percy Alden, M.P.**

A brilliant study of the humanistic movement and the important social problems which to-day have partly bridged the gulf between British political parties and classes to the advantage of the entire community. *Cloth, gilt top,* 12*mo*, $1.50 *net; postpaid* $1.62.

The New Democracy. By **Walter E. Weyl, Ph.D.**

A vital history of democracy in the United States, and a clear summarized statement of the causes and aims of the many movements leading to a "socialized democracy." Explains much that is confusing in the political and social situation confronting the Presidential campaign. *Cloth*, 12*mo*, $2.00 *net; postpaid* $2.12.

The Modern Woman's Rights Movement. By **K. Schirmacher**

Translated from the German by Dr. Carl C. Eckhardt of Colorado.

A full and complete description of the world-wide movement for women's rights. *Cloth*, 12*mo*, $1.50 *net; postpaid* $1.60.

Essentials of Socialism. By **Ira B. Cross**

A clear, concise, impartial, and brief explanation of the arguments for and against Socialism. Just the book for the busy reader. *Cloth*, 12*mo*, $1.00; *postpaid* $1.08.

Socialism and the Ethics of Jesus. By **Henry C. Vedder**

A notable comparison of the ethics of Christianity with modern Socialism. *Cloth*, 12*mo*, $1.50 *net; postpaid* $1.62.

Free Will and Human Responsibility. By **Herman Harrell Horne, Ph.D.**

A comprehensive and novel treatment of a theme in which scholars have always found rich material for speculation. *Cloth*, 12*mo*, $1.50 *net; postpaid* $1.61.

All the Children of All the People. By **William Hawley Smith**

Author of "The Evolution of Dodd."

An inspiring study of the attempt of the United States to educate "all the children of all the people" and the present status of that complex problem. *Cloth*, 12*mo*, $1.50 *net; postpaid* $1.61.

The Century and the School and Other Educational Essays

By **Frank Louis Soldan,** Late Superintendent of Schools, St. Louis.

A selection of important papers which have exerted a strong influence upon public education. *Cloth*, 12*mo*, $1.25 *net; postpaid* $1.35.

Great Educators of Three Centuries. By **Frank P. Graves, Ph.D.**

A valuable condensed account of the lives and work of the innovators and reformers of modern education. *Cloth*, 12*mo*, $1.10 *net; postpaid* $1.20.

Outline of a Course of Study in the Philosophy of Education

By **John A. MacVannel, Ph.D.**

A brilliant, philosophical review of education along scientific lines with suggestions for the organization of educational ideas. *Cloth*, 12*mo*, $0.90 *net; postpaid* $1.00.

NOTABLE NEW BOOKS OF POETRY AND GENERAL LITERATURE

The War God. A Tragedy in Five Acts. By **Israel Zangwill,** Author of "The Children of the Ghetto," etc.

"A powerful play—by far the most important event of the dramatic season of 1911."—*Pall Mall Gazette. Cloth, gilt top,* 12*mo*, $1.25 *net; postpaid* $1.35.

The Hill of Vision. By **James Stephens,** author of "Insurrections"

Verse of a high dramatic order, sustaining the reputation of this author's first volume. *Cloth, gilt top,* 12*mo*, $1.25 *net; postpaid* $1.35.

Daily Bread. By **Wilfrid Wilson Gibson**

"A series of dramatic poems, recording the sorrows, tragedies, and terrors in the lives of the bread-winners of England . . . by a Poet of the People . . . a Millet in word-painting."—*The Outlook, Feb.* 10, 1912. *Cloth*, 12*mo*, $1.25 *net; postpaid* $1.35.

Tennyson and His Friends. Edited by **Hallam Lord Tennyson**

A rich contribution to the literary life of the Victorian era of English literature related in a series of highly interesting papers by the Laureate's friends. *Illustrated. Cloth, gilt top,* 8*vo*, $3.00 *net; postpaid* $3.18.

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. New York

The Nation

NEW YORK, THURSDAY, FEBRUARY 22, 1912.

The Week

Mr. Roosevelt's address to the Ohio Constitutional Convention yesterday will be universally taken as the dropping of the mask which he has been wearing for the past few months. The members of the Convention who asked him to come and "help" them in their work, heard from him that he knew nothing about the "details" of what they were set to do, and then listened to the reading of what people will everywhere regard as his platform for the Presidency. They will conclude that the solemn pledge which he made never to seek or accept another nomination, he is ready to toss aside as a dicer would an oath. Any obligation of friendship to the President, any duty which he owes to the party that has so signally honored him, the country will infer that he is ready to throw into the consuming flame of his ambition. The only alternative is to suppose that by his speech and the sharp contest in the Republican party which he knows it will provoke, he hopes to make the election of a Democratic President certain.

Of the intensely radical nature of Mr. Roosevelt's address it is not necessary to adduce proofs at length. It glares at the reader. Of course, the speech abounds in the author's characteristic hedgings and qualifications. But the main intent is unmistakable. Its aim is to place Mr. Roosevelt at the head of the radicals of all parties. "We Progressives," he says, demand this, that, and the other. Nor is it alone the commonly accepted doctrines of the Progressives that he annexes and flaunts. He is for the short ballot, the initiative and referendum, and, in effect, for the recall of judges. About the tariff he said nothing; possibly his own huge inconsistency on that issue gave even him a twinge. He is for the "distribution of prosperity." Was that property misspelled? At all events, Mr. Roosevelt would raise wages and would have the Government regulate prices; Lloyd George could not be more vehement and inflammatory than he is in crying out upon the wrongs of the helpless poor at the hands of the rich. He is for the severest punishment of all "anti-social conduct." Exactly what he means it would be difficult to say. But there can be no doubt at all of the chief aim and effect of his speech. It is the Osawatomie address over again, only sharpened. So direct an appeal to radicalism and to disturbing agitation Mr. Roosevelt never made before.

President Taft has been a regrettably long time in nominating a successor to Judge Harlan, but his final appointment seems to be unexceptionable. Chancellor Pitney of New Jersey has had large contact with public affairs, and his judicial experience has been extensive in both branches of the law. His principal service has been as an equity judge—the Court of Chancery is highly important under the New Jersey system—and his decisions and opinions have been notable for vigor and clearness. Judge Pitney enjoys the highest esteem of both bench and bar in New Jersey, and the general opinion of him is expressed by Gov. Wilson, who speaks of the President's appointment as one eminently fit, and predicts that Judge Pitney will enrich the Supreme Court. In naming him, Mr. Taft has apparently learned wisdom from the unfortunate methods which he pursued in the case of Judge Hook and some others. He did not hang up Judge Pitney's name in the newspapers, to be made a target of for days and weeks, but quietly satisfied himself of the judge's fitness and then promptly sent his nomination to the Senate.

New York Democrats will find little to cheer them in the proceedings of the State Committee last Friday. The more the party organization is reformed, the more it remains the same thing. All the talk of making Mr. W. C. Osborn or Mr. Tilden or a man of their type State Chairman, came to nothing and a routine servant of the machine was chosen in the person of Mr. Palmer. And although the air is full of promises of direct primaries and liberty of the voters in naming delegates to the National Convention, the old rule was adopted whereby the representatives of the New York Democracy at Baltimore will virtually all be chosen by the Tammany boss. He, of course, wants them simply for trading purposes. Murphy may go through the form of having the State Convention elect and possibly instruct the delegates for some impossible candidate, but everybody will understand that he is preparing to move them, when the time comes, like so many pawns on the chessboard. With the work done openly in this city in the very shadow of Tammany Hall, there will be no excuse for misinterpreting it. The boss's plan is already so evident that neither Gov. Harmon nor any other self-respecting candidate can really desire an endorsement by Murphy.

The unanimous decision of the Supreme Court in the matter of Oregon's initiative-and-referendum system is only what sensible people generally expected. It is fantastic to suppose that the provision of the Constitution guaranteeing "to every State in this Union a republican form of government" could be made a means of preventing the people of a State from adopting the mechanism of the initiative and referendum; it is difficult to imagine a deliberate attempt on the part of the Federal Government, through its legislative or executive department, thus to trammel the power of the people of any particular State. But it is not upon the legitimacy, or the reasonableness, of such supposititious action on the part of the political branch that the Supreme Court passes its judgment; it declares that the whole question is one which belongs to that branch and not to the judiciary. This, too, is ordinary sound sense; the guarantee of a republican form of government was certainly never intended to confer upon the Supreme Court of the United States the power to make and unmake the governments of the States according as these governments did or did not conform to the particular notions of the Court as to what a republican form of government ought to be like.

In the best circles in Tacoma it is considered very bad form to begin a sentence with the words, "it will be recalled." Who knows how many ex-Mayors might be in the room whose of-

ficial careers had been prematurely cut off by popular vote? Three or four recall elections in two or three years is the proud record Tacoma has built up, but it is a distinction of which the city seems to be growing a bit tired. The latest recall movement against a Mayor of Tacoma, organized by a Mayor who was himself recalled last April, has collapsed. And now the suggestion has been made that signatures to a recall petition shall be affixed only at the City Clerk's office instead of at the voters' homes. It is a national characteristic—and, for that matter, a human characteristic—to overindulge in a novelty.

Lincoln's name has upon politicians a hold which is as amazing as it is beautiful. Boss Barnes, it will be remembered, organized the Lincoln League in Albany. And now Senator Penrose, inspired by great memories, calls for the formation of Lincoln Clubs in Pennsylvania. The Senator is greatly impressed by what he has heard of the doings of similar clubs in Illinois. There "the movement has been attended with remarkable success. It has increased the circulation of one Chicago daily newspaper by many thousands," not to mention that it has done what it could for Mr. Penrose's fellow-Senator, Mr. Lorimer. In both Pennsylvania and Illinois the great object of these Lincoln Clubs is, appropriately enough, the education of the people in the necessity of upholding the Constitution. This may seem a rather abstract undertaking for so practical a statesman as Mr. Penrose, but the president of the Lincoln Club of Philadelphia points out a sufficiently concrete object as the ultimate goal of these clubs. With the air cleared of the fads of the initiative, referendum, and recall, there will be a general turning among Republicans to the work of renominating and reëlecting the President—as also those Senators whose terms are nearing a close. It is not impossible that a less complicated appeal for Mr. Taft would please him better.

Mayor Hunt of Cincinnati has been doing what the friends of good government expected of him. As the first step towards the real enforcement of the Civil Service law, he asked the Civil Service Reform Association to investigate the work of the Civil Service Commission under the preceding Administration. The Association found a condition of masterly inactivity. For the first nine months of its existence, the Commission had provided no rules or system of grading the service. Only fourteen examinations were held during the two years ending January 1, and ten of these took place last December; that is, after Hunt's election. Only six appointments outside of the Police and Fire Departments had been made from competitive eligible lists, and there had been no promotion examinations. Now, the timely end of the term of one of the Commissioners a few weeks ago made possible the appointment of a member of the local Civil Service Reform Association. This was followed up by the more drastic action of the removal of the two other Commissioners, after an ineffective defence against charges brought against them, and thus an entirely new Commission has undertaken to give Cincinnati a merit system that shall be something more than a name.

Mere tumult and shouting over the arrest of labor-union men for causing destruction of life and property by dynamite explosions evidently died away with the sensational outcome at Los Angeles. Nearly fifty persons have now been taken into custody on the same charges in fifteen States without a single hysterical outburst. Even Mr. Gompers had nothing to say. No one imagines that this calm is the result of despair over the justice of legal procedure in this country. Labor men, in common with others, are silent because they know that, however it may be legally, the burden of proof morally is now upon the arrested men rather than upon their prosecutors. The tables have been completely turned since the "kidnapping" and the "conspiracy" of which the McNamaras were the "victims" so recently; and the hatred with which Detective Burns is probably still regarded in some quarters is mingled with a fear, not so much of his power to "railroad" his captives to prison, as of his ability to prove that they belong there. That this is a far healthier atmosphere than that which surrounded his initial movements in the matter is as obvious as it is gratifying. It means that the cases are to be tried in the courts, and that the verdicts rendered are to be accepted with that substantial unanimity which is essential to permanent respect for our judicial institutions.

Philadelphia has an Art Jury which, although it has been in existence but three months, has already effected a saving of more than $40,000 on designs for public improvements, for which the total estimates were $480,000. Six of the ten proposals which it has examined have been substantially modified. Two have been temporarily withdrawn. In its first report, submitted to Mayor Blankenburg, the Jury declares that it can be of still greater service to the city if its sphere of activity be broadened to include all public and semi-public structures, such as bridges, street fixtures, and plans for parks, parkways, and playgrounds. The present Jury is composed of four experienced business men and four experts in architecture, industrial art, sculpture, and painting, and has given proof that it can spend wisely as well as save. In the matter of a water tower for the University of Pennsylvania Hospital, it recommended a change both in site and in construction which involved an increased expenditure, but preserved the artistic harmony of the University buildings.

"More than a merely negative result" is not what one would call a chiselled phrase, but in the mouth of a British Prime Minister speaking on the subject of a friendly arrangement with Germany, the words may be taken as the over-cautious description of a notable development in international affairs. It is right to suppose that Mr. Asquith would never have taken up the subject at all if his expectation was of merely negative results; nor, for that matter, would Lord Haldane's visit to Berlin have been so widely advertised in advance if fair progress towards an understanding had not been made already. Mr. Asquith went on to say that "both nations are now engaged in a careful survey of practical possibilities." A year ago the "practical possibilities" would have been interpreted as referring to some arrangement for putting an end to the senseless competition in battleship-building. To-day, expectation runs beyond that. There may be a clearing away of the general fog of misunderstanding between the two nations, a laying of the spirit of suspicious hostility that is behind the Dreadnought-

building and the virulent press campaigns and the lively spy-hunting game.

As regards the Asquith Ministry's domestic programme, Parliament seems to be entering on its work under cheerful auspices. It is true that the reports speak of the opening debate in the Commons as marked by unusual partisan acrimony, and, of course, three such fundamental proposals as Home Rule, Manhood Suffrage, and Welsh Disestablishment are sure to be bitterly fought. But it is to be noticed that Home Rule stock has gone up noticeably since Mr. Churchill's speech at Belfast. It has been recognized all along that the Ulster "last-ditchers" will not take to fire and sword as readily as they threaten. Nevertheless, their campaign of sound and fury did serve for a time to mislead certain observers as to the strength of the case for Home Rule. The Belfast meeting is now over, and the Government goes steadily ahead with its Irish programme. To a very appreciable extent the foreign situation may react on home politics. A diplomatic victory such as England won in the Morocco affair, if followed by an arrangement with Germany, would add to the general prestige of the Cabinet. The signal honor conferred on Sir Edward Grey by the King will be taken as an expression of the sovereign's confidence in his Ministers.

The news from Viterbo in Italy, where the trial of the Camorrists has been under way for two years, suggests a probable solution of our own Lorimer case. Several of the accused at Viterbo have been released on the ground that they have already served the maximum sentence that could be imposed upon them if they were found guilty. In the same way we look for final action by the Lorimer Investigating Committee about March 5, 1915, when Mr. William Lorimer has completed his term in the United States Senate, and has declined to stand for reëlection on the ground of ill-health. The committee will then announce that in the absence of a *casus belli* or a *corpus delicti*, or whatever the technical term may be, its sessions are definitely suspended. In general, there is room for quite an interesting little parallel between the Camorra and the Lorimer trials, with their fine leisureliness, their magnificent irrelevancies, the little emotional side-shows, the charming little passages-at-arms between lawyers, the invectives, imprecations, and, last but not least, their handsome addition to the national expense account.

An estimate of five million dollars for air-craft in the French military budget shows that the aerial navy has ceased to be an experiment, and has become a fact—at least so far as the taxpayer and the military statistician are concerned. The latter has lost no time in drawing up his comparative tables of the nations' air-power, quite after the fashion of balancing super-dreadnoughts, dreadnoughts, and armored cruisers. We shall soon have periodic outbursts of excitement in London and Paris over the number of dirigibles that Germany has authorized for the year, the number she has "laid down," and the number she will have available for whatever they are available for, by, say, March, 1913. France still pins her faith to the aeroplane and is in a position to "mobilize" no less than 334 of these machines. The dirigible is not altogether neglected. Fifteen lighter-than-air machines are to be built during the present year as a partial offset to the fleet of great cruisers Germany has built up. Germany, in turn, has recently gone in with more seriousness for the aeroplane, whose adaptability for scouting purposes is now being tested in Tripoli.

Last Friday's speech of the Chancellor in the Reichstag amounted to a blunt refusal by the Government to make any concession to the recent expression of the popular will. Herr von Bethmann-Hollweg once more declared that his sole allegiance was to the Kaiser. He saw in last month's election no reason whatever for considering any change in the franchise or for altering the present Constitutional arrangements—that is, for moving towards a responsible Ministry. This is not simply reactionary but stupid. The situation to-day in Germany recalls what Cavour, in his early days, said of the repressive and uncompromising Government of Piedmont—that the Ministry "does not understand the laws of physics." What he meant was that every added pound of pressure upon a confined gas simply made it the more explosive.

Spain, too, knows something about the law's delays and the tragedies of justice with too leaden a heel. The Supreme Court of Madrid has lately filed a judgment substantially reversing the findings of the Council of War at Barcelona which condemned Francisco Ferrer to death. After a review of the whole affair, the Court decides that there is no proof of Ferrer's personal concern in the Barcelona rioting; also that there is no evidence to show that any of the rioters acted under orders from him; and that in none of the many prosecutions of individual rioters was testimony given to indicate Ferrer's participation at any time. This is, in effect, a judicial decision that Ferrer was innocent of the specific charges brought against him. He was shot on general principles, because he was deemed a pestiferous fellow and it was desired to make an example. The only practical step, by way of restitution, which the Court can now take is to order the restoration to Ferrer's heirs of the property which was confiscated after his condemnation. This has been done. As for Ferrer himself, the Court finds him innocent, but also finds him dead.

The resignation of Dr. Sun Yat-Sen, provisional President of the Chinese republic at Nanking, is an added illustration of how history insists on being dramatic in spite of the scientific historian's efforts to make it a matter of documents. The brief note in which the intellectual leader of the Chinese revolution lays down his office and makes way for the man of action whom the immediate necessities of the situation demand is not unworthy to be classed with Gen. Washington's farewell to his fellow-officers. The act does not mean, of course, Dr. Sun's retirement from active participation in the rebuilding of the Chinese government. If it should turn out that Yuan Shi-Kai's motives are not of the best, and an attempt at a military dictatorship is made, Dr. Sun will undoubtedly be called upon once more to lead the republican movement. If Yuan Shi-Kai is faithful to the republic, the future may see Dr. Sun elected to the Presidency in the same way that Washington was succeeded in the Presidency by the theoreticians and statesmen of the Revolution.

THE REPUBLICAN HAPPY FAMILY.

If the American people were to believe all that it hears and reads, it would now be concluding that the Republican party is to-day made up of two grand divisions—the "neurotics" and the "paranoiacs." Its ticket would seem destined to be: For President, Harry Thaw; for Vice-President, "Holy-Ghoster" Sanford. To Mr. Taft's characterization of some of the Progressives as emotionalists and neurotics, young Medill McCormick takes it upon himself, at the Roosevelt headquarters in Washington, to rejoin that the President and his supporters are bent on murder and suicide and are afflicted with "political paranoia." To this have we come from the old proud blazon of the Republican party: "Fit to Rule." If things were what they seemed, that would have to be changed to read: "Fit for the Madhouse."

Of course, nobody not in the madhouse or on the way there, will take all this raving literally. We have seen party quarrels before now, and know how readily in politics embittered enemies can swear eternal friendship. If Mr. Taft is nominated, we shall doubtless see many neurotics fall gracefully into line in support of the paranoiacs. What we have before us at present is only the fuming incident to the preliminary campaign. Youthful Mr. McCormick is excited and shrill, yet only a little while ago he was raging in behalf of La Follette as furiously as he is to-day on the side of Roosevelt. The latter's sane friends in Washington, by the way, are reported to be disturbed by this open railing at the President. They may well be. The country does not mind a fair and hard-hitting fight between political rivals, even if one of them happens to be the President of the United States, but it certainly will not be enamored of the spectacle of a rich young lightweight blowing his cigarette smoke in at the White House windows.

The fundamental Republican situation is surely awkward enough without all these exacerbations. With the movement for Mr. Taft's renomination now gathering strength daily, and giving every promise of success, we have the anomaly of groups of rebellious Republicans in various parts of the country declaring publicly that the President cannot possibly be reëlected, and that the party under his leadership is heading for irretrievable disaster. For the intensity and violence of all this it would be hard to find a parallel in our political history. Lincoln had strong opposition in 1864, to be sure, and Harrison was believed by many Republicans in 1892 to be a weak candidate, but there was no such hysteria of antagonism to either as is to-day manifesting itself against President Taft. On the earlier occasions, Republicans wrote privately to one another of their fears, or whispered their apprehensions in the ear, but now they are shouting them from the housetops. If there were a deliberate and concerted attempt to defeat Mr. Taft, not in the Convention, but at the polls, those who are so acrimoniously opposing him could hardly have gone about their work more effectively.

But no account of the Republican happy family would be complete without taking notice of the thickening troubles among the Progressives themselves. They by no means present the touching sight of brethren dwelling together in unity. La Follette is behaving badly. The eminent Roosevelt surgeons had pronounced the Wisconsin Senator dead, but he declares that he is very much alive and kicking—especially kicking. There are ominous phrases in the telegram which he sent the other day to his friends in North Dakota, affirming his purpose to be a candidate to the very end. He complains of the "gross misrepresentations" now made about him in order to "force [him] from the contest which [he] willingly undertook at a time when no one else could be induced to make the fight." Who is the some one else who could not be induced to fight when the struggle looked hopeless, but who is now ready to rush in and carry off what La Follette has been working for? Possibly there is a hint in what La Follette says further on about desiring delegates who will not enter in any "deals or combinations." The persons who are now anxious to administer the estate of Robert M. La Follette, deceased, are pretty well known, as are also those who have been seeking to arrange a deal or combinations by which the votes for the Senator might be turned over, at the psychological hurrah, to a possible Colonel. But the obdurate La Follette will not consent to this, and asserts that he will be found "steadfast to the end." Could anything be more impudent for a dead man to do?

PAYING THE PIPER.

A curious story was told, a few days ago, in the Washington dispatches of one of the leading New York newspapers. In response to an inquiry from the House Committee on Expenditures in the War Department, an extensive compilation of figures relating to military expenditures since the outbreak of the Spanish War was furnished by Gen. Robert Shaw Oliver, Assistant Secretary of War; and the main points of this were selected and spread out at length. In a word, for strictly military purposes—expenses for river-and-harbor work and for the "civil establishment" of the War Department in general being excluded—the Department of War has disbursed in thirteen years one and one-half billion dollars of the people's money. So much for the statistical facts; but now comes the odd part of the story. This first dispatch was followed the next day by another, the gist of which was that the national capital, at both ends of the Avenue, had been profoundly stirred by the revelation. In Congress, the statement was "the subject of discussion all day," and "on all sides the expression was general that no man, not even the experts in the War or Treasury Departments, would have named such an enormous sum." Similar astonishment, we are told, reigned throughout the War Department; and as for poor Stimson, this is what happened to him:

> Secretary Stimson saw the article while he was eating luncheon at the Army and Navy Club, and it simply startled him—in fact, it took away his appetite. He retired to the War Department and at once sent for Assistant Secretary Oliver and Mr. Schofield and asked for an explanation.

It is too bad the Secretary didn't think of telephoning. If he had, he might have finished his luncheon in comfort; for the explanation is extremely simple. It is merely that thirteen times one hundred is thirteen hundred; and consequently—if one must be so particular—thirteen times a little more than one hundred million is fifteen hundred million. In the arithmetic of this there is surely nothing surprising or remote; and as to the facts, if Mr. Stimson did not know that the expenditures have been well above

$100,000,000 every year since the Spanish War, and above $150,000,000 a year for several years past, he is a curiosity of ignorance. How account, then, for the stir alleged to have been made in Washington by a statement about as surprising as the announcement that two and two still continue to make four?

But while this billion-and-a-half-dollar showing cannot be regarded as in any way novel or surprising, the facts with which it deals, and those which it suggests, are none the less important or serious. We attach little value to the spectacular displays that are every now and then made by means of a bit of special handling of statistical data. You can make almost anything look either big or little by subjecting it to the appropriate arithmetical operation. The burden of the protective tariff may be made to seem to some people a small matter by pointing out that even if it does cost the nation a billion dollars a year in the shape of enhanced prices, that is only a matter of three cents a day per capita; and, on the other hand, the most trifling expenditure on the part of each individual, extended throughout the population and prolonged for a series of years, rolls up into a colossal sum. It is not the arithmetic, but the common sense, of the matter that counts. We know, for example, in regard to the tariff, that, as a matter of fact, most Americans buy cotton or shoddy blankets because woollen ones are so dear, and that woollen ones would be very much cheaper if they could be imported free of duty; and this simple fact has a plain significance, which is more than can be said for all that per-capita business. And so it is in the opposite kind of case. It is not necessary to multiply by thirteen, and thus get into that wonderful land of ten figures in which a certain kind of statisticians so love to disport themselves, in order to see that our expenditures for matters relating to war are a serious burden on the country.

In round numbers, the Government's annual expenditures for matters connected with war may be set down at $120,000,000 for the army, $120,000,000 for the navy, $150,000,000 for pensions, and $20,000,000 for interest on the public debt. This is a total of above $400,000,000 a year; or, leaving out the pensions and the interest on the debt, it is still about a quarter of a billion dollars a year. All the expenses of the Government for objects of a non-military nature (exclusive of the Post Office, which is virtually self-supporting) come to an aggregate of only about $200,000,000. The necessity of raising the large revenue required by the Government is assigned as a reason for maintaining tariffs on imports, and as a reason for proposing a Federal tax on incomes. We all know, in our local public expenditures, how many things are imperfectly provided for on account of the added difficulty which the raising of each new million dollars by taxation presents. We all know that $250,000,000 a year, wisely expended for beneficent public purposes, could do a vast amount of good. And finally, if, instead of adding up the expenditures of the past thirteen years for the army, or for the navy, we look at the figures for the years immediately preceding those, we see that this burden of expenditure is almost completely a new thing. Prior to 1898, the annual expenditures of the War Department—the total for civil as well as military purposes—had been running at an average of about $45,000,000, instead of the $140,000,000 at which they have stood since; the expenses of the Navy Department, just before the Spanish War, were about $30,000,000 a year instead of the $120,000,000 we are now averaging. These facts speak for themselves. We are not running into bankruptcy or ruin; but we are spending on our military and naval establishments probably $150,000,000 a year more than we should have been doing if we had never embarked on the Philippine adventure. Whether we are getting $150,000,000 worth a year out of it is a matter that each American is at liberty to judge for himself.

DANGERS OF SMASHING SPEECHES.

The new leader of the English Conservatives, Mr. Bonar Law, was hailed on his accession as a fighting man. He had no pretensions to the intellectual eminence of Mr. Balfour, but neither did he suffer from the pale cast of thought which too often sicklied o'er the public utterances of that gentleman. Mr. Law was a dour Scotchman, with a firm grasp of the hard facts of politics, who would go at his opponents hammer and tongs. And, in fact, he has displayed great activity and much vigor. Speaking frequently in various parts of the country, during the recess of Parliament, he has always been aggressive and downright and has unquestionably put new heart into his followers. His greatest effort was made in an address in Albert Hall a couple of weeks ago, in which he laid about him with marked energy and sought to smite the Liberals hip-and-thigh. It was a smashing speech which filled the Tories with joy. At last they had a man who would lead them against the enemy with loud cries and swingeing blows.

But the reaction speedily set in. For it was at once discovered that Mr. Bonar Law's onslaught upon the Liberals was filled with erroneous statements. Not content with general denunciations, he had committed himself to many assertions of fact which appeared, on examination, to be baseless. For example, one of his attacks upon the Liberal Government was on account of its neglect of the army. Particularizing, he said that the weapons of the army were wholly unequal to those of up-to-date military establishments on the Continent, and that Lord Haldane's administration of the War Office had been one long "failure." But the accomplished military correspondent of the London *Times* at once declared that Bonar Law's sweeping attack upon Haldane only "provoked a smile" among the experts, and then proceeded to hoist the Conservative leader by his own petard, saying:

> When we are told by Mr. Bonar Law that the weapons of our army are utterly inferior to those of other nations, the first thought that occurs to us is that some members of the Unionist party deserve to be hanged; for our present rifle and our present field guns were both introduced by a Unionist Government. Our field gun, however, is commonly supposed to be the equal of any gun in Europe except the French; while our short rifle was adopted under the special patronage of Lord Roberts.

The most damaging exposure of Mr. Bonar Law's blunders, however, was made by the Chancellor of the Exchequer in his speech of February 3. For the Conservative leader had made a headlong assault upon Liberal finance, and Mr. Lloyd George had no difficulty in showing that most of Bonar Law's figures were wrong and his deductions glaringly fallacious. Before proceeding to take up his charges and mistakes seriatim, the Chancellor had a little fun

with the Conservatives and their new leader, in the following vein:

> Shortly before Mr. Balfour's retirement, I remember at a Tory meeting one gentleman got up and proclaimed that they were suffering from too much intelligence. Mr. Bonar Law, judging from his Albert Hall speech, is going to take care that they suffer no longer from that malady. At the Albert Hall, in a regular crescendo of vituperation, he said, "dodgers," "lunatics," "gambling cheats," "Gadarene swine," and they said, in a perfect delirium of triumph—they embraced each other, and said—"Balfour could never have said things like that." Nor could he.

Taking up Bonar Law's assertion that, since the Liberals came into power, national expenditures had increased by $200,000,000, the Chancellor of the Exchequer proved to demonstration—and this is admitted by the Tory newspapers, who now admit that Bonar Law blundered grievously—that he was $55,000,000 out of the way, through not understanding the official figures of which he was supposed to be so great a master. Of the conceded increase in governmental outlay, nearly $40,000,000 had gone to the navy, yet Bonar Law and his party had continually demanded still higher naval appropriations and denounced the Liberals for not making them. But Lloyd George went over the figures, for one department after another, and was able to convict Bonar Law of errors at point after point. Here he was wrong by $40,000,000—only "a trifling error." Next was "the slight inaccuracy of $10,000,000," which was "rather good for Mr. Bonar Law." All told, the Chancellor pitilessly exposed the blunders of the Conservative leader in a field where he was supposed to be peculiarly competent.

But even worse remained. Bonar Law had accused the Government of making spoils of the new offices which had been made necessary to carry out the Old-Age Pension act, the Insurance act, and so on. His exact language was: "They have succeeded in six years in creating a political spoils system which already rivals that of the United States." But in reply Lloyd George was not only indignant but absolutely overwhelming. He took up the matter, item by item, and showed how utterly reckless and unfounded were the assertions of Bonar Law. The new officers have been necessary in order to work four acts of Parliament, and here are the facts as summarized:

(1.) *Old-Age Pensions act.*—All new offices filled out of those who had passed excise examination. No officials appointed from outside.

(2.) *Labor Exchanges act.*—All officials appointed by a committee consisting of the chairman of the Civil Service Commission, Mr. Shackleton, and a member of the Tariff Reform Commission—not a single member of the party to which the Government belongs.

(3.) *Finance act of* 1909.—All officials for valuation appointed by the Inland Revenue, without interference by the First Lord of the Treasury or Chancellor of the Exchequer.

(4.) *Insurance act.*—The greatest possible care taken to prevent political influence being used in connection with the appointments.

The whole affair has been a serious blow to the prestige of the new leader. Even the newspapers of his own party have been compelled to disown his figures and to gloss over or withdraw some of his more violent accusations. No intent to deceive is alleged against Bonar Law; on the contrary, he was merely deceived himself, or else extremely careless. But an orator cannot be both careless and smashing—unless he means to smash himself.

MINISTER OSPINA'S IMPUDENCE.

The Minister of Colombia at Washington, Señor Pedro Nel Ospina, has notified our Acting Secretary of State that he will advise his home Government of the prospective or possible forthcoming visit of Secretary Knox, "and ask for instructions." To explain this proceeding, the Colombian Minister makes the further statement, of course "in [his] own name and without any knowledge of the views of [his] Government on the matter," that a visit from the Secretary "may happen to be considered inopportune at this time." And, to complete the tale of his impudence, he goes on to give the specific reason for his state of mind, which amounts to nothing less than a complaint that we are not treating Colombia in the spirit of fair play, and that we are showing no willingness to apply to the case of our own controversy with Colombia those principles of arbitration which we are so conspicuously urging upon the acceptance of the world at large. "Colombia," says Señor Ospina, "still finds herself placed by the United States in an exceptional position, as the only member of the numerous family of independent nations scattered over the face of the earth to which, despite its constant demands, the United States refuses to submit to arbitration questions referring exclusively to the interpretation of public treaties and the compliance with obligations imposed by the universally accepted principles of international law on all civilized nations in their relations one with another."

All right-minded persons must, of course, be indignant at such impudence. But, inasmuch as we may count on this indignation being the feeling uppermost in every good American's bosom, it may be worth while to present some mitigating circumstances. Let us try, for a moment, to view the situation from the standpoint of the Colombian. From the beginning of the Panama affair of 1903-4, it must be confessed, our treatment of his country has been such as to be peculiarly trying to the philosophy of a Colombian patriot. It is easy enough, of course, for any of us to understand that when a country so weak as Colombia actually hesitates to confirm a treaty with the United States, pocket the ten million Yankee dollars offered to it, and have done, it is committing an unpardonable offence against international ethics, and justifies all subsequent proceedings on the part of the United States, irrespective of what any mere treaty obligations may call for. But what is so plain to us may not be equally clear to the Colombians. And that has been the prime factor in the whole trouble. Indeed, even this error on their part might not have been fatal, had anybody but Mr. Roosevelt been President of the United States. For, familiar as the doctrine under which "I took Panama" has since become, it was a new thing to Americans at the time.

And there is another consideration which cannot be overlooked in the matter. Mr. Roosevelt's overriding of treaty obligations, and his extraordinary feat in the instantaneous recognition of a republic manufactured overnight, were based not only on the paramount right of the United States to get the canal, and get it at once, but also on a view of the character and the motives of the Colombian Government which can hardly be expected to commend itself to its representatives. This view he was not at any pains to conceal at the time, and he has since recurred to it more than once. In his latest conspicuous deliverance on the

subject, his article in the *Outlook* last October, he gave it very simple and compact expression. "We did harm to no one," he declared, "save as harm is done to a bandit by a policeman who deprives him of his chance to blackmail." Now, it may be very unreasonable for Colombia to refuse to accept Col. Roosevelt's verdict as final, but we must admit that such refusal is only human. She would like to have an international tribunal of arbitration decide whether she has any just claim against us, instead of complacently accepting not only the material result of our intervention, but also that status of a blackmailing bandit upon which our intervention was based.

Finally, it must be acknowledged that there are persons who are not Colombians, even good and intelligent Americans, who take the view that our action at Panama was an inexcusable violation of treaty obligations and a flagrant offence against the first principles of honest and honorable dealing. In the current number of the *North American Review*, Leander T. Chamberlain presents a powerful arraignment of Roosevelt's course, based upon ample citation of facts and documents. Indeed, so crushing is the case there presented that the only possible defence is that which, at bottom, really *is* Mr. Roosevelt's own defence, though he envelops it in a mist of high-sounding phrases. We have *got* the canal—that is the beginning and end of the matter; all the rest is fustian. Mr. Roosevelt declares that had he acted otherwise "the canal would still be fifty years in the future"; Mr. Roosevelt announces that the history of our country presents "no more honorable chapter" than that of the Panama affair, and ranks it with the highest acts of Washington and Lincoln. Such exaggerations may be the mere vapors of megalomania; but the fact remains that, by high-handed methods, we did get the canal sooner than we otherwise should have done. To many this may seem the be-all and the end-all of the question. To such there is nothing more to be said; to others, we commend a reading of Dr. Chamberlain's "A Chapter of National Dishonor" in the *North American Review*.

GEN. AINSWORTH AND THE NATIONAL ARCHIVES.

[As a response to the editorial in the *Nation* of January 25 on "Withholding Public Records" we print the following letters from historical students who have felt the rigor of Gen. Ainsworth's grip on the archives of the War Department. Since the date of that editorial, Gen. Ainsworth's insubordination to his superiors in the Department has brought about his suspension from duty, followed by his application for retirement. But the issue for scholars, and for all interested in American history, does not end with the retirement of Gen. Ainsworth. There is still the question of the control of the records under his successor; there is the larger question of the whole housing and management of the National Archives at Washington.—Ed. The Nation.]

For one hundred and twenty years the United States Government has at intervals destroyed by the ton such records as escaped the usual ravages of fire, damp, collectors, and negligent custodians, because there has been no place in which they could be gathered, and the keeping was troublesome to local officials. This destruction has been entrusted to no particular officer, and no careful examination of the material by one possessing historical training or instinct has been made previous to the destruction. The sole test was whether the documents were required for the current business of the office. I could be eloquent upon what has happened in and out of Washington, in such wholesale riddance of records; and the gain of a few hundreds of dollars to the Government through the sale of old paper has been accomplished by loss of tens of thousands of historically valuable records and of untold treasures for the historian. The want of system that has accompanied the want of an Archives building has been deplorable in every way, and most costly to all interested.

More than that, the records that remain are largely unavailable to the student. The custodians are unaware of the historical value of the documents; they have neither the time, nor the force, nor the interest to care for the documents, arrange them, or index their contents; they have no space for letting them be consulted, or they regard them almost as their private possessions, and ward off all inquirers on various pretexts.

By all means let us have an Archives building, and let it be put under the charge of one who has an organizing capacity, united to a knowledge of historical relations, and at least a sympathy with the student of history or of government. It would be a measure of the greatest economy.

Worthington C. Ford.

Boston.

Your editorial of January 25 called to mind a condition which has become almost a scandal. All scholars who have felt called upon by the nature of their work to consult the documents in the Adjutant-General's Office are of one mind about the need of reform in that quarter. At meetings of the American Statistical Association, Gen. Ainsworth and his peculiar view of his functions as the custodian of the nation's war records have frequently been discussed; but I have never seen any one who has been treated by him with half the attention and consideration which one receives in London or Paris by the officials who occupy similar positions.

If it were only possible to have a commission pass upon some of the matters which Gen. Ainsworth so readily decides for himself, and have it adjust the needs of historical scholarship, we might hope for a better day. When writing the "Life of Jefferson Davis" access was curtly denied me to any of the documents of most importance to me. I am convinced that there was no good reason for this, and that a commission composed of men who know something of the needs of scholarship would have instructed the General to allow free use of all the materials in hand. Certainly no one could object to having the files of valuable Southern newspapers opened to the use of all, and just in such shape that this could be done with the greatest facility.

Another matter that would seem to be worthy of the consideration of Congress is the guarding of these valuable manuscripts and other papers in a place of safety. At present, I understand, they are subject to destruction by fire any time some careless clerk drops a cigar in the wrong place. How should we all feel to read some morning in the papers that the war records so religiously guarded all these years had gone up in smoke, like the priceless documents of the New York State Library a short time since? Would Gen. Ainsworth or Congress find a way to undo the calamity?

I hope your editorial may have the effect of compelling members of Congress, if not Gen. Ainsworth, to realize the risks we run. Possibly some action may then be taken; and anything except a fire is better than the present policy.

William E. Dodd.

University of Chicago.

The Virginia State Library has for the past three or four years been engaged in making a list of the Virginia

Revolutionary soldiers. Knowing that the War Department Archives contain a great many records of these soldiers, I went, in June, 1910, to Washington, armed with a letter from the Governor of Virginia to the Secretary of War, requesting that I might be allowed to have these records copied. The Secretary of War, expressing sympathy with my object, promptly passed me on to the Adjutant-General, who also expressed sympathy, but informed me that by a Cabinet order issued some years before he was estopped from granting the privilege which we desired. He said that no one, not even an employee of his office, could be allowed to copy the papers. The Cabinet order was issued, I was informed, in the interests of the sure preservation of the papers till they, with others to be collected, might be published. Accordingly, I accomplished nothing whatever by my visit; and the list of Revolutionary soldiers from Virginia, which is now going through the press, contains only those names which have been preserved here at the Virginia State Library. If the War Department ever publishes its Revolutionary records, it will be necessary for this library to make a second list, supplementary to the one now publishing. The decision of the Adjutant-General has thus resulted, it seems to me, in a great hardship to this library, and in a hardship to thousands of people all over the country who are continually writing to us for information in reference to their Revolutionary ancestors. It is true that information in reference to any named soldier will be given by the Adjutant-General's office to the inquirer who supposes himself or herself to be a descendant, but it would be very much more convenient if all the information obtainable could be had directly from one source. In addition, if we had copies of these records at the Virginia State Library, and could have included the names therein contained in our present list, the interesting historical question as to the number of men furnished by Virginia in the Revolutionary war would be much nearer solution.

In my talk with the Adjutant-General, I tried to impress upon him the fact that I was the representative of a sovereign State. This had no effect on him whatever. I, of course, did not suppose that it would, so far as the *right* of a sovereign State is concerned in the matter, but I hoped that he might at least think that greater privileges and courtesies might be granted on this account. I hasten to say, however, that my interview was personally pleasant.

I shall be greatly delighted when the day comes—as I am certain it will come in the not very distant future—when a freer use of the treasures in the War Department is allowed to students. The present restrictions appear to me to be an anomaly—not only that, but an outrage.

H. R. McILWAINE,
State Librarian.

Richmond, Va.

Permit me to express my sober judgment that your article on "Withholding Public Records" accepts too literally Dr. Ainsworth's boasts of clerical achievements and too mildly describes his gross offences against numerous long-suffering historical scholars, denied plain rights which Congress supposed they were receiving. I have lately conferred with several well-known scholars about the Ainsworthesque policy. I find that they are all familiar with the great man's reputation as autocrat, profuse with discourtesies, and also that each person knew of several victims of that policy of whom none of the rest of us had heard. I hope a cloud of witnesses will soon appear and tell Congress the indexer's record *outside* his self-vaunted and selfishly used card-index.

All serious investigators familiar with conditions in Washington for a generation or two have felt that the Government (including Congress and all the departments) has been most friendly in its liberal aids to all kinds of research and in the cheerful courtesies by which the officials have made the records available. Only last night, in reading the unpublished autobiography of one of the most distinguished American historians, I was pleased to learn that he had "found even the Government at his service, and every one willing to answer questions." Think of what the Agricultural Department has done in recent years to aid thousands of investigators of nature's products! Go into the National Museum and the Library of Congress, and you will be amazed by the generous foresight of the Government in its efforts to preserve the past for the benefit of the present and the future. And such wise benefactions are rightly a source of national pride.

The War Department was long no exception to the general rule, and its library still preserves the most amiable traditions. About twenty years ago Mr. Rhodes and I had free and welcome access to Confederate materials which came into possession of the United States as a result of victory, and had remained in the custody of the War Department. I then learned that files of wartime newspapers of many different Southern cities had also been acquired in the same manner. Knowing their importance and wishing to preserve a record of them, I made two copies of the War Department's list, leaving one in the Library of the Department of State and sending the other to the Library of Congress. This was fortunate, for not long afterwards Dr. Ainsworth's despotism was established. A few years later I bethought myself as to how to make these newspaper files available for historical purposes. After consulting with a high Government official much interested in preserving and rendering accessible such materials, and with the generous sympathy and assistance of my old friend, Gen. Corbin, then Adjutant-General, I went with the General's card of introduction to see Dr. Ainsworth and explain the carefully developed plan. The mighty indexer would not even receive me, but sent back his negro messenger to ask just what I wished. After my explanation, he again sent back Friday to say that the newspapers were stored away and that nothing could be done! It is proverbial that a dog in a manger snaps at the hungry horse that wants to eat hay.

However, should there be no relief for our various grievances, it becomes philosophers to be philosophical, and to find consolation if denied their rights. I consider war such an enemy of humanity that I could learn to rejoice over a peaceful, unmilitary burlesque designed to bestow the highest military honor within the power of the Government, the lieutenant-generalship, not upon real soldiers, even like Grant and Sherman, nor even upon medical soldiers or soldier-physicians, like the doubly able Wood, but upon a one-time physician who probably in a dozen years has not prescribed a purge nor administered a pill, and in all his life may never have fired a gun—upon an "indexer"—a CARD-INDEXER—or at least upon an index-doctor who has driven several hundred clerks so that in fifteen or eighteen years they have made some millions of card-indexes. All hail, therefore, the valiant lieutenant-general of the peaceful Card-Index! But let him be retired at once, so that outrageous injustice may cease forthwith.

FREDERIC BANCROFT.

Washington, D. C.

Last summer, while writing my little sketch of the "Civil War," I had an experience with the office of the Adjutant-General of the army that made me an eager convert to the principle of open military records. I have spent a good many months in the British Archives, and have a vivid recollection of the conveniences and courtesies extended by their custodians to scholars. Having seen in a newspaper what purported to be a table showing the ages at enlistment of the various men who served in the Union armies, I wrote to the Adjutant-General asking if the list was authentic. I received back my letter, with a typed memorandum attached to it, the latter telling me curtly that no such tabulation had ever been

made, and that the table in question was "baseless and misleading." I have not the memorandum before me now, but I am giving you its substance.

Upon receiving this disclaimer from the War Department, I wrote a similar inquiry to the Commissioner of Pensions, and received from that official a courteous two-page letter in which a table of ages, substantially the same as that which I had seen, was given to me. The Commissioner told me that the table was the result of an estimate made "from the records of the Adjutant-General" some years ago.

It is hard to understand the lack of agreement in these two responses, or to feel that both are entirely frank. I may be in error, but I am prejudiced against the letter of the Adjutant-General by the sweeping character of its denial.

It is a scandal and an indecency that our military records should be closed to scholars. Part of the responsibility rests upon Congress for its negligence, but most is upon the officials who so abuse their power. By contrast, it is interesting to note that though the archives of the British Foreign Office are not accessible for dates after 1837, they were opened (to 1860) to Dr. Paullin and me, last year, upon our showing that we had a good reason for using them.

FREDERIC L. PAXSON.

University of Wisconsin.

I notice that in your issue of January 25 you suggest a petition that Gen. Ainsworth be rewarded with a Lieutenant-Generalcy on condition that he shall retire at once. Permit me to record myself as an enthusiastic supporter of such a petition. I should prefer, however, that he be appointed Ambassador to Thibet for life as a surer way of achieving the great end to be desired.

For twelve years a succession of earnest historical students have sought to obtain some of the inner facts concerning military government in the South during Reconstruction. Because the documents recording these facts happen to be in charge of Gen. Ainsworth, they have remained to the present time absolutely concealed from the world. It is an outrage. The situation, however, is but a part of a much larger problem. What is needed is some supervision of archives at Washington by expert historical authorities, who shall have sufficient power to put our administration of such matters at least on a level with some of the partially civilized nations of the world. That we shall ever be in the class with the most enlightened seems too much to hope for. That the treatment of such a man as Dr. Rowland in the manner you describe is possible in this country, puts us about on the level with the native administration of Timbuctoo.

WM. A. DUNNING.

Columbia University.

Your article in the *Nation* of January 25 on the administration of the War Department records will awaken irritating memories in the mind of more than one American scholar who has sought in vain for access to the papers of which Gen. Ainsworth is the custodian. My first experience of rebuff was in 1900, when the work of the Public Archives Commission of the American Historical Association was being organized; and I have had occasion since to realize, either by personal experience or through the experience of others, the practical impossibility of getting at the archives in the War Department for purposes of historical research.

The foundation work of collecting, arranging, and indexing the Federal records of the Civil War has doubtless been very well done, and is worthy of high praise; but the equally important work of making the papers accessible to any student who has legitimate interest in them seems never to have been regarded as a part of the programme. It is not to the credit of the Federal Government, which in so many ways has given useful support to scholarship, that a great collection of documents, invaluable to the historian, should be administered, to most intents and purposes, as the private enterprise of a brusque and illiberal functionary, save when the would-be searcher has a pension bee in his bonnet or can avail himself of a political "pull."

WILLIAM MACDONALD.

Brown University.

Historical scholars are so little given to public controversy that they can greet with peculiar satisfaction such a forcible expression of their opinion as that contained in your recent editorial on the records of the Adjutant-General's office. It is not necessary to depreciate the value of so ingenious a piece of mechanism as the highly praised index catalogue in order to find fault with the management of the office from the historian's point of view. There are other records in the office besides those of individual soldiers, and it looks to the outsider as if the office had lost sight of larger historical needs in its regard for the demands of the pension system and the interest taken by Americans in the military history of their forbears. Great Britain has taken no such one-sided view of her military records, and has set up for worship no such golden calf. The records of her War Office deposited in the Public Record Office are freely open to public inspection, to the end of the year 1850, and for records after that date a permit of inspection may be obtained. All the pay-rolls, muster-rolls, and monthly returns are open almost down to the present day.

The present situation could hardly exist if we had a national archives building, and the indifference of Congress in the matter of erecting such a structure is getting to be something of a national disgrace. The subject is not a pleasant one to discuss with foreign archivists who can point to superb archival buildings in every leading capital city of Europe. Even Finland has a handsome Staatsarchiv, which I had the pleasure of visiting recently, and where I found the records very intelligently cared for and the way of the investigator made smooth and alluring.

CHARLES M. ANDREWS.

Yale University.

SCANDINAVIAN BOOKS.

BERGEN, Norway, February 1.

A Swedish work which seems likely to become popular is "Hela Stockholm" ("All Stockholm"), edited by the well-known newspaper man, Beyron Carlsson. The work is to be in fifty parts (each costing 30 ore), and so far ten parts have appeared. The author, thoroughly knowing Stockholm, his native city, gives a trustworthy and vivid description of the beautiful Swedish capital, "the Venice of the North." The whole work will be written by Mr. Carlsson. "Hela Stockholm" is particularly well suited to public libraries, which need a comprehensive and at the same time popular description of the city on Mälaren's shore. It is illustrated with handsome photographs.

A couple of months ago the Swedish professor of statistics, Gustaf Sundbärg, published a small book called "Det svenska folklynnet" ("The Swedish Spirit") which in a short time attracted great attention in Sweden, while in the neighboring Scandinavian countries it was read with interest and curiosity. The work shows better than almost any publication of late years the quality of Sweden's spiritual life, and in spite of an occasional one-sidedness of view and some absurd exaggerations, it undoubtedly contains much that is accurate, while at the same time new and suggestive. The author maintains that if the Swedes do not hold the position among the nations which they should, the reason must be found in the fact that they lack knowledge of human nature and the right kind of national feeling, the national instinct. In commercial affairs they let themselves be outdone by the smart Danes, and frequently prefer to emigrate to richer foreign countries rather than to cultivate their own land. Professor Sundbärg suggests certain possible remedies. The most interesting part of the work, however, is the author's bitter attack on Norway and Denmark. Sweden, he asserts, has always been her smaller

neighbors' chivalrous protector, but her only reward has been ingratitude and suspicion. Norwegians severed the union with Sweden in 1905, and the Danes have always tried in a questionable way to exploit Sweden, economically and politically. Other Swedish books are "Klassiska bilder" ("Classical Pictures"), by Harald Brising, an able introduction to Greek art; the novel, "Pennskaftet" ("The Penholder"), by Elin Wägner, a work which has caused much comment, because it introduces a new type of womanhood into Swedish literature; "Köpmän och krigare" ("Merchants and Warriors"), by Sven Lidman, which some predict will be as successful as his previous novel, and the novels "Kuskar" ("Coachman"), by Gustaf Hellstrøm, and "Fata Morgana,," by Henning Berger.

The Norwegian book which has attracted the widest attention this season is a collection of letters from Bjørnstjerne Bjørnson to his daughter, Mrs. Bergliot Ibsen, "Aulestadbreve" ("Aulestad-letters"). The letters are written chiefly in the eighties and early nineties, while the then young Miss Bjørnson was studying singing in Paris, and her father was living at his large and beautiful farm, Aulestad, in Norway. They are charming letters, and give a vivid picture of their author. They breathe the tenderest love and concern for the young girl who is alone in the great city, and are full of good advice for her behavior and encouragement for her development in art. At the same time they recount the happenings in the home country, telling how great public questions stand, how the members of the family and the servants on the farm are getting along, and how the season is advancing from winter to spring, those on nature being particularly vivid. A somewhat similar work is "Camilla Colletts livshistorie" ("The Life of Camilla Collett"), edited by her son, Alf Collett. It throws new light on the life of a remarkable writer who played an important part in the literary history of Norway about the middle of the last century. Camilla Collett (she died in 1895) was the sister of the great national poet, Henrik Wergeland. In spite of her love for her brother's fierce antagonist, the poet Welhaven, a feeling which was undoubtedly returned, she chose to marry the highly intellectual and cultured professor, Jonas Collett. The biography, founded to a large extent on letters from and to Camilla Collett, clears up several points which had remained a mystery concerning Welhaven and Wergeland. They reflect Camilla's fine and visionary nature, and some pages of her diary which are included strengthen the reader's impression of her agreeable manner. During the first years of her career as an author, her husband guided her hesitating steps, and was her best support, and the book shows that her feelings toward him were far more intimate and devoted than people have been inclined to think.

The collected works of the historian J. E. Sars are now brought out in a subscription edition. Professor Sars's claim to distinction rests mainly upon his treatment of Norway's union with Denmark, a union stretching over nearly 500 years, and upon a thorough investigation of political conditions in Norway during the country's bond with Sweden from 1814 to 1905. The edition includes several smaller works and articles originally printed in newspapers and magazines, which are frequently of great historical value. In addition there have appeared this season in Norway "Liv" ("Life"), a long novel by the well-known writer, Johan Bojer; a collection of well-written and interesting letters from Paris ("Pariser-breve"), by Dr. Bjarne Eide; a popular scientific-historical work, "Henrik av Navarra og de franske hugenotter" ("Henry of Navarre and the French Huguenots"), by Professor Otto Anderssen, and an able translation of Goethe's "Faust" into the Norwegian *landsmaal* (or attempted fusion of dialects into a national language), by A. M. S. Arctander.

In Denmark there has recently appeared a small book of descriptive sketches of America, "Amerika-skildringer," by H. C. Vedsted. The Danish author has travelled over almost all of the United States, and has undoubtedly seen a great many things during the year and a half of his visit; but what he tells is nothing new, and the book on the whole seems to be rather void of any facts of particular interest. However, the style is direct and vivid, and the descriptions of life among Danish-American farmers have a fund of good humor. Probably the most valuable chapters of the book are those that deal with religious conditions in these communities. But if the author intends to write more on the same subject, it should seem proper to advise him not to take too literally the saying of Stevenson chosen for the motto, "the art of literature is to omit." A book that has real merit is one by the Danish literary essayist and biographer, Carl Behrens, on Heinrich von Kleist. It is a very conscientious and yet interesting critique. Mr. Behrens had previously written noteworthy monographs on two other German poets, Christian Grabbe and Friedrich Hebbel. Finally, briefest mention may be made of the following: A well-written novel by Karl Larsen, "Det springende punkt" ("The Salient Point"); a new novel by the popular writer, Laurids Bruun, "De udvalgte" ("The Elect"); a novel by the eminent literary critic, Poul Levin, "Familien i Danmark" ("The Family in Denmark"), and an historical-biographical work of some interest, "Erindringer af mit liv" ("Recollections of my Life"), by the librarian E. C. Werlauff, who was born in 1781 and died in 1871.

ARNE KILDAL.

Correspondence

HELPING THE FRESHMAN TO FIND HIMSELF.

TO THE EDITOR OF THE NATION:

SIR: A recent bulletin of the Carnegie Foundation suggests that the colleges and universities should do something to help the freshmen "find themselves." The plan here to be outlined calls for a four-hour course in the second semester of the freshman year, to be taken by all first-year men and women in the College of Arts and Sciences. It should be given in the second semester, after the students have become somewhat acquainted with the university—and as a preparation for the elections of their sophomore year. In general, the course will be made up of lectures (to be described later); but there are a few books that might be used as collateral reading; and there will be some one member of the faculty who will have immediate charge of the course, organizing its details, and keeping before the students constantly the unitary and organic nature of the task attempted.

The course itself should have three divisions of, roughly, six weeks each. The first six weeks will be devoted to a presentation by leaders and thinkers and doers in the world of action of the general subject of the vocational opportunities and social demands of our times; the responsibilities that men and women will meet and measure themselves against in the modern world. It should be a compact outline by men who know of the lines of possible life activity open to young men and young women to-day. The vocational phases of the university work itself, including the work of agriculture as a profession, should be included herein. Each talk should be not more than forty minutes in length, giving room for the teacher in charge to call the attention of the class to the place of the talk in the general scheme of the course, and giving a few minutes for questions from the class. Each talk should state clearly the field covered by the vocation, and some of the fundamental preparatory elements, together with a brief analysis of the sorts of native temperament likely to find successful work in that field. The course may cover such subjects as: Manufacturing, Transportation, Banking, Insurance, Retail and Wholesale Business, Journalism, Agriculture, Mining, Forestry, various forms of Engineering, Political Life, Law, Medicine and Surgery, Teaching, the Ministry, Artistic Activities, the Diplomatic Service, forms of Social Service in the City and Country such as the Library, Social Settlements, Y. M. C. A., and Y. W. C. A. work.

This should be followed by a second series, given by representatives of departments and other specific phases of university work, of the various lines of work offered in the university; what the various departments stand for; what they are trying to do; their relationships to each other and to the whole university; their natural affiliations, and their proper correctives; and especially their relationships to the various vocational opportunities and de-

mands set forth in the first series of talks. This course should make plain to the student the meanings of such terms as "cultural," "utilitarian," "vocational," liberal." It would help the student to face the university future with some intelligence. It might lead him to decide that this was not the place for him, thus forestalling a later action to the same effect on the part of the university. It would probably help him to see what work he should do. It would certainly give a more intelligent basis for making elections.

Not the least valuable part of such a course would be its reflex action upon the university itself; it would help individual departments to relate themselves more closely to the university ideal in general, and it would bring about a greater degree of institutional self-consciousness.

In this course, also, the teacher in charge of the course should see to it that the members of the class make their constant connections with the complete course from day to day. Each talk should be not more than forty minutes long, giving time for a good many questions, which the class, if it has been properly handled, will be free to ask by this time. The questions may be either written and handed in, or asked directly from the floor.

A third part of the course, covering the remainder of the semester, should be given to making definite the results reached thus far. There should be some talks by the various deans on the general university activities and their relation to the intellectual life of the university. The president will have something constructive to say about university ideals, and the relationships of athletics, social affairs, and general student life to the work the university fundamentally stands for. Chairmen of various important faculty committees may have some valuable help for new students; the librarian will tell them about the use of books and the library as a tool, etc.

But especially some simple talks should be given in the last few weeks of the course on methods of study. Many students have complained that if they had but known some of the simple laws of Attention, or Memory, or Association of Ideas, or Habit, in the earlier years, their whole course would have meant so much more. There is some simple information of this sort which might be given in the high school. It should surely be given in the freshman year of the university, not in technical form, nor as psychology or pedagogy, but as method for the use of the student the remainder of his days. He should also be brought face to face with some of the simple elements that enter into the making of a choice. There are certain simple laws of choice that enter into the determination of outlooks and vocations that should be presented early.

There should, probably, be no final examination in the course save, if thought best, a quiz on some general aspects of the field, and on the collateral reading if any is carried. There should be required, however, a final paper (announced from the first), by each student, on the general subject: "What are you here for; what is your place in this world of living; what do you see here in the university for you; what are you interested in; how do you connect your interests with anything offered in the university; what are you going to do?"

There should be no mere moralizing or preaching in the course, though it should be organized with reference to the more ideal considerations. It should bring broad-minded and sympathetic information and real inspiration out of the larger world of experience, within and without the university, and assemble it in such a way as to help those who have need of just such help, at a time when they need it very much and have no other way of getting it.

What is there about the plan that is not possible of execution? Why should it not be seriously thought about, at any rate?

JOSEPH K. HART.

University of Washington, Seattle, January 20.

P. S. Since the above was put in type the General Faculty of the University of Washington have voted to permit the Faculty of Arts and Sciences to undertake a modified form of this plan of work, beginning with the year 1911-12.

AUTOBIOGRAPHY AND HISTORY.

TO THE EDITOR OF THE NATION:

SIR: The recent publication of "Moses Coit Tyler: Selections from his Letters and Diaries," revives the question of the value of personal records regarded as historical material. The Preface states that the volume "might in a very broad sense be called an autobiography," and that the only desire of the editor has been to let the author of the diaries "tell in his own language as continuous a story of his life as possible."

But does not the exclusive use of this form of material impose serious limitations on all who attempt through this means to portray the life and character of a great man? It must assuredly seem so to all who read "Moses Coit Tyler" and seek to find in it any true reflection of a man beloved and revered by thousands who were once his students at Michigan and Cornell. The work gives not a hint of any personal interest in a single one of them—only twice is an individual student mentioned and then most casually. Yet no man ever gave time and strength to his students more generously: he was tireless in his efforts to procure positions for them; he encouraged the discouraged, he sympathized with those in trouble, and he always had a cheery word and a sunny smile for all. Nothing can be learned from the book in regard to his great success in the classroom, where he stimulated even the dullest to think for himself, and where the most gifted found unfailing inspiration. The diaries give the impression that he found his college work a good deal of a bore. Yet his enthusiasm was contagious, he gave hundreds of students their first introduction to many of the great productions of literature, he had reprinted for his classes selections from works that were rare or inaccessible, and he gave to many a student his first notion of the difference between genuine criticism of literature and bumptious fault-finding or effusive praise.

But behind the personal disappointment that comes from reading such a diary must be the question whether it is not a form of record that, from the standpoint of the historian, must always have grave defects. The diary is written at the end of the day, presumably when the writer is wearied perhaps even to the point of exhaustion, or when he is almost morbidly introspective, and it reflects a tired body, not a vigorous mind. At the end of the day, too often nothing seems quite worth while, discouragement and disappointment are often uppermost, and all life may seem but a weariness of the flesh. Can a diary written under such conditions be a trustworthy source to be used either by a biographer or by an historian? L. M. S.

Poughkeepsie, N. Y., February 15.

KIPLING AND HIS CAPTAINS.

TO THE EDITOR OF THE NATION:

SIR: There was a time when the great moguls of literature, envious of the popular success of rebels like Kipling and Rider Haggard (they bracketed them together in those days), could express in the London *Athenæum* the pious wish that they might some day reach the happy shore

> Where the Rudyards cease from Kipling
> And the Haggards ride no more.

But that spirit ought to have long passed. The revival of it in Mr. Thompson's attempt, in the *Nation* of February 8, to force personal animus into the dramatic intensity of the "Three Captains," calls for protest. In this age of the Bacon-Shakespeare controversy every educated person knows that you can find any meaning you please in anything you please. But to read an author's private vindictiveness into this little imaginative poem ought no longer to be regarded as courteous.

Happily, Mr. Thompson does not repeat the suggestion, which occurred to uncharitable minds when the poem appeared, that the accidental resemblance of the line

> The bezant is hard, ay, and black

to the names of Mr. Besant, Mr. Hardy, and Mr. Black was intentional, and that the fact that the line broke both context and rhythm was meant to draw attention thereto.

We, who know the touching piety of the "Recessional," which might well be read even in church, cannot keep silent when coincidences like those Mr. Thompson so cunningly discovers are twisted into evidences of personal ferocity on the part of Mr. Kipling.

Let me remind him of Mr. Palgrave's admonition against attributing the democratic sentiments of Mr. Tennyson's "Lady Clara Vere de Vere" to Lord Tennyson. He says: "This poem has so much personal animation, that the reader should bear in mind that it is intended only as a dramatic picture of imaginary characters." That this hint was possibly inspired adds to its force. The application is obvious.

W. HANSON PULSFORD.

Chicago, February 12.

TO THE EDITOR OF THE NATION:

SIR: I am surprised to find that, in an exceedingly interesting and valuable article (*Nation*, February 8), on Kipling's poem, "The Rhyme of the Three Captains," and its relation to an American publisher, Mr. James Westfall Thompson fails to mention three remarkable puns on the names of the three famous English authors who sided against Kipling in the controversy—which arose over the piratical publication of six of his short stories when, in 1890, he was still struggling for recognition.

The fifth line from the end of the poem contains the references:

> We are paid in the coin of the white's man's trade: the bezant is hard, ay, and black.

If these do not refer to Sir Walter Besant, Thomas Hardy, and William Black, then there is no virtuo in puns.

"Slaver's rag," in the final line, to which Mr. Thompson objects as "weak and without relation to the sense of the whole ballad," is at least as good as the original form, "pirate's rag," for the reason that in the middle of the poem there is also a forcible reference to the American publisher as a slaver:

> He carries the taint of a musky ship—the reek of the slaver's dhow!

One further detail is worth noting. Kipling refers, in the following line, to the fact that he was at the time of the controversy still a young, unseasoned writer:

> He has stripped my rails of the shaddock-frails and the *green unripened* pine.

What he objected to was evidently quite as much the fact that no opportunity was allowed him to revise and improve these early stories as that they were piratically published—by a person who is mentioned in the prologue to Longfellow's "Evangeline" as one of those who have "beards that rest on their bosoms." Kipling also gives him a beard:

> I had stripped his hide for my hammock-side, and tasselled his beard i' the mesh.

HARRY T. BAKER.

Philadelphia, February 9.

MR. ROOSEVELT AND MR. GREGSBURY.

TO THE EDITOR OF THE NATION:

SIR: A good deal of adverse comment has been aroused by the episode of Col. Roosevelt's quoting Lincoln to a group of reporters who interviewed him on the subject of his potential candidacy. Without desiring to add anything more thereto, may I ask merely to point out another, and perhaps more pertinent, instance of a great man's refusing to accede at the time to the demands made upon him. The example is taken from fiction, and the question at issue was one of resigning, instead of answering a plain question. Nicholas Nickleby happened to call at the office of Mr. Gregsbury, M.P., at a time when that gentleman was waited upon by a deputation requesting his resignation. The statesman's answer, in the form of a letter to one of his constituents, is, with slight emendations, as follows:

> My Dear Mr. Pugstyles:
>
> Next to the welfare of our beloved America—this great and free and happy country, whose powers and resources are, I sincerely believe, illimitable—I value that noble independence which is an American's proudest boast, and which I fondly hope to bequeath to my children, untarnished and unsullied. Actuated by no personal motives, but moved only by high and great constitutional considerations; which I will not attempt to explain, for they are really beneath the comprehension of those who have not made themselves masters, as I have, of the intricate and arduous study of politics; I would rather keep silent, and intend doing so.
>
> Will you do me the favor to present my compliments to the constituent body, and acquaint them with this circumstance?
>
> With great esteem,
>
> My dear Mr. Pugstyles, etc., etc.

The application of the letter is obvious. It shows us that men of all times and places who have large public interests at heart and no thought of self are united by a common bond.

JULIUS C. PETER.

Seymour, Ind., February 17.

Literature

A FINANCIAL AUTOCRAT.

The Life Story of J. Pierpont Morgan. By Carl Hovey. New York: Sturgis & Walton. $2.50 net.

A few months ago, four or five of the monthly magazines suddenly and simultaneously burst forth with biographies of J. Pierpont Morgan. Such curiosity or interest as the reading public may have entertained when these productions were announced was promptly quenched when it was found that, with one or two exceptions, they were little more than embittered attacks on the Money Power, the story of Mr. Morgan's character, education, and financial career being used merely to illustrate the central theme.

The present book, the work of a New York journalist, appeared in serial form in one of the magazines at the same time as the others, but it has the merit of singularity, when considered along with the so-called biographies just referred to, in being frankly eulogistic, and in not only recognizing that the man it describes was a very great financier, but in asserting that the financial achievements with which he was conspicuously identified were in all respects wise, beneficial, and necessary to the public welfare. This may not perhaps be the surest path to the sound conclusions of historical criticism, but it is at all events biography, which the "muckraking" articles certainly were not.

The publishers of this book have been at pains to declare that Mr. Morgan himself was cognizant of its preparation; that he read parts of the proof or manuscript before publication, and that Mr. Morgan's relatives or associates were personally responsible for the account of some of the episodes. Any one familiar with the events described would draw some such inference from internal evidence. There are numerous details and incidents, especially in regard to the famous Government bond syndicate of 1895, which could hardly have been otherwise ascertained. Even the errors in these parts of the narrative—of which there are not a few—are such as would naturally occur when the details were thus obtained.

Mr. Hovey's book correctly divides Mr. Morgan's career into three main episodes—the effort, in the period from 1885 to 1897, at first to avert and finally to repair the financial disasters of the railways; the organization of the banking syndicate of 1895 for controlling the export of gold and preventing suspension of gold payments by the Government, and, most familiar of all to the general public, the constructing of the enormous Trusts of a decade ago, notably the billion-dollar United States Steel.

The chaos in American railway finance during the later eighties and early nineties resulted from several causes, not all of which are usually recognized. That railway-building went on at too rapid a pace in such years as 1887 is probably true. But the real mischief lay in the facts that so many of the lines then laid down and equipped were not the fruit of matured commercial judgment, but of a hope of forcing the older competing lines to buy them up at extortionate prices, and that they were outrageously over-capitalized. The first of these circumstances led to the reckless cutting of rates, even in prosperous years, below cost of transportation; the second led to widespread railway insolvency, in which many of the older companies were involved. Mr. Morgan's part in the episode lay in persuading the old railways to buy up some of the most dangerous of these free-lance competitors, and then in inducing the presidents to agree informally that rate-cutting should be stopped.

These expedients, on the whole, were futile; they reached one root of trouble, but not the other. It was left for the new corporation laws of another generation, with their Interstate Commerce Commissions and their Public Service Commissions, to grapple intelligently with the real railway problems of 1887 and 1889, and it must be said that when the legislative bodies took the matter thus in hand, they got little but protest or abuse from high finance. Even to-day, despite the important principles and precedents established, the problem is by no means solved; but Mr. Morgan's expedients of those earlier years gave not the slightest promise of their solution. The causes of mischief—notably gross and unscrupulous inflation of bonded debt—were not removed until one-fourth of the railway mileage in the country had passed through the bankruptcy courts.

When, however, the time arrived to solve the question of reorganization, Mr. Morgan at once assumed a commanding position. He was instrumental in putting a stop to the high-handed attempt, in the earlier plans for such companies as the Reading, to force bondholders to bear the heaviest burden of getting shareholders out of their scrape. Through his extremely capable partner, the late Charles H. Coster, the intricate problem of recapitalization, along with drastic reduction of fixed charges and even-handed justice to creditors, was worked out for a number of companies whose position was in great measure the key to the financial and investment markets. It is easy for people who

judge that episode only by the great prosperity of the railways in the succeeding decade, to underrate the real achievement of the reorganization days, and it is true that there were instances (like that of the Erie Railway) where later history showed the mistake of overcapitalization to have been repeated by the reorganizers. But nothing can be more certain than that the energy, judgment, and financial influence of Mr. Morgan, combined with his resolute faith in the future of American industry, were factors of the highest importance in making possible the great revival which followed.

Mr. Hovey's narrative of the celebrated contract to protect the United States Treasury's gold reserve in 1895 seems to be based, to a greater degree than any other part of his book, on what his publishers call "inside information." In its incidental details, the story is correctly told, but the large economic factors which were at work are missed almost entirely. In explaining that the expulsion of gold after 1893, and the Treasury's embarrassment, were influenced by the free-silver agitation, Mr. Hovey is only partly right. After-panic trade reaction and disclosures of unsound railway finance would have caused the movement, even without that agitation. The predicament of the Treasury itself was due, not to the mere fact of large gold exports, but to the much more serious fact that the Silver Purchase Act of 1890 had forced some $150,000,000 new government paper money on the markets, without making any clear provision for its redemption except in silver dollars.

The so-called "raid on the Treasury" was not, as Mr. Hovey describes it, a result of "exchanging the poorer metal for the better one." Neither the silver dollars nor the Treasury notes depreciated; but that they did not do so was wholly due to maintenance of gold payments against the Treasury notes, with a steadily dwindling gold reserve. The problem was: Could these payments continue, when the Treasury, through the incredible financial blunders of the Harrison Administration, had been placed in the position of a bank which has enormously increased its demand liabilities while allowing its reserve to be impaired?

The Cleveland Administration eventually saved the day, and it did so through the contract with Mr. Morgan. But the reason why that unusual contract became necessary was that Secretary Carlisle had failed to grapple courageously with the difficulty until it was too late to meet it by ordinary measures. The progressive collapse of the Treasury's gold reserve, through presentation of government paper money for redemption, was caused, first by inflation of the currency itself, next by the automatic expulsion of gold, then by the market's fear that the Treasury would not see fit to continue gold redemption, and finally by the belief that the Treasury could not do so, even if it would.

The "Belmont-Morgan contract" of 1895 was much more than an expedient to make good the depleted gold reserve; its real purport lay in the bankers' pledge to "make all legitimate efforts to protect the Treasury . . . against the withdrawal of gold." Mr. Hovey tells us that this was to be achieved "by controlling the price of exchange"—a statement which is entirely misleading. To solve the problem in that way, the syndicate would have had to break sterling to a price at which gold could not profitably have been exported. What it really did was to corner the foreign exchange market, keep it at normal gold export rates, but meantime provide for meeting its own drafts on Europe by borrowing abroad and not by shipping gold. The success of Mr. Morgan in banding together all the foreign exchange houses under such a pledge was a notable instance of his personal authority in finance. It undoubtedly saved the Government from a lapse, temporary or permanent, into silver redemption. But the scheme was nevertheless financially unsound; the country had to suffer for it afterward, and it is not at all likely to stand as a useful precedent in financial history. Its excuse will always be, however, that it was a desperate remedy applied for a condition which, by neglect and delay, had been allowed to become critical.

In discussing the organization of the great Morgan Trusts in 1901 and succeeding years, our book reaches highly controversial ground. To-day, perhaps more than at any previous period, the question whether the Steel Trust, for instance, was a legitimate and necessary economic expedient, is under warm discussion. Mr. Hovey betrays no doubt upon the matter, and is content to repeat the familiar Wall Street catchword that competition, as a factor in industrial progress, is dead. The steel trade incidents immediately preceding the merger of 1901 he tells with sufficient accuracy, though he does not point out that it was overcapitalization of the hastily-constructed hundred-million-dollar steel-making corporations of 1899 which converted the highly prosperous steel trade position of 1898 into the confused situation of 1900. The remedy of 1901 involved more overcapitalization; Mr. Hovey does not tell us of the madness of speculation which seized on the community and which swept wholly out of their customary balance even the greatest of our bankers. The "first underwriting syndicate" in the Steel shares, with its 200 per cent. cash profit, is described as a normal financial achievement; but we learn nothing of the "second Steel syndicate," formed to underwrite the utterly unsound plan of turning $200,000,000 of the company's stock into bonds, for no legitimate consideration whatever.

In the matter of the unlucky Shipping Trust underwriting, Mr. Hovey is more frank, though he does not go so far as to state the undoubted truth, that the miscarriage was merely an instance of what was bound to result from the recklessness of the great promotions of the period. We are told very frankly, however, that Mr. Morgan was accustomed, in his underwritings, to put down a given capitalist for what appeared to be the proper amount, and to deny him access to "good things" in the future, if he refused to accept. It will occur to most minds that there is an element of unsoundness, not to say peril, in any such practice, systematically pursued on a great scale in finance. The Armstrong committee's inquiry of 1905 into the life insurance companies showed one aspect of it; the "rich men's panic" of 1903 was a direct consequence of it.

The critical and judicial review of Mr. Morgan's remarkable career will not be written just now; we are too near to the events to say the last word on actions or policies. But in the meantime, any honest attempt to tell the story and sketch the character of a man who will undoubtedly stand out hereafter as one of the great figures of the period, deserves recognition.

CURRENT FICTION.

Flower o' the Peach. By Perceval Gibbon. New York: Century Co.

Admirers of Vrouw Grobelaar and her fund of South African lore will find little to interest them in this story of a tiny veld community consisting of a Boer farm and an English sanatorium for consumptives. It is fashioned in the vein of peculiarly maudlin extravaganza that Mr. Gibbon has dedicated to his globe-trotting Miss Gregory. Like that beneficent gray-haired adventurer in petticoats, the young heroine of the present tale takes with her on her travels the gracious refinements of the politest English society. Her practice of the graces of the impeccably bred enlivens rather disagreeably her sojourn in the Cape Colony health resort. For with the fine freedom of the true aristocrat she unreservedly extends the right hand of fellowship, even across the color line, and suffers upon her digits the respectful kiss of a forlorn Kaffir whom an English education and costume have rendered an anomaly and an abomination in the land of his birth. We infer from all that follows that the color line in North America is as the shadow of a cobweb when compared to the color line as it is drawn in South Africa.

The whole matter has been conceived in spiritual squalor. The author's pen

betrays an astonishing predisposition towards what is tawdry and dingy in human ware, and his adulation of the *real* gentleman and the *real* lady, besides being somewhat excessive, has altogether too much of a cockney tone. These events and these people would leave us with an impression of utter dreariness, had he not somehow contrived to throw round them the redeeming mantle of authentic "atmosphere"—the mysterious texture of an existence half-dream, half-exile, unspeakably lonely and at the same time crowded with enforced companionship, the artificial life amid primitive surroundings of a little ill-assorted congregation of health-seekers.

Ember Light. By Roy Rolfe Gilson. New York: The Baker & Taylor Co.

Whether or not the reader detects a trace of mawkishness in the unabashed sentimentality of these pages must depend, after all, upon how far he is a stickler for the restraint which is just now good form. The fashion shifts in this matter as in others. Perhaps the fairest thing to say of the book is that it has a sort of kinship to "The Cricket on the Hearth," "Reveries of a Bachelor," and the like. It is half a story, half a series of discourses on domestic life, under conditions, to be sure, undreamed-of by Dickens or Ik. Marvel. Marriage as it now is, in the America of the moment, is our theme; and Mr. Gilson, in the course of his many variations, touches, at least, upon most aspects of the problem—or condition. Two households are chiefly involved. The first is that of a young architect who, after years of struggle, finds himself, with a growing family, still far, to all appearances, from even the first rung of the ladder of success. His chance comes in the building of an Italianate palace for a millionaire friend, who is married to a beautiful but childless siren. She lays her snare for the young architect, and captures his fancy by her unfettered charm. So he gradually drifts away from the wife of his bosom, and is on the eve of elopement with the siren when the simple wiles of his children, and a sudden realization of what his wife is to him, win him back to his own hearth. Other considerations apart, the child-talk in the book is remarkably real, and the *personæ* as a whole, under all the rosy light of sentiment in which they move, appear like creatures of flesh and blood. But the reader who does not believe in Paul Dombey, and laughs at the death-bed of Little Nell, may be warned that to read these chapters would be for him a waste of time.

Bypaths in Dixie. By Sarah Johnson Cocke. New York: E. P. Dutton & Co.

Harry Stillwell Edwards's introduction to this book points out the fact that, among all the stories of the old South there have been very few relating to the nursery and the old black mammy. He calls Mrs. Cocke "the happy preemptor of the new find," and testifies to the truthfulness of her scenes and to the faithfulness of her presentation of the "gentle, tender, playful, elusive, young-old, child-wise mind of the African nurse in the white family." While deprecating the occasional sowing of superstitions in childish minds, he stoutly defends mammy from the charge of inflicting punishment by blows. "Blows were unnecessary with the wise-old mammy. There were the cupboard and pantry, the fruit orchard, the kitchen stove, and there were the birds, beasts, and fowls to be invoked in song and story." Mrs. Cocke's Mammy Phyllis is a supreme authority with her young charges. Her stories may seem at the start to be merely efforts to divert misbehaving children, but the moral invariably puts in its word at the right moment. The buzzard that tried to be an eagle, the ill-behaved pigs at the party, the combative, unrewarded hornet and yellow jacket, are not only actors in thrilling stories, but moral agents full of admonition. The fables have the familiar folk-lore ring. But mammy is never more amusing than when inventing impromptu explanations for puzzled inquiring childhood. "'Mammy, could Major Peafowl fly up to the top of Mister Tall Pine?' asked Mary Van in amazement. 'Who sed he fly up ter der top? I sed he went up ter de Pine Tree Holl'r. De Major ain' gwine bus' in nobody's room les'n he sen' his cyard up fus—an' how you know dey ain' got one dem ellumvat'rs like de new hotel got?' 'Oh!' apologetically, [the child] exclaimed." The children's pleas for clemency to threatened bird or beast are charmingly natural and are usually entertained, although there are times when the majesty of the law demands full sentence for offenders.

CLASSICAL AND ROMANTIC.

Essentials of Poetry. By William Allan Neilson. Boston: Houghton Mifflin Co. $1.25 net.

Professor Neilson's book has the advantage of all attempts to look at things in new ways, or, it may be, in ways which are so old that they seem new. With reference to poetry in particular, men have heard something too much of the stereotyped division into Romanticism, Classicism, and Realism. A deal of loose definition has left us uncertain as to what any one of them is precisely, though it is still generally assumed that all persons temperamentally have a bias towards one or another of them; and that poetry should be so classed still seems to many to answer the demand of a fundamental point of view. The difficulty with the scheme has been that it precipitated a quarrel more rancorous than the old battle of the books—a battle of temperaments. Under its stress people have tended to term all poetry which to them was futile classical or romantic, if they were realists, or believed themselves to be; classical or realistic, if they were romantics, etc. There has been more mud-throwing than throwing of light. If, therefore, a new satisfactory arrangement could be found which should dispense with such troublous terms, the New Jerusalem would be immeasurably nearer.

Mr. Neilson is too cautious to state that he has hit upon anything so revolutionary, saying that his is only one of the many angles from which poetry can properly be viewed; but he very evidently would not be surprised if it furnished for others such long clear vistas as it has for him. Briefly, he takes his cue from a passage in Bacon's "De Augmentis": "The best division of human learning is that derived from the three faculties of the rational soul, which is the seat of learning. History has reference to the memory, poesy to the Imagination, and philosophy to the Reason." For his purpose Mr. Neilson equates "memory" with the more modern-sounding "sense of fact," which, together with reason and imagination, he regards as sufficiently fundamental elements to serve as touchstones for poetry. In a brief preliminary testing of these qualities he finds that poetry usually called romantic is that in which the imaginative predominates; that classicism rests chiefly on the rational; and that realism gets its special color from sense of fact. Experiment with Shakespeare reveals a nice balance of all three elements, in addition to a fourth element which supreme poetry can hardly do without—intensity. Such is his general thesis.

The chapter in which an attempt is made to define imagination is, as the author admits, not wholly adequate, though he does not, apparently, realize how damaging anything short of a full discussion at this point may later prove. His purpose is merely to describe the essence of imagination and to illustrate certain of its functions. Here, as in the case of his fundamental divisions, he harks back to old authority, to Aristotle's theory of "imitation." With the Greek all may admit that a truly creative imagination involves at least a two-fold process, the first portion operative in the perception of objects, whereby images which the memory recalls are not literal transcripts, but are colored by fancy, by selection, by emotion; the second being a re-creation of the recalled images into concrete types of the universal. Examples of the first stage are everywhere, notably in Wordsworth's poem on the daisy:

> Oft on the dappled turf at ease
> I sit, and play with similes.

What Wordsworth designated fancy represents it. The line, "Ah, sunflower, weary of Time!" illustrates an idea carried through the second stage. The characteristic attitude of this watcher of the sun stands for that of all sunflowers since the world began, and to it is given the human vision, the somewhat futile vision, of the ages. Mr. Neilson does not present the case quite so simply, though his variations do not get much beyond what we have indicated. His difficulty lies in the application of the definition. In using short passages always for examples, he neglects the larger instances of what to many seems the highest sort of imagination—the true instinct for form and structure. This he includes as a necessary attribute of the classical, whose chief basis is reason. But we protest that sense of form and imagination are often too closely knit to be separated. How should one describe Dante's imagination in "The Divine Comedy" apart from its magnificent framework? So in the case of classical tragedy, it would be folly to pick passages and dub them imaginative or not; for often the central idea, as in "Prometheus," working through the larger medium, colors and transforms sentences which on the surface look commonplace. In a word, imagination is as frequently as not reasoned.

To define romantic poetry as that in which the imagination predominates does not solve the problem, even though the author seems to mean a formless imagination. That in effect does nothing more than say that the romanticists wrote series of lyric poems. We suspect that Mr. Neilson's definition involves nothing more fundamental than imagery, and it may be true that on that basis something might be done towards reaching a distinction between the romanticists, and, say, the neo-classicists. Would he admit, perhaps, that in romantic poetry the conceits are usually carried through the second of the Aristotelian stages? But that is merely reiterating the somewhat archaic complaint that Pope was content to experiment merely with fancy, when he chose to be poetic at all. Of the more fundamental question of attitude and philosophy of life nothing of a positive character is offered, though the author does good service in reviewing destructively the "back to nature" test and numerous others with which literary criticism is cluttered.

The weakness of the plan is still more evident when levelled on Milton, who might well be called our greatest classical poet, save that he "is so much else, is so richly endowed on the other sides of his nature, that we refrain from insisting on the epithet classical, lest it deprive him of a greater honor." This in spite of the fact that classicism has been rigidly distinguished from neo-classicism. One may ask whether, according to the new definitions, Milton in any way differs from Shakespeare, who, it will be recalled, was found to have a nice balance of all the essentials. All great poets, by the original premise, are supposed to possess these, classical as well as modern, and yet Mr. Neilson restricts classicism to the sort of poetry which succeeds in conveying "a general, not a particular, impression of beauty, and so is concerned with large outlines, definite enough to place the figure in its class, rather than with specific details which might serve to identify an individual." The argument leads nowhither.

Tested on many sides, the divisions seem to us arbitrary. A chapter is devoted to intensity. Individual passages again unfortunately serve for illustration. The well-known words of Ferdinand are cited in "The Duchess of Malfi" which are uttered as he looks upon the face of the sister whom he has murdered:

> Cover her face: mine eyes dazzle: she died young;

and Othello's

> It is the cause, it is the cause, my soul.

In both instances it must be evident that the tremendous effect comes from the situations, which in turn are the products of both the imagination and the reason, and is not a thing in itself at all. Loosely used, as it is in common speech, intensity is a useful term to indicate that poetic, dramatic, or other properties have done their work well. But is it not dangerous, by considering it separately, to wrest it from the medium without which it has no life? Nor is the suggestion made that it may often result from an exquisite sense of form, in much the same way as the highest sort of imagination.

We have followed the argument at sufficient length to show the lines which it takes. Worked out logically in connection with the large matters which poetry involves, it could never, we believe, remove the troublous categories with which literary historians have had to get along, since it creates quite as many difficulties as it confronts. Yet the book is stimulating throughout. For the nonce it places poetry in a vacuum, apart from the vapors of prejudice, and searches for its essence. Such questions as biography, gossip, sources, political and social history, which have too frequently, though unnecessarily, clouded vital issues in literary criticism, are put aside by an initial fiat, and one is free to range from Homer to Kipling with a glance. In the process a good many minor matters are cleared up. One of the best points made is the demonstration that not all the failures of the romanticists were romantic failures. Wordsworth in the "Excursion" was trying his hand at the neo-classic method of calm, pointed reasoning. It is a sharp illustration of the well-known fact that in any age and in many writers poetry has received very various treatment. The final chapters of the volume deal with sentimentalism and humor, which latter is not carefully distinguished from wit.

A History of the Peninsular War. By Charles Oman. Vol. IV. New York: Henry Frowde. $4.75.

Three years have elapsed between the publication of the third and fourth instalments of Professor Oman's great work on the Peninsular War, and a good part of the time, at least, has been characteristically employed by him in the production of another massive book on a very different field—Anglo-Saxon England. Considering this, and the fact that he has spent many weeks in visiting the various peninsular battlefields, not to speak of his academic duties at Oxford, his apology in the preface for the delay in the appearance of the present volume seems somewhat superfluous. It is to be hoped, however, that Professor Oman will not permit any other task to interfere with the speedy completion of his *magnum opus*. His contributions, whatever the field they take, are always welcome, but some are less indispensable than others.

The period of the Peninsular War covered by the present volume (December, 1810-December, 1811) sees the allied and the French armies in a state of virtual equipoise. Save for Suchet's victories in the East, which are really only a side issue, interest is centred solely on the campaigns in Portugal and on the Portuguese frontier. The high-water mark of French conquest there had been reached on the knoll of Sobral before the lines of Torres Vedras in October, 1810. The retreat thence which began a month later did not end until French soil had been reached in 1814; indeed, in a larger sense, it did not end until Waterloo. The period dealt with in the present volume, therefore, shows the French armies no longer inspired by that spirit of offence which had been one of the most potent causes of their earlier successes. Masséna evacuated Portugal in March, 1811, and through the remainder of the year the French occupied themselves with a fairly successful defence of the Spanish frontier. Had Wellington been possessed of sufficient resources, they might not have been able to maintain themselves there: as it was, their stand on the Agueda and Guadiana was only made possible by a dangerous disgarnishing of most of the Spanish provinces that lay beneath their yoke. They had abandoned the offensive, but it would not be correct to say that the allies had as yet

assumed it: that was to be reserved for the year 1812.

It was during this period of equipoise, however, that the bloodiest of all the fights of the Peninsular War was fought—the terrible battle of Albuera. No finer illustration of Professor Oman's methods can be asked for than is afforded by his chapter on that great slaughter. It is pretty dreary reading after Napier—that the warmest of his admirers will have to confess: unfortunately, Professor Oman seems to select the very places where his predecessor attains the loftiest heights of his splendid military style, to lapse occasionally into positive slovenliness of expression. But, on the other hand, one feels, on every page, that one is getting at the facts in a way that has never been possible before. Professor Oman's figures, whether cited in text or appendix, are always impressive. His local topographical knowledge, derived from his frequent visits to the different battlefields, is a formidable weapon, of which he makes skilful use (Napier's famous "ravine of the Arroyo" is now relegated to the limbo of unsupported tradition). Various new sources have been placed at his disposal. Last of all, he has no axe to grind, no hero to exalt, no villain to abase: he seeks the truth, and the truth alone, and scatters praise and blame with an impartial hand. There is no logical escape from his main conclusions, and we gladly recognize how completely his work has necessitated the revision of a number of hitherto accepted judgments.

One matter of prime importance Professor Oman has caused to stand out in almost every chapter of the present volume as it has never stood out before, and that is the fatal results of Napoleon's refusal to appoint a single commander-in-chief in Spain to whom all others should be strictly subordinate; his determination to manage everything himself from Paris—"de loin." "He did not wish to 'have a marshal at Madrid, who would want to have all the glory along with all the responsibility'—*i. e.*, he refused to make one of his servants dangerously great." He insisted on giving orders himself which were founded on facts at least three weeks old when reported to him, and more than six weeks old when his orders had been transmitted to the front. Napoleon himself was perfectly aware of the evils of the system; but it was by no means easy to devise a better one. To descend himself into Spain was impossible, even in that comparatively quiet year. It was no wonder that he shrank from the other alternative—the appointment of a subordinate on the ground with full powers; for there was no one in Spain of sufficient ability whom he could trust. He was well aware of the limitations of his brother Joseph; Soult, who after Masséna's dismissal would have been an obvious candidate for the post, had intrigued for kingship at Oporto in 1809, and might very likely do so again; and so on through the entire list: somo fatal objection was to be urged against each one. The policy and methods of Philip II of Spain should not seem at first sight to offer many points of resemblance to those of Napoleon; yet in some respects there is a striking parallel between the way in which the former attempted to manage the Dutch campaigns and direct the tactics of the Armada, and the manner in which the latter dictated the movements of his armies in the Iberian peninsula. To a certain extent the defects of both were almost necessarily inherent in any system of one-man power. But that Napoleon should not have been able to find a solution of his difficulties is one of a number of proofs that he had passed the zenith of his genius in 1811; and it goes to confirm the common verdict that the Peninsular War was on the whole the least well-managed of any in which his armies were engaged.

The Works of Friedrich Nietzsche. Vol. II, Early Greek Philosophy and Other Essays, Translated by M. A. Mügge; VII, Human All-Too-Human, ii, Translated by Paul V. Cohn; VIII, The Case of Wagner, Translated by A. M. Ludovici; IX, The Dawn of Day, Translated by J. M. Kennedy; XVI, The Twilight of Idols, The Anti-Christ, Translated by A. M. Ludovici; XVII, Ecce Homo and Poetry, Translated by A. M. Ludovici. New York: The Macmillan Co.

Nietzsche. By Paul Elmer More. Boston: Houghton Mifflin Co. $1 net.

With this issue of six volumes the great translation of Nietzsche's Works, edited by Dr. Oscar Levy, has, after considerable delay, come virtually to an end; only an eighteenth volume, promised for this spring, is yet to contain "Supplementary Essays and an Index." Even those to whom Nietzsche's philosophy is most repellent will welcome this English presentation of a writer who has become one of the acknowledged influences of Continental life, and whose German style, though much admired, is not particularly easy for the foreigner. In general it may be said that the English version is faithful to the original, and often succeeds, notably in "Zarathustra," in catching something of Nietzsche's peculiar rhythm. The "Ecce Homo" of the present instalment does not seem to us quite so successful as the "Zarathustra" from the same hand. This does not mean errors of interpretation, for the original of the autobiography is not included in the sämmtliche Ausgabe of Nietzsche owned by the reviewer, and no comparison of the German and English has been made. The reference is rather to an occasional laxity in the English itself, such as a plain *will* for *shall*. It is regrettable that this occasional carelessness, though not really a serious blemish, should show itself in the volume of this new instalment to which the inquisitive reader will first turn.

Nor does M. Ludovici appear altogether at his best in his Introduction to this volume. It would seem wiser, certainly more persuasive, to admit that the exaggerated vanity of "Ecce Homo" has a strain of morbidness portentous of the author's approaching madness. It is merely flouting common-sense to say that this lack of restraint "can be regarded as pathological only in a democratic age in which people have lost all sense of gradation and rank, and in which the virtues of modesty and humility have to be preached far and wide as a corrective against the vulgar pretensions of thousands of wretched nobodies." Even the most hardened apologist for Nietzsche might hesitate profitably before accepting as characteristic of their hero in health such an outburst of megalomania as this:

> There is not a single passage in this revelation of truth which had already been anticipated [the Teutonism is Mr. Ludovici's English], and divined by even the greatest among men. Before Zarathustra there was no wisdom, no probing of the soul, no art of speech.

Yet, despite these outbreaks of almost insane egotism, in part even because of them, it is right to regard this strange autobiography as among the most important and illuminating of Nietzsche's works. Nowhere else in his books do we find shrewder and at times sounder epigrams on the conduct of life or more biting critical dicta, when his main philosophical thesis is in abeyance; and nowhere else does this philosophical thesis display more clearly its central error. God, he says in the chapter Why I Am So Clever, is only "a coarse and rude *prohibition* of us." There one touches the heart of Nietzsche's doctrine. His boasted discovery of the Will to Power and the vaunted Transvaluation of All Values is in reality merely a denial of the validity of any check within ourselves contrary to the primitive instincts and impulses of nature. God, or any ideal within ourselves, is a hindrance and *prohibition* upon self-development, and so can have no place in the thought of the Superman. Nietzsche did not see that true development in a conscious being can only come by a choice among natural impulses which implies a controlling power above them, a power which may thus be properly called *supra naturam*. He did not see that true character comes only with prohibition, and that without prohibition there is no will in any senso of the word, but surrender, and in tho end dissipation and death. In other words,

he carried naturalism to its extreme, and thereby showed its inherent fallacy.

This, in brief, is the aspect of naturalism considered in the little book on "Nietzsche" named above, which is, in fact, an expansion of two essays that appeared in the *Nation* of September 21 and 28, of last year. A biographical section has been added, and the development of the twin ideas of sympathy and egotism under naturalism has been followed more precisely. The book may be offered as an attempt to place Nietzsche in relation to his age and the past, and as a comment on the translation of Nietzsche, now happily brought to a conclusion.

The Life and Labors of Bishop Hare, Apostle to the Sioux. By M. A. De Wolfe Howe. New York: Sturgis & Walton Co. $2.50 net.

As the story of a devoted and self-sacrificing life, this biography of a missionary to the Indians will be an inspiration to every reader. The condition of the great Dakota Territory forty years ago, with the serious problems in government, are described by one who took a leading part in solving them. William Hobart Hare, a native of Princeton, N. J., after a short term of service in parish and mission work in the East, was sent out to this region in 1873 as missionary bishop of the Episcopal Church. Its desolateness at that time can be realized from the fact that in one of his early trips he did not see "a human face or a human habitation, not even an Indian lodge, for eight days." The thinly scattered population consisted mostly of Indians, some of them the most reckless and wildest of the tribes. And yet though he went among them constantly unarmed and often unattended, there is but one recorded instance of his having been actually in danger, and then he was accompanied by United States soldiers. The Indians responded eagerly to his wonderful sympathy. One who was present when he preached his first sermon to them writes: "The Indians say they understood nearly all he said before the translator interpreted it. His eye and voice and manner talked to them." From the beginning he was deeply interested in the children's education, his aim being that "the school training should be such as would not only cultivate their intellect, but also develop their physical functions and teach them to do well the common acts of daily humble life." Boarding schools for boys and girls were established in different parts of the territory, and St. Paul's School for Girls at Sioux Falls was his home during a large part of his ministry. The principal gives a charming account of his life there. She says:

> He so loved to be one with the family in all their activities that parties, entertainments, etc., were planned to come, so far as possible, when the Bishop could be at home; and he was never too busy, too weary, or too burdened to join in their fun. When winter came, the Bishop was the first one out to help make a "slide," and many a frosty evening did he spend on the tennis court trying to coax from a garden hose enough water to make a skating pond.

After ten years of service primarily with the Indians, his work broadened, through the flood of white immigrants. "More land was taken up by settlers in Dakota during the past year," he wrote in 1884, "than in all the other Territories together. Towns are growing up everywhere, with almost magical rapidity." From that time he was a missionary to two races and sought heartily and unweariedly the interests of both white and red man. His successful leadership in the campaign for divorce reform won for him this public tribute from the Roman Catholic Bishop O'Gorman: "Morally and financially, we are all the better for the Christian courage of Bishop Hare. To him, the defender of the home, honor and the gratitude of South Dakota."

There is much in this sainted life which reminds one of the Apostle Paul. Especially is this likeness shown in the strong personal feeling which he had for those to whom he ministered. "I shall have you constantly in my heart" was his promise in his first pastoral letter. How this was kept is shown by the testimony of one who labored long under him: "To me he was not only bishop, but father, brother, friend, and he was all of that to others also." Then, too, he had his "thorn in the flesh" in a serious affection which during the whole of his service caused a constant physical strain and sometimes great suffering. Yet, notwithstanding, he did an unparalleled work, visiting his different missions at regular intervals, the nearest to his home in the early years being one hundred miles, the farthest three hundred. To reach them he had to cross barren prairies where there was not even "a great rock in a weary land" to give him shelter from a blazing summer sun, nor a refuge in the more inhospitable and dangerous winter season when the thermometer sometimes fell to 44 degrees below zero. A typical illustration of his work in later years is found in one of his letters: "I have in twenty days preached twenty times, held sixteen confirmations in which I confirmed seventy candidates, have driven two hundred miles by wagon and travelled eight hundred and sixty-seven miles by rail."

The aim of Mr. Howe in writing this biography has been to make the bishop tell his own story so far as possible through extracts from his letters and addresses. Hence a lifelikeness is given to the account which adds much to its interest and value. The biography would be so helpful to similar workers that we trust a cheaper edition may be published. As Bishop Potter said at the General Convention at Washington in 1898, Bishop Hare is "the most splendid and gracious illustration which our missionary service has given us of devotion to the cause of Christ and those who are forgotten of their fellowmen."

Notes

Holt's list of spring books contains, in fiction: "The Squirrel Cage," by Dorothy Canfield, and "Views and Vagabonds," by R. Macaulay.—Miscellaneous: "Smaller Tuscan Towns," illustrated; "Cities of Belgium," by Grant Allen, new, revised edition; "Umbrian Towns," by J. W. and A. M. Cruickshank, new, revised edition; "Beyond War: A Chapter in the Natural History of Man," by Vernon Kellogg; "Social France in the Time of Philip Augustus," by Achille Luchaine, edited by Louis Halphen, translated by E. B. Krehbiel; "Comments of Bagshot," second series, by J. A. Spender; "A History of Public Permanent Common School Funds in the United States (1795-1905)," by Fletcher Harper Swift.—Biography: The World's Leaders series, edited by W. P. Trent: "The World's Leading Poets," by H. W. Boynton, and "The World's Leading Conquerors," by W. L. Bevan.

"The Butterfly House," a new story by Mary E. Wilkins Freeman, is brought out this week by Dodd, Mead & Co., who also have in hand: "The Essential Thing," a novel by Arthur Hodges; "The Chalice of Courage," by Cyrus Townsend Brady; "My Lady Caprice," the first book of Jeffery Farnol; "Death," an essay by Maurice Maeterlinck.

"Chronicles of Avonlea," by L. M. Montgomery; "From Chevrons to Shoulder Straps," by Mrs. Florence Kimball Russell, and "'Tilda Jane in California," by Miss Marshall Saunders, are in the press of L. C. Page & Co.

George Hamlin Fitch is bringing out, through Paul Elder & Co., "Modern English Books of Power," a second series of essays.

Among the books which Putnams will shortly issue are: "The Relentless Current," by Maud Charlesworth; "The Early Court of Queen Victoria," by Clare Jerrold; "Travellers' Tales," by "The Princess"; the following of Molière's works, in the translation by Curtis Hidden Page: "The Tradesman Turned Gentleman," "The Affected Misses," "The Doctor by Compulsion," and "The Hypocrite."

As American representatives of the Cambridge University Press, the Putnams announce: Sir Philip Sidney's "The Countess of Pembroke's Arcadia," edited by Prof. Albert Feuillerat of the University of Rennes—the first volume of a set which, when completed, will contain all of Sidney's works; "Foreign Companies and Other Corporations," by E. Hilton Young; "Royal Charters of the City of Lincoln, from Henry II through William III," transcribed and translated with an introduction by Walter de Gray Birch; "The English Provincial Printers, Stationers, and Bookbinders to

1557," by E. Gordon Duff, and "The Distinctions and Anomalies Arising Out of the Equitable Doctrine of the Legal Estate," by R. M. P. Willoughby.

Harvard University announces the publication on February 26 of a "History of the British Post Office," by Prof. J. C. Hemmeon of McGill University. In addition to an account of the development and present organization of the postal department of Great Britain, the book includes a discussion of the parcels post, the telegraph and telephone system, and similar subjects. It is issued as Vol. VII of the Harvard Economic Studies.

Mr. Murray of London promises the second volume of Mgr. Duchesne's "Early History of the Christian Church" this spring.

"Letters and Recollections of Mazzini" is the title of a new book by Mrs. Hamilton King, announced by Longmans, Green & Co.

The Macmillan Company has a long list of spring announcements. It includes, in fiction: "Julia France and Her Times," by Gertrude Atherton; "The Giant Fisher," by Mrs. Hubert Barclay; "The Inside of the Cup," by Winston Churchill; "Joseph in Jeopardy," by Frank Danby; "The Friar of Wittenberg," by William Stearns Davis; Dostoievski's novels; "Crime and Punishment," "The Possessed," "The Idiot," "The House of the Dead," and "The Brothers Karamazov," all translated by Constance Garnett; "Hieronymus Rides," by Anna Coleman Ladd; "The House of Pride," by Jack London; "The Touchstone of Fortune," by Charles Major; "The Goodly Fellowship," by Rachel Capen Schauffler, and "Van Cleve," by Mary S. Watts.—Public affairs: "South America," by James Bryce; "A New Conscience and an Ancient Evil," by Jane Addams; "The New Democracy," by Walter E. Weyl; "Democratic England," by Percy Alden, with an introduction by Charles F. G. Masterman; "Old Age Dependency in the United States," by Lee Welling Squier; "The Elements of Socialism," by John Spargo and G. L. Arner; "The Modern Woman's Rights Movement," by Dr. Kaethe Schirmacher, translated from the second German edition by Carl Conrad Eckhardt; "The Record of a City: A Social Survey of Lowell," by George F. Kenngott, and "The Control of Trusts," by John B. Clark.—Travel: "Spanish Highways and Byways," by Katharine Lee Bates; "Mexico: The Wonderland of the South," by W. E. Carson; "Stage-Coach and Tavern Days," by Alice Morse Earle; "Alaska: The Great Country," by Ella Higginson; "Boston: The Place and the People," by M. A. De Wolfe Howe; "Along French Byways," by Clifton Johnson; "Among English Hedgerows," the same; "The Isle of Shamrock," the same; "The Land of Heather," the same; "New England and Its Neighbors," the same; "New Orleans: The Place and the People," by Grace King; "Charleston: The Place and the People," by Mrs. St. Julien Ravenel; "Philadelphia: The Place and the People," by Agnes Repplier, and "Cuba," by Irene A. Wright, all to be reissued in the New Travel series. —Biography and history: "Marcus Alonzo Hanna—His Life and Works," by Herbert Croly; "The Life of Benjamin Disraeli," Volume II, by W. F. Monypenny; "The Correspondence of William Shirley," collected and edited by Charles Henry Lincoln; "The Life of William Robertson Smith," by John Sutherland Black and George Chrystal; "A History of the United States," Volume III—"The American Revolution, 1760-1789," by Edward Channing; "The New History and Other Essays in Modern Historical Criticism," by James Harvey Robinson; "The Cambridge Mediæval History," Volume II, "The Rise of the Saracens and the Foundations of the Western Empire," and "The Beginnings of Quakerism," by William Braithwaite.—Religion and philosophy: "Christianizing the Social Order," by Walter Rauschenbusch; "Life's Basis and Life's Ideal," by Rudolph Eucken, translated by A. G. Widgery; "Free Will and Human Responsibility," by Herman Harrell Horne; "A History of the Literature of Ancient Israel from the Earliest Times to 135 B. C.," by Henry T. Fowler; "Socialism and the Ethics of Jesus," by Henry C. Vedder; "Individuality and Destiny," by Bernard Bosanquet, and "The Problem of Formal Logic," by F. C. S. Schiller. Macmillan's list of spring announcements will be completed in the *Nation* next week.

The list of Doubleday, Page & Co.'s spring publications includes, in fiction: "The Recording Angel," by Cora Harris; "A Son of the Sun," by Jack London; "The Guests of Hercules," by C. N. and A. M. Williamson; "The Counsel for the Defense," by Leroy Scott; "Red Eve," by H. Rider Haggard; "The White Waterfall," by James Francis Dwyer; "The Girondin," by Hilaire Belloc; "The Radium Terrors," by Albert Dorrington; "In Search of Arcady," by Nina Wilcox Putnam; "The Spartan," by Caroline Dale Snedeker, and "Peter and Polly," by Elizabeth Hays Wilkinson.—Poetry: "Songs out of Books," by Rudyard Kipling, and "Far Quests," by Cale Young Rice.—Miscellaneous: "Where Half the World is Waking Up," by Clarence Poe; "A Personal Narrative of Political Experiences," by Robert M. La Follette; "Many Celebrities and a Few Others," by William H. Rideing; "Happy Humanity," by Dr. Frederik van Eeden; "New Demands in Education," by James P. Munroe; "The Forester's Manual," by Ernest Thompson Seton; "Popular Garden Flowers," by Walter P. Wright; "The Book of Grasses," by Mary Evans Francis; "Moths of the Limberlost," by Gene Stratton-Porter; "Saturday in My Garden," by H. H. Farthing; "The Spider Book," by John Henry Comstock; "Birds of Eastern North America," by Charles K. Reed, and the Delft Leather series of about thirty-five leather-bound books, including "Freckles," "The Brushwood Boy," "Monsieur Beaucaire," etc.

The Justin Winsor prize of $200, awarded every two years by the American Historical Association, is open to competition this year. The monograph must be based upon independent and original investigation in American history, by which is meant the history of any of the British colonies in America to 1783, of other territories, continental or insular, which have since been acquired by the United States, of the United States, and of independent Latin America. Competitors should submit their work, which must be unpublished, to the committee on awards, Prof. Claude H. Van Tyne, University of Michigan, chairman, by July 1.

Nearly 10,000 Japanese books belonging to the late W. G. Aston have been acquired by the University Library of Cambridge, England.

The latest addition to the Wiener Beiträge is a study of "Bryan Waller Procter," by Franz Becker. The book comes to us from Wilhelm Braumüller of Vienna and Leipzig.

To the really charming volume, "The Belmont Book" (Dutton) by "Vados," Arnold Bennett furnishes an introduction in his worst vein, which is simply the worst vein of a whole school of English literary journalists. It might have been written in a weak moment by Mr. Wells or Mr. Chesterton, or by any among a half-dozen others. That is, it is a mere bit of amiable "copy," jaunty, discursive, sporting its array of little paradoxes: in short, existing for its own sake, rather than for the sake of the book it professes to introduce. We suppose the publisher engaged Mr. Bennett to officiate, because his name, just now, is one to conjure with in any connection. Mr. Bennett himself says that an introduction is necessary to this particular book, "partly on account of its pseudonymity, but more because the adventurous reader, before he begins the adventure, ought to be reassured, and also to be warned." That is, the reader is in danger of being either unduly repelled by the title, because it may suggest the "nature book," or unduly attracted by it, because it will somehow convey to him the idea of a novel. As a matter of fact, it is fairly evident at a glance that the book is neither, but a collection of sketches of country life in Normandy, chiefly in its human aspects. We suspect that Mr. Bennett's real function here is to jostle discreetly the veil of anonymity which conceals the author. It seems that she is a novelist of English birth who lives in Paris, who spends most of her year in the centre of a cosmopolitan circle, and the rest of it, with her husband and a dog, on a little estate in the Norman countryside here nicknamed "Belmont." In these papers, says Mr. Bennett, she "has put off the novelist in her. She is just the sympathetic spectator and listener at large, utterly at large. She is exercising a faculty which knows nothing of either selection or prim orderliness." We doubt if this is strictly true. With all their variety of theme and treatment, with all their appearance of casualness, these chapters, taken together, present a very clear picture of a particular scene and personnel. One might almost as well say—as devotees of conventional romance have said—that "The Old Wives' Tale" is a mere jumble of insignificant and unarranged facts. Every touch counts here, whether in the unsparing but not ruthless vignettes of the peasant life of to-day, or in the affectionately traced scenes and episodes drawn from the legends and chronicles of old Normandy. A few of the chapters, such as La Masure, Dame Agnès, and The Emerald Necklace, are, in form at least, perfectly finished short stories. The book, as a whole, is of a class to which a number of admirable members have been added during the past year or two—for example, Stephen Reynolds's "A Poor Man's House" and Richard Whiteing's "Little People." That is, it is a book of essays and sketches with a slight savor of fiction, done in the intimate manner, and owing its charm chiefly to its revelation of a warm human personality.

"Home Life in Norway" (Macmillan), by H. K. Daniels, is a book of exceptional

charm. The author knows the country and its people intimately, loves them as one does the associations of one's childhood, and yet judges them with the worldly shrewdness of a sturdy Britisher. There are fourteen chapters in the compact little volume—on the Grosserer (merchant), A Dinner Party, Home Life in Flats, Children and Their Education, Norwegian Women, Food, Mistress and Maid, Hotels and Restaurants, Les Norvégiens s'amusent, In the Towns, Out of Doors, Darker Norway, The Peasant and His Home, and A Day on a Better-class Farm—and it is difficult to say which is the best, so crammed full are they all of information, conveyed in the best possible humor, and in a style which, in spite of its occasional lapses into journalistic "breeziness," holds the attention of the reader from cover to cover. We heartily recommend to our readers this novel Baedeker of the home-life of one of the most interesting countries.

Under the somewhat unintelligible title of "The Desire for Qualities" (Frowde), Stanley M. Bligh discusses the value of various qualities of character and the means of cultivating them. His purpose is to enable each of us to decide upon the qualities that he wishes to stand for, and then to cultivate them deliberately. The several references to Law's "Serious Call" suggest a characterization of the book. It is a "serious call" of a twentieth-century type—not "to a devout and holy life," but to the use of the resources of psychology and sociology for the development of personal character. Yet the appeal is less to science, in the narrower sense, than to reason—the "artistic reason." What he means is simply that a deliberate and intelligent estimate of values should guide the inner life as well as the outer. The writer is at home in the literature of his subject, and may be read without offence, and perhaps with profit, even by those who feel competent to provide their own "directive psychology." The book is of pocket size, though it contains 322 pages.

"The Unfolding of Personality as the Chief Aim in Education" (University of Chicago Press) is the title of a small volume of educational psychology, by H. Thiselton Mark, lecturer on education in the University of Manchester. Mr. Mark is strongly in sympathy with the tendency marked by the instinct-psychology of William James and the apperceptionism of Professor Stout, and he stands in general for a rather vigorous individualism. The significance of the individual is rendered somewhat doubtful, however, by the closing chapters on the subconscious and the supra-rational, in which the individual is in danger of becoming a mere manifestation of cosmic energy; and it is a question how far these chapters, though speculatively interesting, belong in educational psychology. In any case the volume suggests that educational psychology stands in England for a higher order of literary ability.

In March, 1909, Athelstan Riley addressed a letter to the London *Times* suggesting that the lull in the educational controversy be used for gathering information, and asking that "schemes" for the solution of the educational problem be sent to him. Ten of the hundred schemes submitted, together with documents setting forth the Roman Catholic and the Jewish position, are now published in a volume entitled "The Religious Question in Public Education" (Longmans), under the joint editorship and criticism of Athelstan Riley, Michael E. Sadler of the University of Manchester, and Cyril Jackson, chairman of the London County Council's Education Committee. The character of the schemes which are printed shows that the response was serious and well considered, and the book as a whole provides a useful document for the study of the English education problem. An American reader will be disposed to wonder why the simplest scheme of all, namely, the complete secularization of the schools, is omitted. The reply is furnished by the editors:

> It will only be in the last resort, and in despair of any other settlement, that the mass of English people will consent to the omission of religious worship and religious teaching from the ordinary curriculum of State-aided schools.

The analysis of topics in the American Year Book for 1911 (Appleton) has been somewhat altered from that of the initial volume of 1910. The department of "Comparative Statistics" has been enlarged by the addition of a section on "Problems of Population"; "History" has been divided into American and foreign; "Government and Administration" and "Functions of Government" have been combined under the simple head of "Government"; a new department, "Public Works and National Defence," takes care of certain topics formerly appearing under "Functions of Government," and includes also a new section, entitled "Public Services"; and there are less important changes, all in the direction of simplicity. The new section on "Public Services" is written by Richard Compton Harrison, assistant counsel to the Public Service Commission of the First District of New York, except for the concluding pages on "State Taxation of Corporations," for which Professor Seligman is responsible. The terms are given of the Public Service Commission laws of New York, New Jersey, Connecticut, New Hampshire, Ohio, Kansas, Nevada, and Washington; the important experiences of various city commissions are presented, and the progress of municipal ownership summarized. The new section on "Problems of Population," written by Prof. W. F. Willcox of Cornell, contains analyses of the last census, showing the increase, density, and geographical and racial distribution of the population, and a statement of conditions of immigration and naturalization. Perhaps the section on "Municipal Government" presents the best single illustration of American activities during the year. In addition to such a fundamental matter as the framing of new city charters, there have been vice investigations, the varied undertakings of the municipal research bureaus, and increasing attention to municipal accounting, city planning, problems of housing, fire prevention, and smoke and billboard nuisances. The relative importance of municipal affairs is indicated by the contrast between the forty-three pages given to them and the fourteen devoted to the section on "State, County, and Town Government," ten of which are filled with tables of statistics. Despite its 850 pages, the volume is easy to handle. Its usefulness will be promptly apparent to any one seeking the latest developments in any of the large fields of human endeavor.

The papers presented at the First Universal Races Congress, held at London July 26-29, 1911, have been gathered together by the Hon. Organizer of the Congress, G. Spiller, Esq., and issued in book form under the title "Inter-Racial Problems" (Ginn). It is stated that the object of the Congress was "to discuss, in the light of science and the modern conscience, the general relations subsisting between the peoples of the West and those of the East, between so-called white and so-called colored peoples, with a view to encouraging between them a fuller understanding, the most friendly feelings, and a heartier coöperation." In the furtherance of this object eminent men and women of many races, from many lands, were invited to discuss a variety of questions bearing on race contact. It was inevitable that the resulting volume should contain a large amount of valuable, though somewhat miscellaneous, data, novel, interesting, suggestive, and sometimes amusing. Some of the conclusions reached are, to say the least, startling. Among these the following may be mentioned: that the various important peoples of the world are essentially equals in intellect, enterprise, morality, and physique; that the progressive development of all primitive peoples is possible, if only the environment can be appropriately changed; that difference of skin-color is entirely a matter of climatic control; that the crossing of the black with the white does not generally produce offspring of an inferior intellectual quality; and that the sole basis of race prejudice and inter-racial friction lies in differences of language, with religion as a possible slight contributing cause. It is, of course, unfair to judge a writer's conclusions on the sole basis of a brief address, yet as one runs through the volume the unholy suspicion continually arises that some of the speakers were chosen because of the views they were known to hold, rather than on the basis of pure scholarship. One of the speakers, Dr. Felix von Luschan, confesses this suspicion as to his own invitation. Nevertheless, one of the few jarring notes sounded in the Congress comes—bringing with it a certain sense of relief—from the lips of this speaker, when he says that racial barriers will never cease to exist, and if they should appear to be falling it would be better to prop them up than to hasten their collapse. His pronounced views on the inevitability of war call forth an editorial footnote to the effect that he regards the desire for an Anglo-German conflict as "insane or dastardly." Perhaps the most valuable papers in the book are the articles on China, India, Japan, and other of the supposedly less advanced countries, by representatives of the corresponding races, furnishing, as they do, a sympathetic but broad-minded summary of the civilization of those lands. The recent report of our own Immigration Commission finds its echo in papers by Prof. Franz Boas, Fred C. Croxton, and Prof. W. Jett Lauck. Among other well-known American writers may be mentioned Felix Adler, W. E. B. DuBois, and Charles A. Eastman.

The Library of Congress has issued a "Calendar of the Van Buren Papers," prepared by Miss Elizabeth H. West of the Manuscripts Division. The manuscripts were presented to the Library by Mrs. Smith-Thompson Van Buren and Dr. Stuy-

vesant Fish Morris, and constitute one of the most important of the collections for the period they cover, complementing the Jackson and Polk papers in the same Library. Miss West has performed her task thoroughly and judiciously, and the summary of each paper is sufficiently full to guide the investigator. Due attention has been given to the undated and miscellaneous material, which so often constitutes a stumbling-block to the inexpert. As to the papers themselves, they are of the highest historical importance, revealing a political career that stands out among its contemporaries for shrewdness of management, success of accomplishment, and disappointment of hopes. That Van Buren ever rose above the clever party manager is difficult of proof, and the few glimpses given of true statesmanship are apt to mislead, soon disappearing in the darkness of intrigue and self-interest. It is this very quality, however, that makes the collection of such value to the historian of party. The letters of Van Buren are not easy reading, for they abound in the set phrases of the political chief, the party cries that served to awaken the enthusiasm of the rank and file. The letters addressed to him form the historical richness of the collection, and need only to be properly worked to develop their wealth.

Prof. Charles A. Beard and Birl E. Shultz of Columbia University have compiled a useful collection of "Documents on the State-wide Initiative, Referendum and Recall" (Macmillan). The documents include all of the constitutional amendments on the several subjects now in force, significant statutes based upon the amendments, all of the constitutional amendments now pending, six important judicial decisions, and the U'Ren plan of government for Oregon. No attempt has been made to deal fully with municipal governments, but three documents illustrate the application of the new devices to municipalities in New Jersey, Ohio, and Iowa. The texts are reproduced literally, and the editors "disclaim responsibility for the atrocious grammar and painful obscurities" to be found in them. The inclusion of documents, eleven of them proposals, from thirty States shows how widely the movement has already spread. A valuable introduction, historical and descriptive, is contributed by Professor Beard. A source-book of this character must, of course, need frequent revision, and the editors hold out the hope of new editions as need requires.

Sarah Agues Pryor, the wife of ex-Justice Pryor of New York, died a week ago, in her eighty-second year. She was the author of "The Mother of Washington and Her Times," "Reminiscences of Peace and War," "The Birth of the Nation," and "My Day."

Hope W. Hogg, professor of Semitic languages and literatures in the University of Manchester, died in London last Friday. He was born in 1863 in Cairo, Egypt, the son of the late Rev. Dr. John Hogg, principal of the American College at Assiut. Professor Hogg had contributed many articles to learned journals and to encyclopædias on his subject.

The death is reported from London of Frederic Seebohm, at the age of seventy-eight, some of whose books are well known in this country. We may mention especially "The Oxford Reformers, Colet, Erasmus, and More," "The Era of the Protestant Revolution," "The English Village Community," and "The Tribal System of Wales."

Friedrich Stephan, who from 1880 to 1900 was chief editor of the *Vossische Zeitung*, died recently in Berlin in his eighty-second year.

Science

Cambridge books in Putnam's announcements include: "The Migration of Birds," by T. A. Coward; "The Natural History of Clay," by Alfred B. Searle, and "Prehistoric Man," by W. L. H. Duckworth.

Holt is bringing out shortly Prof. J. Franklin Collins's "Illustrated Key to the Wild and Commonly Cultivated Trees of the Northeastern United States and Adjacent Canada."

Prof. D. T. Macdougal, director of the Desert Laboratory in Arizona, describes, in the *Geographical Journal* for February, the North American deserts. He lays special emphasis on the influence of evaporation, and refers to the invention of a porous clay cup atometer by Prof. B. E. Livingston as "a very efficient tool for the measurement of evaporation as a factor affecting vegetation." In the discussion of the paper after the reading of it before the Royal Geographical Society, Prof. A. C. Seward of Cambridge said that the research work done in the Desert Laboratory was throwing light "not only on purely botanical questions, but also on geological and many other problems." Dr. Tempest Anderson, the leading authority on volcanoes, gives an account of many craters and explosions he had seen in nearly every volcanic country except Japan. Both articles are illustrated with reproductions of photographs.

The foundations of geography, environment, landscape, scenery, structural division are described by E. Banse in *Petermann's Mitteilungen* for January. An accompanying map shows his idea of the true continental division of the earth's surface. Prof. M. Hammer contributes an account of an expedition of two Germans, Dr. Brunhuber and K. Schmitz, to trace to its unknown source in Tibet the Salween, the river forming the boundary between China and Burma. They reached a point far beyond that of any other explorers, where, in January, 1909, they were murdered by the natives. A party sent by the Chinese Taotai of the district to punish the murderers rescued a diary, sketches, photographs, and a route map. This is reproduced, together with several photographs showing remarkably beautiful scenery. The military department contains a study of Albania, with special reference to military operations inland from the coast, and an excellent map of China, illustrating a brief account of events preceding the revolution.

A year ago, on the foundation established by the late Morris K. Jesup, Prof. F. S. Lee of Columbia University delivered a course of lectures at the American Museum of Natural History in New York. These are now published by the Columbia University Press (Lemcke & Buechner) with the title "Scientific Features of Modern Medicine." Dr. Lee undertook for listeners quite unfamiliar with medical science to set forth in untechnical language the aims and methods of the modern practitioner in combating disease. He did his work exceedingly well, and the book deserves to be widely read. Starting with a brief but very clever survey of the normal human body, the author goes on to sketch the nature of disease and the methods of attacking it, to show the rôle played by micro-organisms in the infectious diseases and elsewhere; he is particularly happy in explaining the theory of immunity and related topics. There is also a somewhat detailed discussion of the problems of cancer and tuberculosis; and chapters in the more remarkable aspects of modern surgery, on the importance of experiment in matters pertaining to medicine, and on the relation of the public to the practitioner and to the progress of medical science. These are large subjects for the limited time at the disposal of the lecturer, but Dr. Lee has succeeded in bringing out the essential points with clearness and has avoided the obscurity which much detail is apt to bring to the untrained hearer. At some points the careful reserve with which the matter is handled is really admirable. Lectures of this kind have many pitfalls, but they have been so well avoided here that no serious slip attracts attention; in fact, the only critical remark we should care to make would be that Harvey did *not* demoustrate the circulation of the blood "in Charles the Second's time" (p. 156), but much earlier.

"Nostrums and Quackery" (Chicago: Press of the American Medical Association) is an interesting book of five hundred pages, from which much information may be gleaned concerning the unfortunate gullibility of the public in matters pertaining to disease. The book is largely made up of articles originally published in the *Journal* of the Association; a few are from other sources. Some of this material has been circulated in pamphlet form, but it is brought together again in more convenient shape, often with later information, and the story is helped by new cases and by many reports of judicial decisions. A considerable number of fraudulent "cures," "treatments," and "institutes" are exposed, often in great detail, and yet certain fields in which quackery flourishes are hardly more than mentioned here. The non-medical reader will also find an account of many compounds familiar to him in ingeniously attractive advertisements, or, perhaps, in the concoctions of venders of soda water, and he will be much astonished to learn what they really contain. There is, for example, a surprising list of headache remedies, more than forty in number, and every one of them distinctly dangerous. If the general reader really wants to have his eyes opened to the harm done by irregular and conscienceless practitioners, he can have it done in large measure by reading this book.

While the snow lies deep on the ground the happy memories of gardens well grown in the past and the opportunities for improvements in the future are charmingly brought to mind in Miss L. M. McCauley's "The Joy of Gardens" (Rand McNally). Her theme is the rich contentment which comes from direct contact with the soil. The real joy of actually raising one's own flowers and vegetables has been the beginning of deep friendships between persons

who would otherwise have known nothing of each other. Those who have tasted these joys of nature and the communion of spirit which they foster will find pleasure in Miss McCauley's musings and in her photographs of gardens in many lands, as well as in her suggestions for laying out simple gardens for children and adults.

"Man and Beast in Eastern Ethiopia" (Macmillan), by Dr. J. Bland-Sutton, is the outcome of a journey in East Africa, the main object of which was "to obtain first-hand some knowledge of the country, the natives, the beasts, the birds, and the trees." A brief description of the natural features of the region between the Indian Ocean and Uganda and of a few experiences, while the author travelled and hunted, is followed by a detailed account of the four native races inhabiting it. Special stress is laid upon their ornaments for ears and lips, and their fashions in hairdressing. Next comes an account of what he aptly terms an "uncaged zoo," in which the peculiar anatomical structure of the principal animals and birds is described, while considerable information is incidentally given about the flora, the insect pests, and the ants. To his own observations, the author adds those of other travellers in this region, so that his book is a valuable compendium of many of the scientific results of African exploring and hunting expeditions, a number of the chapters having, appended to them, lists of authorities quoted. The illustrations, 204 in number, picture nearly everything that lives in that country.

Brig.-Gen. Clinton Brooks Sears, U. S. A., retired, died suddenly in Boston on Friday of last week, aged sixty-seven. He graduated from the Military Academy in 1867, having previously taken part in the war. He was the author of "Principles of Tidal Harbor Improvements" and "Ransom Genealogy."

Drama

A FRENCH PLAY FOR CHILDREN.

PARIS, February 5.

"Un bon petit Diable," a play in three acts at the Gymnase theatre of Paris, has notable authors—Rosemonde Gérard, and Maurice Rostand, that is, the wife and son of him who wrote "Cyrano de Bergerac" and "Chantecler." It keeps the family resemblance. It is very French, very literary, very poetic, and precious and sprightly and lyrical to a degree. It is built up from the story book of the name by the Comtesse de Ségur, who was the Russian Rostopchin's daughter, but became the story-telling grandmother of French children. And it pretends to be for children. I suspect it is somewhat rudimentary for the new preposterously wise generation of children; but it is the delight of their elders, as Maeterlinck's "Blue Bird" has been, because they catch in its dialogue dainty verse and fancy and decorative allusions and the play of life in a symbol. No real child's Aristophanes ever had such frisking, versifying parts for his actors to play.

The broken, old-fashioned English names of the *dramatis personæ* have a quaint ring. The hero is Charles Mac-Lance, orphan and "good little devil," seeing wonders and with shadowy fairies to aid him. Madame Mac-Miche is his crabbed cousin, who brings him up by hand as Mrs. Joe did Pip (all the Rostands have been fed on Dickens and transform the nourishment into French lyrics). Betzy is the good servant, who pities and abets him. Juliette, the blind girl, is his playmate. Old Nick and Nick Junior keep the Black School, where the cousin wishes to put him that she may be freed from his upbringing. First, there must be an examination. Charles knows in geography the names of countries only by their colors on the map; and in history, when Old Nick asks him what he knows about Kings, he answers, "The Queens are nicer!" And he proceeds to discourse musically of one who spins and another who lets her long hair down from her window that her lover may climb up as by a ladder. Old Nick carries him off to the Black School; but he escapes as a beggar boy and gets back to Juliette, while his twelve school-chums scale the wall and run after him. They are disguised as brigands and carry twelve rope ladders with which to abduct as many fair maidens from a dozen balconies.

> On a remis douze lettres
> Aux douze balcons tantôt;
> Et bientôt douze manteaux
> Seront aux douze fenêtres!

Charles at Juliette's knees is reading "Ivanhoé," which is just the reminiscent rhyme needed for the Ark of "Noé." The twelve schoolboys, superior in number, make Madame Mac-Miche and Old Nick sing and meanwhile throw their money into the well, whither Charles plunges after it, and whence he withdraws it unwet, thanks to his fairies. And then he has his great inheritance in London, as who should say from an uncle in India.

> Il part en Angleterre!
> Qui sait s'il reviendra?

Of course, he forgets blind Juliette for haughty British Rosalinde; but he consents to return, once only, to pardon the converted Madame Mac-Miche. He is deaf to the voices of his childhood which speak from every corner, and is going away—when, presto! in the gloom of his old room the little Charles in Scotch plaid and cap appears and speaks up to the big Charles. We have had Dr. Jekyll and Mr. Hyde successively, but not the unselfish boy and the egoist man simultaneously on the stage. It is a new manœuvre of the one personality undoubling before us. It ends by Charles as a boy substituting his own letter for the farewell letter of Charles the man to Juliette. Juliette is so commotioned that she sees—and then all is over for Rosalinde.

S. D.

"Embers," which furnishes the title for the little volume that contains them (Holt), is the first of half a dozen one-act plays written by George Middleton. In a modest word of introduction the author says that they are, in their present form, intended only for the reading public, and especially for those who can appreciate this concentrated form of drama which meets with so little managerial favor upon the English-speaking stage. Possibly the managers are not alone to blame in this matter. The fact is that the one-act play, except where merely farcical incident is concerned, requires a greater amount of constructive skill, more power of compact arrangement, and swift and clear exposition, more thought and more definite purpose, than most of our modern popular dramatists possess. Moreover, to be successful, it demands a superior order of character acting to that which suffices for the current drama of crude emotion and violent action. These works of Mr. Middleton, if not ideal examples of the type, at least demonstrate some of its possibilities. Although they are not always logical or entirely human, they are genuine studies of character, display originality of invention, and have not only literary, but, in several instances, decided theatrical value. In one or two cases the psychological argument is too subtle and too fanciful to be effective in actual representation, while the subjects are not always attractive. The best of them are "Embers" and "Madonna."

In "Embers" a widow, who in her youth preferred a rich to a romantic union, and lived to regret it, appeals to the rejected lover of her early days—now a famous statesman—to save her only son from ruin. The boy has met with disappointment in love, and is seeking to drown his grief in dissipation. The older man, in a scene full of fine feeling and intuition, shows the youth the selfishness and the folly of his course, arguing that true love is an ennobling passion, which, even when not returned, ever strives to prove itself worthy of its object. He then tells how the success of his own life had been due to the inspiration of an unending but hopeless love. Of course, the boy is rescued from the pit, and the piece ends with an intimation that the statesman will find his reward in the mother's gratitude. This is a tender, human, and inspiring piece, somewhat akin to Gilbert's "Sweethearts" and Howard's "Old Love Letters." "Madonna" is another tender little play, in which a doting father delivers his only daughter—the one solace of his life—into her future husband's keeping. Here a difficult subject is treated with exceeding delicacy and touches of simple pathos. "The Gargoyle," a quasi-scientific study of an imaginative author, who, to avoid a broken heart, has succeeded in converting himself into a sort of dual personality, by so subjecting his emotions to intellectual domination that he has lost the capacity for any sincere feeling, is a curious conceit very ingeniously and somewhat plausibly treated, but too vague, presumptuous, and unconvincing in its psychology to be effective on the stage or profitable in the study. The philosophy of it is neither

sound nor human, but the thesis is adroitly handled. In "The Failures," a weak married woman, who has inspired an artist with a great passion, but—out of sheer cowardice, not from any conviction of duty—elected to remain with her husband until his death, finally returns to her lover to find him contemptuous and cold. In the end, however, she rekindles his devotion by avowing her weakness and throwing herself upon his protection. Here the theatrical situations are well worked out, and the characters vividly sketched, but the spirit is not admirable, and the final reconciliation unlikely under the prescribed circumstances. "In His House" is a domestic melodrama, with some spiritual truth in it, and several good situations, but too greatly dependent upon the long arm of coincidence. "The Man Masterful," showing the struggle between a broken wife and a strong woman for the possession of the former's husband, is, perhaps, the weakest, as it is the last of the series. But in every play there is much good literary workmanship, with many evidences of keen observation and ready invention.

Another repertory society has been formed in London, under the name of "The Connoisseurs." The object is to promote the study and enjoyment of the best modern dramatic art. It is intended that the work carried out by the successful Repertory Theatre at Manchester and Glasgow shall be closely followed, and frequent representations given of dramatic works which do not at present find a place in the regular programmes of the London theatres. Admission to the performances will be limited to members of the society. The directors wish it to be clearly understood that the society is entirely independent of any propagandist movement. All classes of artistic plays will be produced. Special efforts will be made to produce the exact atmosphere for each play; all lighting and other effects will be made as perfect as possible. There will be no acting membership, as the casts will be chosen to fit the plays, not the plays to fit the casts. The society will begin with a performance of "The Silver Box," by John Galsworthy, and will then select from: "Chains," by Elizabeth Baker; "The Younger Generation," by Stanley Houghton; "The Visit," and other plays, produced by Miss Horniman at the Gayety Theatre, Manchester; "Riders to the Sea" and "The Shadow of the Glen," by the late J. M. Synge; "The Rising of the Moon" and "The Workhouse Ward," by Lady Gregory; "Success," an original four-act play, by Marr Murray; and "Justice" and "Strife," by John Galsworthy. Sir Arthur Pinero is president, Mr. Galsworthy vice-president, and Frederick Ward and St. John Joyner are honorary co-directors.

Lewis Waller, the popular English actor, will soon be seen here as the hero in "Monsieur Beaucaire," a part in which he has long been extremely popular in England. He will be supported by Grace Lane and other players who were associated with him in his London production.

The latest addition to Australian labor organizations is an Actors' Union, whose members propose to put an embargo upon the importation of stage-players, even those who merely visit the country on tour. At the meeting held in Sydney, it was agreed to except "stars," who, apparently, may go and strut their hour upon the stage unchecked, but must be supported by local companies, recruited and rehearsed on the spot.

The latest play of M. Bernstein, "L'Assant," which has been presented successfully at the Gymnase in Paris, is free from disagreeable taint, being a study of redemption achieved by strength of character. The hero is a prominent politician, Alexandre Mérital, before whom the highest honors of the state lie open when a rival, who has been delving into his past, revives a story of his having robbed his employer while he was still a youth. Mérital triumphs in the libel suit, which follows, but his great trial is yet before him. He loves and he dares not woo until his whole past is open to the beloved one. So he confesses that he did, indeed, commit the theft in an hour of youthful despair, but that he had never rested until he had repaid the whole, and been forgiven by his old employer. The piece was magnificently acted, especially by M. Guitry, who was the Mérital, and was received with great favor.

Music

Franz Liszt: Ein Gedenkblatt von Seiner Tochter. München: F. Bruckmann.

When Cosima Wagner, daughter of Franz Liszt, was asked, fourteen years ago, to contribute a few pages of reminiscences to the memorial volume issued in this country in aid of the widow of Anton Seidl, she refused, with the words: "Ich bin keine Schriftstellerin." She might have told many interesting things about the five years Seidl had spent in Wagner's house as musical secretary. She now has, after all, come forward as an author, encouraged, no doubt, by the extraordinary preparations that were made last summer to celebrate the centenary of her father's birth. Her book was published as a contribution to these celebrations, and whatever profits accrue from it will be added to the funds for perpetuating the Bayreuth festivals.

Many readers of Richard Wagner's autobiography, which was dictated to his second wife, Cosima, doubtless wondered whether those voluminous and gossipy volumes would not be supplemented by a book of her own containing minute details in the years during which she was the great composer's helpmeet. A perusal of her book on her father does not encourage the hope that she has such a volume to offer to the world in regard to her husband. She has evidently not indulged in the habit of taking notes, or keeping a diary, and biographers will not find in her pages many facts or incidents to add to their material. Yet it is an interesting book; it might be called a study in Liszt psychology. The bulk of it is devoted to remarks on his relations with the Princess Wittgenstein and Wagner. The Princess had sacrificed everything to Liszt: her native land, her life on her estates, her exalted position, even her reputation in the eyes of those who knew not her true character. She created a home for him, took care of his health, encouraged and guided his creative activity. Their work tables were adjoining—they had everything in common, including their letters from friends.

Never was there a more virile, manly man than Franz Liszt—a man more original, more creative. Yet in his relations with the Princess he was as receptive as a woman. In his letters to her, which have been published in two volumes, he frequently intimates that he is a mere dreamer who gets all his inspiration, all his impulses, from her. His devotion to her was characterized by the extravagance of romantic love. Though Wagner was his idol, he writes that the fluttering of her handkerchief means more to him than the whole of the Nibelung's Ring. Nor did he hesitate a moment to neglect Wagner's advice if it conflicted with that of the Princess, even in musical matters, in which she was an ignoramus. In Paris, Liszt had won considerable success with a juvenile opera. Some years later he had under consideration a libretto which Rubinstein subsequently set to music. Wagner also often urged him to write operas, but the Princess said "don't," and he didn't. More surprising still was his conduct with regard to the "Dante" symphony. When Wagner disapproved of the closing section, in which the Princess's suggestions had been followed, Liszt agreed with him and wrote another ending; but when the score appeared in print, Wagner found to his amazement that the version preferred by the Princess had been chosen. She had never been in sympathy with Wagner. Although she wrote the greater part of the essay on the "Flying Dutchman," with which Liszt opened his literary campaign for Wagner, she had no real insight, as Frau Wagner justly points out, into its dramatic significance; and as for Wagner's later efforts, they were utterly beyond her comprehension. His theoretical treatises she sneered at as *de grosses bêtises*. She was jealous of Wagner's influence over her protégé, and fought it in every possible way. Hans von Bülow once had an argument with her on this subject, but got the worst of it. "She talks by the hour and allows her interlocutor barely half a minute to reply," he wrote; "and all the time she smokes the strongest of cigars, filling the air with horrible fumes."

It was the absolute subjection of Liszt to the will of this strong-minded woman that brought about the temporary estrangement between him and Wagner, and explains the sudden break in their correspondence. Wagner knew that the Princess read all his letters,

and that arrested his pen. "I would have to keep silent on too many topics," as he wrote to Bülow. Frau Cosima declares repeatedly that since Liszt's letters to the Princess are mostly replies to hers, these also ought to have been published. She says nothing as to their having been preserved; but publishers would in any case be likely to be afraid of them in view of the fact that her pen was as voluble as her tongue. She assisted him with most of his books and literary essays, not to their advantage as a rule. To his monograph on Chopin she added some valuable pages, but his book on the Hungarian gypsies she did her best to mar. She wrote the preface to the Dante symphony, and Frau Wagner suspects that to Lina Ramann, who brought out a life of Liszt in several volumes, she not only gave facts, but wrote some of the pages. For Berlioz she prepared the libretto to "The Trojans," which made Wagner "shudder."

Apart from these contributions to the understanding of the Wittgenstein period in Liszt's life, the most interesting pages in his daughter's book are those in which she refers to his personal appearance and his religious aspirations. The strongest bond between him and the Princess was their religious zealousness. She wants to make a cardinal of him, forgetting that he was, as he often said, "half-Franciscan, half-gypsy." He really hated Rome, dwelling there part of the time for her sake only. But his religious enthusiasm was genuine. His daughter finds in his physiognomy a mixture of saint and Magyar:

> Liszt was a Hungarian. In examining his features we find indeed a great resemblance of his type to the portraits of saints painted by the old German masters; a Johannes von Pfenning over the Tucher-sche altar actually seems like a portrait of him. On Dürer portraits his features often appear, and Dürer, as is well known, was of Hungarian descent.

Massenet's new opera "Roma" will be given shortly at Monte Carlo.

Saint-Saëns's second concerto in D minor will be played for the first time in America by Hans Kronold, the 'cellist, at his recital in the Carnegie Lyceum on March 4.

The famous Mendelssohn Choir of Toronto, which ranks first among American choirs, will give two concerts on February 27 and 28 in Carnegie Hall. On the first night the programme will be miscellaneous; the second night Verdi's Requiem will be given with four of the leading soloists of the country—Miss Hinkle, Christine Miller, George Hamlin, Clarence Whitehill. The Theodore Thomas Orchestra of Chicago will assist.

Parisians are at last beginning to realize that for the proper performance of Wagner's music dramas a great conductor is as important as great singers, and accordingly they have engaged Arthur Nikisch as conductor for the opera festival which occurs in Paris in May and June. Prior to this, Herr Nikisch will make his American tour at the head of the London Symphony Orchestra, under the management of Howard Pew of New York, and will conduct a short tour of the orchestra in the Continental cities of Europe.

Art

ART IN PHILADELPHIA.

They have a fashion at the large annual exhibition of the Pennsylvania Academy of selecting, whenever appropriate material is at hand, some one artist or small group for special honor in point of wall space. A few years ago there was an attractive roomful of the Dutch pictures of Gari Melchers, nineteen canvases in all. This year the plan has been followed in behalf of Henry Golden Dearth among the painters and Frederick G. R. Roth among the sculptors. Mr. Roth's group of small animal figures contains seventeen pieces, in which he displays clever modelling and considerable feeling for what is amusing and picturesque. His polar bears, elephants, donkeys, etc., for all their spirit, are not immediately conspicuous in the sculpture section, which, as always, is the tail of the kite. It is different with the twenty-two canvases of Mr. Dearth. In their small gallery they are easily the most conspicuous exhibits on the walls; once seen they stand out in recollection above the more obvious mass of the rest of the collection. They are the sensation, if a sensation is desired, of the year's show.

In them Mr. Dearth has departed sharply from all his former practice. He leaves, also, the beaten track of the majority of his fellow-painters. It follows naturally enough that these paintings raise doubts. We should be on our guard against the conservatism of our critical opinions. We may also be properly enough on our guard against the attempt to gain attention by a deliberate essay in the bizarre. To run a line between the shallowness of artistic posturing and the shallowness of critical dulness is no easy task at times.

Mr. Dearth's new paintings are of rocks at the ocean shore, perches for the girlish, summer-gowned visitor and local habitation for the intertidal kelp, mussle, and limpet; or quiet pools enclosed among these rocks and lying transparent to their populous bottoms. He varies this once or twice with a bowl of chrysanthemums or gardenias, a plate of Persian underglaze, a tapestried hanging, or figured table-cover. These things he has painted with small strokes, or as often small spots of color with a good deal of black on a ground generally of whitish drabs. Though the result, as compared to colors applied in continuous masses, involves some confusion of form here and there, the whole endeavor speaks plainly of a purpose to transliterate nature with fidelity, rather than to transfix the beholder with astonishment. For this reason we cannot see in Mr. Dearth's departure from his former oily, thick concoction of rich and glowing pigment, any mere bid for notoriety. Nothing could be more delightful than the way Mr. Dearth paints his rock-closed pools right down to their bottom sands without worrying over the chances that the canvas may not at first flush tell the eye what is seen above water and what below. Nature worries about it just as little. But some of Mr. Dearth's pictures carry us nowhere. He shows an excellent refinement of vision, but without always applying it to rewarding result. The best art is never mysterious. Some of these canvases undoubtedly are.

These pictures stand apart by themselves as almost the only specimens of work not in a familiar rut. Nevertheless, the exhibition, on the whole, though not rich in novelties, maintains its standing as the most representative gathering of oils in the country. In bulk it runs considerably beyond last year's. There are 750 works shown as compared with 523 last year and 412 at the National Academy two months ago. The paintings number 568, the sculptures 182. The artists represented are 440.

Though this is an exhibition without a Sargent, the portrait painters are here in force. Hugh H. Breckenridge, in his commission for the University of Pennsylvania, exhibits a portrait of Dr. James Tyson. The emeritus professor of medicine is shown seated beside a table in the sick-room, studying, with knit brow and pursed moustache, the chart. Behind him stands a nurse, glancing at the patient, whose arm lies over the coverlet in the light. The artist's fondness for warm, tremulous effect and ruddy glow finds an opportunity in the scheme. His other portrait, of Howard B. French, presents the president of the Philadelphia College of Pharmacy in academic gown, the interest centred on the face and penetrating eye. Robert W. Vonnoh's portrait of Dr. Talcott Williams is a work in which the most careful apprehension of character and personality has not dimmed the freshness and spontaneity of expression, has perhaps brought it about. The portrait of Dr. W. R. Howell, lent by Johns Hopkins University, is characteristic of the firm brush and acumen of Cecilia Beaux. Joseph DeCamp's group of the Clothiers shows three generations of the male line.

L. G. Seyffert's portrait of Judge Buffington shows an appreciation of the possibilities in drawing character by noting the hands carefully. Mr. Tarbell's portraits of Dr. Morse and Dr. Reynolds are craftsmanship of a high or-

der, joined to a sympathetic rendering and intelligent reading of the sitter. Mr. Chase has a portrait and three studies, painted with a free and sweeping brush. Besides the sedately delightful portrait of the Kohl sisters, Irving Wiles has a standing figure in black hat, shoulder-wrap, and gown, in which mood, expression, and the pleasure in assured control of texture play for the upper hand. Homer Boss's portrait of a young girl is painted with the high note of decision and emphatic utterance which threatened at one time to get the better of his tact in color, but which is now assuming its place as a reasonable, if marked, element of a better style. There is movement, as usual, in his work, in the advanced foot, the pocketed hands, the toss of the head. The canvas has more balance than the girl with a fan by Robert Henri. Eugene Speicher's portrait of C. D. Gibson, which won a prize in New York, is here; also Mrs. Herter's portrait of David Mannes pulling the bow across his violin.

The boundary between portrait and figure cannot be followed strictly. The two outweigh the landscape this year. We have Robert Henri; Robert Reid, with one of the pale rose themes included in his recent exhibition, and another, a Benson-like girl against the sky; Benson, with one of the familiar water-side snatches of summer life, and an interior, more formal, with mother and child at the lesson; Charles W. Hawthorne, his level-eyed damsel no longer holding fish, but sheet music near a piano; John C. Johansen, clever but a touch uncertain in the sewing-room figure, less uneasy in the straightforward Village Rider, where the wide back of her mount has as much sense of mass as Ellerhusen's little bronze of the drinking horse. The reclining figure on the sofa, the thoroughly-at-ease young woman, by George Bellows, which appeared with so much éclat at the New York Academy, renews the delicious aspect of comfortable languor. There is still something the matter with her foot. John W. Alexander's delicate, romantic setting for soft figures, refined and musing, is painted thinly on a wide mesh. Sergeant Kendall, cuddling his groups within swooping lines effectively, makes his color as pretty as his sentiment. Mary Cassatt points his obvious contrast.

Of paintings with the nude there are no less than seven; it quite takes one's breath away—one in every eighty. And there is interesting quality of a subdued sort in Gilchrist's and Mora's. W. W. Gilchrist, jr., for his well-designed small study of three poses from one model shown against a Japanese screen, has painted over gold leaf and handled the whole quietly. F. Luis Mora paints a dreamy torso in soft color. The figure in M. Baynon Copeland's Chatterers is more assertive, the color correspondingly sharper. Norwood MacGilvary's is one of those mournful figures that crouch over harps or urns in the deep twilight that never was. Allegory is not plentiful. Two panels for the Curtis Publishing Company's dining room are of a series of seventeen by Maxfield Parrish. Perhaps we should count Arthur B. Davies's Sea Wind and Sea with the nudes, though it is not altogether safe to classify him. His imaginary world is represented also by a hunter with dogs on a jutting ledge of high land in the night, a canvas that is full of the sense of open distance and cold air.

Among those who paint the glimpses of the life about us, Elizabeth Sparhawk-Jones deserves first mention for her millinery shop riot of sheer color, to which the Mary Smith prize was awarded, and for the shoe-shop interior. John Sloan takes the show window outside for some of his best notes. Gifford Beal has gone this year to the circus. The metropolitan walls and gullies of New York are to be come upon here and there, as with Colin Campbell Cooper, George H. Macrum, and others. Alfred Juergens introduces the neglected suburban street.

Landscape is in the hands of tried painters, whose ways are known. There are Edward W. Redfield, Elmer Schofield, Alden Weir, D. W. Tryon, Gardner Symons, A. L. Groll, Henry R. Poore, Ernest Lawson, William Sartain, William Ritschel, Edward Dufner, Van D. Perrine, Hugo Ballin, Daniel Garber, Chauncey F. Ryder, and Hobart Nichols—these among others. Charles Morris Young has done his best in his Red Mill, a veracious bit of countryside, with road and a most enjoyable passage of painting. Charles Rosen's flooded quarry is kept to a pervasive gray, with much charm. Willard L. Metcalf's Spring Fields is in his best vein. To it the Jennie Sesnan medal was awarded.

The sculpture includes a number of portrait heads, an array of small animal bronzes and figurines. Janet Scudder receives special honor in the centring of her exhibits in two of the main galleries apart from the sculpture in the rotunda. Her success in sun-dials has borne much fruit. One of the ingenious devices is the use made by Lucy Richards of the pond lily stem for shadow rod, drawn taut by a crouching figure which is in the act of uprooting the lily from its pond. Portraits in bas-relief are shown by Frances Grimes, Richard H. Recchia, Madeleine A. Barnett, Harriet W. Frishmuth, and others.

The large bronze turkey, by Albert Laessle, strutting its fan-like pride, has a special award from the jury, no prize being available for the purpose.

The prize awards were as follows: The Temple gold medal to Emil Carlsen for his picture entitled Open Sea; the Jennie Sesnan medal to Willard L. Metcalf for his picturo entitled Spring Fields; the Carol H. Beck gold medal to Joseph De Camp for his portrait entitled Francis I. Amory; tho Mary Smith prize to Elizabeth Sparhawk-Jones for her picture entitled In the Spring.

G. B. Rose's "The World's Leading Painters," and "Engraved Gems" by Duffield Osborne, are announced by Holt.

Howard C. Levis has placed with Messrs. Ellis of London a "Bibliography of Books in English on the Art and History of Engraving and Print Collecting." It will be illustrated with facsimiles of rare title-pages.

It is welcome news to all archæologists that the Austrian Institute is resuming its exploration of the city of Ephesus, which had been discontinued for several years. Permission to excavate this site had been granted to the Austrians in 1899 by the Sultan Abdul Hamid; but with the new order which was established in 1908 this permission lapsed and could not be renewed in its terms consistently with the Constitution. Then came Austria's annexation of Bosnia, followed by strained feelings between Turkey and that Power. The Archæological Institute had to close up its excavation house and leave the scene of ten seasons' operations. Fortunately, the difficulties have now been smoothed away, and work will probably begin again this spring.

News has been received of the wanton destruction of a famous painted stucco pavement at Tell-el-Amarna, in Egypt. The pavement was discovered by Prof. Flinders Petrie in 1891, while excavating on this site, which was built about 1360 B. C. by King Akhenaten. The pavement was decorated with paintings representing ponds with birds and animals, rendered in a very naturalistic style, and was one of the most valuable monuments of the realistic tendencies in Egyptian art for this period. The deed appears to have been perpetrated by a discharged watchman.

Announcement was made on Monday, after the annual meeting of the Metropolitan Museum of Art, that the Museum had received from Francis L. Leland, president of the New York County National Bank, 1,200 shares of stock valued at more than $1,000,000, the gift to be absolutely without condition. This sum is one of the four largest received by the Museum. According to the trustees, the Museum expended in the last year $562,948.11 on objects of art, the largest amount ever appropriated in a single year for purchases. The expenditure for administration and maintenance was $338,864.41, of which the city contributed $200,000. Besides the big item mentioned above, the legacies received were: Estate of Charles E. Tilford, $21,866.25; estate of Thomas Achelis, $5,000, and estate of Caroline Phelps Stokes, $1,000. Under the will of Joseph Pulitzer the Museum will receive $500,000. In addition to amounts already paid by executors the sum of $1,005,000 was received on account of the legacy of John Stewart Kennedy, and from the estate of the late Frederick C. Hewitt $442,520.38. Among the gifts was one of $100,000 from George A. Hearn and one of $15,000 from Samuel Putnam Avery and Howard Cas-

sell Smith as a fund in memory of the late Charles Stewart Smith.

Prof. Henry Williamson Haynes, archæologist, died at his home in Boston last Friday, at the age of eighty. After graduating from Harvard in 1851, he taught in the University of Vermont, and in 1873 began his researches in archæology abroad. His contributions to knowledge earned him a medal from the International Congress of Anthropological Sciences in 1878.

Finance

FIXING PRICES.

The so-called Stanley committee of the House of Representatives, which was appointed ostensibly to investigate the Steel Trust, became some time ago a sort of forum for the expression of economic views by eminent financiers summoned as witnesses. Judge Gary was invited, last June, to give evidence on the Tennessee Coal purchase by the Steel Corporation, concerning which the suspicion was afloat in Congress that the panic of 1907 had been caused by a few financiers determining to force the Tennessee property's owners to sell out. The committee made no progress in establishing that fact, but they drew from Judge Gary, chairman of the Steel Trust, the following statement of opinion as to the fixing of prices in the steel trade:

> I believe we must come to enforced publicity and governmental control. . . . Speaking for our company as far as I have the right to do, I would be very glad . . . if we had some place where we could go, to a responsible governmental authority, and say to them: "Here are our facts and figures, here is our property, here our cost of production; now you tell us what we have the right to do and what prices we have the right to charge."

And this was taken as supplementary to Judge Gary's statement of April, 1908: "The mere fact that the demand is greater than the supply . . . does not justify an increase in price, nor does the fact that the demand is less than the supply furnish an argument for lowering the price."

On Tuesday of last week, James J. Hill was summoned for cross-examination on the question of the ore-land lease by the Steel Trust from the Great Northern Railway, concerning which Congress seemed to have had a rooted suspicion that a complete monopoly in the raw material of iron had been established by the contract. As in the case of the "Tennessee Coal deal," that inquiry led to nothing except confusion of preconceived ideas; but, as with the cross-questioning of Judge Gary, the examination of Mr. Hill brought about some positive declarations of economic opinion.

Mr. Hill was asked, incidentally, whether it would be a good thing for the Government to take control of business through the fixing of prices for commodities. He replied:

> If this Government ever undertakes to regulate prices, as has been proposed, the present form of government will pass out of existence. It will be succeeded for a time by confusion and then anarchy.

When further questioned as to the doctrine that the competitive régime was dead, Mr. Hill replied:

> You will have to tame human nature and eliminate all selfish motives that rule human beings and every other form of life, before you will eliminate competition. There will be competition as long as the doctrine of the survival of the fittest lasts, and that will be operating long after our present statutes have been wiped off the books.

So that here is a flat and absolute cleavage of opinion, on a point of vital importance to the producing community, between two of the highest practical authorities in the country. Which of the two has the clearer vision of the future?

One answer will be that Judge Gary speaks with the responsibility of an enormous manufacturing plant upon his shoulders, while Mr. Hill is not a manufacturer at all. But, on the other hand, it will possibly be alleged that Mr. Hill was in a position to judge the problem in the light of unfettered common sense, whereas Judge Gary had obviously taken refuge in his plan of 1911 for price-fixing by the Government, as an alternative to his plan of 1908 for replacing the law of supply and demand by the dictum of private individuals. Public opinion had at once pronounced that earlier theory untenable; its assertion complicated the Steel Trust's relation to the law; hence the recourse to paternal government.

But if this was the basis for Judge Gary's reasoning, what was the basis for Mr. Hill's? What ground had he for predicting the downfall of republican institutions in a state where the Government fixes prices? Undoubtedly, his argument was that no power on earth is so great, so difficult to administer rightly, so susceptible of abuse, and so easily adaptable to the purposes of demagogues in office, as the power to fix by arbitrary decree the price of materials for industry and the cost of living to the people.

Probably, also, Mr. Hill had in view the fact that if things went badly under the price-fixing régime, demand for actual government ownership of the industrial plant would inevitably follow. If the people thought the arbitrary official prices unjustly high, they would begin to ask for ownership by the state; and if the manufacturers deemed the prices ruinously low, they would themselves insist on the Government running industries in which its price decrees prevented a living profit to individuals. It was not an accident that the leading Socialist organ of the country hailed Judge Gary's statement of last June as the "capitalist prelude to the social and industrial revolution." "If it does not lead to government ownership," the *Call* concluded, "it leads nowhere and changes nothing."

Whether all these considerations do not still leave open the question of governmental restriction on unfair competition, on savage price-cutting with a view to ruining competitors, is another matter. Judge Gary recognizes this as a part of his plan for government supervision. Mr. Hill declared at Washington last week that Government should not only rigidly supervise the capitalization of industrial companies, but should "lay down the law of right and wrong." President Taft has said in a message to Congress that he can "see decided advantages in the enactment of a law which shall describe and denounce, in a criminal statute, methods of competition which are unfair."

BOOKS OF THE WEEK.

Aborigines of Minnesota. St. Paul: Minnesota Historical Society.

Ahad Ha-'Am. Selected Essays. Translated from the Hebrew by Leon Simon. Philadelphia: Jewish Pub. Society of America.

Atkinson, Eleanor. Greyfriars Bobby. Harper. $1.20 net.

Barker, Granville. The Madras House: A Comedy in Four Acts; Three Plays—The Marrying of Ann Leete; The Voysey Inheritance; Waste. Mitchell Kennerley. $1, $1.50 net.

Birch, Noel. Modern Riding and Horse Education. W. R. Jenkins Co. $2.

Bogg, T. H The Anglo-Saxon in India and the Philippines. Reprint from Journal of Race Development. Dartmouth College: The Author.

Donal Hamilton Haines's

The Return of Pierre

A Tale of 1870. With a frontispiece from one of the panels of Detaille's "Le Chant du Depart." $1.25 net; by mail, $1.37.

The leading characters are Pierre, a soldier lad from the country; the woman Pierre loves, her father—a fine old Colonel of Dragoons—and a German spy, not without attractive qualities, whose fate becomes strangely entangled with theirs. The book abounds in striking scenes.

THE DRUNKARD

By GUY THORNE
Author of "When It Was Dark."

A powerful novel written by a man of the world for men and women of the world. To the general reader it is a strong story of deep human appeal. To those to whom drunkenness is a painful personal and social problem, it is the scientific and sympathetic revelation of the physical and mental state of the drunkard, which makes help for him possible. Probably the most startling and impressive story in any language concerned with the psychology of intemperance. In *"When It Was Dark"* the author proved his power of holding spell-bound a vast company of readers. (Cloth, 12mo. $1.35 net, postpaid $1.47.)

Outdoor Philosophy

The Meditations of a Naturalist

By Stanton Davis Kirkham

Crown 8vo. $1.50 *net.* (*By mail* $1.65)

A protest against life as it is lived by the majority to-day, a slavish pursuit of worthless ideals that impoverish the soul. The author dwells on the contrast, which Nature evokes, between her own sublime harmony and the discord and strife and ugliness of life in the teeming centres of population.

IMPORTANT NEW BOOKS

Frederick Orin Bartlett's *great new novel,* **THE GUARDIAN**

A rare novel of the great woods, breathing the keen air of the out-of-doors and portraying the rugged characters of the lumbermen with a skill which surpasses any previous attempt to show them as they really are. The central theme is simple yet stupendous, and in its broad human application, possesses a fundamental quality that gives it the widest appeal. *Published five days ago; second large edition already on press.* By the author of "The Seventh Noon," etc. 470 pages, frontispiece by N. C. Wyeth, $1.35 *net; by mail,* $1.47.

Hewes Lancaster's *charming story of Louisiana,* **THE ONE AND THE OTHER**

Here the author of "Marie of Arcady" gives her growing public another delightful classic of 'Cajan life, in which the reader meets many an old friend and catches glimpses of many a quaint custom handed down from generation to generation, in a story that is yet sturdily American, abounding in humor and human nature. It is the story of twin brothers, the one a leader, the other a follower. $1.00 *net; by mail,* $1.08.

Fred Lewis Pattee's *much-discussed novel of the modern church,* **THE BREAKING-POINT**

A novel of serious importance, with a theme that makes it worth the attention of every man or woman who has at heart the problems of the church and of its work in the world—the struggle of a minister to be the real spiritual leader of a great city church. By the author of "The House with the Black Ring." $1.25 *net; by mail,* $1.37.

Gaston Leroux's *delightfully absorbing mystery,* **THE MAN WITH THE BLACK FEATHER**

"Surely a French Edgar Allan Poe. The author has cleverly drawn Theophrastus Longuet, a retired manufacturer of rubber stamps, and in making him the hero of a 'mystery' novel fashions a weird and interesting tale full of strange, whimsical humor."—*Portland Oregonian.* Translated by Edgar Jepson. By the author of "The Phantom of the Opera," "The Mystery of the Yellow Room," etc. Illustrated by C. M. Relyea, $1.20 *net; by mail,* $1.32.

READY SHORTLY

Credo Harris's *powerful novel of Kentucky life,* **TOBY**

This novel by a new author merits the attention of all lovers of good fiction for its vigorous and sincere portrayal of life in the hills of Kentucky and its sound delineation of character. The regeneration of Toby and the revelation of his personality through the influence of a true and tender love form the theme of one of the most delightful stories that have seen the light of day for a long time. $1.25 *net; by mail,* $1.37.

Marion Hill's *delectable story of the life of a wholly charming actress,* **GEORGETTE**

Have you ever wondered whether there is anywhere another actress as diverting as "The Chorus Lady"? *Read "Georgette!"*

Have you ever wondered what goes on in an actress's mind? *Read "Georgette!"*

Have you ever wondered if an actress is always artificial? *Read "Georgette!"*

Have you ever wondered why there is no real classic of the American stage? THERE IS. *Read "Georgette!"*

By the author of "The Pettison Twins," "Harmony Hall," etc. $1.25 *net; by mail,* $1.37.

READY SHORTLY

Mrs. Mabel Loomis Todd's *delightful and authoritative* **TRIPOLI THE MYSTERIOUS**

This is the only book in the English language on Tripoli as it is. The author has had unusual opportunities for first hand knowledge, having twice accompanied her husband, Professor David Todd, of Amherst, on expeditions to Tripoli to observe total eclipses of the sun. The book is charmingly informative. By the author of "A Cycle of Sunsets," etc. Profusely illustrated. $1.50 *net; by mail,* $1.62.

Ezra Pound's *wonderful English verse translation of*

THE SONNETS AND BALLATE OF GUIDO CAVALCANTI

Mr. Pound, who is widely regarded as the most original force in American poetry since Whitman, here devotes his genius and his rich knowledge of things medieval to the rendering into English verse of the work of Guido Cavalcanti, the friend and in more than one way the inspirer of Dante. The result is a book that may fairly lay claim to the distinction of being one of the most significant volumes of poetry ever done by an American. $2.00 *net; by mail,* $2.15.

A REVISED EDITION OF
Montgomery's Leading Facts of English History

The history that has been for years the stand-by of American schools. No other textbook has ever surpassed it in clarity of treatment, completeness and reliability.

It presents in brief compass the most important points in the development of the English nation, and covers all the ground ordinarily covered by a high-school course.

The revision embodies an extensive rewriting of the previous edition. It includes new maps and twenty-five new illustrations, together with a new and superior letterpress throughout. Teachers who desire to make a special study of Constitutional History will be greatly aided by the revised Summary on that subject and by the important Constitutional Documents contained at the back of the book.

For Sale

FOR SALE. AT POINT LOOKOUT, Isle au Haut, a cottage and a lot of about four acres. Cottage has large sitting room, writing room, and two bedrooms on the first floor, and five bedrooms on the second floor, four bathrooms, and all modern conveniences. It commands, from the windows, views of the Camden Hills, Deer Isle, and the mountains of Mt. Desert. The climate is the best on the coast—excessive heat is never known, and, being twenty miles from the mainland, the climate is exceptionally equable, the variation at times in twenty-four hours being even less than two degrees. The island is about 7 miles long by 2 miles wide, and the summit of the mountain is about 600 feet above tide. A fresh water lake, of more than a mile in length, is stocked with land-locked salmon. A road of thirteen miles around the island affords charming views, and gives access to cliffs rivalling those of Mt. Desert. For terms, apply to Ernest W. Bowditch, 60 Devonshire Street, Boston, Mass.

For Rent

FURNISHED HOUSE in Cambridge, Mass., next the Longfellow House, to rent for winter season 1912-13: 4 master's living rooms, kitchen, laundry, and drying-room; 6 master's bedrooms, 2 baths, 3 servants', and 1 trunk-room. Occupancy given after August 1, 1912. Apply to owner at 113 Brattle Street.

SYNTAX OF EARLY LATIN

VOLUME I.—THE VERB

PRICE $4.00

By Professor CHARLES E. BENNETT, of Cornell University

Extracts from the Reviews:

"Man darf dem zweiten Teil mit Spannung entgegensehen: fällt er eben so gediegen aus wie der erste, dann haben wir eine Syntax des Altlateins welche allen billigen Ansprüchen entsprechen kann."—*J. H. Schmalz, in Berliner Philologische Wochenschrift.*

"Professor Bennett is to be congratulated on having accomplished a heavy and important task. The mass of material covered is large. The style is lucid, flowing, and interesting. The book deserves wide reading."—*Wm. Gardner Hale, in Classical Philology.*

"Professor Bennett has discharged a huge task in a manner highly to his own credit and to that of American scholarship, and has earned the thanks of all students of Latin for the rich array of facts presented and for the criticism to which he has so often subjected the views of others concerning them. We are a long step nearer to a real Historische Grammatik der lateinischen Sprache."—*Charles Knapp, in American Journal of Philology.*

"Here at length we have for Early Latin a book containing a rich and convenient collection of the facts, together with a clear summary and honest critique of the theories put forth to explain the facts. Of the great usefulness of the book there can be no doubt."—*Arthur L. Wheeler, in Classical Weekly.*

"The book will stand as one of the most important products of American classical scholarship, and add much to our prestige in foreign circles."—*The Nation.*

"Das Vorliaben wird mit Freude begrüsst werden, zumal der erste vorliegende Band einen so guten Vorgeschmack gibt."—*Gustav Landgraf, in Blätter für das Gymnasial-Schulwesen.*

"(Steht) auf der Höhe der Forschung. . . . Eine der erfreulichsten Erscheinungen auf altsprachlichem Gebiet."—*Ignaz Golling, in Zeitschrift für österreichische Gymnasien.*

"(Der Verfasser) in scharfem syntaktischem Denken geübt."—*Friedrich Leo, in Göttingische Gelehrte Anzeigen.*

"The work will prove indispensable to students of Early Latin syntax."—*E. A. Sonnenschein, in The Year's Work in Classical Studies.*

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

NEW BOOKS FROM THE DUTTON LIST

Syndicalism and Labor

By Sir ARTHUR CLAY, Bart. One volume, 7¼ in. x 5 in. $2.25 net

A valuable book on the beginnings and rise to favor of the "General Strike" as Labor's most deadly weapon, including some account of the French "Syndicats Ouvriers" which initiated it.

The principal so-called "General Strikes" of the past few years in France, Sweden, Italy, and Spain are described and their results noted.

A most timely and informing book, written in a temperate and judicial spirit.

The Pilgrims' Way From Winchester to Canterbury

By JULIA CARTWRIGHT (Mrs. Ady)

New and Revised Edition. Illustrated by 8 colored plates, 8 half-tones and a large number of line drawings, all specially made for this volume by A. H. Hallam Murray.

One volume, 8½ in. x 6½ in. $5.00 net

A picturesque description of the ancient road still known as the Pilgrims' Way, along which for nearly four hundred years the pilgrims to the renowned shrine of St. Thomas of Canterbury (Thomas à Becket) traveled from Winchester to Canterbury.

The author knows her ground thoroughly, its history past and present, and takes her readers with her into the heart of the most beautiful and storied part of England.

Mr. Hallam Murray's admirable drawings give an excellent idea of the old house, ancient ruins and the lovely scenery through which the old road zigzags from village to village.

The Ideals of Indian Art

By E. B. HAVELL, C.I.E.

Formerly Principal of the Indian Government School of Art and Keeper of the Calcutta Art Gallery. Author of "Indian Sculpture and Painting," etc.

Illustrated with 33 plates from photographs. One volume, 10 in. x 7 in. $5.00 net

This is a very original and very comprehensive introduction to the study of the main branch of Indian Art, namely Indian sculpture.

The author maintains that the reason Europeans consider Hindu sculptures to be fantastic or preposterous is that the religious beliefs, legends and hopes symbolized in them are not taken into consideration by the European critic. Here the author focusses the principal achievement of Hindu plastic art together with the leading religious ideas of Hindu mythology which that art expressed, so that a clear perception of the relation between the two is possible to the reader.

The plates are admirable examples of the photographic art.

The French Ideal: Pascal, Fénelon and Other Essays

By Madame DUCLAUX ("A. Mary F. Robinson") $2.50 net

Madame Duclaux, wife of the celebrated Director of the Pasteur Institute in Paris, has already won distinction in letters over two other signatures, A. Mary F. Robinson and Madame Darmestetter. Well known as a writer of both prose and verse in her adopted language, French, and for her unusual power of expression in English, she is the ideal interpreter of the great French writers of the past generation for English speaking readers. The four essays are on Pascal, Fénelon, Buffon, and Lamartine.

The Cult of Incompetence

By EMILE FAGUET $1.50 net

Translated by Miss Beatrice Barstow.

This work has attracted widespread attention in France, and exhibits many of the dominant tendencies of the democracy of the present day to discourage the highest talent in all principal walks of life, and to encourage mediocrity and incompetence, to the ultimate detriment of the nation and national character.

Sixty Years: Life and Adventure in the Far East

By JOHN DILL ROSS Three photogravure plates. 20 other illustrations and a map. 2 vols. $7 net

"A biography of adventure in love, trade, finance, fights and diplomacy . . . more human and at times more exciting than any novel we have seen these many years."

The Surgeon's Log

By J. JOHNSTON ABRAHAM Richly illustrated with photographs. $2.50

The day-by-day story of a ship's doctor on a well-found trading steamer. Rich in anecdote, reminiscence and description of many Eastern ports, the less familiar as well as the better known.

Pocket Guide to the West Indies

By ALGERNON E. ASPINWALL $1.50 net

New edition with maps, illustrations, historic and statistical data and complete guide for each locality.

E. P. DUTTON & COMPANY, 31 West 23d Street, New York

The Nation

NEW YORK, THURSDAY, FEBRUARY 29, 1912.

The Week

The winning of half the Oklahoma delegation to the Baltimore Convention is a highly significant victory for Woodrow Wilson, for it fully confirms the estimate that has been placed by his advocates upon his strength in the Middle West. In Oklahoma Champ Clark was supposed to be strongly intrenched, the neighborhood feeling, as well as other elements, being a powerful factor in his favor. With this send-off in a comparatively unpromising State, it may now be expected that cumulative indications of Gov. Wilson's strength will be showing themselves, both in the West and in the South. Of course, much will depend on developments in the political situation generally, and in the Republican as well as in the Democratic party. The case is very different from what it would be if the Republican nomination were a foregone conclusion. For the present, nobody can be quite certain what aspect the campaign will present; and at the last moment the choice may turn on the feeling that one Democrat rather than another is the "logical" candidate to be put up at Baltimore in response to the choice made the previous week at Chicago.

One straw vote in the West has been strangely overlooked by the Colonel's admirers, though it gives convincing proof of his immense popularity. We refer to the postal-card canvass conducted by the *Appeal to Reason*. This is the well-known Socialist paper, with a large circulation. Calling upon its readers for an expression of their Presidential preferences, it has found, to date, that 41,384 of them want Roosevelt, while only 426 declare for Taft. This looks perfectly overwhelming till we note that Roosevelt really ran fourth, Debs leading with 65,928 votes, McNamara getting 54,726, Gompers being third with 48,225. Closely after Roosevelt, the fourth favorite, came Haywood with 41,109 votes. This is fine company for the Colonel. But as he is only fourth in the affections of the Socialists, it follows, by the irresistible logic which has been used in connection with the other Western straw votes, that there is a whirlwind demand of the people that Debs be made President.

We are not always able to agree with the Chicago *Inter Ocean*, but its opposition to the desire of political conventions to break all records for length of cheering popular leaders is both sound and bold. It owns to sympathy with the man who rises and waves his flags and lets out his voice from spontaneous impulse. It even avows a belief in the yelling that is sincere. But it criticises the "demonstration" that has become a mere affair of keeping itself going as long as possible, and it refers to the spectacle at Chicago and to the one at Denver four years ago when the names of Roosevelt and Bryan, respectively, were presented. Those who read of what followed may have received the idea of a touching outburst of genuine loyalty which a solid hour of shouting and marching could hardly exhaust, but to those on the spot the creaking of the machinery grew increasingly evident after the first few minutes. And what good came of it at last? A few short months after Mr. Bryan's trained acousticians had triumphed over those of Mr. Roosevelt, and still more impressively over those of Mr. Taft, the last-named gentleman was inaugurated.

Those were wholesome and sober words that Gov. Harmon spoke to the Kentucky Legislature when he said that the ultimate force behind the movement for the initiative, referendum, and recall was supplied by the shortcomings of the men in public office. Agitators are quick to seize upon grievances and make a great noise about cheap cure-alls; but if the grievances were not there, such men would have little chance. Quite properly, too, Mr. Harmon pointed out some substantial administrative and fiscal reforms that had been accomplished in Ohio in his term as Governor; for upon actual achievements of this kind the case for representative government as we have known it in the past must rest. It is to be regretted, however, that he put the case of the expenses of the national Government as he did. "It ought not to cost," he said, "a billion dollars a year, or over $11 for each man, woman, and child in the country, to maintain the Federal Government with its limited functions." That there is need of economizing in the Federal Government is true enough; but such a statement as this makes a false impression. Outside the post office, which is self-supporting, the annual expenditures of the Federal Government are not a billion dollars, but about $650,000,000; and of this about $400,000,000 are for army, navy, pensions, and interest on the public debt. What is spent in order to "maintain the Federal Government, with its limited functions," as that phrase would usually be understood, is about a quarter of a billion dollars, instead of a billion.

Serious faults in the bill to regulate immigration, now pending in the Senate, are discovered as the debate on the measure proceeds. As drafted, the bill specified among aliens to be excluded "persons who are not eligible to become citizens of the United States by naturalization." The intent was, obviously, to settle in this way the question of Chinese and Japanese immigration. But an unforeseen difficulty at once arose; for in order to become naturalized, applicants must be able to speak English, and hence this clause of the bill might be tortured into authority for keeping out all immigrants who speak only a foreign language. When this danger was pointed out, the advocates of the bill rather shamefacedly accepted an amendment providing that "no alien shall be denied admission to the United States solely because of inability to speak the English language." Even this does not meet the case, since applications for naturalization must, by the law, be "signed by the applicant in his own handwriting." Thus there might be in the clause in question a lurking attempt to set up by indirection the literary test for immigrants. Other similar complications might easily be caused by passing the bill as framed. Its chief defect, as we have before said, is its lack of explicitness. It may be well to revise and codify our immigration laws, but the work should be done with a thoroughness that left no room for suspicion of "jokers" in the bill.

Early action is expected in the Senate on the Stephenson case. The Committee on Privileges and Elections is unanimous in saying that the expenditure of $107,793 (the amount which Senator Stephenson acknowledges he paid to carry the primaries) "was in violation of the fundamental principles underlying our system of government, which contemplated the selection of candidates by the electors, not the selection of the electors by the candidate." Yet the majority of the committee does not see in that fact sufficient reason for unseating the man who paid this sum of money avowedly and designedly for that purpose. In other words, the majority lends its sanction to a violation of the "fundamental principles" of our system of government, and gives its assent to the selection of electors by the candidate, on a cash basis. If the Senate ratifies the majority report it will by so much give license to the rich men of the country to buy up the seats in that body. If all the seats are to be put up at auction, there is no doubt that buyers can be found in all the States as easily as in Wisconsin and Illinois.

A brief homily on the question of violence in labor disputes, chiefly interesting because it is written from the "inside," appears in last week's *Independent*. The author is Harry Orchard, of Haywood-Moyer trial fame, and he writes from the inside of Idaho State's Prison at Boisé. It is Mr. Orchard's emphatic belief that "direct action" is both wicked and unprofitable. The system of intimidation by dynamite did work well, "with hardly an exception, up until the McNamara confession," but it has now got a blow from which it will never recover. All right-thinking men will join Mr. Orchard in this hope. At any rate, Harry Orchard out of prison never did as clear thinking as he reveals in the following passage:

> Now, while the great wheels of industry are busy grinding out their dollars, they are also slowly, but surely, grinding out the lives of men and women that keep them in motion. Some of the great industries are very hazardous at best. The greedy captains that control them should be forced to make the conditions as safe and sanitary as possible. The kind of force, however, that we have been talking about will not do the work. But if labor organizations will place big, broad-minded men at their head, letting them direct the policies of the union, and, instead of sowing the seed of discontent and strife, establish schools of education along economic lines, etc.

The trouble is that the partisan of "direct action" is dazzled by the immediateness of results obtained. A bridge or a factory is blown up and the "victory" is won. A fig for your painfully slow orthodox union methods! What the anarchist refuses to see is that violence, like murder, will out; that his "victory" turns to ashes, and that it takes years of painful effort for labor to make up the loss of that "victory."

The American Express Company, we read, has paid $43,500,000 in dividends since 1868. Forty-three million dollars in forty-four years is almost exactly a million dollars a year, and that might not seem an outrageous annual profit for a business concern of such vast dimensions. Neither is there anything overwhelming in the statement that this same company has received from its patrons during the same period the sum of $598,000,000, which means an annual gross revenue of $15,000,000 a year; this again might seem no formidable sum for an enterprise of national scope. One need not hold a brief for the express companies to question the effectiveness of such long strings of figures. Nevertheless, there is little doubt that the express companies have been charging excessive rates and accumulating very large profits. The Interstate Commerce Commission's investigation into the express business has already been more than justified. But for the purpose of emphasizing the extortionate practices of the express companies, the statement that they charge fifty cents for carrying a parcel that could be carried for fifteen is more convincing than any number of millions spread before the eye.

It would be interesting to know how leading members of the bar in our country feel when confronted with such a statement as that made by Mr. Justice Riddell of Ontario, in an interview in the New York *Sun:*

> I have been at the bar or on the bench about thirty years, and never, even in murder cases have I seen more than half an hour consumed in getting a jury. . . . I have never but once known even a murder case to last as much as four days. . . . Some time ago I went to hold the London (Ont.) Assizes. There were to be tried four criminal cases, one of murder, one of manslaughter, one of serious embezzlement, and one of less importance, and eleven civil cases. At the same time I opened my assize in London, a court in Detroit, Mich., only a few hours further along the railroad, began to get a jury in a murder case. My four prisoners were on their way to the penitentiary and seven of the eleven civil cases had been disposed of before half the jury had been got together in Detroit. . . . Our criminal law is codified in the simplest possible form, and there is not an appeal once in fifty cases.

The contrast may here be somewhat exaggerated, but in essence it represents the truth. And what do we get in return for the frightful waste and trouble of our criminal procedure? Does any one pretend that we get more exact justice than is attained in England or in Canada? Is it not true, on the contrary, that the tremendous cumbrousness of our procedure only lowers the confidence of the community in the soundness of its results?

Resolutions pointing to an energetic campaign against the chestnut tree blight marked the close of the congress of experts from twenty-nine States, which, at the invitation of Gov. Tener, has been meeting at Harrisburg. The gathering called upon the States, the Federal Government, and Canada to follow the lead of Pennsylvania in combating the disease which menaces the entire chestnut growth of the Atlantic Coast, by making appropriations to "enable authorities to cope with the disease, where practicable." One resolution asks Congress to appropriate $60,000 for the Government coöperation. Two opposing points of view were manifest in the first session of the congress. Delay was advocated by Prof. W. A. Murrill of New York, who asserted that public money could be saved by allowing active field work to wait upon further scientific investigation; but for the policy of immediate extirpation of affected trees, to prevent further spread of the destructive blight, I. C. Williams, deputy forestry commissioner of Pennsylvania, stood sponsor. The results already obtained by this method in that State led to the endorsement of its militant policy by the congress.

The movement to erect a memorial to Whittier in the national capital calls attention to an odd diversity between our professions and practice. At bottom, we are a peaceable people, with a jealous preference for the supremacy of the civil power over all matters of the army

and navy. But when we look around for distinguished citizens to whom monuments may appropriately be erected, we are strangely beset by the notion that such persons must belong to one of two classes. They must be either dead politicians, and therefore presumably statesmen, or heroes of battle. The exceptions are just numerous enough to emphasize the rule. Longfellow now breaks the monotony of the long series of statues to "public" men in Washington, but there is no reason why his memorial should not be supplemented by those of several other men and women who have raised our national reputation by what they have written rather than by what they done.

Secretary Knox striking an appropriate attitude at Panama and bidding all Central and South America stop, look, and listen to the honeyed words in which their big neighbor at the North once more strives to express its feelings towards them, will be a sight for gods and men—and Mr. Dooley. "Here," the Secretary may begin with a smile, "we meet on common ground—that is, of course, if the Government which I have the honor to represent does not decide to discriminate against you in the matter of tolls. The one subject of possible disagreement between the United States and any of you having been happily removed by the—er—annexation of this fair land, my Government feels very strongly that it is a part of the patriotic duty of every citizen of a Central or South American republic, especially of those in authority, to let bygones be bygones, to accept our protestations of goodwill at their face value, and, in a word, to think of us as we would fain be thought of." At this point the cheering will doubtless no longer be restrained, unless Col. Goethals should meanwhile have taken a leaf from Nicaragua's book, and given orders prohibiting any demonstrations, favorable or otherwise, in connection with the Secretary's visit.

The first bye-election in Canada since last year's overwhelming Liberal defeat has resulted in a gain for the Liberals, which is quite in accordance with the law that seems to govern bye-elections. It is the regular thing that, after a general campaign in which the country has plumped with unrestrained enthusiasm for one party or another, the voters shall turn about, and right on the heels of election day begin to elect members of the minority. Apparently, there is about this procedure something of the shame-faced awakening to cold wisdom which follows an emotional outburst. Certainly some such reaction was to be looked for in Canada, where a spontaneous assertion of unsuspected popular sentiment made fools out of the prophets in both parties. No one has yet been able to bring out all the reasons for that mad rush in which the Liberal party was so badly trampled. Partial explanations are at hand in plenty, but at bottom we seem to be facing one of those curious manifestations of the psychology of the crowd which make the business of political prophecy so hazardous.

The figure of George V has gradually emerged during the hopeful discussions regarding the betterment of Anglo-German relations. A German newspaper of standing assigns credit to the English monarch for taking the initiative in Mr. Haldane's visit to Berlin. There is nothing improbable in the hypothesis. It would be quite appropriate that King George should take up a line of activity in which Edward VII is conceded to have done useful work for his country. The late King was largely instrumental in forging the chain of Continental friendships and alliances which Germany chose to regard as a menace to her own interests, but which, there is good reason to believe, Edward VII regarded sincerely as working for the peace of Europe. The sphere of foreign affairs is one in which a British monarch, for all his complete subordination to Constitutional forms, still exercises real power. Unlike the late King, who was his own travelling ambassador, and whose personality made him welcome in the capitals of Europe, George V chooses to work through his Ministers; but there is every reason to believe that the monarch's views will carry weight with the Cabinet.

The bill providing for the annexation of Tripoli and Cyrenaica was passed in the Italian Chamber of Deputies last Friday with only thirty-eight dissenting votes in a poll of 469, and amidst scenes of frenzied popular enthusiasm. From the first it has been apparent that, with the exception of the revolutionary Socialist faction, the attack on Tripoli had popular approval behind it, in the sense that the men who engineered the raid could count on certain conditions of public sentiment. The Italian people has watched the annexation game being played on all sides, by France and Spain in Morocco, by Austria in the Balkans, by Russia and Great Britain in the Far East. The memory of Italy's own sad experiences in Abyssinia has rankled. National sentiment has been raised to a climax by the celebration of the semi-centennial of Italian unity. No politician was taking undue risk in planning an attack upon a defenceless foreign province under such circumstances. The only danger lay in the actual course of military operations. A serious setback would have been fatal to the Cabinet. A crushing defeat might have been fatal to the throne. So far these dangers have been averted, but the Government will still have to deal with the problems arising out of the heavy taxation that is the corollary of Imperialist politics, and is beginning to be in Europe a fruitful source of popular discontent.

Mr. Shuster's statement to the press is not so careful in its wording as his speeches in England and elsewhere on his way home from Teheran. At any rate, it is overstating the point to accuse Great Britain of having set out "to create a strong Russia after the Japanese war." It was not within England's power nor for her best interests to create a strong Russia. That Empire's recuperation from the disasters of the Manchurian war was a natural and inevitable process. What does remain true is that the present directors of English foreign policy have attached so much importance to Russia's friendship in Europe that they have been willing to let the Czar have virtually a free hand in middle Asia. That is a policy of which the wisdom as well as the morality may be easily questioned. Russia as an ally or a friend is a weak reed to lean upon. The French found that out again and again in the course of recent complications with Germany. And England, too, may discover, in time of crisis, that Russia's friendship was not worth the sacrifice of important interests in Persia or the cold-blooded abandonment of that country to the tender mercies of the Czar.

THE "HEAVY RESPONSIBILITY."

Mr. Roosevelt declares that he realizes "to the full" the "heavy responsibility" which he assumes in announcing that he will be a candidate for the Presidency. But does he? Can he be entirely aware of the full weight of the grievous burden which he is binding on his own back? We doubt it. We should hate to think, for example, that he had deliberately considered and coolly disregarded the fact that he was about to shatter the ideal of Roosevelt which has been admiringly, however mistakenly, cherished all over the country. For in that ideal one element has been the conception of him as a man fit to stand on the holy hill because he sweareth to his own hurt and changeth not. But now he is seen to be false to his plighted faith. What he had voluntarily and solemnly assured the people that he would do under no circumstances, he now proposes to do without explanation or a glimmer of remorse. Thousands of his truest friends have been vehemently asserting for three years past that Theodore Roosevelt was incapable of doing this thing. Whatever else he might be, he was a man of his word. But this trust in him he has now dashed to the ground. Instead of the ideal Roosevelt, we see a Machiavellian prince acting on the maxim that a "signore prudente" does not feel bound to stand by his pledges when they can be turned against him, or when his motive for making them no longer exists.

To multitudes throughout the land this will seem a fall like Lucifer's, that other son of the morning. It is not now a question of the validity of the tradition against a third term. It is merely a question of Theodore Roosevelt's personal honor. Others may doubt or challenge the third-term custom; he cannot. He publicly pronounced it "wise," declared that he felt bound by it, and told the people who had just elected him President: "Under no circumstances will I be a candidate for or accept another nomination." John Morley was a guest at the White House when President Roosevelt made that announcement on November 8, 1904. The story was printed at the time that Mr. Roosevelt said to Morley that his declaration had "no string" to it. The Englishman was puzzled by this bit of American slang. Now, however, Honest John will understand what it means. The "string" has been pulled and the word broken. It is a terrible thing for Roosevelt thus to destroy the faith which credulous thousands have placed in his personal integrity.

The heavy responsibility which Mr. Roosevelt has blithely shouldered includes the confirming of the worst interpretation which has been put upon his conduct for the past three years. He himself now admits the truth of what he has been charged with. In the light of his own statements, few can be found longer to believe that his course has been aught but that of a secret plotter. To undermine his friend Taft has been his passion. To scheme for his own nomination has been his consistent but concealed plan. What are we to think now of its successive steps? First, he was not a candidate and would not be. He wrote last year that any movement to win the nomination for him would be a "genuine calamity." He asserted that no friend of his could possibly countenance anything of the kind. Then came the time of his standing on his dignity. He would not do a thing or say a word. After that came the period of contingencies. Roosevelt would not lift his hand, but, of course, if the united voice of a mighty people summoned him as the "one man in sight," he could not refuse. But presently even those professed hesitations and scruples were abandoned: the Columbus address was an open bid for the Presidency; and now comes his acceptance of the first formal proposal that he be a candidate for the nomination—an acceptance tantamount to a frank avowal that he wants the Presidency consumedly and will move heaven and earth to get it. What a light all this throws upon the long and despicable intrigue in which this frankest and most generous of men has for months been up to his neck!

Another aspect of the heavy responsibility which Mr. Roosevelt light-heartedly assumes is that of splitting asunder the party which has showered honors upon him and to which he has professed gratitude and devotion. To dash it to pieces now is but a trifle for his insatiate ambition. He has delayed so long in coming out from his cover that a fierce contest within the party is to-day inevitable. In the struggle the organization may be crumpled into a heap, the party principles may be trampled upon, undying bitterness and rancor may be developed, Republican hopes may visibly turn to ashes—but what does this matter to the man who is so eaten up of selfishness and conceit that he thinks of all men and of all parties as only tools in his hand, to be used as long as convenient and then thrown on the junk heap?

The heaviest part of the responsibility which Mr. Roosevelt undertakes goes, however, beyond persons or parties. It touches the good of the country. At the moment when success was about to reward the painful striving of finance and industry to recover from the heavy blows they have suffered, when business men were reporting the disturbance of Presidential year to be less than was feared, Mr. Roosevelt invites us to plunge into a vast upheaval. He would call upon all the winds of social passion to blow and crack their cheeks. He would give us a series of explosions, and would precipitate a contest that would shake the land. If he has his way, instead of slow recuperation we shall have a period of fear and ferocity, of unscrupulous appeal and incendiary tactics. But it is not to be believed that he is going to have his way. Even if he terrorizes or tricks the Republican Convention into nominating him, or if he sets himself up as the independent candidate of all the discontented, he has the sober sense of the mass of his countrymen to reckon with, and upon that he cannot again impose. For it is no more the Roosevelt of old going forth in shining armor to overthrow his opponents. He is known better now; troops of friends are walking backward from him with averted gaze; his reckless craving for power is at last disclosed. What was said of Charles Fox, after he had made a betrayal of his friends and his party, may now be said of Theodore Roosevelt: "He felt that he had done something that required defence; the mouth still spoke great things, but the swell of soul was no more."

THE PRESIDENT ON POST-OFFICE QUESTIONS.

Besides the second-class postage rate question, the President, in his message on post-office matters, comments on several other topics of importance. Naturally enough, he gives a conspicuous place to the fact that for the fiscal year

which ended on June 30 last the accounts of the Post Office Department show a slight surplus—$219,000—compared with a deficit of more than $17,000,000 two years before. He is careful to state that this financial gain has been accomplished without curtailing the service, and indeed in the face of a considerable enlargement both of postal facilities and of salaries; moreover, there has been an increase of more than 8,000 in the number of employees. Of course, these things could not have been simultaneously possible without a combination of improved management and expanded revenue. As a matter of fact, the revenues increased by $8,000,000 in the last year, and by $13,000,000 in the last but one; but this is less than the usual biennial increase, and accordingly it seems fair to set down the bettered financial showing, in the main, to improvements in administration.

From the Postmaster-General's recommendation that the Government shall acquire the telegraph system of the country and operate it as part of its postal business, the President flatly dissents. The reasons he assigns for this conclusion will, we make no doubt, command general approval. Unless a perfectly clear case can be made out of great public advantage, it is evident that such a change is not entitled to serious consideration as a practical proposal. So far from thinking that such a case has been made out, the President is "not satisfied from any evidence that if these properties were taken over by the Government they could be managed any more economically or any more efficiently, or that this would enable the Government to furnish service at any smaller rate than the public are now required to pay by private companies." After this, it is not necessary for the President at this time to dwell on the seriousness of enlarging by hundreds of thousands the army of Government employees, though he makes it plain enough that this consideration weighs heavily with him. But he points out another consideration which constitutes a special reason for not entering upon this undertaking, over and above the general presumption against it; namely, that the Department has now on its hands, and very far from solution, a problem with which it is clearly called upon to deal before any new complication is added. In the matter of a parcels post, we are far behind other countries, nor is this convenience satisfactorily furnished by any private agency.

In his recommendation as to rates for second-class matter, the President simply follows the report of the special Commission, consisting of Supreme Court Justice Hughes, President Lowell of Harvard, and Mr. H. A. Wheeler, president of the Chicago Association of Commerce. So far as regards the matters of fact involved, there is no room for doubting the substantial accuracy of the results reached by the Commission, for the methods pursued are set forth with exemplary completeness and lucidity in its reports. Its plan that the general rate for magazines and newspapers mailed by publishers and news agents should be increased from one cent a pound to two cents is adopted by the President as his own recommendation to Congress. This plan, the Commission explicitly states, is not based on any consideration of an existing deficit, but on the desire to bring the charges for this service more nearly into correspondence with cost. The basis of calculation is that, in estimating cost, each part of the service must be charged with its proportionate share and not as a merely residual factor. On such a basis the cost directly assignable to the handling of pound-rate matter, exclusive of general post-office expenses, has recently been more than six cents a pound, and will in the future be in excess of five cents a pound. Whether the public objects served by encouraging the dissemination of this matter warrants a subvention so great as this is a question of public policy which Congress must settle; the Commission and the President emphatically hold that a two-cent rate would meet all reasonable requirements of the case; and it is hardly fitting that organs of public opinion, which have a direct pecuniary interest in the question, should press a contrary view. The facts relating to cost are now before the country in an authoritative form.

The whole matter affords an instructive illustration of the problems involved in governmental rate-fixing. The ascertainment of facts is necessarily only one part of the question; the question of policy still remains, and there is no way of getting rid of it. Indeed, the question of policy may be said to enter, and in a highly important way, even into that part of the task which relates exclusively to the ascertainment of facts; in this instance, for example, the result would have been materially different if an estimate had been made not of the proportionate cost of handling second-class matter, but of what may be called the residual cost—the amount added to the cost to which the Government would be put if this matter were not carried at all. But, waiving this, and accepting the estimate of cost as conclusive, there are still any number of questions of policy. Shall newspapers, with their average haul of 255 miles, pay the same rate as magazines with an average of 707 miles? Shall there be a zone system? What attitude should be taken with regard to the competition of private transportation agencies? All this apart from the three principal questions—how far shall the rate be fixed with a view to making the second-class service self-supporting, to what extent should consideration for established interests be taken into account, and what weight should be given to the public benefit derived from encouragement of journalistic activities? The rate recommended by the Commission is necessarily in the nature of a compromise; whether it is the best or not is, after all, a question for individual judgment. And what is true of this simple question would be true of the myriads of questions that would arise in the administration of a Government railway system. Those who lightly advocate the assumption of such a task by the Government forget that in this country transportation questions play a part incomparably more vital than in any other country in the world.

NEW IDEAS IN TRUST LEGISLATION.

Several incidents of the past few days indicate a somewhat new turn in the controversy over control of combinations in restraint of trade. The experience of the promoters of the so-called "Money Trust inquiry" has itself been pretty significant. The overwhelming defeat, in the House Democratic caucus of three weeks ago, of the proposal for a special committee with instructions which should take the results of its inquiry for granted, and whose avowed purpose should be that of spectacular agitation, was one indication of the feeling of sober legisla-

tors. Both parties to the controversy, however, appeared to misunderstand the purport of the Underwood resolution adopted by that caucus. The agitators proclaimed that the reference of the inquiry to the Banking and Currency Committee meant the stifling of all investigation, and in some quarters of the outside business community a rather similar conclusion seemed to be drawn. Such inferences were unwarranted. The Banking Committee's subsequent proposal to investigate "the banking and currency conditions of the country, for the purpose of determining what legislation is needed," did indeed broaden the field of inquiry; but it excluded none of the specific questions proposed in the defeated Henry resolution, and, indeed, Mr. Underwood himself, when asked in the caucus whether his own resolution contemplated inquiry into those specific topics, replied that he so understood it.

There was, therefore, no ground whatever for the assertion, in some of Saturday's Washington dispatches, that the formal inclusion of the Henry inquiries in the programme of the Banking Committee was a "victory for the radicals" or a "new turn in the situation." So far as we are aware, no Congressman has opposed an investigation of the "Money Trust" with a view to answering just those questions about concentrated control of banking resources, discrimination in loans, or favoritism to one set of corporations. The real attitude of the House was thus expressed on Saturday, in a speech on the resolution by Mr. Vreeland, a conservative New York Republican:

> Mr. Speaker, I favor this investigation, not with a blare of trumpets and explosion of dynamite, but along safe and orderly methods of procedure. I believe in making it thorough. I think any man or set of men in the United States, who believe that financiers in New York have conspired against them or injured them, will receive a full and fair hearing before the committee.

Simultaneously with this move in the "Money Trust" investigation, the Senate committee has begun to take in hand the much-discussed question of supplementary legislation in restriction of industrial Trusts and monopolies. Last week Chairman Gary of the Steel Corporation, who has been insistent, ever since his Stanley Committee testimony of last June, for legislation empowering Government to fix prices, forwarded to Washington a proposed measure to that purpose. Judge Gary proposed a commission of three to regulate interstate trade conditions. A corporation engaged in such trade, with $10,000,000 capital or more, must have a Federal license, revocable if it undertook monopoly or restraint of trade. If it already controlled more than 50 per cent. of the business in its line it should not be allowed to buy up any competing plant until the three commissioners had decided that such purchase would not tend to restraint of trade. Finally, the commissioners "may fix the maximum prices of any products" involved in such an operation, "if, in the judgment of the commission, the fixing of such prices shall be necessary to prevent a monopoly or an undue restraint of trade or commerce."

The pith of this proposal is plainly in the last-mentioned clause. That scheme of governmental price-fixing is something of a retreat from Judge Gary's programme of last June, when he declared to the Stanley Committee that he should like to have some governmental agency where the Steel Corporation could go and say: "Here are our facts and figures, here is our property, here our cost of production; now you tell us what we have the right to do and what prices we have the right to charge." But the entering wedge of an extremely dangerous policy, pointing towards eventual State Socialism, is none the less inserted, and this fact is clearly recognized in the bill introduced on Monday by Senator Cummins from the Senate Interstate Commerce Committee. Mr. Cummins proposes a commission of three, with power, not of licensing corporations, but of supervising them. He expressly leaves the present Anti-Trust law unchanged, but provides in addition against the common ownership of industrial plants and transportation systems, against "community-of-interest" directors, against watered stock, and, especially, against the "practice of selling below actual cost so as to destroy a competitor." Corporations found to have been indulging in such a practice, or which sell to different customers at different prices, are to be excluded from the field of interstate commerce.

Of Senator Cummins's measure we shall now only remark that it undertakes, without upsetting or emasculating the present Anti-Trust law, to deal with the problem which opponents of that law have alleged must arise in formidable shape if the great combinations are to be dissolved. There has been of late something less of the confident assertion that "the competitive régime is dead," but in shifting their position the advocates of dominating combinations rest on the assertion that return to what they describe as the "old-time cut-throat competition" would utterly disorganize business. That some sort of protection against such a situation may be desirable, President Taft himself has admitted. For ourselves, we can see that the problem might be made more formidable from the mere fact that such enormous aggregations of capital are commanded by the present Trusts, and might be commanded by their component parts even after dissolution.

EFFICIENCY IN PUBLIC SERVICE.

There is coming from the Chicago Bureau of Public Efficiency a series of reports upon the administration of the various offices of the city and county. These reports are of a detailed and practical character, and at the same time are so simply and clearly arranged and worded as to be easily followed by any intelligent person. With one of these before him, the ordinary citizen has no excuse for not knowing far more about the actual working of the department to which it relates, and of the direction in which improvements therein are needed, than any one except a student or an expert could have known previously. Here, for instance, is an attractively printed pamphlet of twenty-six pages, entitled "Administration of the Office of Sheriff of Cook County, Illinois." One's ideas of the natural and proper order of topics in such a report receive a surprise at the first glance at the table of contents, for the "Conclusions" are placed at the beginning, and the "Text of Report" at the end. Who, however, could resist a look at conclusions so temptingly laid before him? This result was perhaps in the minds of the sagacious framers of the report, who were but too well aware of the normal attitude of voters towards the machinery of government for which it is their proud privilege to name the engineers and pay the expenses.

A second surprise awaits the reader in the opening sentenco of tho Report. "The present Sheriff," it runs, "is de-

serving of great credit for introducing a system of reports and records designed to indicate the character and volume of work performed by deputies and bailiffs." Further on, one learns that "the attitude of Sheriff Zimmer indicates a desire on his part to secure the highest degree of efficiency in the administration of his office compatible with existing political conditions. He has shown much more zeal for public service than any of his predecessors in that office for many years." Evidently, the Chicago Bureau of Public Efficiency is anything but an organization for irritating the gentlemen whose offices it investigates. After such words of praise, qualified as they are by the reference to "existing political conditions," can one imagine Sheriff Zimmer refusing to consider seriously any suggestion the Bureau may offer for rendering his administration worthy of more generous compliment? Nor does the Bureau allow its tact to restrain it from criticism. The Sheriff, it appears, owing to an increase in the number of judges by six, is asking for ten additional bailiffs. But the Bureau has made an analysis of the service records installed by this efficiency-loving officer, and finds from them that the work required of the bailiffs outside of the court-room is "inconsiderable for the number performing it." It recommends, therefore, the retaining of the bailiffs at the present number.

And now the Bureau shows the stuff of which it is made. The section dealing with this matter of the bailiffs is headed "Recommended Decreases in Staff." Here are the paragraphs in which the bold recommendations are set forth:

> The actual time reported by deputy sheriffs, exclusive of time unnecessarily spent in the office, indicates that the work could have been performed, and all demands have been provided for, with four fewer deputies. The Bureau recommends that the staff be decreased by that number.
>
> The necessity for an assistant sheriff in addition to a chief deputy sheriff is not apparent, particularly as the assistant sheriff generally is one unfamiliar with the details of administration and procedure. It is recommended, therefore, that this position be abolished.

One important feature of the readableness of this report is the brevity of its sections. Like a newspaper story in which we may not be especially interested, its successive paragraphs lure us on by the very rapidity with which they may be dispatched. The section following the one we have just been treating is entitled "Salary Reductions Recommended." Now, if there is anything calculated to attract the eye, and, still more, the attention of the taxpayer, it is such words as these. The report does not waste space or the reader's patience on preliminaries. "It is the opinion of the Bureau," it says, crisply, "that deputy sheriffs and bailiffs—except the personal bailiffs of the judges, twenty-five in number—are overpaid." And it proceeds to point out that city policemen, with a maximum salary of $1,200 a year, have as important duties to perform as deputy sheriffs, who receive $2,000.

It is difficult to see how any citizen of Chicago or Cook County, deserving of the right of franchise, can fail to be deeply interested in such a report as this. Its method disposes completely of the objection that one cannot understand what is going on between reformers and officials beyond wordy altercations. Here are set down, in plain black and white, specific recommendations, based upon careful analysis, with an equally plain statement of the reasons behind them. It is clear that we are going to tolerate with increasing impatience and protest the worse than slipshod management of municipal affairs that has given us a name all over the Old World. Mingled with this feeling must be regret that such a consummation should have been so long delayed. But the sordid truth is that first the fight had to be made for honesty. To talk of efficiency with a Tweed behind the curtain would have been anything but an example of efficiency. Then it is to be recognized that business itself, which, as any business man will tell you, has always been the incarnation of efficiency, has but recently awakened to the possibilities in this direction. It can hardly be denied that, for once at least, public administration has been quick to respond to the new spirit that was manifesting itself in private affairs.

LITERATURE AND MORALS IN ENGLAND.

The conflict between the British censorship and the advanced element among British writers and playwrights has been increasingly animated and confusing. The word censorship is here used in its broad, non-technical meaning. As yet there is no government official who exercises the same authority over new books that the Lord Chamberlain exercises over plays. But from an important section of the public has come, though not in so many words perhaps, the demand for some form of supervision over the printed book akin to the conditions under which the London theatre labors. Thus we have a case of carrying the war into the enemy's territory with a vengeance. While some of the leading men of letters in England are fulminating against the tyrannies and ineptitudes of the Dramatic Censor, a very respectable body of public men, journalists and publishers even, are crying out against the unchecked flow of demoralizing literature from the printing presses. We catch almost daily echoes of the controversy on this side of the water. Hardly a week passes that does not bring news of some play prohibited by the Censor followed by a round-robin of protest bearing such names as Thomas Hardy, H. G. Wells, Shaw, Pinero, Hewlett, Barker, and Galsworthy. Usually the prohibited play is produced before a private audience, as was the case with Eden Phillpotts's "New Woman," or it is put out in book form as with Zangwill's "New Religion."

The element of confusion arises from the nature of the campaign that has been set on foot by the opponents of what is loosely described as "pernicious" or "demoralizing" tendencies in contemporary literature. Before the Home Secretary there recently appeared an influential deputation of writers and publishers to voice the demand that the laws against the dissemination of "demoralizing" literature should be more rigorously enforced and that additional legislation should be enacted for the purpose if existing regulations are insufficient. The principal spokesman of the deputation was Mr. St. Loe Strachey, editor of the *Spectator*. Now the editor of the *Spectator* has been foremost in denouncing the ultra-realistic swing in contemporary fiction as exemplified in H. G. Wells's "Ann Veronica," against which Mr. Strachey carried on a vigorous polemic. He has also come to blows with the editors of the *English Review*, a publication of good literary standing and radical views, which is in the habit of describing itself as "the Great Adult Review." Mr. Strachey recently declared

the Great Adult Review to be unfit for circulation among respectable people and ejected its advertisements from the columns of the *Spectator*. He immediately became a literary storm centre. Therefore, when the editor of the *Spectator* appears as the head of a deputation to speak on the subject of demoralizing literature, the idea that first leaps to the mind is that here is at least a clear joining of issues between the new realism and the advocates of that older standard of reticence in the written word which is usually described as Mid-Victorian.

But it is not with literature in a real sense that this particular deputation concerned itself. Mr. Strachey and his associates dealt entirely with that class of gutter print which the law designates as obscene and which falls under the jurisdiction of the police in every civilized country. It seems to be agreed that the English laws against the production and distribution of filth of this kind are regrettably indulgent and incomplete, and the Home Secretary, in his reply, promised that the Government would take up and deal energetically with the problem. Now it would be an insult to the entire generation of English readers even to bring the names of men like Wells, Phillpotts, or Granville Barker in connection with so disgusting a subject; and, of course, no such attempt was made. But it was unfortunate that this deputation against "demoralizing" literature should come at a time when conservative opinion is busy attacking the "demoralizing" literature of the Wells, Barker, and Shaw type. It was also unfortunate that the leader of the deputation should be a man who has been in the forefront of the assault on the modern school of British fiction and drama.

Thus if the unthinking public lumps together as "demoralizing" the work of the most skilful men in England and the products of the sewer, it is to a very appreciable extent the fault of much loose arguing on the subject by men who should know better. In the *Hibbert Journal*, writing on the subject of "pernicious literature," Canon Rawnsley is guilty of sad lack of discrimination. From the grossly indecent photograph or broadside he passes on to the moving-picture shows and so to the "nasty novelists":

> Women in this field of license vie with men in writing seductively and realistically, but with no serious purpose, what they are pleased to call the sex problem. These novels, some of them, the publishers tell us, have gone through a million copies. They glorify lust; they preach free love; they mock at marriage as a relic of barbarism, and appeal to pure animal passion and appetite.

Here is an unmistakable slant at the Wells novel amidst a rush of accusation that it would be outrageously unjust to bring into connection with Mr. Wells's art or his motives. It is a case of mixing up two widely different things in such a reckless way as to give the radicals ground for fearing that the two things are really the same in the eyes of these men, and that the present move against obscene publications may be intended as an entering wedge for a crusade against the new realism in literature.

The present outlook is that it will be some time before the subject of realism in art and literature will be freed from the confusion injected into the problem by bringing forward the question of the defence of public morals by the police. The issue will then be brought back to its original form: whether the present state of English literature demands the exercise of some form of censorship, either by a regularly constituted authority, or as has been suggested, by an agreement among the circulating libraries. The history of the English novel since its beginning weighs heavily against any formal censorship. It has in every age been the reflex of the prevailing tone of social life, rough and outspoken with Fielding and Smollet, sentimental and outspoken with Richardson, clean-lipped and sentimental with the Victorians. The danger of a censorship is that it intensifies the spirit of opposition and drives the recusant to extremes. The radical novels may have pernicious tendencies, but their evil, if evil there be, is different in kind from that of the pornographic literature that properly falls under censorship. They do not circulate by the million. They address themselves to people of intelligence, and in the long run intelligent public opinion may be trusted to deal with the standards and motives of literary men.

FRENCH BOOK NOTES.

PARIS, February 14.

Emile Faguet's "Vie de Rousseau" (Société Française d'Imprimerie; 418 pages) came out a year before the bicentenary of its subject's birth (June 28, 1712). Jean-Jacques Rousseau, in life and in death, excites the same perennial flames of controversy. For the general reader, for the beginning student, this life is perhaps the best yet written, the most likely to set him afloat along a true course. Emile Faguet is the full man whom reading maketh, according to Bacon; but he is also the professor of the great Ecole Normale where the clash of alert, youthful minds will not allow of too much inexactness. Besides his seat in the French Academy, he has some forty critical works to his credit, in literary history or literary politics. Not his least fitness for his present task comes from his studies in nineteenth-century 'isms. His standpoint, clearly and deliberately chosen, is that of French Liberalism, and is nearly akin to the traditional thought which alone has a right to the name of Americanism, as in Channing, who, in a way, was a by-product of Rousseau. With all this, Emile Faguet has an easy-going style, and says what he has to say quite fully. This means that his Rousseau is less precious as literature than the Conférences of Jules Lemaître, which set all these Rousseau controversies blazing.

In twenty-five chapters, the book proceeds by little groups of years through Rousseau's troubled life and still more troubled association with the lives of men and women around him; and a twenty-sixth sums up the life in itself. For, although the author is a critic of political philosophy and influences in history, he has kept here to the life of the man Rousseau:

> Rousseau, as he said himself a thousand times, was born good, in this sense, that he was born tender-hearted, generous, charitable—in a word, an altruist. But he was also born without any moral sense, and his education, which was null, or rather very bad, gave him none. I understand by lack of moral sense the absence of all rule of conduct *and of the need of having one*. Never did Rousseau have such a need. He felt that he was good, which was true, and he concluded from it that whatever he did could not but be excellent. This is precisely the state of soul of most men, but with most men it is mixed, and with Jean-Jacques it was absolute. . . . He has no moral sense, but little by little, as he frequents society that is somewhat better, he perceives it, seeks to deaden the thought by sophisms, at bottom suffers horribly from it—and this gives him a direction along two new ways: on the one side, to believe that, being born good, he has been depraved by society, which is half true, and to conclude from it that society is abominable, in which there is some truth also; on the other side, to believe himself obliged to repair his faults by the cult of

virtue and the preaching of virtue. . . . He said of Voltaire something which was very false when applied to Voltaire and was precisely very true, without his ever suspecting it, when applied to Rousseau: "His first impulses are good; but reflection makes him perverse (*méchant*)."

Voltaire and Rousseau made the eighteenth century their own and a great part of the nineteenth, until the reaction came and spent itself, when they resumed their sway for the twentieth:

> Je suis tombé par terre,
> C'est la faute à Voltaire;
> Le nez dans le ruisseau,
> C'est la faute à Rousseau.

There are some new side-books to help us understand this wonderful eighteenth century. "Les Hommes de lettres au XVIIIe siècle" (A. Colin; 310 pages—3.50 francs), by Maurice Pellisson, is one of these. It is really a history of the emancipation of the literary man who, Carlyle said, is the priest of these latter days. From the documents of the time—many of them unpublished, from the Anisson Duperron collection—the author shows the relations of the men of letters with the law, Government, publishers, play-actors; in private life; among themselves (*genus detestabile*, as poor Rousseau knew to his cost, but already fraternizing in their own cafés and, under Madame Necker's guidance, beginning to erect statues to one another); with the world of the court and of the town; with public opinion; and (already) with journalists. There are twenty-six pages of documents in an appendix—and ten entire pages of double-columned index of names of men of letters cited in the course of this valuable book for the history of literature.

"Les Sciences de la Nature en France, au XVIIIe siècle" (A. Colin; 300 pages—3.50 francs), by D. Mornet, is, according to its author, "a chapter of the history of ideas." It really centres in Buffon, who was to his century something like Darwin to the next. The book is systematic, erudite. In a first part, it shows the *épuration* of science or "natural history" before Buffon, in the struggle against the marvellous and against theology; in a second part, the organization of science in systems, the Buffon quarrel, and the organizing of experiment; in a third part, the diffusion of science in the triumph of natural history, its art of pleasing, and the consequences. There are twenty pages of valuable bibliography and fourteen of text-references. Dr. Mornet, doctor of letters and university professor, has written before of nature-sentiment in France, from Rousseau to Bernardin de Saint-Pierre.

"Les Moeurs et la Vie privée d'autrefois" (Calmann-Lévy: 390 pages—3.50 francs), by Humbert de Gallier, is a first portion of alert, capable studies of private life and habits of living under the old régime; and, naturally, it looks closely into the eighteenth century. The present book begins with "how they spent their money"—gentlemen's houses in town and country, and peasants' houses, their size, furniture, rent, comfort, and luxury; clothing, monsieur spending more than madame, and Queen Marie Antoinette in muslin and linen gowns (unavailing Rousseauism); and then hunting and gambling and mistresses and debts. "How they married" is explained among *bourgeois* (the middle classes), the people, and the nobles. They married more then than now; and, because the family was everything and the individual little, marriage was at once more serious and more businesslike, with love, if it came at all, following rather than preceding; but marriage presents and ceremonies were ample. "How they were served"—the treatment of the servants and how these treated their masters, those who were of the family and those who were only lackeys—leads the author to the conclusion that "the lot of domestics was better then than now." "How they took care of themselves," with all their healers and swift epidemics and still more sudden remedies, points to a contrary conclusion, in spite of every man being his own doctor nowadays with an abundance of patented medicines. This book also has a laudable index of names cited, eighteen double-column pages.

"Trois Drames de l'histoire de Russie" (A. Colin: 300 pages—3.50 francs), by the late Vicomte de Vogüé, gathers into one small volume three dramatic studies in Russian history, with its outlandish development of the eighteenth century. The tragedy of Peter the Great's son, Mazeppa in legend and history, and the lightning change of régime at the death of the great Catherine of the philosophers, are good samples of the literature of a writer who introduced the Russian soul to Young France, whose pen was dipped in Chateaubriand's inkstand, and whose own lofty soul was long supposed to have diffused the new spirit among his countrymen. It is not sure that his words are yet dead.

How Germany rebounded from eighteenth-century philosophy and *doctrinaires* is shown in "La Littérature patriotique en Allemagne—1800-1815" (A. Colin: 310 pages—3.50 francs), by G. Gromaire. It begins with the literary patriotism which was the legacy of the eighteenth century, and follows the course of romanticism until the fatal date of Jena. Then, year by year, the author portrays the consequences of that shock—Austria and the campaign of 1808; the revival of Prussia from 1810 to 1812; Arndt, who merits a whole chapter; the romantics now at their full; a whole chapter again to Körner; and then, from 1813, the secondary poets and people's songs. With 1815 the book stops, not because the patriotic movement of German minds ceased, for, on the contrary, it only then began sweeping the whole people within its train until the nation came into existence. But in 1815, "with the disappearance of Napoleon, the situation of Europe changes." The last verses of the book are from Ditfurth's elegy to the parting conqueror, for even after Jena Germans were found to recognize that it was Napoleon who had brought the Fatherland to a consciousness of self. "It is the beginning of the Bonapartist legend which has spread throughout Europe—not excepting Germany." It was Goethe's Epimenides Waking; and the French writer has the perspective needed to narrate it.

Correspondence

WEEMS.

To the Editor of The Nation:

Sir: There is so little accurate information about Mason Locke Weems, the first to print the story of Washington and the cherry tree, that a summary of the facts which the writer and a few other persons interested in the matter have unearthed in the past few years may be welcome in your columns.

The date of Weems's birth, as shown by family records in the absence of any entry in the parish register, is October 1, 1759. The place was the family estate of Marshes Seat on Herring Bay, Anne Arundel County, Maryland. The next established date about him is his arrival in Nantes in 1782, as shown by a letter to Franklin asking for passports for England. In 1784 Franklin's correspondence and John Adams's show that Weems tried to procure ordination without taking the oath of allegiance to the British Crown. Finally an act of Parliament (24 George III, cap. 35) allowed him to do this, and he was ordained a deacon on September 5, 1784, by the Bishop of Chester, and on September 12, 1784, a priest by the Archbishop of Canterbury.

These incidents and Weems's subsequent experiences as a rector in Maryland from 1784 to 1794 have been well set forth in "Parson Weems" (Baltimore, 1911), by L. C. Wroth, to whom credit is due for discovering the dates of the ordination and for gathering considerable material from the manuscript diary of William Duke and the Allen manuscript, both in the Maryland Diocesan Library. These show that Weems early began his work of selling books, even before his marriage to Fanny Ewell on July 2, 1795, at Belle Air, near Dumfries, Virginia, which place became from that time his home.

For the period from 1796 to 1802 Weems was chiefly employed by Matthew Carey, and continued to be more or less so for many years, as is shown by the letters preserved by Carey's successors, Lea & Febiger. From 1802 to 1808 he also did much work for Caleb Wayne, who employed him to push the sale of Marshall's "Life of Washington." Much of this correspondence

is preserved in the Dreer collection of manuscripts in the Pennsylvania Historical Society.

As soon as Washington died Weems brought out a small pamphlet on Washington and added material as it came to him, until in the fifth edition, published in 1806 in Augusta, Georgia, he inserted the anecdotes of the cherry tree, the seeds, and the rest of Washington's youth. Only one copy of this edition has been known of late years, and that, though in the possession of Paul Leicester Ford before his death, seems now to have disappeared.

There is no direct evidence in favor of the authenticity of these anecdotes. Weems, indeed, knew many intimate friends of Washington, but that he should have, as he says, kept the stories secret for twenty years is incredible. A better explanation has come to me from a grandson of Weems, who had it from his father. It is that the whole thing was suggested by a similar occurrence to Weems's eldest son, who was born in 1799. He cut down a Pride of China and confessed, but, sad to say, according to my informer, he received not blessings, but a sound thrashing. The seed story is certainly from James Beattie's account of the youth of his son, James Hay Beattie. Weems never regarded himself seriously as an historian, but as a teacher of morals, and knew that dialogue and anecdote were unsurpassed in driving home a moral lesson.

The remainder of Weems's material about Washington is derived from popular tradition in the South (especially in the vicinity of Mount Vernon, where he frequently occupied the pulpit of Pohick Church, as is shown by letters and by Davis's "Travels of Four Years and a Half,") or from well-known accounts, particularly the *Annual Register* and its plagiarists, Gordon and Ramsay.

The rest of his time he spent selling books throughout the States from New York to Georgia, and he died in Beaufort, S. C., May 23, 1825. He was first buried in Beaufort in St. Helena's Churchyard, but later removed to the Ewell burial ground at Belle Air, as was ascertained some years ago by Mr. G. C. Round, the present owner of the property, from interviews with old persons in the neighborhood. His grave in the southeast corner of the burial ground is still unmarked, though its occupant can well be called the creator of the current conception of Washington, and the author of the best-known hero tale in American history.

COLLEGE ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: May I be permitted through your columns to add one more suggestion to the mass of variegated counsel under which college teachers of freshman composition are now almost buried? Most of the discussion has clearly depended upon the definition of the purposes of such a compulsory course in writing. No one can deny that daily themes do not create authors; but the Conservatives have replied to the Progressive—not to say Radical—Professor Lounsbury that nobody is trying to turn freshmen into authors. Compulsory composition is supposed to train students in the correct and accurate use of the English language. This sounds well, but the proof of the pudding is in the eating; and it is the almost universal testimony of college teachers that college seniors are in the vast majority of cases illiterate. A senior who had passed creditably in prescribed composition once met my criticism that a thesis of his was devoid of punctuation with the naïve statement that he had not had time to put in the commas, and did not think it mattered much. If prescribed work in composition can neither foster talent nor create competence, it certainly has little ground upon which to plead immunity from criticism.

But let us consider the problem which the teacher of college English has to face. His freshman students for the most part cannot spell. Their notions of grammar are often either non-existent or hideously warped. Their vocabularies are infinitesimal, and, which is worse, their use of the few words that they dare employ without blushing is so loose as to defy definition. In preparation for college—note the irony of the phrase—they have written a few perfectly meaningless little essays on "Dr. Johnson and his Club" or "Was Hamlet Mad?" Thus the whole business of writing English has become, not a matter of accurate self-expression, but a frankly artificial exercise of ingenuity, without method or purpose. All this the college teacher must fight against, and yet, out of respect for academic traditions, and also in consideration of the saving remnant to whom the English language has not become a snare and a delusion, he must make his work "advanced." He cannot line up his class and institute a spelling-bee; he cannot take as a text-book a primer of grammar. In other words, he must try to reconcile two irreconcilable elements. A German teacher who had his classes read "Faust" the day after they mastered *Der-die-das* would justly be condemned; yet it is with an equivalent amount of straw that the college teacher of prescribed composition is expected, in the absurdly brief space of a year, to produce presentable bricks. It is not surprising that, as a general thing, he fails.

No reformation of college work in writing can hope to alter materially these conditions. The change must come first of all in the schools; for though a college student may be in dire need of a primer, he is beyond the stage when he is likely to profit by it. When the schools can supply more spelling than grammar, even if Dr. Johnson and "Hamlet" suffer thereby, which it has yet to be shown that they will, the college can shape its work to the requirements of students who are fitted to pursue it.

HENRY ADAMS BELLOWS.

University of Minnesota, February 21.

A BAVARIAN SCHOOL OF HOUSEKEEPING.

TO THE EDITOR OF THE NATION:

SIR: As the train pulls into the little station of Miesbach, Bavaria, one of the interesting sights that strikes a stranger is the large red brick building standing on a high slope some distance away, and surrounded by trees and hedges which give it the appearance of a stately baronial estate. It is that of the famous School of Housekeeping, which graduates yearly some fifty pupils or more. The inside of this substantial-looking house shows its proximity to Munich, for the simple ornamentation, the tasteful coloring, and the comfortable furniture bespeak its nearness to the great art centre of Germany. The school is fitted up in the most approved and modern fashion as to heat, light, electricity, etc.

The large dining-room, with its soft tints of blue and white, its numerous small tables, covered with spotless linen and the prettiest of silver and glass, looks more like the dining-room of a well-kept hotel than of a school.

The kitchens are spacious, immaculate in their white tiling, and fitted up with every possible convenience. The preserve-rooms fairly glisten with jars of strawberries, pears, plums, grape-jam, marmalade, asparagus, beans, peas, tomatoes, sweet and sour pickles, etc., all grown and put up by the pupils of the school.

There is a practical and a theoretical course, both of which are obligatory. The practical course includes: (1) cooking, baking, and preserving; (2) washing and ironing; (3) housework, viz., bedmaking, sweeping, dusting, knowledge of the care of hardwood floors, and of blanket cleaning and summer storing; (4) flower, vegetable, and fruit growing; (5) poultry and bee-keeping; (6) sewing, dressmaking, mending, and repairing. The theoretical course comprises an advanced course in botany, chemistry, physics, political economy, and household-bookkeeping. The science of nourishment is also taught, as is a proper knowledge of the different cuts of meat, their average cost and weight, etc.; also "first aid to the injured" and how to prescribe for the simpler ailments in the ordinary household, and lastly the elementary methods of caring for the health and character of children.

The outdoor life presents equally wholesome and desirable surroundings. Here all kinds of vegetables, flowers, and fruits are grown, tended in the most scientific fashion by the pupils of the school. Lettuce and cauliflower, for instance, are grown under the large glass bells found so useful in the sewage market gardens about Paris, and the poultry, ducks, and geese are looked after with the utmost care and knowledge, the large result of which is a commendable supply of fresh eggs and marketable birds every week.

The girls take turns each week in attending to the various household duties; a certain number taking charge of the kitchen, planning all the meals, buying and paying for all the food, and preparing and cooking it for the whole school. Another set of pupils do all the sweeping and dusting, all the silver and brass polishing, take note of the condition of the floors, and see that fresh flowers are put in their accustomed places. Others, in turn, attend to the bees and poultry, and still others do the gardening. The instruction in sewing, mending, dressmaking, millinery, and embroidery is rich in results, and teaches method and thrift in buying clothes, and care in keeping them neat. Every detail of the daily housekeeping is thought out to a nicety, and as few maids are kept in the school, the pupils are made responsible for the proper and efficient care of the entire household. The indoor life prepares pretty solidly for

the subsequent duties of housewife and mother. It is safe to say that when these girls have their own establishments to manage, there will be neither culpable negligence nor ignorance.

MARY PARKINSON.

Munich, Germany, February 15.

THE DEATH OF LYDGATE.

TO THE EDITOR OF THE NATION:

SIR: John Metham's romance of "Amorys and Cleopes," soon to be published by the Early English Text Society, gives us closer limits for the death of the monk, John Lydgate. Writing, as he tells us in his "Envoy" in 27 Henry VI (1 Sept., 1448-31 Aug., 1449), Metham regrets that Chaucer and Lydgate are both dead. As the Pipe Rolls give the record of the payment to Lydgate of his pension up to Easter, 1449, the date of his death should seem to be fixed between Easter and September 1, 1449. Metham lived at Norwich, and had been a scholar at Cambridge. As a resident of East Anglia, he is entitled to full credence on such a matter as the death of the monk. His references to the monk's work show that he was acquainted with the very latest production of Lydgate's pen.

So far as I know, Metham's evidence has passed unnoticed in print. The recent article on Lydgate, in the Encyclopædia Britannica, quotes Metham's opinion of Lydgate's writing, but follows the Dictionary of National Biography in retaining 1451 as the date of the death of the Monk of Bury.

New Haven, Conn., February 23.

DIPLOMATIC SERVICE EXAMINATIONS.

TO THE EDITOR OF THE NATION:

SIR: The pamphlet of instruction issued by the Department of State, entitled "Information Regarding Appointments and Promotions in the Diplomatic Service of the United States," provides that "the object of the oral examination shall also be to determine the candidate's general alertness, general contemporary information, and natural fitness for the service, including mental, moral, and physical qualifications, character, address, general education, and good command of English." But the candidate is carefully asked if he is rich, or whether he depends upon his earnings for his living expenses. The Secretary of State recently, at a meeting held in New York, stated that it was impossible for the Department to recommend for appointment in the Diplomatic Service any but rich men. It would therefore seem that "general fitness for the service" included, among other qualifications, a private fortune. Does it also include political influence? Civil service examinations are supposed to be conducted on an impartial basis and to show no favor. Perhaps, however, the backing of a strong Senator or two may be included under "moral fitness."

Again, the pamphlet mentioned above provides: "The names of candidates will remain on the eligible list for two years, except in case of such candidates as shall within that period be appointed or shall withdraw their names." But if a candidate fails to qualify in the oral examination—that of "general fitness"—he is informed by the Department that "under the rule" he is not eligible to further designation or examination, and that he might as well drop out of the running. This in the face of the provisions of the regulations made by the President, November 26, 1909. What is this rule, and who made it? How does it take precedence over the instructions of the President and over the "Information" issued by the Department itself?

Literature

ARCTIC VOYAGES.

In Northern Mists: Arctic Exploration in Early Times. By Fridtjof Nansen, G.C.V.O., D.Sc., D.C.L., Ph.D., Professor of Oceanography in the University of Christiania. Translated by Arthur G. Chater. In two volumes, with frontispieces in color and over one hundred and fifty illustrations in black-and-white. New York: The Frederick A. Stokes Co. $8 net.

From J. Scott Keltie, we are told, came the impulse which led Dr. Nansen to the production of the *magnum opus* now before us. Asked to contribute an account of Arctic voyages to Dr. Keltie's series of books on geographical exploration, he accepted the commission and soon found himself involved in a sea of mingled myth, fiction, and history almost as hard to navigate as the dark, curdled outer waters of ancient and mediæval legend. But he has fought his way through, and no less an authority than Sir Clements R. Markham, in the *Geographical Journal* for January, has given him credit for drawing the veil from the mystery of early Arctic history, as he had previously drawn it from the mystery of Arctic geography. Confessedly not a master of the classical languages, he has called Amund Sommerfeldt to his aid in searching out and translating the numerous passages in ancient and mediæval Greek and Roman authors bearing upon his subject, as he has gone to Prof. Alexander Seippel for help with his Arab sources. We mention this chiefly as a suggestion to college and university history departments which are guilty of encouraging students to believe that they can fit themselves satisfactorily for "original research" in history with no broader linguistic equipment than a smattering of two or three modern languages.

Dr. Nansen has carried his work through with a noble enthusiasm. The whole story, he says, is a magnificent illustration of the power of the unknown over the mind of man. "Nowhere else have we won our way more slowly, nowhere else has every new step cost so much trouble, so many privations and sufferings, and certainly nowhere else have the resulting discoveries promised fewer material advantages—and, nevertheless, new forces have always been found to carry the attack farther, to stretch once more the limits of the world." The first three chapters are given to the ancients. Here Pytheas of Massilia, of course, towers above all others, though distance has unfortunately blurred the definite outlines of the tower, as in the well-known illustration of Lucretius. Little as the ancients grasped the possible meaning of his discoveries, however ready some of their historians were to accept his relations as true, enough has filtered down to justify Dr. Nansen in pronouncing him "one of the most capable and undaunted explorers the world has seen." To break out of the Mediterranean regions by sea as early as the time of Alexander the Great, and make his way to the Arctic Circle, coasting along northern Gaul and Germany, and bringing to the then civilized world its earliest first-hand knowledge of Great Britain, the Scottish Isles, Shetland, and Norway, was to set a pace which, all things considered, has not since been equalled. But the world of his time could neither mentally appreciate nor physically appropriate his discoveries. Dr. Nansen accepts fully the identification of the "Thule" of Pytheas with Norway, specifically combating the objections which Karl Müllenhoff raised against that view a few decades ago.

Later antiquity and the earlier Middle Ages made no real progress in northern research, being content merely to "chew the cud of knowledge that had been collected in remote antiquity," and that mostly at second hand, from the later Roman authors. The first mediæval contribution of serious import was recounted by the Roman historian Cassiodorus, but has reached us, unfortunately, only through the Goth Jordanes, in his "Origin and Deeds of the Goths." The information concerning the North contained in this work Dr. Nansen believes to have come largely from the Norwegian King Rodulph and his men, the reality of whose visit to Theodoric, King of the Goths, there seems to be no reason to question. The next authority of weight is the Byzantine Procopius, who had ample opportunity to gather first-hand information concerning the North from the northern warriors enlisted under Belisarius in the armies of the Eastern Empire. But we have not space to follow Dr. Nansen's chapters in detail. A point of prime interest to many readers will be his treatment of the much discussed discovery of America by the Norsemen. He holds firmly to the belief that such a discovery was actually made; but after his relentless wiping from the slate of all the well-known lore of "Wineland the Good," and other legends clinging around the name of Leif Ericson, one wishes that he had given a more definite statement of his positive reasons for accepting the dis-

covery as a fact. The very name "Wineland" is an accretion of far later date than the supposed discovery, and all the tales of wine and wheat found in such abundance by Leif and his men are traceable to familiar legends of classical antiquity, making their first appearance in Norse literature only in the saga of Eric the Red, at the close of the thirteenth century. Readers of "The Discovery of America," by John Fiske, will remember the high historical standing which he assigned to this saga. "That document contains unmistakable knowledge of some things which mediæval Europeans could by no human possibility have learned, except through a visit to some part of the coast of North America further south than Labrador or Newfoundland. It tells an eminently probable story in a simple, straightforward way, agreeing in its details with what we know of the North American coast between Point Judith and Cape Breton." Mr. Fiske made no difficulty of identifying the "self-sown wheat" of the saga as Indian corn, and took this and the mention of the vines as evidence that Leif's visit should be located not farther north than Massachusetts Bay. But, of course, he never accepted the alleged discovery of "Norumbega," at Watertown, and his arguments against the theory of any actual settlement by the Norsemen are keen and unanswerable.

In Nansen's view, however, Eric's saga "contains scarcely a single feature that is not wholly or in part mythical or borrowed from elsewhere." For the wine and the wheat of the saga we are to look not to the fields and forests of Northeastern America, but to ancient legend, gathered up in the pages of Isidore of Seville, whose description of the "Insulæ Fortunatæ" gradually worked its way into the North and inevitably connected itself with the mixture of myth and history which lay at the basis of such literature as the saga of Eric the Red. Professor Fiske could not see why the part of Eric's saga which deals with Greenland should be accepted and the rest discarded: "What shall be said of a style of criticism which, in dealing with one and the same document, cuts it in two in the middle and calls the first half history and the last half legend?" ("The Discovery of America," I, 213). But Nansen remarks in a footnote: "The beginning of this saga, dealing with the discovery of Greenland by Eric the Red, is taken straight out of the Landnámabók, and is thus much older." But for the loss of historic value Dr. Nansen finds solace in increased admiration for "the extraordinary powers of realistic description in Icelandic literature. In reading Eric's saga one cannot help being struck by the way in which many of the events are so described, often in a few words, that the whole thing is before one's eyes, and it is difficult to believe that it has not actually occurred." Professor Fiske took this very quality as a guarantee of the truth of the narrative, which to him read "not in the least like a fairy-tale, but often much like a ship's log." But Nansen adds to the words above quoted: "This is just the same quality that characterizes our Norwegian fairy-tales: all that is supernatural is made so natural and realistic that it is brought straight before one. The Icelanders created the realistic novel; and at a time when the prose style of Europe was still in its infancy their prose narrative often reaches the summit of clear simplicity." Dr. Nansen clinches his extended discussion of the whole matter with a formidable array of twenty-two numbered paragraphs, but it would be rash to predict that "the last word has been said." In the field of historical argument the *clôture* is hard to apply. Dr. Nansen's views on the subject were uttered in an address before the Royal Geographical Society, in November, and any who have access to the *Geographical Journal* (December) will be interested in its account of the discussion which followed, in which the participants were Lord Curzon, Sir Clements Markham, and G. M. Gathorne-Hardy, Lord Curzon betraying the strongest signs of reluctance to give up any material part of the story of "Leif the Lucky."

Mediæval cartography, Arab geographers, compass-charts, the maps of Claudius Clavus, and fifteenth-century maps are among the various subjects which, along with accounts of actual or alleged voyages of discovery, go to make up a work which it is safe to predict will see no rival in the lifetime of the present generation.

CURRENT FICTION.

The Progress of Mrs. Cripps-Middlemore. By Gerard Bendall. New York: John Lane Co.

A Mr. Hugo Street, reviewer, makes his casual appearance in these pages, and leaves behind him at least one memorable utterance. His journal, he complains, is "literally inundated" with fiction, and he has been compelled to invent a means of relief: "If a book is slangy, middle-class, vulgar, we call it a little effort in the style of Dickens; if full of cheap cynicism and maudlin sentiment, a contribution after the manner of Thackeray; if the writer appears to have been to school, and to have a slight acquaintance with the classics, we say an essay in the well-known style of Thomas Love Peacock." From this unexpected conjunction of Peacock with Dickens and Thackeray, and from the evidence of the present book, we should say that Mr. Bendall has been accused of being "Peacockian." So he is, in a sense, and we take this to be a unique distinction in this day. He bears quite as close a relation to Peacock as Mr. De Morgan to Dickens, or Mrs. Watts to Thackeray. Why should not Mr. Hugo Streets be permitted to call attention to so interesting a fact? The group of persons who revolve about the bland figure of Mrs. Cripps-Middlemore are as carefully chosen types as the intimates of Crochet Castle or Gryll Grange; and there is no doubt as to the lineage of the suave, ironical style in which the story is told. The dialogue often amounts to discourse rather than conversation, and the range of topics touched upon is wide. But in one respect—and this gives the book its peculiar tone—Mr. Bendall seems to derive from an older master than Peacock, namely, the Reverend Laurence Sterne. "The Philanderers" would have been a good title for this story, if it had been available. These persons, young and old, involve themselves in an extraordinary series of amatory situations, with which it is not professed that passion has anything to do, unless as the man about town understands the word. There is a great deal of insinuation and double meaning—a method more provocative than calling a spade a spade, and less in accordance with the traditions of the English-speaking race.

The Heart of Us. By T. R. Sullivan. Boston: Houghton Mifflin Co.

Love-making in Boston, with excursions into a rigidly respectable Boston Bohemia of Temple players to temper the decorum of the Back Bay, supplies this tale with its somewhat slender thread of romance. Upon that thread is strung a deal of circumstantial evidence to prove the story's right to a Boston habitat. The evidence includes much talk, seasoned with learning in the shape of quotations from the Latin poets, and culture in the guise of allusions to more modern classics. There are hints also of a staid and sober philosophy such as might ripen in the precincts of the Common and take the air upon Commonwealth Avenue.

The hero is a young man of Beacon Street lineage, whose chief claim to the reader's interest is his possession of a soul strong enough to prefer banking to play-writing, in spite of having scored an initial success as translator of a French piece and a subsequent failure with a play of his own devising. This superiority to the weakness of lesser men comes very near losing him the love of an excellent New England young woman with "views." And there you have the plot and the story. An elderly mentor and another excellent New England young woman of the innermost Brahmin circle assist the development with their several gifts of experience and feminine guile, and the little party

of Bohemians assemhled around the leading comedian of the Temple company provide the lovers with a curtain-raiser and a finale to their own drama. There are touches here and there of something which might almost be life, might almost he charm—but just misses the mark.

The Believing Years. By Edmund Lester Pearson. New York: The Macmillan Co.

These are stories retold, in an altered form, from a series puhlished in the *Outlook*. They are very real reproductions of the mind and activities of the ordinary small hoy. He is not the hoy of Kenneth Graham, nor of Rohert Louis Stevenson, nor of Mrs. Ewing, hut the unvarnished man-child living in a somewhat unvarnished surrounding, having feelings and experiences which pertain less to the castle-huilding, hero-worshipping child than to our own familiar little Toms, Dicks, and Harrys. The appeal is perhaps less to the lover of universal childhood than to the rememherer of his own. Any man who has hated arithmetic, has loved fishing, egg-hunting, playing Indian, or has saved his pennies to go to the circus will follow reminiscently the vacation days of Sam and his fellows. Here are photographs of hoyhood as it used to he when one was a hoy in a New England coast town—a hoyhood not unconcerned with knightly adventure, hut having also largely to do with strange messes cooked out of doors, with wriggling moist treasures, and experimental huryings and up-diggings. The stories are pleasantly told, simply, with a twinkle of the eye and with a climactic prick at the end of each one.

The Toll Bar. By J. E. Buckrose. New York: G. P. Putnam's Sons.

Whether of earlier or later origin, this is a disappointing story from the author of "Down Our Street." The rich and quiet humor, the tenderness, the simplicity of that delightful hook are altogether lacking here. Instead we have a melodramatic plot, rudimentary characterization, and a general straining for effect. The chief persons are pale caricatures, relics of a cruder age of fiction. Daniel Oldroyd, the landlord of the Toll Bar Inn, is an inhuman monster who cannot be made credihle hy the assertion that "he stood on the bedrock of things where men's instincts generate and mature while their souls remain in emhryo." He is a mere hogey. And his wife, with her pallor, her impassivity, and her interminahle patchwork, into which she stitches the substance of a lifelong tragedy, is at hest no hetter than a stage presence. The young hero, Richard, supposed to be laboring under an equally tragic curse, is nothing more or less than a selfish young dream-cuh, a paper-doll Hamlet. What if Oldroyd had murdered Richard's father? Richard need not on that account have taken to himself the rôle of emotional jumping-jack, at poor Alice Oldroyd's expense: his sentimental reactions hecome tiresome to the point of nausea before we are done with them, and we wish heartily that Oldroyd's daughter would send him ahout his business. But her part is that of the modern Griselda, and she plays it not without dignity, the only real figure in a world of not very skilfully manipulated puppets.

LIFE OF FREDERIC HARRISON.

Autobiographic Memoirs. By Frederic Harrison. New York: The Macmillan Co. 2 vols. $7.50 net.

Mr. Harrison sets for a motto on his title-page, *Vivre au grand jour*, and whoever reads his two volumes will recognize its fitness: for from early manhood until his eighty-first year, in which he completed this autohiography, Mr. Harrison has always heen living in hroad daylight. He has heen among the first to detect and to welcome the currents of fresh thought and to enlist in the vanguard of new causes.

To epitomize the suhstance of these reminiscences would require a closely-packed essay: but we can at least indicate their quality. They are as frank as Mill's—an ohvious virtue; and if they do not leave so deep an impression upon us as Mill's, it is hecause we never feel that the tragic conflicts of life ground as poignantly into Mr. Harrison's soul as we know they did into Mill's. Mr. Harrison, like Ulysses, seems to have habitually taken the thunder and the sunshine with a frolic welcome; and at eighty, he declares himself an optimist. He has seen the world improve greatly during his life-time: but he admits that its present lack of faith in religion is the cause of many evils, and that the growing dishelief in the family is "the most dangerous symptom of our age."

Mr. Harrison's method as an autobiographer is somewhat mixed: for he intersperses chapters of straightforward narrative with others devoted to special topics or general information. Thus he interrupts his account of his education, in order to discuss the reforms introduced into Oxford sixty years ago and to contrast old Oxford with that of 1910. So, too, he digresses into a survey of the Crimean War, or of India during the Mutiny, or of a dozen political and social issues. If this method, on the one hand, prevents a perfect fusion of autohiographic material, it permits, on the other, the introduction of much valuable material, such as his gallery of pen-portraits of Mill, Bright, and the politicians of 1860-70, or his paper on London life during that decade, or his description of French celehrities. All this would convince any doubter that the memoirs are thoroughly documented; and in addition, Mr. Harrison furnishes appendices containing sections of his correspondence, extracts from his diary, and even from his pamphlets and other sources.

As is often the case with honest autohiographies, so with Mr. Harrison's, the story of his childhood and formative years is the most interesting of all. Besides an unusually inquisitive mind, he had the interest that a healthy hoy should have in unhookish things. But he preferred normal exercise to athletics. Though he began early to speculate on the ultimate facts of life, he seems never to have suffered any spiritual pangs, much less such a wrench as his elder contemporaries, Clough and Arnold, experienced, in breaking away from the religious traditions in which they were hred. Mr. Harrison became a rationalist, and, when he reached maturity, a Positivist. It is as the chief British disciple of Comte, indeed, that he has heen latterly most easily classified, and these volumes will need to he referred to by whoever wishes to follow the fortunes of Comtism during the last half-century.

But although Mr. Harrison himself naturally regards this as the most important concern of his career, there were many others which will appeal quite as strongly to most of his readers. Without ever sitting in Parliament, he was behind the scenes in more than one political campaign. Politicians of hoth parties trusted him, and he had intimates among churchmen and dissenters, Roman Catholics and agnostics. By the accident of early schooling in France, he came into close sympathies with the French, and in middle life he more than once served the London *Times* as special correspondent on the occasion of French political crises. Especially interesting are his pages about the birth of the repuhlic and the monarchist plot of 1877. Mr. Harrison had a way of turning up on the Continent just at the right moment to report a political upheaval. He kept copious diaries and wrote voluminous letters, from some of which he has drawn vivid passages. One might fill a page with hright anecdotes and epigrams. Gamhetta's definition of Blowitz, for instance, is worthy of Bismarck's wit: "Il a tous les vices—il est Juif, Bohême, Catholique, et décoré." To which Blowitz might have replied that the Paris correspondent of the *Times*, if he would succeed, must be all things to all men.

These "Memoirs" confirm the impression that Mr. Harrison's talent is that of the puhlicist—or pamphleteer, as he would have been called in the Georgian era. He mentions some eighty essays, hesides his lectures and addresses, and

letters and discussions in the newspapers. His volumes, with the exception of his short biographies of Cromwell, William the Silent, Ruskin, and Chatham, are mostly collections of articles which first appeared in the magazines. He has displayed remarkable versatility, but that alone would not account for the impression he has made. While he has treated many themes, he has put himself into each essay. He has written, as he has worked, to promote great causes. His love of fair-play, his sturdy honesty, his belief in liberty, and his courage flow through all his writings. He has a refreshing frankness in giving his downright opinions. Even on the emotional side he is not deficient—witness his tributes to Ruskin—although, like many another Englishman, he usually prefers to show the world his intellectual side only. But it is his gift of pungent speech that has carried his voice far. He criticised English manners, morals, and men with perfect independence and more than cleverness: and that the English like, if it be done by one of themselves and not by a foreigner. He formed his opinions, as he took his views, at first hand, and always in broad daylight. His "Memoirs," like his varied tastes and enthusiasms, should appeal to diverse readers.

Addresses Delivered in the University of St. Andrews. By Sir James Donaldson. Printed for the University by T. & A. Constable.

The traditional English attitude towards education appears to be founded upon the conception that it is primarily a private matter, with which the state ought to interfere as little as possible. To care for it is one of the proper functions of the family, or of voluntary private initiative. Of course, the church early took a hand, but mainly for the sake of providing itself with trained servants. Thus its activity was directly comparable to that of the family in the same field. Scotland, however, looks at things from quite a different standpoint, at least since the Reformation. It has to thank John Knox for a system of popular education based on a conception of the duty of the state which is a commonplace also in America. When the state in Scotland disestablished Romanism, it naturally possessed itself of the academic ecclesiastical foundations, but in the course of the juggling back and forth from which that unfortunate realm suffered for more than a century, the endowments of the universities were in large measure diverted from their original purpose. The state assumed authority over the universities, and responsibility for their maintenance. But Scotland became politically united with England, and to the Parliament at Westminster, thoroughly English in traditions and sentiments, the Scotch universities must henceforth look for supplies. The result was lamentable. The Englishman held a different theory from the Scot about the duty of the state towards education, and declined to recognize that in taking over the rights and emoluments of the northern realm he had inherited responsibilities other than those he acknowledged in his own country. The Scotch universities were left to poverty and hard work. From this untoward condition they are only just now emerging, and that with but grudging assistance from Parliament, upon which they directly and willingly ac knowledge themselves to be dependent.

The University of St. Andrews, the oldest of the Scotch foundations, has just celebrated with great scholastic impressiveness its five hundredth birthday. At the same time its well-beloved principal, Sir James Donaldson, completed the twenty-fifth year of his extremely able administration. As his own contribution to the quincentenary celebrations he has republished in a handsome volume the series of public academic addresses with which he has opened the successive years of scholastic work. In each he reviews briefly the history of the past year, and in many he sets forth with considerable fulness, and in charming manner, some item in the earlier annals of the University, or his own views about scholastic ideals of the present and future. The result is a volume of much more interest than a formal history could have possessed, because of the greater intimacy to which the reader is admitted. The American reader will find it unique in affording him an inside view of the wide difference of ideal, standpoint, method, and character between Scotland and England. Principal Donaldson's theories of education are most sane and virile, and much in point for America as well as for Scotland. Incidentally also the temperamental kinship between American and Scotchman, as contrasted with the lack of it between American and Englishman, can here be further observed; and much of the recent history of the internal development of St. Andrews is strangely like that of a New England college a generation ago. But no American faculty of equal size could measure up in scholarly achievement to the remarkable faculty of St. Andrews.

Political and Ecclesiastical Allegory of the First Book of the Faerie Queene. By Frederick Morgan Padelford. Boston: Ginn & Co. 75 cents.

That there was a certain amount of political allegory in Spenser's great poem, even in the first book, has, of course, always been recognized. A suggestion of Spenser's eighteenth-century editor, Upton, that the Red Cross Knight might be identical with Henry VIII as Defensor Fidei, led J. Ernest Whitney, in the Transactions of the American Philological Association for 1888, to develop the theory that there was a general correspondence of the kind just indicated. Professor Padelford takes up this theory again but carries it much further, inasmuch as he tries to discover in the political and ecclesiastical history of England during the Reformation the key to every character or incident of any importance in the first book of Spenser's poem—so that this book becomes under his interpretation a detailed allegorical history. To drive a theory as hard as this arouses in the reader a spirit of incredulity, which, we believe, is not likely to be allayed on a closer examination of the evidence. For, according to this supposition, in planning the first book (which alone is considerably more than half the length of "Paradise Lost"), Spenser set himself the task of inventing a series of imaginative incidents which should constitute a continuous moral and religious allegory, itself of an intricate character, and at the same time an allegorical reflection throughout of the historical development of the English Reformation. That he intended the first is, of course, beyond dispute, and it is merely a question of the second. Now, on the face of it, such a procedure is highly improbable. There is nothing similar elsewhere in the history of allegory, and the enterprise is one from which even the most heroic spirit might have shrunk. As a matter of fact, Professor Padelford, himself, breaks down at the Cave of Despair and the reader shares his sense of exhaustion. This is bound to be the fate, we are convinced, of any commentator who endeavors to hold down the poet to so complex and rigorous a scheme.

Spenser has told us that Belphœbe is intended to represent Queen Elizabeth in certain aspects, yet no one would maintain that much—perhaps most—that is related of this heroine has any allegorical significance; but, if this is true of a character of the later books, why should we expect such rigorous consistency in the first book, even though the allegory here is, obviously, more systematic? In matters so vague it is as hard to combat as to defend such identifications as those proposed by our author: Sansfoy with Wolsey, Sansloy with Gardiner, Sansjoy with Pole, Sir Satyrane with Cranmer, the lion with Thomas Cromwell. In the case of Sansjoy, as Professor Padelford acknowledges, the identification has little force; and there are serious flaws in that of Sir Satyrane, for Cranmer was not of illegitimate birth, and Sir Satyrane should have lost his life in the defence of Una, if the two were identical. Furthermore, whatever Gardiner's faults may have been, we do not see any appropriateness in applying to him the name, Sansloy, or "Lawlessness."

The identification of Wolsey with Sansfoy of necessity rests on considerations of the vaguest kind, for the character appears in only one passage of eight stanzas. It seems to us, moreover, that if Professor Padelford's theory is correct, he is called on to supply the historical key to such minor characters as Fradubio and Fralissa, a task which he does not attempt. Finally, we do not believe that Spenser's appeal to the muse of history, apparently, rather than to the muse of epic poetry in the Prologue to this first book, affords any support to our author's thesis. In the introductory letter to Sir Walter Raleigh, Spenser designates the great epic poets, Homer, Virgil, Ariosto, and Tasso as "poets historicall." This reveals sufficiently his point of view.

Tennyson and His Friends. Edited by Hallam, Lord Tennyson. New York: The Macmillan Co. $3 net.

It is a matter of taste whether the reader will enjoy this collection of reminiscences as a whole. The present reviewer, who in general is none too squeamish in accepting the personal records of great men, must admit that his final impression of this work of filial piety was not altogether pleasant. Possibly he was prejudiced against the whole book by the opening chapter, which contains the Recollections of My Early Life, by Emily, Lady Tennyson. "You ask me," the writer begins, "to tell you something of my life before marriage at Horncastle in Lincolnshire. It would be hard indeed not to do anything you ask of me if within my power. To say the truth, this particular thing you want is somewhat painful." Lady Tennyson's instinctive repugnance is in nicer taste than her son's insistence. Her Recollections are rather feeble and should never have been printed. Certain other chapters contributed by willing or unwilling friends of the poet are garrulous or empty, and, especially in these days when his own name is somewhat under eclipse for the sentimentality of much of his verse, will not add to his fame. Two of the sections are made up of Tennyson's own poems on his Cambridge and later friends. It is somewhat significant of the tone of the book that "A Character" is not included:

With a half-glance upon the sky
At night he said, "The wanderings
Of this most intricate Universe
Teach me the nothingness of things."
Yet could not all creation pierce
Beyond the bottom of his eye.
. . . . . .
With lips depress'd as he were meek,
Himself unto himself he sold:
Upon himself himself did feed:
Quiet, dispassionate, and cold,
And other than his form of creed,
With chisell'd features clear and sleek.

That caustic portrait, we believe of the future Master of Trinity (one of the finest things Tennyson ever wrote, by the way), would have been a relief in these pages. We miss something of Thompson's own pungent and uncharitable observations.

But if the taste of the book as a whole may be questioned, there are sections of it that stand out by the solidity of the information or by the entertainment they provide. Perhaps the most purely interesting chapter is that in which Willingham Rawnsley writes of Tennyson and Lincolnshire. There are bits of admirable description in these pages, with many quotations showing how persistently (the fact was already well known, of course) the sights and sounds of the Lincolnshire wold and marsh recur in the poet's works. Nor have we ever read a better account of the families about Somersby visited by the Tennysons, or of the peasants and servants whose sturdy independence made so deep an impression on the poet's mind. The story of the old Waterloo cavalryman who served as coachman at Halton Rectory (the home of the Rawnsleys), may not be new, though we do not at the moment recall having read it before. At any rate, it is amusing enough and characteristic enough to be repeated:

Perhaps his most famous saying was addressed to my younger brother, who, when attempting to copy his elders who always jumped the quickest hedge opposite the saddle-room as a short cut to the house, had stuck in the thorns and cried, "Grayson, Grayson, come and help me out!" The old man slowly wiped his hands, and with his usual deliberation said, "Yis, I'm a-coming." "But look sharp, confound you, it's pricking me." "Oh, if you're going to sweër you may stay theër, and be damned to you."

The best of the character sketches, to our taste, is the long chapter on James Spedding, contributed by W. Aldis Wright—Spedding, "the Pope among us young men, the wisest man I know," as Tennyson said; the scholar who spent a lifetime whitewashing Bacon, and whose majestic head furnished FitzGerald with some of his best raillery; as in his letter to Laurence: "You have, of course, read the account of Spedding's forehead landing in America, etc." And if Spedding's altitudinous brow was the cause of wit in the letters of others, some of his own letters, as given here by Professor Wright, if not exactly witty, are solid and good, and in their way, as becomes a great Baconian, entertaining. We wish that Professor Wright had been able to give us more of the correspondence between Spedding and Thompson.

Other chapters of particular interest are those that deal with Frederick and Charles Tennyson and with the poet's friendship for W. G. Ward. In the letters of Frederick something may be observed of the mystical vein that ran through the family, and that finds full expression in the poems of Alfred quoted in the chapter on W. G. Ward. Altogether, as we con over the passages we have marked while reading the book, we are inclined to ask if our first judgment of the whole work was not too severe.

The Indian Tribes of the Upper Mississippi Valley and Region of the Great Lakes, as described by Nicholas Perrot, French Commandant in the Northwest; Bacqueville de la Potherie, French Royal Commissioner to Canada; Morrell Marsten, American Army Officer; and Thomas Forsyth, United States Agent at Fort Armstrong. Translated, edited, annotated, and with bibliography and index, by Emma Helen Blair. 2 vols. Cleveland: Arthur H. Clark Co. $10 net.

These two volumes of approximately four hundred pages each are the last work of one who, during her life, had become known as a careful and painstaking student in a limited field of research. Miss Blair has here made available for English readers two important, but little known, French sources of information about the Indians inhabiting the Great Lake region, and besides these, two later accounts of the Sauk and Fox Indians, written by Americans. To these longer memorials there are added, as appendices, a biographical sketch of Nicolas Perrot; notes on Indian social organizations and mental and religious life, by modern ethnologists; and letters written to the editor by missionaries and other observers, "describing the character and present conditions of the Sioux, Potawatomi, and Winnebago tribes." The whole work is provided with long and scholarly notes.

The Memoir by Perrot, which was written in the years from 1680 to 1718, was first published with voluminous annotations by Father Failhan in 1864. Although it is not difficult to purchase in the second-hand book market, it is not as well known outside the circle of specialists as it should be, for it is a far better and more reliable account of the Indians than the more famous works of Father Hennepin, Baron La Hontan, and Jonathan Carver. Perrot lived for nearly forty years as *coureur de bois*, trader, and explorer among the natives, and came to know them as few men of his generation did. In his Memoir he treats at length of Indian life as it manifested itself in various ways, and adds thereto an excellent history of the wars of the Iroquois with the nations of the Lake region. The other French work is the "History of the Savage Peoples who are Allies of New France," by Claude Charles Le Roy, Sieur de Bacqueville de la Potherie. It is the second volume of the author's "Histoire de l'Amérique

septentrionale." La Potherie's first employment in America was in the squadron under D'Iberville that was sent in 1697 to drive the English out of Hudson's Bay. The following year he was appointed to the newly created post of comptroller-general of the marine and fortifications in Canada, where he lived till family affairs compelled him to go to Guadaloupe. The second volume of his history only is here translated, as its basis is the lost memorials of Perrot.

The translations have been faithfully, although not brilliantly, executed. Miss Blair's long experience as a translator for the "Jesuit Relations" and works of similar character has fitted her well for this kind of editorial work. For Perrot's Memoir she has generally retained or else summarized Father Tailhan's notes, her own longer notes being reserved for the other documents.

The last two documents are of much less importance and of later date. The letter of Major Marsten, addressed to the Rev. Dr. Morse, was written in 1820; and the "Account of the Manners and Customs of the Sauk and Foxes," by Thomas Forsyth, bears the date 1827. Both are very interesting, and the latter is printed for the first time, but one wonders why such a long leap across the "sands of time" was made. Certainly there are similar accounts of the Indians of the Lake region, both printed and unprinted, which might have been found to bridge the gap of one hundred years, during which time most important changes occurred among the Indians, both in customs and their geographical situation.

The frontispiece of the first volume is a map showing the location of the leading Indian tribes from the earliest time until they were driven across the Mississippi. The making of a map to show the position of shifting tribes with large hunting areas over which they roamed offers great difficulties, which Miss Blair has succeeded in overcoming; but the notice of the reviewer is caught by some errors. She locates the Peoria Indians at Kaskaskia from 1700-1833, and on the Illinois River from 1768-1832. The fact is that they were at the latter place when Joliet and Marquette came up the river in 1673, and never removed from there until the nineteenth century. It is evident, both from note 19 on page 46 and the map, that Miss Blair has committed the usual error of identifying the eastern and western divisions of the Shawnee, for she writes of that tribe crossing and recrossing the Alleghanies, when the truth is that the western division moved only from the Cumberland River to the Ohio about 1700, and never farther eastward. The attempt to associate one division with the movements of both has unfortunately led to several curious mistakes in dates on the map. These do not seriously impair the value of the work, however, and the two volumes will be regarded by historians as a worthy and fitting monument to the memory of a faithful scholar; and the publishers have given the work a beautiful setting through their choice of paper, printing, and illustration.

Notes

Included in Macmillan's list of spring publications, part of which was printed in the *Nation* last week, are: "The Hill of Vision," poems by James Stephens; "Daily Bread," poems by Wilfrid Wilson Gibson; "Swinburne," by George Edward Woodberry; "Tennyson and His Friends," edited by Hallam Lord Tennyson; "The Complete Poetical Works of Geoffrey Chaucer," put into modern English by John S. P. Tatlock and Percy MacKaye; "Thoughts on Education: Chosen from the Writings of Matthew Arnold," edited by Leonard Huxley; "Expository Writing," by Maurice G. Fulton; "A Course in Public Speaking," by I. L. Winter; "Laws of Wages," by Henry L. Moore; "Essentials of Socialism," by Ira B. Cross; "The Governments of Europe," by Frederick Austin Ogg; "Initiative, Referendum, and Recall Documents," by Charles A. Beard; "Readings on Parties and Elections in the United States," by Chester Lloyd Jones; "The New Realism," by Profs. E. B. Holt, W. T. Marvin, W. P. Montague, R. B. Perry, W. B. Pitkin, and E. G. Spaulding, and "Outline of a History of Psychology," by Max Dessoir.

The following books will be published by Houghton Mifflin Company on March 2: "The Plain Path," a novel by Frances Symmes Allen; "Copyright: Its History and Law," by R. R. Bowker; "The Adventure of Life," by Wilfred T. Grenfell; "Socialism and Character," by Vida D. Scudder; "The Rolling Earth: Outdoor Scenes and Thoughts from the Writings of Walt Whitman," compiled by Waldo R. Browne; "The Boy and His Gang," by J. Adams Puffer, and "Improvement of Rural Schools," by Ellwood P. Cubberley.

Among the new books announced by Scribners are: "The Sources of Religious Insight," by Josiah Royce; "Suggestion and Psychotherapy," by Dr. George W. Jacoby; "The Abolition Crusade and Its Consequences," by Hillary A. Herbert, with a preface by James Ford Rhodes; "Courts, Criminals, and the Camorra," by Arthur Train; "Wisconsin: an Experiment of Democracy," by Frederic C. Howe, and a volume of verse called "Wild Oats: Moods, Songs, and Doggerels," by John Galsworthy.

T. & T. Clark publications, which will be imported this season by Scribners, include: "Greece and Babylon: A Comparative Sketch of Mesopotamian, Anatolian, and Hellenic Religions," by Lewis R. Farnell; "The Religion of the Ancient Celts," by Canon MacCulloch; "A History of Creeds and Confessions of Faith in Christendom and Beyond," by W. A. Curtis; "Communion with God: The Preparation Before Christ and the Realization in Him," by Darewell Stone and David Capell Simpson; "Christ's Message of the Kingdom: A Course of Daily Study for Private Students and for Bible Circles," by A. G. Hogg; "At the Temple Church," by the Rev. H. G. Woods, and "A Disciple's Religion," by the Rev. W. H. Hutton.

Little, Brown & Co.'s miscellaneous spring publications include: "A Handbook of Home Economics," by Etta Proctor Flagg; "The Boys' Parkman," compiled by Louise S. Hasbrouck; "The British West Indies," by Algernon E. Aspinwall in the All-Red British Empire series; "Pin Money Suggestions," by Lilian W. Babcock, and "Anomalies of the English Law," by S. Beach Chester.

Prof. William T. Brewster's "English Composition and Style," and Prof. Carl Holliday's "English Fiction," which latter is a study of the story-telling instinct among the English people and a survey of the English novel from the fifth to the twentieth century, are in preparation by the Century Company.

Messrs. Methuen announce a new biographical study of William the Silent, by Jack Collings Squire.

Gilbert K. Chesterton has written an introduction for the Rev. A. H. Baverstock's "The English Agricultural Labourer," which Mr. Fifield will shortly issue.

The fifth and final volume of Petrus Johannes Blok's "History of the People of the Netherlands," translated by Oscar A. Bierstadt, is promised by Putnams for early March.

In the list of Fleming H. Revell Company we note: "American-Japanese Relations," by Prof. Kiyoshi K. Kawakami; "The Battle of Principles: A Story of the Heroism and Eloquence of the Anti-Slavery Conflict," by Newell Dwight Hillis, and "The Stolen Bridegroom and Other East Indian Idylls," by Anstice Abbott.

Moffat, Yard & Co. have in hand: "The Blind Road," a new novel by Hugh Gordon; "On the Trail to Sunset," the story of a motor trip across the country, by Mr. and Mrs. Thomas W. Willy, and "The Sentence of Silence," by Reginald Wright Kauffman.

"The Festival Book—May-day Pastimes and the Maypole" is the title of a book by Mrs. Jennette E. C. Lincoln which is now in the press of the A. S. Barnes Company.

Prof. Morris W. Croll has prepared notes and an introduction for "English Lyrics from Dryden to Burns," announced by Holt as a number of the English Readings for Schools series, edited by Prof. W. L. Cross.

The same house will bring out shortly "Language Lessons for Intermediate Grades," by Dr. Alma Blount.

The three memoirs which make the text of "Cambridge Under Queen Anne" (London: Bell & Sons) were already accessible in type. The memoir of Ambrose Bonwicke, indeed, was published in 1870 by Prof. J. E. B. Mayor himself, with this statement:

> This volume is extracted from "Cambridge Under Queen Anne," which will also comprise visits to London, to Oxford, and particularly Cambridge, by Francis Burman in 1702, and by Zacharias Conrad von Uffenbach in 1710. The complete work is printed mainly for such of my private friends as are interested in the history of the Universities, and in the advancement of learning and science.

Professor Mayor never printed the complete work, but at the time of his death he had prepared a vast mass of notes illustra-

tive chiefly of the allusions to Cambridge in these three tracts, and these, with the tracts themselves, are now issued by the care of the Cambridge Antiquarian Society. To his task of annotation the editor brought the same patient and inexhaustible learning which distinguishes his "Juvenal." The result is something like an encyclopædic account of a host of obscure men and books, without neglect of some of the larger names. As an example of these biographical sketches we may specify the pages on the too little known and read Benjamin Whichcote. Nor are customs and places ignored in the editor's all-embracing interest. As for the three tracts themselves, those of Burman and Uffenbach are mainly valuable for the allusions and details which have instigated the editor's research. Bonwicke's memoir, written by his father, gives the pathetic story of a scholar of St. John's, who died early from consumption, to which excessive study and painful religion were contributory causes. Were it not for something hectic in the young man's faith (not to use the harsher word, priggish), we might think ourselves, while reading his letters and devotional exercises, back in the mid-seventeenth century instead of the deistic days of Anne. His difficulty in taking the oaths and his conscientious manner of evading their consequences are of considerable interest for the psychological student of history.

"The Puhlic Library of the City of Boston" is the history by its librarian, Horace G. Wadlin, of the first large library established as a municipal institution. Its founders, therefore, are justly entitled to be called the fathers of the public library movement. Singularly enough the interest in it was awakened by a French actor, Alexandre Vattemare, who had left the stage in order to promote a system of international exchange of books and the establishment of free public libraries and museums in all countries. With this end in view he came to Boston in 1841 and explained his plan at a public meeting, with the result that a committee was appointed to consider the practicability of the scheme. Though some of the leading citizens pleaded for the library as completing the system of popular education, yet it was regarded, says George Ticknor, the Spanish historian, "by many whose judgment and influence could neither be wisely nor safely overlooked, as an experiment, promising little real or lasting good to the city." This opposition was gradually overcome, and the library was put on a firm basis in 1852 by the unexpected gift of $50,000 from Joshua Bates, a member of the house of Baring Bros. His reason for it is given in a letter to a friend:

> My own experience as a poor boy convinced me of the great advantage of such a library. Having no money to spend and no place to go to, not being able to pay for a fire in my own room, I could not pay for books, and the best way I could pass my evenings was to sit in Hastings, Etheridge & Bliss's bookstore, and read what they kindly permitted me to; and I am confident that had there heen good, warm, and well-lighted rooms to which we could have resorted, with proper books, nearly all the youth of my acquaintance would have spent their evenings there, to the improvement of their minds and morals.

The larger part of the book is naturally of purely local interest. After tracing the development of the library and enumerating its notable gifts and collections, the author gives brief biographical sketches of the leading trustees and librarians, the closing chapter being devoted to an account of its present condition and method of operation. Inciuding the branches it contains nearly a million volumes, the home use being more than 1,500,000 annually. One of the earliest gifts, it is interesting to note, was about fifty volumes from the city of Paris. The educational value of the library is shown by the fact that "four hundred and seventy-seven different volumes were recently consulted in one day by students from a single college." The work, which is the product of the library press, contains a map showing the location of the hranches and reading-rooms, pictures of its three homes, and fourteen portraits.

Though the argument is labored, repetitious, and too long spun out, William Boyd's book may be recommended as a work of solid usefuness for one seeking to form a clear conception of "The Educational Theory of Jean Jacques Rousseau" (Longmans). Dr. Boyd makes use of the political writings, and the "Nouvelle Héloïse," quite as much as of the "Emile"; for, as he shows, Rousseau's pedagogy is everywhere involved in his politics. Indeed, it is a question whether, in the present volume, the politics is not the major topic. In one mood an extreme individualist, in another an equally extreme socialist, Rousseau aims in his theory of education, now to develop the self-sufficient man, now again the good citizen. The truth is, however, according to Dr. Boyd, that in both cases he is thinking of the small, well-harmonized social group, such as the city-state of his native Geneva, or, in his pedagogical theory, the family. His hostility to society is directed, therefore, against the modern nation, for which neither his social nor his educational theory is able to provide. Yet, with all his defects as a man and as a writer, he has performed an imnortant service to modern education—a service more warmly appreciated in the preface than in the text—in being the first of a series of writers to call attention to the point of view of the child. With the passing of Froebel and Herbart, the direct influence of Rousseau came to an end. At present, however, we are witnessing a recrudescence of Rouseilianism in our American "child-study," which Dr. Boyd thinks to he of doubtful value, with the exception of the writings of Prof. John Dewey, to whom he accords high praise.

Edwin J. Dingle, the author of "Across China on Foot, Life in the Interior and the Reform Movement" (Holt), is a young English journalist, who seems to have first determined upon a waik across China as a vacation ramble, with little preparation for the trip and with even less appreciation of its risks. It might be wished, since he has ventured into print, that he had taken the precaution to study his subject, if not the language of the country, before starting. As it was, he wasted a considerable amount of vital energy in the performance of a task made more difficult than it had need to be, and produced a result hardly commensurate in value with his pains. But time and experience are effective teachers. The traveller becomes less commonplace in his observations as he becomes accustomed to the people and the land, and at the end of an arduous year he is able to contribute information about them that is worth recording. In another book, which he promises to write on the aboriginal tribes of southwestern China, he bids fair to produce a work of serious interest, but he is likely to live long enough to regret the rather inconsequential character of this first effort. Mr. Dingle's pedestrian tour comprised the river trip of 1,500 miles by steamer and boat to Chung-king, and thence 1,600 miles on foot and horse to British Burma. It might be unfair to insist upon the misnomer involved in his title, but it deserves mention. Half the distance across China by road was enough almost to kill him in two illnesses brought on by hardships; had be undertaken to perform the other half in the same way he would presumably have perished incontinently. Throughout his long tramp he proves himself to be a cheerful traveller, fairly observant of the things which he can see, though not always inspiring confidence in the things repeated as told him by his "boy." His record has been compiled from a diary written on the way in 1909, without much revision and often corrected by footnotes added a year later, which occasionally contradict the statements in the text.

Mr. Dingle's interest in the countrymen of China reveals a sympathetic nature. Like most visitors who take the trouble to get their point of view, he sees great possibilities in even the lowest grades of the people and is not repelled by their uniform indifference to filth and squalor. Indications of new currents surging in the life of these remote districts were visible frequently if not everywhere; but to the question "Does China really want the foreigner?" he is inclined to return an unqualified "no." Yet if change means progress, China is progressing rapidly, for every considerable centre he reached displayed the two signs which chiefly mark her departure from her old ways—public schools and modern military establishments. The former are hardly more than an advertisement of what is yet to come, a costly plant already well begun, but no educated class so far produced that is capable of moulding the opinion of the community. The Model Army already developed in Yun-nan impresses him, however, as being a thoroughly trained and equipped force. "The military academy," he declares, "would be a credit to any town in India; the discipline and military bearing of the troops on parade would be no disgrace to any native or foreign regiment in Asia; the thoroughness with which the Yun-nan Model Army is equipped with modern gear not only shows that the provincial authorities mean business, but that the army shall be in a position to put that business through." And what is going on in the capital, he saw in a lesser degree in other towns throughout the province. His opinion that the new army would remain loyal to the Government has already been demolished by the events of the last few months, but the spirit developed in these troops here and elsewhere in China ought, if his observations are trustworthy, to carry her through the crisis, when a real leader is found. Whatever the outcome of the rebellion, the forces of a militant China already generated promise no further submission to predatory foreign Powers in the future.

Egerton R. Williams, jr., has followed his "Hill-Towns of Italy" with a volume on

"Plain-Towns of Italy" (Houghton Mifflin). His "plain" is old Venetia, and his limits are Udine on the east and Brescia on the west. He describes many of the places once famous but now usually neglected by the tourist, although they well deserve attention. Whoever would recover some of the Old World Italian atmosphere should pass a day at Bassano or Vicenza, or at any one of the dozen other towns to which Mr. Williams devotes a chapter. Verona and Padua he treats at much greater length. His method is to give not merely a sightseer's impression, but such historical and artistic information as a cultivated traveller desires to know. He writes agreeably, and has excellent illustrations. His volume ought to serve as a delightful complement to Baedeker for every one who explores the beautiful Venetian Plain.

The American Antiquarian Society of Worcester, Mass., has introduced a broader interest into its publications by printing a compilation of "British Royal Proclamations relating to America, 1603-1783," prepared by Clarence S. Brigham. At best a proclamation requires some interpretation, and its time and sphere of action should be defined, unless those facts are stated in the document. The proclamation of 1622, for example, issued at the behest of the council for Plymouth, to prevent irregular trading outside of the council's patent in New England, had no effect, because there was not sufficient force to make it effective. Each document has a history, and it could be wished that the notes of the editor, judicious as they are, had been extended. The prominence of the tobacco interests of Virginia is shown by the eighteen proclamations issued before 1640, or more than one-half the total issued in that period. Trade regulation is the most important single subject treated, and the record does not show any undue interference with American affairs, for the measures were framed according to the commercial spirit of the day. Piracy, the apprehension of criminals, and the continuance in office of Colonial administrations receive attention. The proclamations for fast days from 1776 to 1783 are little more than curiosities. There are one hundred and one proclamations printed in the volume, a convenient compilation for reference.

An examination of eleven new volumes in the Home University Library (Holt) confirms what was said in these pages regarding the first instalment of these little books. It is a useful and interesting series, which now sells at the moderate rate of 50 cents the volume, in large, clear print, and attractive binding. The monographs are written by men of unquestioned authority in their field, but evidently with a minimum of general editorial supervision. This means that there is a considerable variety with regard to method of treatment. Not all of the volumes are primers in the sense of aiming at the simple presentment of accepted fact for the ordinary reader. Frequently the author chooses to develop his own views on a controverted question, and sometimes he does so in a manner that presupposes considerable preliminary knowledge. One advantage is that we have here a vigor and attractiveness of style that are not to be found in the ordinary handbook. G. H. Mair writes on "Modern English Literature" with ease and authority. His treatment of the subject is not inclusive, and, since he allows himself to pass judgment on writers of recent date concerning whom criticism is as yet in a condition of flux, there is room for taking exception to his opinions. But there is no doubt that his text stimulates to further study in the subject, and so serves its purpose. Another example of personal treatment is Dr. Barry's sketch, "The Papacy and Modern Times," in which the author develops the thesis that the Vatican has played an important rôle in history as the champion of the individual and the state against Cæsarism. Professor Myres of Oxford, in "The Dawn of History," studies historical evolution as shaped by physiographical and primitive sociological conditions; he takes account of the latest discoveries in Egypt, Mesopotamia, and the Ægean. Closer to the type of the ordinary text-book are the "Astronomy" of Arthur R. Hinks of Cambridge Observatory, England; "The Civilization of China," by Prof. Herbert A. Giles of Cambridge University, an intimate and comprehensive little treatise; and "The History of Our Time, 1885-1911," by G. P. Gooch, which necessarily fails to be comprehensive. W. M. Geldart's "Elements of English Law" is an excellent summary. So is W. F. Barrett's "Psychical Research," which sets out to be a survey of the results so far achieved by the Society for Psychical Research. Two volumes, which suffer from an overloose treatment of a vague subject, are D. H. Macgregor's "The Evolution of Industry," which is handicapped also by an obscure style, and Prof. J. Arthur Thomson's "Introduction to Science." Professor Thomson is one of the general editors of the series, and, with Professor Geddes, has written the fascinating volume on Evolution. Here we have a discursive treatment on the nature and implications of science which is agreeable philosophizing, but does not get anywhere in particular. The only American contributor is Prof. Frederic L. Paxson of the University of Wisconsin, who writes on our Civil War. In his preface Professor Paxson asserts it to be "reasonably clear to-day, that the South would of herself have discarded slavery in another generation." That presupposition does not interfere with his giving us a straightforward narrative of events.

"The Modern Railroad" (McClurg), by Edward Hungerford, depicts in twentieth century magazine style the human side of the railway industry. It has no concern with the railway problem. Its purpose is to give the reader an intimate knowledge of the everyday problems of the men engaged in building and operating our transportation lines, by describing in order the duties of the different railway officers, and of the various grades of employees. It is filled with anecdotes, significant statistics, and dramatic situations, and it is generously illustrated. While its vivid writing may have too great a tendency to surround with an atmosphere of romance what is mere commonplace, its five hundred pages contain a store of interesting information.

"The Civil War Literature of Ohio: A Bibliography," by Daniel J. Ryan, published by Burrows Brothers Co. of Cleveland, is a distinct contribution to the literature of Western history and bibliography. There are in all eight hundred and ninety-nine titles listed, consisting mostly of public documents, regimental histories, and ephemeral literature, such as speeches and sermons. The annotations are excellent and of such a length as to make it unnecessary, in many cases, for the student to go to the original. The editor has followed the usual bibliographical method of arrangement in alphabetical order, although the grouping into topics would be far more convenient for the student, and all the benefits of the alphabetical order might be put in the index. Three-fourths of the titles are taken from the editor's own library, but the list does not indicate where copies of the others may be found, information that is essential in the case of scarce and little-known books and pamphlets.

A second edition has just appeared of that fascinating and valuable work by Prof. Otto Jespersen, the "Growth and Structure of the English Language" (Teubner), mentioned by the *Nation* in February, 1906, before it received the Volney prize of the Institut de France. Although the substance has not been greatly altered, the revision has been more extensive than the author's modest explanation in the Preface might lead one to expect. The work as a whole has gained through slight changes of expression here and there, through fresh illustrations, and through occasional condensation. Several errors of the printer have disappeared, and, so far as we have observed, no new ones of importance have crept in. The book is now a little more compact, and the new type and paper make easier reading. In connection with the chapter on Shakespeare and the Language of Poetry, we may remark, as Professor Jespersen duly notes, that the whole subject of the diction of Shakespeare, as compared with that of Bacon, "has been investigated by N. Bøgholm ('Bacon og Shakespeare,' Copenhagen, 1906), who has succeeded in pointing out an astonishing number of discrepancies between the two authors." We recommend all of the chapters in their new dress to teachers who desire to attract immature students of language by means that are at once inspiring and safe.

Dr. Andrew Martin Fairbairn, for twenty-three years principal of Mansfield College, Oxford, died recently in London, at the age of seventy-three. He was Lyman Beecher lecturer at Yale in 1891-92, and was the author of several works on religious and philosophical subjects, among them "Studies in the Philosophy of Religion and History," "Studies in the Life of Christ," "Catholicism, Roman and Anglican," and "The Philosophy of the Christian Religion."

Mrs. Margaret Byers, doctor of laws, and principal, since 1859, of Victoria College, Belfast, died in that city last week. From the first she was deeply interested in all movements looking to the improvement of the condition of Irish women, and in due course became the founder and director of Victoria College, which has been prominent in all pioneer and educational work. It was begun as a secondary school before collegiate education for women was thought of. In 1878 she worked for the inclusion of girls in the benefits of the Irish Intermediate act. The college was a natural evolution of all that had gone before, when, in 1881, the Royal University of Ireland offered its examinations and degrees to wo-

men. Mrs. Byers was interested in many forms of philanthropic work. But amid her many labors she found time for a good deal of literary work.

Dr. Joseph Ettlinger, who a short time before his recent death, in his forty-third year, was appointed feuilleton editor of the *Frankfurter Zeitung*, wrote a number of distinguished biographies; for example, "Hofman von Hofmanswaldau" and "Madame Récamier."

Science

Aerial Navigation. By Albert F. Zahm. New York: D. Appleton & Co. $3 net.

This book has unusual merit. It is popular in tone, but contains many important scientific facts related directly and indirectly to aviation, and cannot fail to be regarded as an excellent addition to aeronautic literature. The author is professor of mechanics in the Catholic University of America in Washington, and has conducted some excellent investigations on aerodynamics, especially concerning air resistance to moving planes, and the coefficient of skin friction.

In the historical introduction, Professor Zahm has a most interesting chapter on the Fancy and Folk-lore of flying. Ovid's account of Icarus, son of Dædalus, is quoted, and there are many other references to such legends, including the tales of the great flying bird, the roc. Among those who imagined the possibilities of the so-called Dædalean flight was none less than Leonardo da Vinci, a gifted engineer as well as an artist, who devised a flying gear for man which clearly showed genius. The devices invented are reproduced from Da Vinci's sketches. To Jean-Baptiste Dante, who lived in the fifteenth century, is credited the first successful soaring flight. The experiments took place at Perugia. The remarkable flight of the Marquis de Bacqueville in Paris over the Seine in 1742 is described. From the evidence available, it is probable that both Dante and De Bacqueville used some sort of aeroplane glider. The early history of the many forms of balloons and their fanciful inventors, which follows, is very entertaining.

Part I is entitled "The Growth of Aerostation," and in the first chapter is found a history of the development of the passive balloon. Progress in the science got its first real impetus from the discovery in 1766 by Henry Cavendish that hydrogen was many times lighter than air. Dr. Black, an Edinburgh chemist, suggested the use of hydrogen for balloons, an idea shortly after put into practical use by Tiberius Cavallo in the form of small soap bubbles filled with that gas. It was left to the Montgolfier brothers and to the physicist, Professor Charles, to devise the man-carrying hydrogen balloon. The balloons of the Montgolfiers were highly decorated and designed in curious shapes. It is said that the suggestion of the invention came from the Siege of Gibraltar, the possibility of escaping like rising smoke having occurred to Joseph Montgolfier. The brothers were rich paper manufacturers, but Stephen is said to have been an architect also. The passenger balloon designed by Professor Charles about 1783 was a truly scientific invention. It was twenty-seven and a half feet in diameter and made of varnished silk. After several successful ascensions it was destroyed. The adventurous flight of Glaisher and Coxwell in 1861 is described in detail, with a discussion relating to the height reached by these aeronauts. At an altitude of 30,000 feet or more both became almost unconscious, but they managed somehow to descend.

The early history of power balloons begins essentially with Blanchard's, in 1784, which was provided with a boat-like car having aerial oars. A number of the pioneer forms of these balloons are pictured, but it is evident that the real advance was the man-carrying dirigible, La France, of Capt. Renard and Capt. Krebs, in 1884. This aerial vessel actually returned to the starting point against a wind, the propelling power being a 220-pound electric motor which developed nine horsepower. Then came the famous dirigibles of Santos Dumont, which are described in detail. Seventy-five pages are devoted to the various gasolene-driven dirigibles. These are divided into two classes: the non-rigid, represented by the Clement-Bayard, and the rigid type, such as the Zeppelin.

Part II relates to the growth of aviation. Here again the reader is led back to the early history of the science. Leonardo da Vinci's fertile mind conceived three distinct devices for carrying a man in the air. Owing to the lack of motive power the early inventors, of course, could not navigate dynamic flyers, however ingeniously contrived. Da Vinci's first design, referred to in the introduction, is shown by a drawing copied from the original. It provides the operator with two wings manipulated by his arms and legs. The second design is a helicopter. The drawing shows a screw twenty-six feet in diameter to be operated by the aviator. It is quite obvious that the machine was never used. The third device was a framed sail, on which a man could settle slowly down to the earth. Thus da Vinci was the father of the parachute. The first use of the parachute is said to have been made in the year 1783, when Lenormand descended from the Montpelier Observatory by means of two specially made umbrellas, one being held in each hand. In this connection the author describes an interesting parachute found in nature in the form of a two-winged seed which grows on a tree in India. When the seed falls it descends to the ground in wide, graceful curves. Descriptions follow of the inventions of the Englishmen, Sir George Cayley and Henson. The latter in 1847-48 constructed a model which was supposed to be the first flying machine to perform a successful flight. Other early models are cited, including the aeroplane kite of Hargrave, on the design of which is based the construction of the box kite bearing their name, so universally used as the most efficient form. The work of Langley is illustrated with excellent photographs, as is also that of the unfortunate Lilienthal. Four beautiful photographs show the Wright brothers' first and second gliders and their first power-driven aeroplane, and there are some interesting stories of their experiments on the dunes near Kitty Hawk, North Carolina. Not the least interesting are the descriptions of the remarkable glider flights of the late Professor Montgomery, who was killed in California recently. In a hundred subsequent pages the progress of aviation is sketched during the past four years, much of which is familiar to all.

Part III is a discussion of the general properties of the free air. On page 349 a table gives the percentage distribution of gases in the atmosphere up to an altitude of 150 kilometers, which is taken from Moore's "Descriptive Meteorology." The accuracy of this table is questionable, since it represents an unproved theory only. The other tables are good, and there is much of interest in the hundred pages which deal with "aeronautic meteorology," for the author presents the subject well. The aeronautic letters written from Passy, France, in 1783, by Benjamin Franklin, relating to the experiments of the Montgolfier brothers and Professor Charles, are of particular interest. The last pages of the book are devoted to military dirigible balloons, and to aeroplanes which can rise from water.

Science books in Macmillan's list include: "Insect Pests," by W. C. O'Kane; "The Beginner in Poultry," by C. S. Valentine; "Farm Boys and Girls," by William A. McKeever; "Milk and Its Products," by Henry H. Wing; "The Training and Breaking of Horses," by M. W. Harper; "Forage Crops for the South," by S. M. Tracy; "Farm Management," by G. F. Warren; "Farm Poultry," by George C. Watson; "Poultry Husbandry," by J. E. Rice; "Plant Breeding," by H. J. Webber; "The Healthy Baby and How to Keep Him So," by Roger H. Dennet; "Food for the Invalid and the Convalescent," by Winifred S. Gibbs; "Stuttering and Lisping," by E. W. Scripture; "Who's Who in Science"; "College Zoology," by R. W. Hegner; "Principles of Human Nutrition," by W. H. Jordon; "Meteorology," by W. I. Milham; "Earth Features and Their Meaning," by William

Herbert Hobbs; "Analytical Mechanics," by Alexander Ziwet and Peter Field; "Storage Batteries," by Harry W. Morse; "Elements of Statistical Method," by Willford I. King; "Anthropology," by Dr. H. Schurtz, translated and adapted by Prof. Franz Boas.

"The Teaching of Primary Arithmetic," by Henry Suzzallo, will be brought out by Houghton Mifflin Co. on March 2.

Edward Bok has arranged for the publication by the Fleming H. Revell Co. of a series of treatises on sex hygiene. The first three are now announced: "How Shall I Tell My Child," by Mrs. Woodallen Chapman; "When a Boy Becomes a Man," by H. Bissecker, and "Instead of Wild Oats," by Winfield Scott Hall.

The Smithsonian Astrophysical Observatory, which, on account of its work on the sun, enjoys the unique distinction of threefold location—in Washington, and on the summits of Mount Wilson and Mount Whitney, California—has accomplished much excellent work in the past year. Following up the work of the late lamented Langley, whose first expedition to the summit of Mt. Whitney was undertaken nearly a third of a century ago, Dr. C. G. Abbot, the director, has now made solar-constant determinations simultaneously at sea level (Washington), at above a mile altitude (Mount Wilson), and again at Mount Wilson, and at nearly three miles altitude (Mount Whitney). Although both the quantity and the quality of the solar radiation found at these stations differ very much, neither the "solar constant" nor the distribution of the solar energy in the spectrum outside the atmosphere, as fixed by the wholly independent measurements at these three stations, differs more than would be expected in view of the unavoidable small errors of observation. It seems just to conclude that we do, in fact, eliminate the effects of atmospheric losses and actually determine the true quantity and quality of the sun's radiation outside the atmosphere, as we might do if we could observe in free space, with no atmosphere at all to hinder. Also, Dr. Abbot reaches the further important conclusion, though as yet tentatively, that the sun actually varies from day to day in its output of radiation within limits of from 5 to 10 per cent. in quantity, and in irregular periods of from 5 to 10 days; and that the solar radiation comes from sources ranging in temperature, perhaps, between the limits 5,000 degrees and 7,000 degrees absolute centigrade, but mostly from sources between 6,000 degrees and 7,000 degrees.

Charles Robert Sanger, professor of chemistry and director of the chemical laboratory at Harvard University, died in Cambridge on Sunday, after a brief illness, at fifty-six years. Professor Sanger graduated from Harvard in 1881, and after graduate work there and in Germany filled the chair of chemistry at the United States Naval Academy for six years and at Washington University in St. Louis for seven years. He was called to Harvard in 1899.

Philip Rounseville Alger, professor of mathematics at the United States Naval Academy, died on Friday of last week, at the age of fifty-two. He was an expert in ordnance and the chemistry of explosives, and was the author of "Exterior Ballistics," "Elastic Strength of Guns," and "Hydromechanics."

Miss Grace Anna Lewis, one of America's foremost scientific women and widely known as a naturalist, died in Media, Pa., on Sunday. She was born in 1821. In 1869 she printed a pamphlet showing the relation of birds to the animal kingdom. This pamphlet was the germ of charts that she prepared later, among which were "Chart of the Classification of Birds," "Chart of the Animal Kingdom," and "Chart of Geology, with a Special Reference to Palæontology." She also prepared "Water-Color Paintings of Wild Flowers" and "Studies in Forestry."

Drama

John Galsworthy's play "The "Pigeon" will be published by Scribners about the time that Winthrop Ames presents it on the stage. Another play by this author, "The Eldest Son," will be issued by the same house somewhat later.

There was need of a monograph such as Mary Leland Hunt has given us in "Thomas Dekker, a Study" (Columbia University Press, Lemeke & Buechner). A certain sentimentalism which pervades the book betrays the feminine hand, but the work is thoroughly done and marks an advance on anything that had previously been written on the subject. As was to be expected, the author has not succeeded in bringing to light any new facts concerning the poet's life. The expression she points out in Samuel Rowlands's pamphlet, "Martin Markall" (1610), according to which Dekker is accused of employing "old words used forty years ago, before he was born," would not materially change the prevalent dating of his birth, even if we accepted it as literally true, which, of course, it is not likely to be. It must also remain uncertain whether Dekker travelled on the Continent in his early life, although his fondness for Dutch lends some color to the supposition that he once visited Holland. Owing to the dearth of biographical data, the book is devoted almost wholly to Dekker's works, especially the dramas. Like nearly all students of the poet in recent times, Miss Hunt writes under the spell of Charles Lamb's saying that Dekker "had poetry enough for anything," which certainly contains a gross exaggeration. For instance, "The Shoemaker's Holiday," which is probably the best of his plays not written in collaboration, possesses an undeniable sweetness and wholesome charm, but who would maintain that it moves on a high level of poetry? Our author criticises A. W. Ward's estimate of the poet as too depreciatory. We believe, however, that he was nearer the truth than Professor Schelling when he speaks of so formless a work as "Old Fortunatus" as "this beautiful play." In reading Elizabethan productions of this kind we feel that the much decried period of classicism had its uses after all—and not merely in prose. We do not mean to deny to Dekker, of course, a true lyrical charm and the capacity, which he shared with so many of his contemporaries, of striking off occasionally beautiful images and even fine passages of a somewhat greater extent, but, in the main, his plays, in so far as they hold the reader, do so by qualities which are very different from those implied in Lamb's phrase. This is true even of the most powerful drama with which his name is connected, "The Witch of Edmonton," which he produced in conjunction with Ford. One cannot say positively, of course, how much of this play we owe to the superior tragic genius of Ford, but after all it remains on the level of domestic tragedy, and despite its genuine pathos and power it is wanting in the imaginative quality which might have lifted it into the higher regions of poetry.

Miss Hunt's book is generally well-written, but we cannot regard as very happy the term which she applies to the Middleton type of comedy—the "comedy of mud"—still less such a phrase as "monstrous mush of concession," which is supposed to be descriptive of Griselda's patience—evidently from the Pankhurst rather than the Chaucerian point of view. It is a pity that such small type should be employed for quotations in these Columbia University Studies. Where the quotations are long, as is often the case in the present volume, it becomes a serious matter.

The performance of "Lady Patricia" in the Empire Theatre on Monday evening proved a disappointment to those who expected brilliant results from a comedy by the clever author of "Don." The real strength of this piece lies more in its witty dialogue and satirical characterization than in its highly artificial comic incident, and this strength was not emphasized in the representation. Nothing could be more artificial or unlifelike than the story itself, which must be familiar to many of our readers. Lady Patricia and her husband, Michael Cosway, old married folk, grow tired of humdrum matrimony, and—being of romantic disposition—seek excitement in strange loves, while pretending deep devotion to each other. Their chosen affinities, with whom they exchange vows of eternal fidelity and renunciation—for the bonds are to be entirely Platonic—are a boy and girl who, of course, fall in love and leave their elderly adorers, after humiliating exposure, to finish their lives together as they best may. Lady Patricia, the mature spouse, who revels in the notion of reciprocal devastating passions which are to be altogether Platonic, is an entirely Gilbertian figure, and, of course, ought to be enacted with perfect sincerity, as if she were really the languorous, elegant, and passionate sentimentalist of her habitual pose. It is only thus that the piece can be made effective as genuine satirical comedy. Mrs. Fiske, one of the least plastic of stage performers, has not the temperament, the style, or the acting abilities necessary for the proper interpretation of such a character. She makes of the aristocratic, mooning Patricia a pert, incisive, self-conscious personage, resembling a burlesquer never unmindful of her audience. Her impersonation lacks imagination, refinement, and fascination, three of its most vital elements. The piece was beautifully dressed and mounted, but the acting throughout was of second-rate quality, and the representation dragged for the want of a little interpretative intelligence.

The stage version of H. G. Wells's "Kipps," prepared by the author himself and Rudolf Besier, will be presented soon

in London. It is in three acts, the first being laid in the shop where Kipps served his laborer's apprenticeship; and the second in the house of which the little hero became the proud possessor. The third and last act is divided into two scenes, the first introducing a big garden party, and the second the kitchen of Kipps's abode, where he and Anne eventually come together. Louis Calvert will be the producer, and the scenery will be painted by Mr. Joseph Harker.

Early in March there will be produced in the Aldwych Theatre, London, a four-act play, entitled "Proud Maisie," by E. G. Hemmerde, K.C., part-author of "The Butterfly on the Wheel" and "The Crucible." "Proud Maisie" deals with a Scotch subject, and abounds in moving incidents and thrilling adventures, set in a framework of pure romance. The two principal characters will be played by Miss Alexandra Carlisle and Henry Ainley.

A new three-act comedy, called "Minerva's Husband," is to be presented by the Playfellows' Society, in London. The author is J. B. Sterndale Bennett, a grandson of the famous composer, and report speaks well of his work.

Alfred Sutro's new play, "The Fire Screen," which has just been produced at the Garrick Theatre, in London, does not appear to be a work of striking originality or great dramatic value. But, it is said to have the merit of being exceedingly amusing.

There seems to have been no particular reason why the London Stage Society should have produced the "Travellers," of Norman McKeown, except possibly the fact that no one else would. Half of the independent societies appear to be possessed by the delusion that any piece which no practical manager will have anything to do with must naturally be a masterpiece. "Travellers" is a tale of the unlawful passion inspired in the breast of a mining Hercules for the wife of a puny little professor, who prates about eugenics and the necessity of improving the human race. Hercules proposes to make a practical application of these theories, but when he broaches the subject to the professor, finds himself looking down the barrel of a revolver, and listening to a stern injunction—which he obeys promptly—to be off about his proper business and keep hereafter at a respectful distance.

The New Players of London have been giving the "Medea" of Euripides in Gilbert Murray's translation. Adeline Bourne was the Medea. Mr. Walkley, writing of her performance, says:

> Unless the Medea is great enough to fill us with awe, and not merely horror, the play will not earn the honorable title of tragedy. And Miss Adeline Bourne, while she shocked and thrilled and now and then all but disgusted us with the intensity of this haggard, dishevelled, neurotic woman's distorted passions, hardly made Medea great. Her vengeance did not fill the heavens; it made the earth creepy. And there are at least two passages where Medea's sorrows, as distinct from her wrongs, well to the surface in "warm tears"; these pass by all but unnoticed.

W. B. Yeats has made a new version, in prose, of "Œdipus Rex" for production at the Abbey Theatre, Dublin. Gordon Craig's scenery is used for the purpose.

"The Five Frankfurters," a successful Berlin play of which the American rights have been obtained by the Shuberts, deals with the beginnings of the house of Rothschild. The date is 1822, and the first act takes place in the living-room, situated over the historic bank in Frankfurt where the fortunes of the Rothschild family were started. Here, in company with their mother, are assembled the five brothers, who have come, one from Paris, another from London, a third from Vienna, and so forth, to discuss the question of a big loan to be made to an Austrian Duke. A love story is blended with the financial motive of the tale.

Music

MASSENET'S "CENDRILLON."

Previous to the opening of the Manhattan Opera House, four only of Massenet's operas had been heard in New York—"Manon," "Werther," "Le Cid," and "La Navarraise." Oscar Hammerstein added five more—"Thaïs," "Le Jongleur de Notre Dame," "Hérodiade," "Sapho," and "Grisélidis." The tenth of Massenet's twenty-two operas, "Cendrillon," had its first hearing in this city on Tuesday evening of last week, when it was sung at the Metropolitan Opera House by Mr. Dippel's opera company, which had previously won genuine successes with it in Chicago and Philadelphia. The cast included Mary Garden, Maggie Teyte, Marie Cavan, Mabel Riegelmann, Hector Dufranne, and M. Huberdeau, who, under the painstaking and enthusiastic direction of Campanini, gave an admirable rendering of this characteristic product of Massenet's genius. Particular interest attached to the Cinderella of Maggie Teyte, who, not long ago, jumped into sudden fame in Europe and on this occasion made her first appearance on the operatic stage here. She has evident talent for acting; her voice is youthful and charming, and no one could have sung the music better. Mary Garden has once more put Massenet under obligations by impersonating one of his parts—that of Prince Charming—with rare art, while her singing was better than usual.

When "Cendrillon" was produced in Paris it was suggested that Massenet had been prompted to set this fairy tale to music by the sensational success of Humperdinck's "Hänsel and Gretel." As a matter of fact, "Cendrillon" had been planned and partly written before that German fairy opera had been launched; but it was put aside and was not produced at the Opéra Comique till six years later (1899). It was exceptionally well received by both public and press. Louis Schneider, Massenet's official biographer, declared that the composer "dusted the tale of Perrault and the libretto of Henri Cain with a fine powder of sounds," which applies to the opera as a whole, but does not do justice to the more emotional moments of the score.

Henri Cain's libretto is of unusual poetic merit, and Massenet's music is in perfect accord with it. Because this Parisian has the gift of composing simple, pleasing melodies, the impression has gone abroad that he is not a deep expert musician. As a matter of fact, he was for a number of years professor of harmony and composition at the Paris Conservatoire, where most of the younger men now prominent in the musical life of that city came under his influence. None of these is a more thorough master of his craft than he, but better than all of them he knows how to conceal art, and combine depth with clarity, while avoiding needless dissonances. "Cendrillon" is as exquisitely scored as "The Juggler of Notre Dame." In all French opera there is perhaps nothing more delicious than the passage "You are my Prince Charming," where the oboe and voice chant together lovingly. There is a surprising amount of variety, too. Cinderella's song, in which she resigns herself to her dull life, is plaintive, while nothing could be more pompous or grotesque than the entry of her relatives. Exceptionally good, also, are the dances at the ball. The first one is rhythmically as Spanish as the "Carmen" ballet, while the third has a piquant *pizzicato ostinato*. Altogether, "Cendrillon" was decidedly worth producing. Possibly, next season, Mr. Dippel may choose to produce Massenet's latest opera, "Roma," or his "Don Quixote," which is now having a run in Paris and which would give Maurice Renaud a splendid opportunity to reveal his art in a new aspect.

Dodd, Mead & Co. have added to their collection of librettos of famous operas two of Wagner's: "Die Meistersinger" and "Tristan and Isolde," bound, like their predecessors, in red and of convenient size for the pocket. W. J. Henderson, as before, has provided readable and helpful introductions, telling the stories and commenting briefly on the peculiarities of the operas.

Inasmuch as Humperdinck's second fairy opera, "Königskinder," had its first performance anywhere in New York City, it is proper that the first books on it should also be local products. Some time ago Anna Alice Chapin wrote a book telling the story of this opera in a simple style, for the benefit of children. But since, unlike "Hänsel and Gretel," this work appeals to adults even more strongly than to the young folks, there was room for another book, devoted to the task of initiating opera-goers into the subtle art of Humperdinck's latest score. This book has been written by two well-equipped men, Lewis M. Isaacs and Kurt J. Rahlson (Dodd, Mead & Co.). It contains a portrait of the composer with a sketch of his career, pictures of some of the scenes, a lucid synopsis of the plot, and, best of all, nearly sixty pages in which the musical web of the beautiful score is put under the microscope and ana-

lyzed. There are nearly half a hundred distinct melodies and motives in it. These are printed, numbered, and labelled, and the authors display great ingenuity in showing how the composer has used them in Wagner's manner, to enhance the eloquence and impressiveness of the music and deepen the meaning of the text. Even those who have heard this opera repeatedly will find here the key to beauties of detail that had escaped their attention. To cite only one case: In speaking of the "Beauty" motive, the authors say: "In this, the composer neatly illustrates the way in which an extra-musical idea can be translated into music; for the Beauty mirrored in the fountain is an exact inversion of the Goose Girl's own theme." Humperdinck himself has complimented the authors on having worked out their task "very carefully and with much insight."

Art

Chinese Porcelains and Hard Stones. By Edgar Gorer and J. F. Blacker. 2 large quartos, with 254 color plates. London: Bernard Quaritch.

The limitations of these beautiful albums are candidly admitted by the authors at the outset. No facsimiles can convey the ultimate material perfections of fine porcelains. Only constant handling of choice examples can teach anything about paste and potting; there are refinements in these matters that reveal themselves more readily to the finger-tips than to the eye. Yet facsimiles as good as those we have here are immensely useful. No one who pores over these reproductions can fail to quicken his color sense. And it is in the minutest of color discriminations, after all, that sense of quality consists. It is by something in the color quite obscure to the layman that the expert recognizes an Imperial vase from afar. In fact, for porcelains there are virtually no scientific criteria. Dr. Percynski's Morellian classification of the Kang-he painters will be helpful, but essentially we know porcelains instinctively—as the product of long experience of course—by "the look." When the late William M. Laffan catalogued the Morgan-Garland porcelains and overthrew scores of traditional attributions to the Ming period, he justified himself only by remarking that "Ming looks its age." And indeed there was nothing more to say.

Now, these facsimiles in Messrs. Gorer's and Blacker's catalogue are on the whole the most useful aid to a collector that we know of, precisely because they give this "look" of fine pieces. The vases have been ingeniously lighted in a way to eliminate distracting reflections and deep shadows. The resulting flatness is justified because it emphasizes the effect of the color. Here remarkable effects have been attained. The almost impossible *finesses* of early blues have been faithfully conveyed to paper, the greens and yellows are of true vividness and delicacy. Merely from these plates the student could learn much, and he who in addition possessed a few good typical pieces might readily perfect his ceramic education.

In this English-French catalogue, which is properly ancillary to the reproductions, and sensibly omits marks, the authors have laid most stress upon the classic reign of the Emperor Kang-he. Many pieces are credited to the earlier Ming dynasties, but judging from the plates, not a quarter of such attributions are tenable. In particular, the pieces ascribed to Cheng-hwa are plainly magnificent examples of Kang-he archaism. This whole matter of Ming attributions may be less important than it seems. We fancy, indeed, that if Ming pieces were as plentiful as those of Kang-he, a sensitive collector would in most cases prefer the later ware. Because of their rarity one possibly exaggerates the quality of the early pieces. Considerable attention is given in this catalogue to the Yung-ching period which witnessed the development of *famille rose* and egg-shell porcelains. The Kien-lung products, which already mark the decline of the art, are scantily but sufficiently represented. These dryly perfect masterpieces of the late eighteenth century are rarely quite satisfactory in the cabinet, but for purely decorative use nothing can be finer than the large single-color pieces of Kien-lung.

Besides porcelains, this work contains numerous plates of cut crystal, glass, and jade. These are often extraordinarily beautiful objects, but they are present at the cost of slurring more relevant matters. Whites, celadons, *clairs de lune*, crackles, etc., are quite unrepresented. The excuse is difficulty of reproduction. It would be more cogent if the process did not cope successfully with the problem of rock crystal. We could wish that the plates allotted to hard stones had been devoted to the whites, and to an epitome of the finest pottery and stoneware. The types are, after all, not numerous, and their inclusion would have made this work a complete guide to Chinese ceramics of the highest class. We hope that these authors may be moved to complete their work with a supplementary volume of the scope indicated above. Meanwhile, they have done a great service to collectors and students. The edition of this sumptuous catalogue, which is doubly useful because most of the pieces are inaccessible in private collections, is limited to one thousand copies.

A large, thin folio, in blue boards, on "Albrecht Dürer" (Macmillan, $2.50 net) is one of the best arranged art books that has come under our eye. The text, translated from the German of Dr. Friedrich Nüchter, comprises a terse biography enriched from Dürer's own writings, with explanations opposite the fifty-three plates. The reproductions are excellent, and there is an introductory note by Sir Martin Conway. It is hard to imagine anything more convenient either for the dilettante or the student beginner.

Facts about furniture, gathered and classified by an indefatigable literary worker, have at last been assembled in a single volume ("Furniture," by Esther Singleton; Duffield). As a guide book of the historic styles this is an admirable work, a veritable Baedeker of furniture. Its contents are sumptuously impressive. Something might be said favoring a slightly less reserved literary treatment of the subject matter. In contrast to the Englishmen who are now writing many good books about the decorative arts and who frequently become vehement in their enthusiasm and indignation, Miss Singleton only occasionally expresses an opinion; her nearest approach to warmth of statement is in describing Mid-Victorian iniquities:

> It seems incredible that furniture of the Chippendale, Heppelwhite, and Sheraton periods should have been turned out of old houses for mahogany marked with such clumsy and repulsive forms—furniture which frequently masquerades to-day under the name of "Colonial" and which accords with what M. Molinier aptly describes as "the horrible simplicity of prison architecture."

Styles and schools are described in the first third of the volume, after which the conventional articles of furniture are taken up. Frequent quotations from old newspaper advertisements, sales records, inventories, and wills enliven the chapters on beds, seats, cupboards, mirror frames, and clocks. A questionable generalization may be noted now and then. Concerning Spanish and Gothic furniture, for example, the assertion that "little study has yet been given to the arts in Spain during the Middle Ages" makes one wonder if the author has properly valued the research underlying Leonard Williams's three books on "Arts and Crafts of Older Spain." Generally speaking, nevertheless, this furniture book is so superior to several recently published manuals of hastily cribbed and badly compiled information that its appearance is a cause for extending congratulations to the publishing house which has had the courage to produce it so handsomely. Many of the illustrations have been drawn from the furniture collections of the Metropolitan Museum of Art.

The Société des Artistes Indépendants, who hold their next annual exhibition March 15 at the Quai d'Orsay, have reëlected Paul Signac president.

The new French Under-Secretary for Fine Arts, Léon Bérard, reflects the spirit of the times in announcing his intention to open the Louvre more freely to the public; he desires to do away entirely with "paying days." It is his hope, also, that the Luxembourg Museum may be transferred shortly to the quarters prepared for it in the Seminary of St. Sulpice.

The death is reported of the English engraver, Charles William Sherborn.

The death is reported from Farningham, Kent, of Joseph N. Ward, the well-known Egyptologist, and author of publications on art. A collection of Greek coins made by

him is now in J. Pierpont Morgan's exhibit at the Metropolitan Museum.

Jules-Joseph Lefebvre, the well-known French painter and member of the Institute, died Saturday in Paris. He was born at Tournon, in the Department of the Seine-et-Marne, in 1834, was a pupil of Léon Cogniet, and won the Grand Prix de Rome, with his painting, The Death of Priam, in 1861, six years after his maiden exhibit in the Salon. Among his best-known paintings are La Cigale, in the Museum at St. Louis; La Vérité, in the Museum of Luxembourg, and Diane Surprise, in the museum at Buenos Ayres. He was decorated with the Legion of Honor in 1870, becoming an officer of the order in 1878. The Academy of Fine Arts elected him to membership in 1891.

News comes to us from Berlin of the death of Prof. Albert Hertel, painter of landscapes and still life, aged sixty-eight. He became a member of the Berlin Academy in 1901.

Finance

THE PROBLEM OF "DULNESS."

One topic, not at all novel, has largely superseded others in financial discussion during the past two or three weeks. In most other fields of human interest, it is taken for granted that conditions are normal and usual when nothing in particular is happening, but that the fact of sensational activity at once calls for explanation. On the Stock Exchange the contrary is true. Nobody ever thinks, when the stock market is stirred into violent commotion, of asking why prices should be moving. No financial critic ever heads an article Activity, and proceeds to discuss his topic as in itself the perplexing subject of the day. But columns of argument, inquiry, and conjecture have been published under the heading Dulness.

In a measure, this attitude is mere reflection of the impatience of speculators at the absence of any such sharp fluctuations as will favor quick profits to good guessers. But it has a more rational excuse when it is based on the fact that not only are price fluctuations narrow, but that actual purchases, especially by the outside investing public, are abnormally small. The total of 127,000 shares sold on Tuesday of last week on the New York Stock Exchange was the smallest of any day since the close of last July. It was not far above the smallest day's trading of 1911—the 80,500 shares of July 14—or the 70,800 shares of July 3, 1908, which is the lowest full day's record in fifteen years. That small day of last week followed a week whose total transactions were the smallest of any corresponding week since 1903.

Thus Dulness is at all events somewhat unusually conspicuous just now and it is natural enough that explanations should be asked. A common answer is that professional traders on the floor of the Exchange, whose dealings always make up the bulk of a day's total purchases or sales, have been forced into inactivity by the market's motionless condition. But that is to beg the question; for every one knows that if influences bearing on values were really in evidence, and if the investing public were coming in, the professional speculator would wake up. So that the real problem is, why the outsiders will neither buy nor sell.

There seem to be three different answers to the question. The first and most familiar is the political uncertainty. Whether Taft will be renominated; whether he can be elected if he is; whether his reëlection would itself be a good thing or a bad thing; whether Roosevelt's intrusion is a menace because of his excessively radical Columbus speech or a matter of reassurance because he denounces the Steel Trust prosecution; whether, if Wilson gets the Democratic nomination, he is not too radical or too unstable, and whether, if he does not get it, somebody still more radical may not run—all these are considerations which may easily make the real investor pause. It is quite possible that the course of industry and prosperity will be duly pursued, whoever is nominated or elected. But in the high financial quarters, where opinion is largely formulated for Wall Street (whence it percolates to the outside investing world), there has been repeated and obstinate declaration to the contrary. To that extent, the very people who are now complaining most bitterly of Dulness are themselves chiefly responsible for it.

A somewhat similar comment must be made on the second explanation, that the Trust prosecutions, the restriction on railway rate advances, and the tariff legislation are the cause of the outside public's apathy. A good case might be made out for the argument that all these things were exaggerated as influences on prosperity, or that, at any rate, they have been discounted. But, on the other hand, important financiers are on record as proclaiming impetuously that these three influences were bound to paralyze all activity, and their predictions had a hand in shaping the programme of the public.

It might be remarked of the two explanations already noticed that the absence of any continuous decline in prices can be construed as reassuring. It would seem to mean that the public intends to keep what securities it has already. The third explanation, less frequently heard, is somewhat more far-reaching, since it involves the query whether prices of stocks and merchandise are really low or not. Some commodities—cotton and steel, for instance—seem to be cheap, even though the present price of cotton would have been called high in 1901. But with other commodities the case is different. *Bradstreet's* February average of all staple prices is the lowest since last August; but the difference from recent months is very slight; it is far above the monthly average even of 1909, and is higher than that of any month between the early nineties and December, 1906. Are we, then, economizing and saving and accumulating as we have led ourselves to suppose? Or have we been under an illusion, and is a new chapter of readjusting prices and cost of living before us?

It is an interesting problem. Probably the economist would reply that, partly or chiefly as a result of increase in the metallic money supply, prices have for fourteen years been adjusting themselves to a higher standard; that wages of labor have gone up simultaneously so as to allow the workingman to buy at the higher prices the same quantity of goods he used to buy, and that, labor cost having thus advanced, prices of commodities cannot go back to their old-time level without cutting wages—which employers dare not do. From one point of view this might be called an unnatural and precarious position. But from another the conclusion might as easily be that economic forces have brought the normal price level higher than of old; that, as in the present case of cotton, what used to be deemed a comparatively high price may now be actually low, and that people may really economize and heap up capital for future use, without bringing back prices to the level of 1900.

THE LIFE STORY OF

J. PIERPONT MORGAN

By CARL HOVEY

Crown 8vo. Illustrated. $2.50 net, postpaid $2.66.

This accurate biography, containing "inside" information never before in print, brings the record of Mr. Morgan's life into the year 1911, and chronicles his early beginnings and immense achievements in the world of business. It presents the commanding personality of a great man of affairs and patron of the arts, and is engrossing to the general reader and informing to the financier.

By Alexander Francis

Outdoor Philosophy

The Meditations of a Naturalist

By Stanton Davis Kirkham

Crown 8vo. $1.50 *net.* (*By mail* $1.65)

A protest against life as it is lived by the majority to-day, a slavish pursuit of worthless ideals that impoverish the soul. The author dwells on the contrast, which Nature evokes, between her own sublime harmony and the discord and strife and ugliness of life in the teeming centres of population.

VOL. XCIV.—NO. 2436 THURSDAY, MARCH 7, 1912 Reg. U. S. Pat. Office. PRICE TEN CENTS

By RUDOLF EUCKEN

Professor of Philosophy in the University of Jena.

Translated by Williston S. Hough, of George Washington University, and W. R. Boyce-Gibson, of the University of Melbourne.

The Problem of Human Life

A new edition of Professor Eucken's famous work, called forth by the appreciation the original has received in this country, and published at a price which puts it within the reach of a wider circle of readers than was the case in the earlier edition.

"Professor Eucken, then, has written a work which is an important addition to the treasures of philosophical literature, massive in content, masterly in its comprehensiveness, and thoroughly original."—*Hibbert Journal* (Prof. F. Granger).
